A

HANDY TOPICAL INDEX

TO THE

“JAPAN MAIL”

FROM 1869 TO 1889 INCLUSIVE.

A HANDY TOPICAL INDEX TO THE "JAPAN MAIL"

FROM 1869 TO 1889 INCLUSIVE.

[NOTE.—There are two particular allowances to be made for the following rough topical index: (1) It has been made at a distance, from notes taken during residence in Japan; and with the files of the *Mail* inaccessible at the time of final compilation, many errors of citation have inevitably and undoubtedly crept in. (2) From 1869 to 1881—that is, until the *Mail* came under the present management—there was no annual index prepared. Hence, the columns of those thirteen years are alone in actual need of such a summary as the present; a careful search of the annual indexes since that date would furnish the desired references. But many topics might conveniently be brought down through the later period—e.g., Local Government. Moreover, on several topics—e.g., Press, Taxation, China—it was worth while to note here such articles as were worth reference, and thus at least effect economy for students who would otherwise have to search half-a-dozen indexes for a few references. While, therefore, the first thirteen years are believed to have been fully covered for all topics of more than a temporary interest, the subsequent years must be understood as dealt with by no means exhaustively, the effort for the latter period being mainly to note important articles and not mere items of news. In particular, no attempt is made to trace the political parties arising after 1881, the year of the Constitution-promise.]

It must furthermore be noted that articles reproduced from other sources in the *Mail*—such as Mr. Gubbins' masterly reports on Taxation, on Finance, and Banking—are not here noted. But where a translation is given of an article in a foreign language—e.g., Mr. Heneken's Diary and Mr. Michaelis article on Penal Law—this seemed worth noting. Moreover, matter which first appeared in the *Mail*, though afterwards in book-form—such as Mr. Pfoundes' "Budget of Notes," or Mr. Suyematsu's "Yoshitsune and Genghis Khan"—ought here to be noted. As to the title "Bibliography," its limited contents cover only such works as are not to be found in Mr. F. Wenckstern's admirable and invaluable "Bibliography of Japan." Indeed, a main motive for venturing to publish this rough Index is the fact that the learned compiler of that work was unable to obtain access to a complete file of the *Japan Mail*, and that the valuable material in its columns thus remained without any representation in the titles of that comprehensive work. The *Mail* noticed from time to time the appearance of most of the books on Japanese topics, and the present writer once collected these with some view towards beginning a bibliography of Japan. But the appearance of Mr. Wenckstern's work makes it now necessary only to note those few publications which evaded that gentleman's industrious search.

The references are to the year and page. Where two volumes appeared in one year, the indication is thus: 88 (2) 129, for the second volume.

In completing a survey of the topics in the following list, one's main feeling is that of deep regret that the rarity of the earlier files of the *Mail* makes practically inaccessible a quantity of material so interesting and valuable to the now numerous students of Japanese history and manners.]

I.—AGRICULTURE.

Agriculture in general, 74-744; 80-1429, 1461; 81-449, 966.

Land-tax. See TAXATION, Land-transfer, See LAW, *Sundry Legislation*. See also COMMERCE AND INDUSTRY; GOVERNMENT AND POLITICS, *Central Government*, *Local Government*; LAW, *Sundry Legislation*.

II.—AINU.

The Ainu, 87-128.

The worship of Yoshitsune by the Ainu, 87-448.

Ainu burial customs, 88-469.

III.—ART.

The Nara Exhibition, 75-507.

History of the art-movement shown in the societies known as *Ryuchi-kai*, *Kangaku-kwai*, and *Toyo-kai-gaku-kai*, 86-352, 401.

Account of the work of Mr. E. F. Fenollosa, with Mr. Okakura and others, 86 (2) 54, 592, 87-389, 521; 88-463 (2) 370.

See also MUSIC; MANNERS AND CUSTOMS.

VI.—CHARITY.

A Japanese Charitable Institution, 76-6.

A Private Japanese Hospital, 73-18.

The Yedo Poorhouse, 77-826.

Humanity of the Japanese, 78-243.

The *Kyoroku shu*, a charitable society of Osaka, 78-1394.

A Charitable Society, 81-1059.

The Proletariat Classes, 81-1226.

See also MANNERS AND CUSTOMS.

V.—CHINA.

The Relation of China in the West, 84 (2) 336.

Chinese Maladministration, 84 (2) 329.

Chinese Geomancy, 84-677, 699.

Chinese Music, 85-407, 434.

Land-transfer system in China, 86-395.

Chinese Justice, 87-174; 88-267; 88 (2) 222; 89-133.

Land-tenure in China, 89 630.

Chinese Ideographs, 75-901.

Chinese Relationships, etc., 75-902.

See also FOREIGN INTERCOURSE.

VI.—COMMERCE AND INDUSTRY.

Adulterations, See Imitations.

Chambers of Commerce; rules and doings, 78-1076, 1110, 1173.

Companies, trading; 81-636; Government regulations for, 84 (2) 554.

Cormorant fishing, 86 (2) 350.

Expositions, national and local, 81-657; 87 (2) 619.

Fisheries, 84-88.

Guilds, 73-306, 645; 78-892.

Hokkaido, exploitation of, 86 (2) 459; 88 (2) 112.

Imitation of trademarks, adulterations, etc., 75-699, 1120; 81-772, 1098.

Insurance, 78-462, 597, 621, 892; 79-1080; 81-1042.

Interest and Mortgages, 88 (2) 160.

Mitsui Bishi Company, 82-17; 85-52; 86 (2) 485; 87 (2) 640.

Morality, commercial, 76-5, 6; 81-178; 83-335, 373, 426; 88 (2) 399, 492.

Mortgages, interest and, 88 (2) 160.

Pre Restoration, industrial system of, 83-43, 58; notions as to commerce and foreign intercourse, 70-29, 40, 100, 112, 366.

Railways, 81-1307, 1346; 84-531; 85-113, 259; 87 (2) 156.

Transportation, internal, 79-608, 677.

See also FINANCE; MANNERS AND CUSTOMS; LAW, *Sundry Legislation*; *Government*, *Local Government*.

VII.—EARTHQUAKES AND STORMS.

Great Storms: Of 1853, 81-1255.

Great Earthquakes. Of 1855 at Yedo, 73-687.

VIII.—EDUCATION.

Education in Japan [being a series of articles under the following heads],

Foreign Teachers, 73-836;

Native Officials, 73-876;

Japanese Students, 73-895;

Native Teachers, 73-916;

In general, 72-2;

Physical Education, 74-58;

Female Education, 74-59;

English Education, 74-95;

Moral Education, 74-137.

Education in Japan, 25-350; 86-129.

Ordinance for the Imperial University, 86-282.

Addresses to students by Mr. Fukuzawa, 86-287 (life of Mr. F.), 87-227.

Mr. Fukuzawa's College, 87-321.

Athletic Education, 88 (2) 12.

The Western Learning in Japan, by Mr. Fukuzawa, 89-482.

See also GOVERNMENT, *Central Government*, *Social Government*; LAW, *Sundry Legislation*; MANNERS AND CUSTOMS.

IX.—ETHNOGRAPHY.

The Origin of the Japanese Race, by Yokoyama Yoshikiyo, 79-1315.

The Ethnology of the Japanese, by Edward R. Garczynski, 87-157.

X.—FINANCE, PUBLIC AND PRIVATE.

Banks 81-688; 84 (2) 1147; 87-123.

Crisis of 1882-3, 83-259; 84-176; 86-500.

Currency, paper; history of, 85-580.

Exchanges, Government regulations for, 86 (2) 474; 87-119, 494, 515; 88 (2) 243, 301.

Okuma, and his successors; financial policy of, 80-194, 231, 265, 1213, 1273, 1300, 1333, 1369; 81-362, 933, 969, 997, 1303; 86 (2) 265, 342, 380, 511, 576.

Mr. Munsey's Report on Japanese Finance, reviewed, 77-876, 902, 932, 981, 1007.

See GOVERNMENT, *Central Government*.

XI.—FOREIGN INTERCOURSE.

1. Foreigners in Japan.

The Attempt of the "Morrison" in 1837 to trade, 71-671.

Will Adams (the first Englishman in Japan,) 72 297, 368 (with bibliography,) 87 (2) 38 (by D. Boulger; from records of the Colonial Office).

England and Japan from 1600 to 1851, 74-514.

Russia and Saghalin, 74-806.

Historical Notes on Nagasaki, 81-303.

The Diary of Heusken (Secretary to Townsend Harris, first U. S. Minister,) translated from the Proceedings of the German Asiatic Society, 84-12, 37.

A History of Western Settlements in Japan, 86-409.

Americans who have been decorated, 86 (2) 198.

See also HISTORY; TREATIES.

2. Japanese Abroad.

Foreign purchases of the *Daimyo* before 1867, 72-69.

The Formosa Expedition, 74-486, 510, 538, 607.

The Loo-choo Question, 79 1342, 1377, 1383, 1415, 1421, 1451, 1485, 1487.

The *Unyokan* Affair at Korea (Notes of a Japanese Officer,) 75 941.

Yoshitsune and Genghis Khan, by K. Suyematsu, 80 834, 852, 866, 897, 928, 960, 998, 1032.

Japanese Pirates in China, 80-1493.

See also AINU.

XII.—GOVERNMENT AND POLITICS.

1. History of Representative Institutions.

Daimyos' meetings in earlier times, 73-640.

Emperor's oath in 1868, 77 572.

Kogisho, or Parliament of *Samurai*; Constitution and Proceedings, 73-328, 917.

Chihokwan Kwaigi (Assembly of Prefects), Constitution and Proceedings, 74-274, 277, 281, 517; 75-565, 575, 586, 606, 609, 626, 672, 712; 76-390, 413; 78-241, 245, 329, 353, 388, 404, 873; 79-521; 80 277, 748; 81-847, 925, 1052; 82-745.

Genro-in (Senate), Constitution and Proceedings, 75-330, 401, 653, 718; 76-11; 77 572; 80 437, 660; 81-791; 89 83.

Kwasoku Kwaikwan (Assembly of Nobles), Constitution and Proceedings, 75-625, 895, 916.

Discussion in the Japanese press of representative institutions, 75-25, 136, 217 by Fukuzawa, Mori, Kato, 75-529.

Dialogue on Popular Elections, 76-394.

Draft of a Constitution ordered by the Emperor, 76-558; 77-9.

Popular agitation for representative government, 77-304, 397, 472, 514, 600; 78-1037, 1104, 1392; 79-102, 255, 354; 80-137, 277, 280, 472, 536, 568, 923, 948, 995, 1020, 1186, 1564; 81-568, 1264; 84 (2) 542. See also *Political Parties infra*.

Draft of Constitution popularly circulated in secrecy, 81-1052.

Cabinet discussion and the Crisis leading to the Constitution 80-137, 378, 923; 81-1075, 1217, 1220; 83-369, 85-487, 88 536.

Imperial Decree of Oct. 12 announcing a Representative Constitution for the 23rd year of Meiji, 81-1179, 1198.

Investigations of Government preparatory to the framing of a Constitution in pursuance of the Decree 83-369; 84-366, 447, 486, 544; (86) 29; 88-536.

Mr. Fukuzawa on the History of Parliamentary Institutions, 89-329, 336.

2. Central Government Organisation; Administrative Law.

Cabinet personnel, 73-209, 773-793; 75-217; 77-376, 397, 1156; 80-277, 1016; 81-1217, 1220. Cabinet Organization: earlier form after Restoration, 73-276, 77-714, 80-437; change of 1880, 81-1217, 1218; change of 1885, 86-23, 327, 329, 398, 464; general survey of changes from 1868 onwards, 81-1300; 86-149; 88 (2) 63. See also *Privy Council infra*.

Departmental administrative law: Education, Finance, Home, Colonization, Public Works, 76-153 to 157; Education, Finance, Public Works, Foreign Affairs, Agriculture and Commerce, Metropolitan Police, 81-1023, 1051, 1374; Auditing and Statistical Bureaux, 81-731, 89-491, 501; Communications, 87-322; War, 87-616.

Departmental business, general rules for, 81-1374. Departmental officials, instructions to, 76-269; 87-182.

Civil Service in general, 81-68; 87-163 (Regulations); 88-56, 106 (same).

Genro-in Senate, administrative law of, 81-791.

See also same title under BEGINNINGS OF REPR. GOVT.

Sumitsu-in (Privy Council), 88-419, 444; 88 (2) 201.

3.—Local Government; Organisation, History, etc.

Process of changing *han* into *ken*, 71-537, 576, 595, 597, 644, 647; 72-179.

Fu, *han*, and *ken*; appointment of *chihanji*, 73-353.

Electing officials in *ken*, 73-560.

Instructions to *fu*, and *ken* about local assemblies, 73-Dec. 20.

Claims against the *han*, 74-571.

Establishment of *ken-kwai* local assemblies, 75-245, 330, 895.

Changes in size of *ken* 67-525.

Local Assemblies organized, 77-9, 34.

Workings of earlier local self-government, 72-112; 76-17; 77-543; 78-309, 750, 893, 973.

Local officials,—terms of office, salaries, 78-781.

Law of local government as completely revised in 1878 Imperial Notifications Nos. 17, 18, 19, 54, 78-873; 81, 847, 1137; 84-615.

First general elections under new law, 78-1301, 1391, 1413; 79-153.

Doings of the new assemblies in Tokyo and elsewhere, 79-32, 102, 120, 322, 390, 428; 80-634; 81-161, 958, 959, 1303; 82-586; 86-522; 86 (2) 66; 87 (2) 488, 620; 88-255; 88 (2) 219, 459, 604; 89-23, 444, 446, 503.

Amendments of 1880 to local government law, 80-748; 81-415, 1137, 1258.

Local boards of education established, 81-751; 86-59.

Enlargement of local assemblies' powers, and other amendments, 81-277; 86 (2) 114, 170; 87-353.

Local boards of agriculture and commerce, 82-309.

Local sanitary officers, 85-542.

History of local government 1867-1881, 81-925.

Revised local government law of 1888, 86-187 (proposals for revision); 87 (2) 611 (same); 88-216 (same); 88 (2), 153, 178, 252; 89-83, 323.

4.—Peerage Ranks and Grades.

The nobility before the Restoration, 84-187.

The reorganization of 1884, 84 (2) 32, 33, 90.

Classification of the new peers by clans, 88 (2) 270.

5.—Political Memorials, Pamphlets, etc.

Memorial on Christianity, 72-266, 287.

Memorial on Abolition of Distinctions of Rank, 72-287.

Memorial of Shimadzu of Satsuma, 72-509, 510.

Memorial of Kido on the State of the Country, 73-796, 814.

Memorial of Soyejima on a Parliament, 74-55, 62; Answer to it, 74-98; Reply to the Answer, 75-268, 275.

Memorial on sundry political topics, 74-280, 517, 670, 734; 75-69.

Memorial on Formosa, 74-490.

Writings of Nakamura, 75-264.

Petition of the Rishshisha, 77-514, 572.

Fukuzawa's "Complaint of the Time," 81-1363, 1394, 1483, 1517; 82-6, 33.

Nishi Sensei on Japanese National Characteristics, 83-536.

6.—Political Parties.

Origin of the phrase "*Sat-cho party*" 73-191.

The Satsuma party, 76-128, 646.

The *Jiyu-to* and its predecessors (*Rikken keisei-to*, *Taisei-to*, etc.); 82-342, 461; 83-175, 529, 543, 560; 84 (2) 501.

The *Kaishin-to*, 82-461, 84 (2) 7, 501; 85-31, 87 (2) 375.

7.—Political Personages; their Deeds, Lives, etc.

Fukuzawa, 86-287.

Inouye, 88-63.

Itagaki, 77-397; 82-452; 83-529.

Ito, 78-488.

Iwakura, 77-517, 80-1016, 84-318.

Goto, Komatsu, and others, 73-260.

Kido, 77-451.

Komei Tenno, 78-132.

Okubo, 78-458, 459.

Saigo, 77-126.

Sawa Nohiyoshi, 73-698.

Shimadzu, 77-516.

Yokoyama, 70-461.

For general information as to the parts played by various eminent persons in *ante- and post-Restoration* politics, see also GOVERNMENT AND POLITICS, *Central Government, Political Parties*.

8.—Sundry Political Measures and Occurrences.

Uprisings due to innovations of Government, 73-584.

Extinction of Pensions of *Samurai*, 74-13, 94, 113; 76-486; 83-433.

Instances of official corruption, mismanagement, etc., 73-16; 74-778; 78-559, 611; 81-551; 83-251; 84 (2) 481.

Samurais' employment in Government; the clans; 76-129, 162, 186; 79-425; 83-582. Sundry uprisings and their causes, 72-411, 457; 76-699, 706.

Satsuma *samurai* incorporated into Tokyo police force, 80-761.

Satsuma Rebellion, 78-799.

9.—Treaties; Extraterritoriality; Consular Jurisdiction; Treaty Revision.

Essays on the Theory and Practice of Extraterritoriality, by Eli T. Sheppard, Esq., Legal Adviser to Japan, 79-1068, 1099, 1135, 1165, 1201, 1235, 1270, 1307, 1343, 1417, 1452.

Extra-territoriality, 87 (2) 566, 592.

F. V. Dickens on the history of Treaty Revision, 82-46, 173.

England's First Treaty with Japan, 75-4.

Was Japan willing to make the Treaties? 84-250.

History of the Revision Negotiations of 1887, 87 (2) 478.

History of Japan's Foreign Policy, 89-608.

See also FOREIGN INTERCOURSE.

XIII.—HISTORY IN GENERAL.

1. Japan Historical Chronicles (translated.)

Chapters of History [being accounts of notable episodes in the feudal times], 77-805, 830, 850, 900 (The Pretender Yoshimune); 77-930, 958, 983 (*Yui no Shosetsu*); 77-1165 ("The Suspended Ceiling"); 78-84, 105 (Yoshimori); 78-642, 667 (The Intrigues of Yanagisawa).

Fuku-ko-ron [The Overthrow of Feudalism], 69-96, 111.

Genji Ume Monogatari, 71-94, 106, 117, 131, 145, 157, 170, 200, 232, 247, 270, 285, 304, 315, 334, 344, 362.

Han-Ron [The Clans], 69-718.

Japanese Personages, 80-339, 373, 403, 431, 499, 636, 688, 722, 819, 983, 1016, 1079, 1143.

Kindai Gippyo, a Chronicle of the Chief Events from 1844 to 1863, 73-585, 607, 621, 639, 668, 703, 721, 755, 780, 799, 819.

Kinsei Shiryaku, 73-171, 188, 204, 220, 238, 277, 295, 307, 328, 350.

Nihon Gwaishi, 71-726; 72-43, 71, 84, 98, 112, 171, 183, 201, 239, 256, 268, 295, 304, 343, 358, 378, 394, 413, 427, 442, 460, 475, 494, 510, 524, 549, 570.

Taketori Monogatari (translated from the German of Mr. Lange, in the Proceedings of the German Asiatic Society), 79-1431, 1463, 1498, 1531, 1541, 1563.

Times of the Taira an historical romance, (translated) and edited by Capt. F. Brinkley, 79-902, 941, 975, 1009, 1049, 1081, 1117, 1151, 1189, 1223, 1257, 1292, 1329, 1363, 1402, 1437, 1469, 1505, 1572, 1607, 1641, 1670, 1701; 80-16, 48, 83, 114, 443, 175, 211, 251, 286, 323, 352, 385, 414, 445, 478, 507, 541, 573.

2. General Surveys and Summaries.

General survey, 76-214, 673.

Annual summary of events: See the first portion of almost every volume to 1880.

For other topics, see also FOREIGN INTERCOURSE; FINANCE; COMMERCE AND INDUSTRY; LAW; GOVERNMENT; MANNERS AND CUSTOMS.

XIV.—LANGUAGE.

Notes on Japanese Grammar, by B. S. Lyman, 78-31, 54.

Proposed uniform system of Transliteration, by Wm. Bramsen, 78-1290, 1319, 1354, 1386.

Sinico Japanese, 84 (2) 312, 382.

Verbs of Saying, Telling, etc., by J. H. De Forest, 86-573.

Amusing English in Advertisements and elsewhere: 75-458, 699, 1627; 76-747; 76-86, 515; 78-483; 80-1082; 81-751; 86-248, (2) 514; 87-446; 88-342, 485, (2) 35.

See also MANNERS AND CUSTOMS.

XV.—LAW.

1. Criminal Law and Crime.

Table of punishments under the Code of 1871, compared with the old law, 73-607.

Imperial police ordinances issued (dealing in part with civil wrongs also), 73-688.

Torture, instances of, 75-421; abolished, 76-401, 79-1430; 81-587; revival charged, 77-671, 689; history during Meiji, 81-728.

Law reform, 76-86.

Habeas corpus law demanded, 76-209.

Prisons, 76-330; 80-1522, 1553; 83-694.

Law of Bail, 77-105.

Privilege of local representatives against arrest, 78-481.

Abolition of Vendetta, 79-1590.

Legal Nomenclature, 81-336.

Crime in Tokyo before and since the Restoration, 81-510.

Story of a professional murderer, 81-704.

History of Criminal Codes since 1873, 81-815, 906, 964; 83-840; 84-368.

First public trial under the Restoration, 83-313.

History of Japanese Penal Law, by Michaelis (translated from the Proceedings of the German Asiatic Society), 88-563.

See also MANNERS AND CUSTOMS, *Stories, Life under the Old Régime*.

2. Justice in General, Specific Trials and other Instances.

Prosecutions under the Press Laws, 76-235, 238-40, 613.

Cases in Japanese Courts, 76-245, 250, 269, 296, 489, 750; 77-313, 339; 83-794.

Hokiyama's Case, 76-613.

General criticisms, 77-1129; 78-1319.

Instances of improper decisions, 50-156.

The debt-dunning Company (*Saisoku-sha*), 81-400.

The Fukuchi libel suit, 81-971.

Trial of the dynamiters Baba and Oishi, 86-565.

See also MANNERS AND CUSTOMS, *Life under the Old Régime*.

3. Organisation of Courts.

Transfer of judicial business to a Central Board, 73-7.

Establishment and Constitution of Courts, 75-330, 556, 673, 76-35; 77-475, 572, 648.

Provincial Courts, 76-12-35, 526, 557.

Rules for Attorneys, 76-153.

Examination for admission of attorneys, 76-237.

Court for deciding administrative disputes between Governors and Assemblies, 81-660, 731.

Rules for the appointment of Judges, 85-14, 64; 86-104.

4. Procedure.

Old form of oath, 81-838.

Bankruptcy law, 72-663; 76-382.

Civil Procedure (Imperial Notification No. 93), 75-675.

Legal Nomenclature, 81-336.

5. Sundry Legislation.

Regulations for Mercantile Steam Marine, 76-386.

Press Laws, 73-330; 75-572; 78-543; 83-700; 88-56, 109.

Educational Regulations, 79-1391.

Copyright Law, 75-791; 88-56.

Sanitary Regulations, 80-690.

Boards of Trade, Agriculture, and Manufactures established 81-633.

Land-tax Regulations. See TAXATION.

Public Meetings Regulations, 82-712.

The New Codes, 83-155; 89-323, 451.

Libel Law, 75-573.

Income Tax Law, 87-346.

Private Railway Regulations, 87-517, 539.

Conscription Regulations, 84-126, 128.

Trade-mark Regulations, 84-581, 589.

Regulations for the Promulgation of Laws, etc., 86-231.

Regulations for Land-transfer, 86-395.

Regulations for Hotels, Streets, etc., 86 (2) 95.

Regulations for the Registration of Property (Land, Houses, and Ships), 86 (2) 339.

See also COMMERCE AND INDUSTRY.

XVI.—LITERATURE.

Rules of the *Gakushi-kwai-in*, 79-620.
Concerning the true title of the so-called "Hundred Laws" (*Hyakkajo*) of Iyeyasu, 74-103; 76-712, 714.
Tosa Nikki (Diary of a Journey to Tosa) translated, 82-14, 139, 171, 203, 263, 289.
See also RELIGION, *Sermons*; LANGUAGE; LAW, *Sundry Legislation*; MANNERS AND CUSTOMS.

XVII.—MANNERS AND CUSTOMS IN GENERAL.

1. *Collective Description and General Articles*:
 - (1). Fuso Mimi Bukuro, or A Budget of Notes, by C. A. Ploufdes, under the following heads:
 - Superstitions, 75-50;
 - Children's Schools, Games, and Puzzles, 75-70;
 - Sports and Accomplishments, 75-138;
 - Theatres and Plays, 75-163;
 - Pastimes, 75-180;
 - Music Teachers and Songs, 75-201;
 - Religion, Prayers, and Festivals, 75-249, 265, 285, 311, 334, 353;
 - Clothes, 75-377;
 - Swicide, 75-377, 403;
 - Swords, 75-422, 443;
 - Names and Titles, 75-532, 743, 790;
 - Legends, 75-532, 636;
 - Proverbs, 75-722;
 - Poetical Ideas, 75-743;
 - Conspiracy of Okubo, 75-765;
 - Conspiracy of Mizuno, 75-766;
 - Revolt of Osho, 75-766;
 - Dreams, 75-789;
 - Chinese Ideographs, 75-901;
 - Chinese Relationship, etc., 75-902.
 - (2). The Calendar of Old Japan [an account of the various holidays, celebrations, seasons, etc.]; 78-9, 34, 57, 87, 107, 135, 156, 201, 248, 269, 314, 335, 359, 381, 411, 439, 489, 517, 614, 664. The Floral Calendar of Japan, 78-315, 359, 461, 518.
 - (3). Notes and Queries, [being a collection of information on the following subjects]:
 - Fans, 78-38;
 - Hotels, 78-38;
 - Names of persons, 78-114, 186;
 - Names of places, 78-114, 162, 186, 236, 394;
 - Names of cats, 78-162, 186;
 - Titles of officials, 78-114;
 - Children's songs, 78-162, 236, 394;
 - Imaginary animals, 78-319;
 - Word-exercises, 78-500.
 - (4). Our Neighbourhood, by T. A. Purcell [being sketches of local life, under various heads]:
 - 73-726;
 - 73-759;
 - 73-783;
 - 73-805;
 - The *Kwajiya* (smith), 75-115;
 - Desolation, 75-380;
 - The *Meshiya*, 75-476;
 - 75-821, 853;
 - A Country Theatre, 75-1079;
 - An old Well, 76-19;
 - 76-186, 304;
 - The fencer, 76-338; Fantasies, 76-468;
 - In the Gallery, 76-710;
 - Death of the Story-teller, 77-241;
 - The Mountebank, 77-286;
 - Rural Quiet, 77-377;
 - Shark-fishing, 480, 514;
2. *Stories and Folk-Lore*.
Leaves from a Pocket-book (of a Story-teller) 73-351, 371, 464, 479, 497.
Napaj, 74-65.
Omme and Genjiro, 74-356, 647, 818.
The Grateful Crane, 76-276.
The Tale of a Cat, 76-585, 617, 647.
Foxiana, 76-737.
Minetaro, 77-56.
Gata, Gata Gudsu, 77-110, 161.
How the Bears treated Hachisuka, 77-218.
Concerning a Tortoise, 77-305, 355.
How a certain Fox was married, 77-454.
What the Fox did, 77-526.
Shintoku Maru, 77-654, 677, 693.
History of Lord Moss Ball, 78-463.
Adventures of Thumbso, 79-225.

Faithful Ichibei, 79-546.
The Story of the Feather Robe (Hagamoro), 80-919.
The Singer of Sawa, 81-697.
Narihira, 81-1234.
How Eisuke's Nose was put out of joint, 87-29.
Ume, 84-43.
Stories of a Traveller: I. On the road to Sapporo; II., the Haunted Honjin. 86 (2) 578.
Times of the Taira (an historical romance), see "History, Japanese Chronicles."
A Vendetta Tale, 70-245.

3. *Games, Amusements, and Festivals*.

Sundries, 81-1246.
Flowers in Tokyo, 74-519.
Jugglers, 72-405.
Story-tellers, 79-385.
Game of Go, 80-818.
Japanese Plays, 80-882, 1237; 81-62, 481; 87-43.
Danjuro's Carefulness, 84 (2) 426.
Kantan; a specimen of the ancient *No* dance, 81-274.
The *Sanno* Festival, 84 (2) 188.
Theatrical Reform, 86 (2) 628.
See also *Collective Description, supra*.

4. *Life under the Old Régime*.

Famous cases before Oka, the Yedo Town Magistrate, 79-691, 767.
Tosa Nikki (Diary of a Journal to Tosa), see LITERATURE.
Hatamoto, *yoriki*, etc., 70-408.
Public opinion under the Tokugawa, 80-651.
Lyuch law in the old times, 81-719.
The Ronin, 78-780.
An ancient burial custom, 87-590.
Komoso Secret Societies, 79-1138.
Judicial methods under the Tokugawa, 76-643.
Kemp's Journey (a description of local life), 78-973.
"Maintainers" under the Tokugawa, 88-178.
See also *Collective Descriptions, supra*; and CHARITY.

5. *Sundry Articles*.

Glimpses of Childhood, 81-1377.
Streets of Tokyo, 87-9.
Sundry Customs, 74-815.

XVIII.—MEDICINE.

Vaccination in Japan, by Dr. Geerts, 79-679, 758.

XIX.—MUSIC.

Music in Japan, 84 (2) 424.
Foreign music in Japan, 76-400; 86 (2) 132.

XX.—PHILOSOPHY, MORALITY, AND SENTIMENT.

Yamato-damashii, 87-11.
The Japanese in search of a Moral Basis for Ethics, 88-107; also 89-628 (Study of Ethics).
The Japanese Philosophical Society, 88 (2) 541.
Influence of the Government, 76-99.
Nishi Sensei on Japanese National Characteristics, 83-536.
See also COMMERCE; EDUCATION; MANNERS AND CUSTOMS.

XXI.—PRESS.

History of the Japanese Press, 78-53.
A Sketch of the Japanese Press, 79-474.
Japanese Newspapers, 80-813.
Japanese Journalism, 84 (2) 410.
Mr. Black's Newspaper, 84-125.
Comic papers, 81-1043.
Newspapers and Public Opinion, 87-25.
See also LAW, *Justice in general*, *Sundry legislation*.

XXII.—RELIGION.

1. *Buddhism, Shintoism, and Religion in general*.
Insufficiencies of Buddhism as a Religion, by M. L. Gordon, M.D., 84-609.
A Japanese Monastery, 81-488.
Mr. Fukuzawa on the future Religion of Japan, 84 (2) 94.
Religions feeling in Japan, 84 (2) 162.
An account of the Decline of Buddhism, 84 (2) 195.

On Religion (from the *Choya Shimibun*), 83-116.
Sanskrit Vestiges in Japan, 80-492, 620, 1299.
See also MANNERS AND CUSTOMS.

2. *Christianity, Foreign Missions, and Missionaries*.

Life of S. R. Brown, 80-1110.
The Immediate Christianization of Japan, by C. S. Eby, 84-136.
The Christian Rebellion at Shimobara, by W. C. Kitchin, 86-13.
Christianity in Japan, by a Japanese Gentleman, 86-248.
Union in Native Protestant Churches, 87-58.
Presbyterianism in Japan, 87-320.
Methodism in Japan, 87-378.
Roman Catholicism in Japan, 87-519.
History of the Japanese Translation of the Bible, 88-131.
Christianity and the Discovery of Japan, 74-282.
The Church in Japan in the 16th century, 85-12, 87, 108, 158.

3. *Sermons*.

Buddhist, 75-655; 81-899, 928.
Shinto, 72-393, 425.
Unspecified, 75-533; 76-274, 532; 77-807.
Parable, 87-344, 597.

XXIII.—TAXATION.

Taxation at Niigata, 72-457.
Revised system of land-tax, 73-471; 75-306, 759, 782; 84-278; 87 (2) 645.
Reduction of land-tax to $2\frac{1}{2}\%$, 77-17.
Taxation of trades, etc., 78-1417.
Taxation in general, 84 (2) 572; 86-35; 87 (2) 490.

XXIV.—TRAVELS AND DESCRIPTIONS OF PLACES.

Ainu. See AINU.
Akasaka and Chiwaya Castle, 80-944.
Asama Yama, 86 (2) 259, 607.
Atami and Hakone, 72-142.
Awaji Island, 84-487.
Awomori, 88 (2) 517.
Country Trips, by a Victim, 77-720; 738, 760, 788.
Fukuhara, 80-1016.
Fuji, 72-96, 126; 76-530; 78-892.
Hakone and Atami, 72-142.
Hirado and Iki, 87-355.
Hokkaido. See *Yezo*, Sapporo, *infra*; also COMMERCE AND INDUSTRY, HOKKAIDO.
Ikao, 86 (2) 884.
Iki, Hirado and, 87-355.
Karuizawa, 86 (2) 551, 88 (2) 275.
Kashii Castle, 80 (2) 851.
Kawagoye, 80-913.
Kishiu and Yamato, Celebrated Places of; Nara, 79-1002, 1077, 1114, 1180, 1215, 1283, 1397.
Kobe to Nagasaki, 72-606, 623, 647, 660.
Kurile Islands, 82-589, 621, 655, 683, 747.
Kyoto and Environs, 73-241.
Kyoto to Tokyo by the Nakasendo, 73-87, 103, 119, 135, 155.
Miyanoshiba, 88 (2) 612.
Nagasaki, Kobe to, 72-606, 623, 647, 660.
Nagasaki, Historical Notes on, 81-303.
Nakasendo, See Kobe.
Nara, See Kishiu.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 6TH, 1895.

DEATH.

At the General Hospital, on Tuesday evening, FRANÇOIS BEYER, aged 34 years, late clerk at the M.M. Co.

SUMMARY OF NEWS.

THE anti-Cabinet crusade is gradually "petering" out.

THE British Fleet leave for a cruise in Northern waters to-day.

THE French flagship *Bayard* leaves Yokohama on Monday.

CHOLERA is raging at Port Arthur: at Sasebo also the epidemic is very prevalent.

SOME 823 artisans left Tokyo for Formosa on the 30th ult., and 179 on the 1st inst.

THE Weston Challenge Shield and the American Minister's Cup were won by *Maid Marion*,

an English-owned boat, on the Fourth of July, beating eight American competitors.

THE Tokyo Tramway Company expect to pay a dividend of 20 per cent. for the half-year.

LATEST cholera returns for the whole Empire show 3,997 total cases, and 1,183 deaths.

MR. ENSLIE, acting as umpire in the *Rheingold* arbitration case, has found against the ship.

VISCOUNT MURSU, Minister of Foreign Affairs, is said to be in a somewhat dangerous condition.

MR. SUGIMURA TORACHI, Secretary of the Japanese Legation in Russia, has been transferred to Vienna.

THE Korean Government proposes to dispense with the services of a good many of its Japanese employés.

THE Navy were again defeated at Cricket on the Fourth, losing the match with the Y.C. and A.C. by 66 runs.

COUNT ITO and other Ministers lunched with Admiral Buller on board H.M.S. *Centurion* on Friday.

CHOLERA is spreading in Tokyo, and increased Hospital accommodation is demanded by the Governor.

COUNT INOUE, Japanese Minister to Korea, attended a special meeting of the Cabinet held on Thursday.

THE Meritorious War Services Committee are busy investigating cases deserving the Emperor's particular notice.

UNTIL Formosa is properly pacified, Governor-General Kabayama desires none but officially sent Japanese to go to the island.

COUNT GOTO will shortly publish a weekly magazine. The editor will be Mr. Takahashi Chuji, a distinguished follower of the Count's.

ADMIRAL BULLER received on board the *Centurion* on Wednesday; on Thursday Admiral Carpenter was "at home" on the *Baltimore*.

A GOOD deal of rain fell during the earlier part of the week, but a change occurred on Thursday. Floods are now reported from Hokkaido.

VISCOUNT HAYASHI and Mr. Ozaki Saburo succeed to the positions of Court Councillors vacated by Baron Takasaki and Mr. Kuki.

THE Naigai Shushin-sha reports that Vice-Admiral Nakamura, formerly Chief of the Office of Naval Command, is very dangerously ill.

THE Law Lords of the Privy Council at Westminster, have decided in favour of the Japanese Government in the *Chishima-Ravenna* appeal case.

MR. OTANI KAHRI, President of the Yokohama Guild of Tea Merchants, has been publicly thanked for his services towards improving the quality of Japanese tea.

MR. KAWASE ZENTARO, who has Studied Forestry in Germany for many years, succeeds to the post in the Imperial University Tokyo, vacated by Mr. E. Grasmann.

THE Portuguese Barradas, who was arrested on suspicion of being connected with a scheme to swindle some Japanese mine-owners, has been acquitted by the Yokohama Local Court.

WITH a view to making Kagoshima one of the principal markets for the Formosan trade after

the opening of steamship communication with the island, several Kagoshima residents are preparing to organize a Formosa Trade Society with the support of the parliamentary representatives for that Prefecture.

THE commencement exercises of the Yokohama Kyoritsu-Jo-Gakko took place on Monday, when four young Japanese ladies graduated. To-day the Yokohama Girls' High School, and the Winton House School for Boys jointly held a breaking-up festival.

THE "Glorious Fourth" passed off amid a blaze of sunshine and an almost universal discharge of bombs and fire-crackers. The only *contretemps* was the accidental pulling down of the palings at the Grand Hotel by the crowd gathered to see the illuminations.

REUTER telegraphs:—The following Ministerial appointments are announced:—Lord George Hamilton, Secretary of State for India; The Marquis of Landsdowne, Secretary of State for War; Sir Matthew White Ridley, Secretary of State for Home Affairs; Lord Cross, Lord Privy Seal; The Rt. Hon. C. T. Ritchie, President of the Board of Trade; Lord Ashbourne, Lord Chancellor; Earl Cadogan, Viceroy of Ireland; and Lord Burleigh, Secretary of State for Scotland. The resignation of the Rosebery Cabinet came about in this manner. An amendment was moved by the Hon. H. W. St. John Brodrick, M.P. for Guildford, on the Army Estimates, protesting against the inadequacy of the reserves of ammunition. This was carried against the Government by one hundred and thirty-two votes to one hundred and twenty-five, a majority of seven, a result which astonished even the Opposition. Mr. Campbell-Bannerman, Secretary of State for War, announced, prior to the vote, that H.R.H. the Duke of Cambridge will resign his position as Commander-in-Chief in October, but that it was not proposed to abolish the office though the functions of the Commander-in-Chief would be greatly modified. The marriage of the Duke of Aosta and Princess Helène d'Orleans has been solemnised at Kingston-on-Thames, with full French royal state. Fifty Princes and Princesses were present at the ceremony.

THERE is very little to be said about the Import trade, and no improvement worth recording, buyers of Yarns and Piece-goods only operating to fill bare necessities. The principal reason for this condition of trade appears to be the continued tightness of the money market, and relief in this direction would probably put a different complexion on the Import business. There is no change to note in the Metal market, except that large sales of damaged cargo are said to be interfering with the regular trade. No alteration is to be seen in Kerosene, but the recent rumours about the Pennsylvania wells giving out are again in circulation. There has been very little done in Sugar, and all brands and qualities may be called unchanged. New Silk does not come to this market in large quantities yet, but the parcels that have been sent in have commanded full rates, and the present tendency of prices is upward. There is no change in the value of Waste, as any tendency towards a rise in prices stays transactions. In the Tea trade a fair amount of business continues to be done at recent quotations, but the quality of the second crop leaf, which was stated at first not to be up to the usual standard, does not appear to improve as the season advances, consequently most of the parcels at present on the market are reckoned to be dear at the price now paid. Exchange has again fluctuated, through not to any great extent.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The anti-Cabinet agitation has collapsed altogether. The dissolution of the attempted combination of Opposition parties led to the formation of a new party, the *Doshi-kai*, in addition to those already in existence. But the new party is already in a very precarious condition, its projectors, it is believed, having suddenly discovered that they were the dupes of a secret intrigue on the part of a certain ambitious statesman. Whatever may be the truth of this report, there is no doubt that the *Doshi-kai* lacks any force of cohesion, and it may therefore be said that the Progressionists and their allies have entirely failed, first, to effect an overwhelming combination of the parties opposed to the Cabinet, and secondly, to stir up any strong popular excitement throughout the country. Their ill-considered and unpatriotic scheme seems to be viewed with disgust by the public in general, while they have little if any hope of being supported in the next session of the Diet by the Radicals, the National Unionists, or the Independent Members, or even by many of the men that have hitherto acted in concert with them. Their organs are circulating various rumours relating to the Radicals and the National Unionists; rumours designed to discredit those parties in the eyes of the people. But such devices are too hackneyed to be productive of much effect. As to the alleged changes in the Cabinet, little is now heard. Count Inouye, however, is the subject of journalistic gossip. He is regarded as the most probable successor to Viscount Mutsu, whose resignation of the post of Foreign Minister is, in the opinion of the news-mongers, only a question of time.

The convocation of an extraordinary session of the Diet still continues to be demanded by a majority of the metropolitan papers. Rumour states that Count Matsukata's consent to withdraw his resignation was conditional upon the calling of such a session. It is even reported that the Cabinet contemplates taking that step either at the end of the present month or at the beginning of next. The Opposition politicians have their own reasons for desiring an early assembly of the Diet, but the grounds upon which they openly advocate that course are two, namely, first that the Ministry is morally bound to adopt immediate measures for acquainting the Houses of the Diet with the present state of the country's foreign relations, since it was by the unstinted support of the people and their Representatives that the Government was able to achieve such splendid military and naval successes; and secondly, that various measures, Military and Naval and otherwise, demand immediate attention. The *Nichi Nichi Shimbun*, however, exposes the absurdity of demanding an extraordinary session of the Diet. Measures relating to an increase of the Army and Navy are intimately connected with the national finances, and time is obviously needed to elaborate the economical part of such measures. Persons who think that the Diet can be at any moment convened to discuss these matters, prove themselves ignorant of practical affairs of State. Some of the measures in question must be at once carried out: the construction of war vessels, for example. The *Nichi Nichi* hopes that the Government will take steps in that direction on its own responsibility. For the rest, there are no reasons necessitating the convocation of an extraordinary session.

During the war it was feared that Military and Naval Officers, returning from the field in the full blush of honour and glory, would obtain undue ascendancy in society, and that an obstacle would thus be placed in the path of healthy progress. But events have proved the baselessness of such an apprehension. The moderate and unostentatious attitude of both officers and men is a subject of universal praise throughout the country. No one now entertains the slightest fear of any undue preponderance of military influence either in politics or in

society. Most of the senior officers returning from China have declined any ostentatious form of welcome, saying that they have done their simple duty, and have no manner of claim on the gratitude of their fellow-countrymen. Commenting on this fact, the *Nippon* infers from the conduct of these officers that they believe the real war to be still unfought.

The question how to reward the rank and file of the Army attracts considerable attention. Private soldiers receive almost nothing in the way of pay, only a little over one *yen* being allowed them monthly as pocket money. There are of course special regulations for rewarding acts of bravery and making provision for the families of men killed in battle, but it is generally felt that these regulations are not sufficiently comprehensive, and many journals strongly urge the Government to give rewards to all the private soldiers. The *Fiji Shimpō*, the most enthusiastic advocate of this step, proposes that a sum of money, say 30 or 50 *yen*, be given to each soldier, and that the distribution of the reward be made in the presence of the Emperor. Our contemporary prays that His Majesty will graciously pay a visit to the Divisional Headquarters all over the country, and there, summoning the whole force that took part in the recent war, personally attend the ceremony of giving the rewards. Such a gift from the Imperial hands would make a strong and indelible impression upon the simple and loyal soldiers. Supposing the whole number of soldiers that went to China to be 200,000, and that 50 *yen* be given to each of them, the total sum required for the purpose would be only 10,000,000 *yen*. Even taking into consideration the expenses of the Imperial journey and the summoning of the disbanded troops, 11 or 13 million *yen* would more than suffice.

The *Kokkai* writes in a similar strain. It agrees with the above quoted journal in recommending that a monetary reward be given to all the private soldiers, but it does not specify the sum to be distributed, merely suggesting that the contributions made by private individuals to the War Fund, and the portion of the Fund still remaining in the Treasury, might be used for the purpose. It also urges revision of the present regulations as to pensions and gratuities. These regulations are stated to be unfair to the non-commissioned officers and private soldiers.

Questions connected with foreign policy continue to occupy a conspicuous place in the columns of the vernacular press. Thus the subject of the Anglo-Japanese alliance is persistently discussed by the *Fiji Shimpō* and other papers. The *Fiji* cannot agree with the *Nichi Nichi's* conclusion that the change of Cabinet in England will not be attended by any change in foreign policy. The known propensity of the Conservative statesmen, as well as the state of things in the East, will not permit the new British Ministry to maintain a neutral attitude in these parts of the world. "The practical solution of the question of an alliance," writes our contemporary, "is a diplomatic secret and must be left to the management of the responsible officials of the two countries. What we make no doubt about is that a new departure is inevitable in the foreign policy of England."

The *Kokumin Shimbun's* staff seem to be divided among themselves on the subject of the above alliance. Sometimes we are strongly led to suspect that our contemporary is in favour of an alliance with Russia, while at other time it writes as though it were not opposed to one with England. The philo-Russian elements, however, seem to be weaker than those making for a close friendship with England. A conspicuous feature of the *Kokumin's* attitude on this topic, is that, even when it expresses itself favourable to the idea of an alliance with England, it takes care to make it apparent that it is supremely indifferent about the friendship of that country. In its opinion, England, not Japan, should be anxious to effect the proposed alliance. Its latest article on this

subject contains the following:—"It is important for England to be on good terms with the *Dreibund*, especially with Germany. In Europe, she ought to induce the Turks to join an alliance between herself, Germany, Austria, and Italy; while in the East, she ought to solicit the assistance of Japan on the understanding that the latter shall have a commanding voice in the solution of Oriental questions. If England followed such a policy, it would not be difficult to maintain the peace of the world. Should she, on the contrary, continue, as under the Rosebery Administration, to be a mere spectator of the great international drama, her political death, not only in Europe and Africa but in Asia, must ensue. Japan is ready to take due notice of an England with blood and life, but she is not foolish enough to stand firm by a mere skeleton of England."

The public anxiety about Korea has been relieved so far as concerning the attitude of Boku Eiko. But considerable uneasiness is felt on account of a report that the relations between the Queen and the Russian Legation grow more and more intimate. Just as before the recent war, the Japanese press urged that, in dealing with Korea, the Government ought to be prepared to come face to face with China, so now it is alleged that the policy necessary in Korea is a policy against Russia. The Northern Power's ambition to obtain a port in waters open during all the seasons of the year, is denounced as a danger to the peace of the East—a danger that must be averted at all hazards by this country. Referring to the rumour that Russia has demanded, or is about to demand, the withdrawal of the Japanese troops from Korea, the metropolitan papers unite in advising the Government to reject such a demand. They declare that their country has no sinister motives in Korea, whereas Russia's aim is to annex the peninsula, or at all events to bring it completely under her own influence. Russia being on the watch for an opportunity to pounce upon her long coveted prey, it is, say these journals, the duty of Japan never to relax the strong policy she has thus far pursued in Korea. A report has been circulated that the Japanese Government contemplates the adoption of a neutral policy in this matter, but the *Fiji Shimpō* declines to believe anything of the kind, for having once taken upon herself the task of guarding the independence of Korea, Japan has no choice but to adhere to that policy.

The *Mainichi Shimbun* strongly complains of the Cabinet's indolence in matters of foreign affairs. It frankly declares that Marquis Saionji, the Acting Minister for Foreign Affairs, is not capable of dealing with a juncture like the present. If Viscount Mutsu can resume the duties of the post, well and good. But should his health be too much impaired, a suitable successor must at once be appointed. Our contemporary seems to be in favour of Count Ito's joining that portfolio with the Premiership. The *Mainichi* is further dissatisfied with the appointment of Mr. Hayashi to Peking. He may be a valuable man as a friend in private life, but his talent, in the *Mainichi's* opinion, is not of a character fitted for the management of difficult diplomatic affairs. The truth is that our contemporary is not in the least likely to be satisfied with any official appointment until its own Party comes into power.

THE "CENTURION."

Vice-Admiral Buller, C.B., yesterday entertained at tiffin on board the Flagship their Excellencies the Minister President of State, Count Saigo, Viscount Enomoto, and Marquis Saionji; Vice-Admiral Ito, Messrs. Sannomiya, Lowther, and Kirkwood; Captains Shimamura, Nagasaki, Henderson, and others. Before tiffin the guests were taken over the ship, and the men afterwards went to quarters and handled the big guns as in action. In the afternoon the party proceeded to the *Edgar*, and having inspected the ship, drank tea with Captain Henderson, returning to Tokyo by the 4.15 train.

EDITORIAL NOTES.

JAPANESE EMIGRATION.

MR. NAKAGAWA, Japanese Consul in Hongkong, has submitted a report upon Japanese emigration. It being quite natural, he says, that the number of Japanese who go abroad should increase with the progress of the nation's foreign intercourse, it is of course against reason to interfere with the movement. Still, emigrants that now leave Japan for foreign shores being used to a simple mode of life at home and being quite ignorant of the keen competition prevailing in foreign countries, are mostly under the delusion that if once they emigrate they can obtain high wages without undergoing any particular hardships. Labouring under that idea, they are generally sure to find themselves confronted with difficulties in regard to their subsistence, and even when fortunate enough to find employers they are liable to be subjected to treatment even inferior to that generally accorded to Chinese employes. Last winter for instance, about thirty Japanese arrived in Hongkong with the purpose of going to North Borneo. Their travelling expenses were fraudulently appropriated by their guide, and they were obliged to stay in Hongkong, though it was evident that they could not compete with Chinese as labourers. After some while, several succeeded in getting to Borneo, but soon returned, finding themselves unable to carry on the work expected of them. Sickness broke out among them in Hongkong, and the Consulate was obliged to send more than 20 home. North Borneo was reported upon last year after a careful inspection by the Consul, and he therefore regrets exceedingly that despite the warning contained in that report local offices should so far disregard it as to allow emigrants to leave Japan for that region. Not a few publicists hold that foreign emigration is an important element in extending the prosperity of Japan. These men know nothing about foreign countries, or about the requirements of foreign labour, their knowledge of the subject being derived mainly from newspapers. Consequently, whenever they hear of a new country being opened up, they suffer themselves to be deluded into thinking that it would be well to send Japanese labour thither, while they always expect the venture to turn out highly profitable. Now and then they specially send out an exploring agent. In such a case the new country, needing labour badly, treats the delegate with all possible hospitality and affords him every convenience. His stay in the place is limited, however, and it is not possible for him to conduct sufficient or proper inquiries. Hardships therefore too often await the Japanese emigrant. Especially when the needs of imported labour are urgent, it is not infrequent for such a country to promise unusually favourable conditions, simply to entice emigrants, although the authorities have no real intention of fulfilling these glowing promises. The emigration of Japanese labourers must be conducted with the utmost precaution. Since the project of sending Japanese labourers abroad was conceived, with the single exception of Hawaii, no successful result has reached the ears of the writer of the report. The disastrous failures of the Fijii and New Caledonia settlements are notorious. Queensland is also said to be highly unsatisfactory. These failures must be attributed to carelessness in carrying out preliminary investigations. The writer hears that British New Guinea is desirous of importing labour from Japan, and that a project is on foot to supply the demand. Such an enterprise demands great caution. Some folks may say that the emigrants should be left to do as they choose, and that they should not be regarded in the light of children requiring protection. Should they fail owing to their inability to surmount natural hardships, let them fail, and so afford object lessons to others similarly inclined. The writer can not but regard such an opinion as not quite consistent with reason. Japanese emigrants are generally destitute of patience, are of mild disposition, and are not only unused to endure the hardships

common to a sphere of keen competition, but are even unable to offer opposition when cruelly treated by their employers. The Japanese emigrants now employed in tree-felling in the deep forests of Borneo are as likely as not, after a few years, to degenerate till they are not much superior to the aborigines. The writer is not well acquainted with the circumstances of the work at a certain mine in Siam, but he entertains great fears that the Japanese there will be reduced to a similar condition before long. He can not see that the sending of such people abroad will conduce to the prosperity of the Empire. In short, he is of opinion that except in places where government officials are stationed, or where agents really interested in the welfare of emigrants are in charge of the enterprises, the Government should interfere and forbid emigration from Japan.

THE FORMOSA SUGAR SUPPLY.

THE public are liable, says the *Keizai*, to exaggerate the output of sugar in Formosa, and to think that the island can raise an inexhaustible supply of this food stuff. That is far from being the case, as the *Keizai* learns from a wholesale merchant in Yokohama. Formosa at present supplies only a small portion of the sugar consumed in Japan. According to the Customs returns, the total amount of sugar imported last year was 228½ million catties, representing in value about 13,320,000 yen. Now, the whole export of sugar from Formosa, as given in the Custom returns of Tainan, does not exceed 600,000 piculs. Even if one-half of the amount is sent to Japan it does not exceed 300,000 piculs, or 30 million catties. There being, however, a certain amount of sugar carried over to the mainland of China and not included in the Custom returns, the total sugar crop of the island may, after making all allowances, be put at 1,200,000 piculs, or 120 million catties. That is about half of the entire import into Japan. Thus it will be seen that in the event of the whole yield being sent to Japan, more than one hundred million catties have still to be supplied from abroad. Of the various kinds of sugar consumed in Japan, the principal are (1) refined sugar from Hongkong, (2) Luzon sugar, (3) refined and brown sugar produced in China, and last of all, the sugar of Formosa. Even in the event of Government protection being accorded to the sugar industry of Formosa, such as the abolition of Customs duty, the *Keizai* cannot see that the demand for inferior Formosa sugar will be perceptibly stimulated. On the other hand, the refined sugar of Hongkong grows more and more palatable to the Japanese people, and next in popular favour comes the sugar produced in Luzon. The question is, will it be possible to improve the Formosan sugar, and raise it to the standard of Hongkong or Luzon sugar? It should not be an impossible task; but at the same time it cannot be denied that the undertaking is beset with many difficulties. There are in the Far East two sugar refineries, both of which are situated in Hongkong, and they have agencies in various treaty ports of Japan. The raw material used by these refineries comes from Formosa, Luzon, and other southern islands. It is, therefore, needless to point out that any enterprising Japanese who intends to refine Formosa sugar and to sell it in Japan must be prepared from the outset to encounter strong competition from the two Hongkong refineries. That is one grave difficulty which will have to be met. And it bears a graver aspect when we consider that the sugar of Formosa as compared with that produced in Luzon, Java, and other districts, is far inferior in quality, so that it yields but a comparatively small quantity of refined sugar in proportion to the bulk of raw material treated. To bring Formosa sugar to the level of that refined in Hongkong, the first requisite will be to improve the cultivation of the cane. At first there was no difference in the relative quality of cane grown in Formosa, Luzon, or Java, the variety being the same; but owing to the negligence of sugar cultivators in Formosa the cane gradually deteriorated, till at last it is now greatly inferior to that grown in

other islands. To improve the quality of the cane, either the Japanese emigrants must open new sugar plantations or must plant a superior species in the old plantations. At any rate radical improvement is essential. Under the circumstances, no particular change can be hoped for in the sugar supply of Japan, as a long time must of necessity elapse ere the refined sugar of Hongkong can be replaced by the new-quality Formosa. The Hongkong sugar refineries are flourishing, their dividends being far above those declared by any other company in the Orient. Every half-year dividends of 20 per cent. and over are distributed. In fact, the sugar supply of the Far East is practically controlled by the Hongkong refineries, and the Japanese capitalist who intends to start sugar refining with a view to supersede them, will find the enterprise fraught with innumerable difficulties. These comments of the *Keizai Zasshi* will be read with interest in Hongkong. We may note, however, that the statement with regard to the dividends paid by the Hongkong refineries is greatly exaggerated.

THE EXPLOSION AT KELUNG.

SERGEANT NAKAMURA, of the First Regiment of the Imperial Body-guards, who was one of the sufferers by the explosion at Kelung, lately returned to undergo treatment at the Hiroshima Reserve Military Hospital. He states that the explosion took place on the premises of a big temple situated in the southern part of Kelung. After the fighting had finished on the 4th instant, the streets were strewn with dead bodies of Chinese, and the 6th Company of the 18th Regiment, were ordered to clear away the corpses from the temple. This done, the 6th Company was quartered in the temple and placed in charge of several thousand cases of powder that had fallen into the hands of the Japanese as spoils of war. At about 11 a.m., the following day, the main body of the 1st Regiment were quartered a short distance away from the temple, and Sergeant Nakamura, together with 5 soldiers, about 100 coolies, and some 30 natives, were ordered to convey the powder to a safer place. The Sergeant reported to Lieutenant Tanaka, and then proceeded to execute his orders. At the same time the Lieutenant and others approached the spot where the cases were piled-up, when an explosion took place. Volumes of smoke poured forth from the powder-store, darkening the heavens. When it had cleared away a little, it was found that the Lieutenant, a sergeant, and several soldiers, 27 in all, had been killed outright, while over 120 non-commissioned officers, soldiers, coolies, and natives were more or less seriously injured. As soon as the alarm reached the Regiment, Captain Hirata, hastened to the temple and made various inquiries as to the cause of the explosion. At last two Chinese were discovered under the temple, and these were seized at once. A hasty cross-examination of the men revealed the fact that the explosion had been caused by them. They both carried boring tools, and coils of fuse used in mining. The suspects were conveyed to the head-quarters of the Regiment, but sentence had not been delivered when Sergeant Nakamura left the island.

THE TAKASHIMA COLLIERY.

THE present condition and future prospect of the Takashima colliery are discussed in the Nagasaki vernacular paper. The coal-mining operations of the Mitsubishi Firm, carried on in the vicinity of Nagasaki, are very closely connected with the prosperity of the town. It is for the purpose of coaling that mail steamers of England, France, and the United States of America specially call at the port, even though they have no passengers or cargo for Nagasaki. In the event of a failure in the coal supply, the result, so far as Nagasaki is concerned, would be deplorable, for with the diminution of shipping the prosperity of the town would decline. It is to be greatly feared that the town has cause for anxiety in regard to the supply of coal in its near neighbourhood. The Takashima mine, which once enjoyed the reputation of being the largest in Japan, and was one of the principal sources of income for the Mitsubishi Firm, be-

sides being regarded as an important national resource, has begun to show signs of being worked-out. But the other colliery, at Hajima, has not been worked very long and promises a hopeful future. In fact, compared with the yield of the year before last, the increased out-put for 1895 is more than 100 tons per day, the total extraction being about 300 tons per diem. But the yield from the two collieries is now only between 150,000 to 200,000 tons a year, and is gradually growing less. The Mitsubishi Company are already taking steps to open up a new coal-field, and trial mining has been commenced on the Island of Yokohama. Up to the present the results have proved satisfactory, and the firm is making arrangements for increasing the output of the mine. It is matter for regret, however, that this mine is situated on a very small islet, the area not being half that of Hajima, and the preparatory works are beset with many difficulties. No definite estimate can therefore be formed as to the production to be anticipated from this new colliery. It is greatly to be hoped that the mine will prove productive, for owing to its convenient situation, close to the harbour, it will enjoy great facilities of transportation, and should become in every respect a profitable venture.

KYORITSU JO GAKKO.

THE graduation exercises for 1895 of the Kyoritsu Jo-gakko, No. 212, Bluff, Yokohama, took place on Monday evening, and proved a great success. The room arranged for the occasion was neatly decorated with flowers and bamboos, and many drawings of the lady pupils. No small improvement is to be noticed in the drawing department, and an equal advance has been made in knitting and sewing, some handsome specimens of which were on exhibition in another room. The proceedings commenced at 8 o'clock, when the large room was filled to overflowing with guests, including both foreigners and Japanese. The exercises passed off most successfully, each and all meriting the hearty applause bestowed by the audience. The Programme was as follows:—Two Pianos, Eight Hands, "Invitation à la valse," Weber, Miss Eleanor Bewick, Miss Mary Bewick, Miss Eugenie Gordon, and Miss Tama Oyama; Salutatory, Miss Tai Miyata, Anthem, "I will lift up mine Eyes," Martin, Senior Division; Recitation, "The Creeds of the Bells," Miss Eugenie Gordon; Piano and Organ Duet, "Gavotte," Jungmann, Miss Eleanor Bewick and Miss Yasu Totsuka; Essay, "Joshi-Kyoiku," Miss Toshi Hayashi; Vocal Solo, "One Morning, O so Early," Scott Gatty, Miss Eugenie Gordon; Recitation, "Abraham," Miss Sono Soma; Piano Solo, "Album Leaf," Kirchner, Miss Tama Oyama; Essay, "Sobetsu," Miss Mitsuru Yonekura; Piano and Organ Duet, "Rigoletto," Verdi, Miss Eugenie Gordon and Miss Shobi Yamada; Recitation, "Nothing to Wear," Miss Eleanor Bewick; Trio, "April Showers," Hatton, Senior Division; Piano Solo, Airs from "Traviata," Verdi, Miss Nobu Yoshida; Valedictory, Miss Yasu Totsuka; Trio, "Hosanna," Martin, Senior Division. The certificates were presented by Miss Irving, Chief Instructor of the institution. Four young ladies presented themselves for graduation honours. They were:—Miss Yasu Totsuka, Miss Sono Soma, Miss Tai Miyata, and Miss Toshi Hayashi.

COUNT QUADT.

WE learn that Count A. Quadt, Secretary of the Imperial German Legation, who left this country on leave at the end of February, will not return to Japan, having been appointed to the Embassy in Constantinople. Count Quadt was a general favourite in Tokyo, and it had been hoped that his stay there would have been prolonged until 1898, as the original programme was that he should remain to act in the capacity of *Chargé d'Affaires* during the absence of Baron von Gutschmid, who contemplated a trip to Europe on leave in 1897. Count Quadt arrived in Tokyo at the end of October, 1893, so that his service there extended to 16 months only.

Count Quadt's engagement to Miss Martino, daughter of the Chevalier de Martino, for many years Italian Representative in Japan, is also

announced. There had been some talk of this happy event before the Count left Tokyo, but the difficulties lying in the way rendered the result questionable. It would be necessary, in the first place, to set aside the rule of the German diplomatic service forbidding marriage with a lady of a different nationality; and in the second place, there were serious complications to be overcome in connection with the fact that Count Quadt represents one of the Mediatized Families, whose marriage affairs are controlled by certain hard-and-fast laws. However, the Kaiser is powerful enough to act as *deus ex* in almost any German question, and we presume that Count Quadt could command influence to overcome all obstacles. Japan sends many wishes for the happiness of the young couple.

CUSTOMS RETURNS.

THE following is a summary of the Customs Returns for May, showing the foreign trade of the empire for the month:—

	1894. SILVER YEN.	1895. SILVER YEN.
Exports	9,204,056.140	9,840,349.470
Imports	10,323,789.830	11,021,372.740

Total exports and imports	20,861,722.210
Excess of imports	1,181,023.270

	CUSTOMS DUTIES
Exports	158,972.852
Imports	355,861.259
Miscellaneous	13,977.736

Total..... 528,811.847

TOTAL VALUE OF EXPORTS TO AND IMPORTS FROM VARIOUS FOREIGN COUNTRIES.

	Exports. Silver Yen.	Imports. Silver Yen.	Total. Silver Yen.
China	730,717.780	1,807,133.350	2,537,851.130
Hongkong	1,450,000.750	331,095.270	1,781,096.020
British India	367,846.240	1,383,607.030	1,751,453.270
Korea	320,750.750	214,145.770	534,896.520

THE PIONEER SPINNING FACTORY IN JAPAN.

SATSUMA, writes the *Chuo*, was the place where the cotton-spinning industry was first established in Japan, and there was set up an Arkwright's spinning-jenny. Prince Shimazu Narihisa, the father of the present head of this illustrious family, was one of the most highly gifted men of his time. While other feudal lords were occupied in petty domestic squabbles and regarded foreign manufactures with lofty contempt, Prince

Shimazu discerned the true value of Western things and spared no cost or pains to introduce them in his fief of Satsuma. In 1850, he established a scientific laboratory in his grounds and encouraged investigations in Western medical and chemical sciences. The Prince personally acted as overseer of this institution, and telegraphy, photography, glass-making, the manufacture of gas for illuminating purposes, and others scientific arts were investigated there. Three years later, another work-shop was started near his summer villa in Iso. The new institution was half arsenal, half iron-foundry. Personally conducted experiments in Western sciences and arts having more and more convinced him of the great benefits accruing from the practical application of Western science, the Prince constantly sent one or other of his retainers to Nagasaki to purchase any interesting imported article, regardless of price. On one occasion a merchant of Nagasaki informed a retainer charged with the duty of purchasing foreign articles, of the arrival of some new volumes on natural philosophy and chemistry. Deterred by the price asked, he inquired of the Prince whether the volumes should be purchased. The Prince ordered him to buy them, and at the same time observed that physics and chemistry being the foundation of economics, every new book bearing on those topics should be bought without delay, no matter what their cost might be. The volumes were duly obtained, translated into Japanese, and studied by the Prince and his schoolmen. Such were the painstaking habits of the Prince, who endeavoured to introduce all the western sciences and arts which had any practical utility into his dominions. There stands at this day in a suburb of Kagoshima called Niriiso, a spinning factory where 3,030 spindles are in operation, and which is conducted on a capital of 30,000 yen. This factory was the first of its kind in Japan, and was established more than 40 years ago by Prince Shimazu Narihisa, when the public at large were entirely ignorant of the existence of a spinning machine and spinning was exclusively carried on according to the old methods. The machines introduced by the Prince were throstles and mules, made by Platt and Brothers, and the factory was built entirely of stone, an Englishman being engaged as principal in the factory. A house was specially built for the accommodation of the foreign teacher, and this house now forms a portion of the buildings of the present Higher Middle School at Kagoshima. As the enterprise was not started with any thought of profit-making, but from the far-reaching idea of propagating the art of spinning among the people, everything was conducted and installed on an elaborate and expensive scale. This disregard of cost and labour made itself manifest in the production of yarns of superior quality, and from these yarns the well-known cotton fabric of Kagoshima, *Satsuma kasuri*, was made. Subsequently the factory passed into the hands of a citizen of Kagoshima, from whom the present head of the Satsuma family bought it back. Prince Narihisa once engaged several coal miners from Chikuzen to see if coal could be found in his territories. Their prospecting proving fruitless, Prince Shimadzu next conceived the idea of utilizing water-power for the purpose of working the machines. With this end in view he determined to conduct water to Kagoshima from a distance of some 10 miles, and actually started the great work, but death intervened and the project was abandoned.

"GANJU-YAKI."

AN interesting story is told by the *Osaka Mainichi* of Mr. Higuchi Haruzane, a *shizoku* of Saga Ken, who succeeded, after years of patient effort, in making the new porcelain which he calls *ganju-yaki* (jewelled-ware), that is to say, the "grains of rice pattern" of Chinese kilns. In the old fief of Nabeshima, *samurai* were specially permitted to engage in porcelain manufacture, and the family of Mr. Higuchi were hereditary porcelain-makers. Since the Restoration, Mr. Higuchi has devoted his whole energy to the making of porcelain. On one occasion, with a view to extending the export of Japanese porcelains, he went to China, where

he conceived the idea of making a new kind of ware. One day he observed a flaw on the surface of a small piece of earthenware—the flaw rudely represented a cherry blossom, and was quite transparent. This accidental discovery served as a suggestive hint, and Mr. Higuchi from that day endeavoured to discover the art of turning out porcelain upon which the forms of flowers, birds, and other things should stand out transparently. In the year 1882, he finally decided to carry into effect the idea furnished by the accidental flaw, and after seven years of repeated trials and failures found that his indefatigable labours had almost exhausted his resources. But he did not lose hope, and his long cherished desire began to bear fruit in the spring of 1886. He at once applied for patent rights, which were granted in December of next year. In the March following, by a still further improvement upon the new process, he succeeded in turning out several cups (*mizu-nomi*) decorated with transparent chrysanthemums. The cups were presented to the Imperial Household, which not only accepted them, but even appointed the potter one of its regular protégés. Higuchi was ordered to make some flower-vases bearing the Imperial *kiri* badge. Three years were occupied in completing the task assigned him by the Imperial Household, and it was only after he had baked fourteen batches of specimens, and had been driven to the verge of privation, that he succeeded in turning out pieces to his own satisfaction. In April, 1890, when His Majesty visited Sasebo, Higuchi carried a pair of the vases to the Emperor, and had the satisfaction of having them received. In June of the same year, another pair of the same kind of vases was presented to and accepted by the Empress. Soon after, the Imperial Household gave Higuchi an order to make a pair of vases bearing transparent decoration of phoenixes and clouds. Another three years were spent in completing this task, and the vases were sent up to Tokyo in June, 1893. In consequence of intense application and unsparing exertions, extending over a period of about 13 years, Higuchi lost his most trusted artist, Matsuoka; and three of his other assistants became enfeebled by brain disease. He enjoyed a competence at first, but his exertions towards developing the new ceramic process reduced him to penury. His relatives and friends earnestly exhorted him to give up the unprofitable work and to turn his attention to more remunerative undertakings. He thanked them for their kindness, but did not follow their advice. At times, when he reflected upon the misery he had brought on his family and upon the dreary prospect before him, his resolution almost failed him. In 1893, when he heard of the contemplated holding of an international exhibition in America—the World's Fair—he thought that he must not lose the opportunity of displaying some specimens of his hardly evolved invention. He determined to exhibit some pieces of the new ware, and to obtain funds for the purpose he disposed of his furniture. Still he had not raised the necessary amount. At last, he forwarded a petition to the Authorities and applied for Government assistance. The Government deemed his application proper, and readily gave consent. Mr. Higashijima, of Saga, reputed for his liberal munificence, was struck with admiration at the earnestness of Higuchi, and volunteered to help him. The *Noshomusho* also gave orders to the inventor to manufacture for the Department certain specimens of the new ware. Encouraged by such unexpected facilities, Mr. Higuchi set to work upon the specimens for the World's Fair, and they were completed in due time, and sent to Chicago. The exhibitor awaited with impatience the judgment of the inspecting committee. At last it came, and was to this effect: "The make and design of the small pieces of porcelain decorated with transparent figures of flowers and birds on a pure white ground, exhibited by Higuchi Haruzane, Saga, Japan, are very chaste and graceful." Mr. Higuchi was delighted to receive the news of the appreciative remarks of the Committee of the Exposition, and said that it comforted him

to a certain extent for the painful years through which he had passed; still, thought he, the ultimate umpire is the public, and unless my wares enjoy the appreciation of the public I cannot rest satisfied; for the influence of an exhibition committee, of whatever description, is necessarily narrow and must after all be regarded as differing but little from mere table talk. At any rate, I owe not a little to my assistants who are now in the grave for the distinction enjoyed by me upon the world's stage, and I ought to inform their spirits of the success their efforts have attained. Higuchi then visited the graves of his dead assistants and read in a loud voice a translation of the certificate of the Exposition. His exhibits fared far better at the hands of the public than might have been expected, and although many other exhibits obtained higher marks of the Judges' appreciation than did those of Mr. Higuchi, only one or two of the latter's articles failed to find purchasers. At the Winter Exhibition subsequently held at San Francisco, Mr. Higuchi's exhibits were even better appreciated, and they won for him a gold medal and a certificate of merit. His wares are attracting more and more attention now and he receives orders both from foreigners and Japanese. Mr. Higuchi's exhibits in the 4th Domestic Exhibition at Kyoto, attract a considerable amount of attention from the visitors; and a flower vase (150 *yen*), coffee cups (36 *yen*), and two water cups (10 *yen*) were purchased by the Empress. His efforts are thus bearing fruit after many years.

RAILWAY FREIGHTS.

At the general meeting of Japanese Chambers of Commerce, held the year before last at Kobe, the Chamber of Commerce of that place suggested the advisability of taking steps to obtain a reduction in the freights of Government railways. No definite decision was arrived at on that occasion, but it was resolved to leave the matter to be deliberated upon by the Tokyo Chamber of Commerce. In pursuance of that resolution the Chamber subsequently appointed a special committee and entrusted it with power to carry out the necessary investigations. These investigations have at last been completed, and the Committee, which was presided over by Mr. Shoda Heigoro, decided to reject the suggestion, chiefly on the ground that the reduction of freights would be likely to interfere with the proper development of railway enterprise. Instead of applying for a reduction in freights, the Committee decided to submit a representation addressed to the Ministers of State for Agriculture and Commerce, and for Communications, praying them to extend the Government railways as far as possible. The Committee arrived at this conclusion after long and mature consideration. They found that they could not endorse the views entertained by the introducers of the suggestion, and could not hold that freight rates on Government railways were so high as to interfere with commercial development. As a proof of this contention, the committee referred to the present condition of the Tokaido railway, which has already drawn to it the major portion of the passenger traffic between Tokyo and Kobe and Yokkaichi. The railway has even commenced to encroach upon the field once held by steamers in the transportation of goods between those places. It is true the regular freight rates charged by the Railway Bureau may appear rather high, but there is a special arrangement for the exclusive hire of cars by which rates can be considerably reduced. Thus, while the regular charge for goods between Tokyo and Kobe is 5.375 *yen* per ton per 100 miles, the actual charge in virtue of special arrangements for rice and 24 other staple commodities is only 1.524 *yen*. To contrast, as the introducers of the suggestion did, the freight charged for exclusive hire of goods-cars and that for ordinary goods carriage between Kobe and Bamba (Otsu), with the rates on the Sanyo Railway, is not just, the conditions between the two lines being widely different. Traffic on the Tokaido line has lately become unusually brisk, so brisk that it is difficult to meet the

demand for transportation. Hence reduction of freights might aggravate this insufficiency, and eventually impede seriously the development of trade. In short, what merchants are mostly dissatisfied with in regard to the Government railways is not so much the rates of freight, as insufficiency of rolling-stock to carry the goods demanding instant transportation. The present arrangement for the exclusive hire of freight cars was established for the purpose of allowing a certain latitude in the rigid rules governing the handling of freight, but the necessity of such a system will pass away upon the establishment of a more convenient set of rules. Moreover, there being no fixed arrangement about receiving goods direct from owners, only transport agents derive benefit from it. What the Tokyo Chamber of Commerce desires to see is the abolition of the present system of reducing freight through the exclusive hire of freight cars, and its replacement by a system for receiving goods direct from owners at various stations along the line, so as to enable the public at large to fairly enjoy the benefit of cheap transportation. Freights should not be too rigidly fixed, as they are at present, but certain latitude should be allowed in virtue of which owners of goods might be charged reduced rates within certain bounds in certain special cases. The dislocation of the goods traffic has now reached a very grave point. For instance, in consigning goods from Tokyo to Osaka or *vice versa*—a distance of about 350 miles—one week is not infrequently required. Such a defective mode of transportation between the two greatest marts of the country cannot but seriously effect business. Under the circumstances, the Government should take prompt steps to obtain the necessary funds to enable it to double the present Tokaido line, at the same time increasing the rolling-stock upon it. According to the annual statistics for the 26th year of *Meiji*, the profit accruing from the Government railways averages 9.5 per cent., whereas the average profit on private railways amounts to only 6.1 per cent. a year. In other words, the former enjoy a profit of more than 50 per cent. above the latter. Profits being so large, even at present, when the facilities of transportation afforded by Government railways are far from satisfactory, it is plain that they would increase considerably were the means of transportation more perfectly arranged. The reduction of freights, as suggested by the Kobe Chamber of Commerce, would interfere with the expansion of the Government railways by reducing their income, and hence the Tokyo Chamber of Commerce decided not to endorse the proposition.

ENTERTAINMENTS.

THE Concert given on Wednesday evening in the Seamen's Free Reading Room was a pronounced success. Long before the time fixed for commencing, the place was packed and every item on an exceptionally good programme was loudly applauded. Miss Leach sang Cowen's "Children's Home," and in company with Mrs. Irwine, "The Angel" (Rubenstein), greatly to the delight of the audience. The Misses Page gave two violin selections, "Caliph of Bagdad," and "Two Studies," by Franz Wohlfahrt, and had to response to an encore. Mrs. Irwine sang Millard's lovely song, "Waiting," and in company with Mr. Walford, Schubert's "Serenade." Miss Thomas gave a nice rendering of Frederick Cliff's "When;" Mr. Sharp recited "Kissing Cup's Race," in his inimitable style; Mr. Brackenbury sang "Three Merry Men," and another very amusing ballad; and Mr. Oxford gave two songs. During the evening selections were given by a string band from H.M.S. Fleet.

On Wednesday afternoon the *Undaunted's* Ebony Minstrels entertained a large company of Yokohama's little ones at the Public Hall. The entertainment was hugely appreciated.

WANTON ASSAULT.

On Wednesday evening, shortly after 6 o'clock, one of those mob-risings, whose origin lies in a trivial dispute, took place at the French *hatoba*.

Three English marines had come down to the landing steps preparatory to returning to their ship, when a slight dispute arose about fares. In a moment all the *sendoes* lounging about the place had congregated and joined in. Soon oars were being flourished and nasty looking sticks began to appear among the Japanese. The marines were surrounded and soon one of them was knocked down, by a terrific blow across the head and face, the force of which caused blood to flow freely. Some foreigners on the Boat-house verandah, seeing affairs assuming this desperate aspect, then ran round, and by their exertions cleared up matters. All this time the police at the *hatoba* entrance had remained passive, with their heads turned another way. One of the wounded men endeavoured to lay a complaint with the *hatoba* police, but he was unheeded. A complaint has since been laid at the Settlement Police Station

SILK IN THE UNITED STATES.

FOLLOWING are the Imports of Raw Silk at New York and the Pacific coast ports for May, 1895 :

	BALES.	LS.	VALUE.
New York.....	1,410.....	300,566...	\$1,058,011
San Francisco	1,732.....	220,260.....	715,476

3,142.....520,826.....1,773,487

Imports of Waste, Noils, and Cocoons in same period were :—

New York.....	205.....	66,800.....	19,098
San Francisco	25.....	10,800.....	5,348

230.....76,100.....24,446

Imports of Japanese Piece Goods and Handkerchiefs were from January 1st to April 25th, 1895 :—Silk Piece Goods, 218,046 pcs. Silk Handkerchiefs, 150,146 doz.

IMPERIAL AUDIENCE.

The Commander-in-Chief of the British Squadron in the East, the Captains of the *Centurion*, *Edgar*, *Undaunted*, and *Leander*, accompanied by the British *Chargé d'Affaires*; the Commander-in-Chief of the French Squadron in the Far East, the Captain of the *Bayard*, and their staffs, accompanied by the French Minister; and the Commander-in-Chief of the U.S. Squadron on the Asiatic Station, and his staff, accompanied by the U.S. Minister, proceeded to the Palace on the 2nd inst., and were received in audience by the Emperor.

PIGEONS ON WAR SERVICE.

At this year's French grand naval manoeuvres in the Mediterranean, the 500 homing pigeons installed last year in the military dovecotes of Missiessy, at Toulon, will take part. These pigeons have already done service by conveying reports on observations made from the car of a captive balloon attached to a torpedo-boat in the open sea to the Naval Prefecture on shore. Preparatory to their use in the manoeuvres, the pigeons will be trained by being taken out to sea once a week from now, and released at gradually increasing distances.—*L'Écho de l'Armée*.

THE BELGIAN REPRESENTATIVE.

We are glad to be able to state that M. le Baron d'Anethan has sufficiently recovered from his illness to be able to proceed to Miyanoishi, for which place he has set out by order of his medical advisers. Monsieur le Baron asks us to say that he regrets to be unable to acknowledge, until his return, the many kind visits and inquiries that he has received from his friends and acquaintances of Tokyo and Yokohama.

DEATH OF MR. HANS KOCH OF KOBE.

The *Kobe Chronicle* records the death of Mr. Hans Koch, of Messrs. Faber and Voigt's. Mr. Koch, who has been a resident of Kobe for less than two years, appears never to have been in the enjoyment of robust health, but it was not until Saturday last that serious symptoms connected with the brain developed themselves, after which he rapidly sank, passing away quietly at 6 p.m. on Monday.

SUDDEN DEATH OF A CHINAMAN.

The *Asahi Shimbun* says that a Chinaman, named Kun Kei-ki, of Tsukiji, Tokyo, who es-

caped to Yokohama immediately after the police had discovered that he had sold opium, was arrested on the 28th ult. but while being conveyed to the Tokyo Local Court was suddenly taken ill, and expired at the Takanawa Police Office, Shiba, Tokyo, on the 29th, at 7 p.m.

CHEAP MERCENARIES.

The *Chinese Mail* (*Wah Ts Yat Po*) says that the authorities at Canton are now paying off the soldiers returning from Formosa and the Pescadores at the rate of a dollar per head.

EXTREMES.

HONGKONG is suffering from drought: Yokohama is suffering from too much rain.

IMPERIAL ORDINANCE.

By the Imperial Ordinance No. 92, promulgated on the 29th ult., provisions are enacted relating to the establishment of Extraordinary Military Tribunals, having jurisdiction over territories occupied by military forces in time of war or after its conclusion. These Tribunals are to be constituted in the same manner, and invested with the same authority as ordinary Military Tribunals established in localities in a state of siege. Civilians, as a rule, will be tried in accordance with the common laws, but a number of exceptional cases are specified in which civilians must be dealt with under the provisions of the Military Criminal Law. These exceptional cases may be classed as acts calculated to assist the enemy.

It has been reported by some papers that the present Ordinance is meant for Formosa, but the *Nichi Nichi Shimbun* is informed on good authority, that the Tribunals in question will be established in the Liaotung peninsula and at Weihaiwei. It need scarcely be added that the Ordinance has to be submitted for the *post facto* approbation of the Diet in its next session.

THE ECONOMIC CONDITION OF JAPAN.

Mr. Yamamoto Tatsuo, a Manager of the Nippon Ginko (Bank of Japan), delivered an interesting lecture at a meeting of the managers of the metropolitan branches of the Provincial Banks on the 27th ultimo. The lecturer's direct object was to define the financial policy of his bank, but in so doing he threw some light upon the general economic condition of the country. Contrary to the general expectation that the restoration of peace would be immediately followed by great trade prosperity, men are complaining, said the lecturer, of bad times and general business depression. He thought, however, that the present depression was but temporary, being in a great measure due to national disappointment at the return of Liaotung, and to uneasiness caused by the state of affairs in Korea. He then went on to explain the economic causes that have led to the present tightness of money. Shortly after the commencement of the war last year, a small class of financiers advocated the importation of foreign capital to avoid any disturbance of the national economy. But the country being able to rely upon its own resources, domestic loans of 30 million and 50 million yen were successfully floated at different times. Still the withdrawal of 80,000,000 yen from circulation could not fail to produce sensible effects upon the condition of the business world. Scarcely had the last instalment of the War Loan been paid, when, the silk season having commenced, large applications for advances were made by sericulturists and silk merchants. This demand for money was accentuated by another cause, namely, the desire of small traders to replenish their stock of goods in anticipation of a revival of business activity. These causes operating together had produced the present extreme tightness of the money market. Now the question for the bankers to consider seriously was whether they should loosen their purse-strings and meet the pressing call for accommodation. Mr. Yamamoto did not hesitate to reply in the

affirmative, inasmuch as the tightness of the money market had resulted not from any commercial or industrial crises, but from the conversion of floating capital into a War Loan, and from advances to sericulturists and other merchants. The capital diverted into those channels was sure to flow back sooner or later without the slightest risk of loss. Under these circumstances, Mr. Yamamoto thought it necessary that the bankers should meet the demand for accommodation. Especially important did a liberal policy seem at a juncture like the present when the country was just beginning to extend and develop its trade with foreign lands. The demand for money would have to be met by an issue of taxable convertible notes by the Bank of Japan. A possible objection that to increase the paper currency might tend to encourage speculative undertakings, was refuted by the lecturer, who adduced statistics in support of his view. By comparing the volume of paper currency at the end of June, 1894 and 1895, as tabulated below, it was shown that an increase of 20,000,000 yen had taken place :—

	1894. Yen.	1895. Yen.
Paper currency	139,000,000.....	159,000,000

A large proportion of the above increase was in circulation in Korea and in the occupied Chinese territories, and a portion remained in the hands of the army and the military coolies. That such was the case appeared from the following figures, showing the state of deposits in the Postal Savings Bureau and the metropolitan banks in the month of May, 1894 and 1895 :—

	Postal Savings Bureau. Yen.	Metropolitan Banks. Yen.	Total. Yen.
May, 1894	25,100,000.....	37,560,000.....	62,660,000
May, 1895	24,500,000.....	40,000,000.....	65,400,000

From this table it will be seen that the increase in deposits was only 2,800,000 yen, a sum altogether out of proportion to the nominally augmented volume of paper money in circulation. A steady rise of prices was sometimes quoted as evidence of an increased volume of circulating money. But Mr. Yamamoto ascribed it to the depreciation of silver in terms of gold. To the question whether or not the Bank of Japan had a sufficient amount of specie reserves for the purpose of issuing taxable convertible notes, the lecturer replied in the affirmative. The amount of the convertible notes already issued, and that of the specie reserve, were as follow :—

	Yen.
Convertibles Notes	135,610,000
Specie Reserve.....	65,000,000

Mr. Yamamoto thought that the Nippon Ginko could safely issue 20 or 30 millions yen of convertible notes in addition to those already in circulation, especially as there was a prospect of an influx of specie amounting to some 60,000,000 yen in value, from China in October next. Under these circumstances, he asked his fellow bankers to adopt the policy of making advances to suitable applicants, and he entertained no doubt that the result would be most beneficial to the development of trade and industry. He proceeded to allude to the economic condition of Germany after her victorious war of 1870-1871. A sudden and indiscriminate increase in the volume of circulating media by the redemption of domestic loans, had proved disastrous in her case. But no such undesirable result would follow the incoming of specie from China, since not only was the indemnity to be paid in small yearly instalments, but also it would be used, not for the redemption of the War Loan, but for various military and naval purposes. A time might come when it would be necessary for the banks to tighten the strings of their purses, but the present state of the national economy required exactly the opposite policy. The Nippon Ginko had just established branches at Sapporo and Hakodate for the purpose of meeting the demand for accommodation in the north. In conclusion, Mr. Yamamoto asked his hearers to use their judgment and discretion in promoting the distribution of money from the centre to the respective localities, for the success of the new policy inaugurated by the Nippon Ginko depended largely upon the manner in which the practical work of distribution was carried out.

CURRENT TOPICS.

Concerning Count Matsukata's decision to remain in the Cabinet, various rumours are circulated. They seem scarcely worthy of notice, being evidently fabrications of politicians disappointed at the step taken by the Minister of Finance. One story, however, may be referred to, namely, that, among the conditions on which he has consented to remain in office, is included the opening of an extraordinary session of the Diet. Those that circulate this report seem to take it for granted that the Cabinet has decided to convene an extraordinary session. Of course the Ministers of State have never declared that such a step will not be taken, but it was originally reported on good authority that time being required to elaborate the Naval and Military Bills demanded by the exigencies of the era, it would be impossible to assemble the Diet at an early date. Whether it has since been found possible to push the drafting of these Bills sufficiently for such a purpose we can not say.

Viscount Torio's appointment as a Privy Councillor causes some surprise. He has always been regarded as a free lance in the House of Peers, by no means well affected toward the present Cabinet. He is an interesting figure in that House, though eccentric and inconsistent at times. One of the most eloquent and ready speakers, he is always listened to with respect and pleasure by members of all parties and factions. On several occasions he has been the chief hope of the Opposition politicians, who are very anxious to obtain friends in the Upper House. Hence his retirement from a parliamentary career—for Privy Councillors are not permitted to sit in either House—has caused some surprise and considerable disappointment. Apparently by way of revenge, the Opposition say that his entrance into the Privy Council may be regarded as his political demise.

The projectors of the recently dissolved anti-Cabinet agitation have been arraigned before the District Court of Shiba on a charge of violating the Law of Public Meetings and Political Associations. According to that law, notice of the formation of a political association must be given to the police authorities within a specified period of time. The projectors of the movement in question held repeated conferences, adopted resolutions, issued manifestoes, and in various other respects acted exactly like an organized political body. But they did not give the required notice to the police. Their defence is that they did not organize any political association, and consequently did not come under the scope of the Law in question. The public procurators think otherwise, and have instituted proceedings against these politicians. The case is fixed for to-day (29th). Concerning the point at issue, namely, whether or no the recent agitation included essentials of a political association, much may be said on both sides, and the case has excited considerable interest not only in political, but also in legal circles.

With regard to the failure of the above mentioned agitation—for there is no doubt that it has been a failure—the *Kokumin Shimbun* offers two explanations. First, that the projectors neglected to make it clear that the object of the coalition was not primarily destructive, but essentially constructive; and secondly, that they also did not take sufficient pains to remove the misconception that the whole of the Cabinet was to be held responsible for the return of Liaotung, whereas the true object of the agitation was to demand the resignation of only a section of the Ministers. Had the latter fact been made known from the outset in an unmistakable manner, our contemporary believes that the movement would have been cordially welcomed by many who stood indifferent. The *Kokumin* ought to recognize the absurdity of holding only one or two Ministers responsible for a measure of such grave importance as the return of the Liaotung Peninsula.

Of the projectors of the anti-Cabinet agitation, those that do not belong to any of the existing

parties have decided to organize a new association under the name of *Doshi-kai* (Association of Men of Similar Views). The programme is very simple, namely, the elevation of the nation's prestige. The principal members of the new party are Messrs. Suyehiro Shigeyasu, Shiga Shigetaka, Suzuki Manjiro, and Mori Hajimu. Such seems to be the sole result of a movement that was to unite the whole Opposition parties under a single banner. It is surely a curious phenomenon that an agitation for party amalgamation has ended in adding a new party to those already existing.

Count Yamagata, who is recruiting his health at Oiso, is reported to be hale and busy. The *Chuo Shimbun* tells us that he is arranging his journal of pre-Restoration days for publication. It will no doubt be an interesting work.

The development of the resources of Hokkaido is attracting much attention. The number of emigrants is yearly increasing. Thus, while the population at the end of 1893 was 510,000, it became 600,000 by the end of last year. The increase is still more remarkable this year. It is expected by the authorities that the population of the island will soon reach a million. Mr. Kitagaki, Chief of the Hokkaido Administration Board, is reported to have submitted to the Minister of Home Affairs a scheme for further developing the resources of the island and enlarging the scope of the Board. The paper is now undergoing examination in the Home Office.

With characteristic tenacity, the *Fiji Shimpō* returns again and again to discuss the question of an alliance between Japan and England. In its latest article on this subject, it calls attention to a circumstance that has been noticed in these columns more than once, namely, that the action of Russia, Germany, and France with respect to the Liaotung peninsula has had a salutary effect upon the attitude of the Japanese toward foreigners in general. Whether the proposed Anglo-Japanese alliance, now very popular with the Japanese, will or will not lead to any practical result, is more than our contemporary can predict. But it is glad that one beneficial result has followed from the discussion of the question of foreign alliances. The changed aspect of the country's foreign relations has entirely swept away whatever anti-foreign sentiments may have lingered in the recesses of conservative minds. Our contemporary is also convinced that the relations between the Japanese and foreign residents will hereafter become frank and cordial. The latest statistics about the foreigners in Japan are as follow:—Englishmen, 1,780; Americans, 940; Germans, 490; and Frenchmen, 390. As to the Russians, their total number does not much exceed 100. Apart from diplomatic reasons, the present growth of friendly feeling between England and Japan is hailed with genuine joy by our contemporary, seeing that the English constitute the great majority of the foreign residents, whereas the Russians are so few that their presence need not be taken into account.

Some folks advocate the removal of the capital to Osaka, or still farther west to suit the requirements of the south-westerly expansion of the Empire. The *Keizai Zasshi* is opposed to this project. It is aware that, had the capital been nearer to the continent of Asia, it would have attained a far greater degree of commercial prosperity. But the removal would involve an expenditure of money so vast as to more than counterbalance the benefits expected from the measure. Moreover, the *Keizai* think that Tokyo is better situated than any port in the south-western part of the empire from a military point of view; for there are few places in Tokyo's vicinity where a foreign enemy could effect a landing, while such facilities are more numerous west of Osaka. Instead of removing the capital, the *Keizai* thinks it a better policy to remedy the causes that make Tokyo an inconvenient centre of politics and commerce. The first step in that direction is the construction of a harbour in Tokyo. Were that done, it would be possible, among other things, to ship troops, provisions, and ammunition directly from the capital, in-

stead of collecting them at Ujina. Secondly, the central railway line—connecting Tokyo with Nagoya through Kofu and the Southern part of Shinano—should be completed as speedily as possible. Thirdly and lastly, the freight and passenger rates over the Government lines should be reduced by 50 per cent. Most of the money spent by the Government in connection with the recent war has gone into the pockets of business men in Osaka and west of it, and very few benefits have been obtained by the citizens of Tokyo. One of the causes of this is to be sought in the fact that the costliness of travelling between Tokyo and Osaka prevented smaller merchants from going to the capital to get what they wanted.

The appointment of Viscount Torio to the Privy Council has led to a rumour that several others members of the Upper House will receive official appointments. It is reported, for instance, that Viscount Tani will be appointed Minister of the Imperial Household, that Prince Konoye, will be accredited to a European Court, and that Viscount Soga will become President of the Nobles College.

Various attempts are made to impart an appearance of undiminished vitality to the anti-Cabinet agitation that has been so vigorously suppressed by the Authorities. All efforts to hold political meetings having been resolutely prevented by the police, the projectors of the agitation now advocate the holding of a grand social reunion of men entertaining the same political views. Moreover, a number of Members of the House of Representatives, who are in sympathy with the anti-Government movement, met on the 4th instant in the Maple Club, Shiba, Tokyo, to discuss various important questions relating to the policy to be pursued in the coming session of the Diet. Another scheme conceived by the enemies of the Ministry is the formation of a grand journalistic league. Such a league, organized last year, was dissolved by the Authorities as being injurious to good order. Taught by that experience, the projectors propose on this occasion to avoid all outward semblance of combination, so as to afford no pretext for police interference. But it is scarcely conceivable that a large number of newspapers, published in different parts of the country, can be combined in such an innocent-looking fashion. After all, these projects are but devices to make men believe that the anti-Cabinet agitation has not lost its vitality.

The necessity of constructing railways through the Provinces on the coast of the Sea of Japan, is much discussed. The *Kokkai*, writing on this topic, remarks that, although the diplomatic relations between Japan and Russia are friendly, important measures of defence must not on that account be neglected, and that among such measures, one of the most urgent is the connection of important points on the northern coast. Various lines are in course of construction in those regions, but more must be laid out as quickly as possible. As to Hokkaido, our contemporary observes with satisfaction that a line connecting Otaru with Hakodate is about to be built by a private company, while the Government projects a trunk line connecting Sapporo with Nemuro in the extreme north of the island. The *Kokkai* hopes that the Diet will not refuse to sanction this line.

The conduct of the Police Inspectors at the lecture meeting of the anti-Cabinet politicians on the 30th ultimo has evoked severe criticism in the columns of the metropolitan papers. Especially vehement is the condemnation of the police in connection with the suspension of Mr. Shimada Saburo's speech. Mr. Shimada had just commenced to read an Imperial Rescript when he was ordered to descend from the platform. In this instance the police officials may have been a little hasty, but there could be no doubt that the speaker was about to discuss the forbidden subject, namely, the retrocession of the Liaotung Peninsula.

The question of the terms upon which the return of the Liaotung Peninsula is to be effected,

has been almost exhausted by Japanese writers. Nevertheless, the public being still without information as to the time when the negotiations are to be opened with China, a certain amount of anxiety is evinced. It is apprehended that even a temporary occupation of the peninsula by Japan may provoke another protest from the three European Powers. The *Kokumin-no-Tomo*, however, sees little danger of such a protest being made. Germany has never been prepared to go to the length of war with Japan; and her zeal for the Triple Alliance has of late visibly cooled. As to France, she was even less enthusiastic than Germany. She gave her nominal assistance to Russia because she wanted the latter's cooperation in her Egyptian policy. The *Kokumin* thinks that, if Russia refuses to help the French in driving the English out of Egypt, that will be the end of the Franco-Russian alliance. If, again, France secures her ally's assistance in her Egyptian policy and carries out that policy earnestly, she will have little reserve force for a campaign in these waters. Thus, in either event, France is not likely to join Russia in a possible collision with this country. With Russia alone, Japan will know how to deal; but Russia, in our contemporary's opinion, is not rash enough to protest, single-handed, against a temporary occupation of Liaotung by Japan. Neither has Russia any pretext for offering such a protest, for, by expressing itself satisfied with Japan's promise to renounce the permanent possession of the peninsula, the Russian Government virtually recognized Japan's right to adopt any measure short of permanent possession. The *Kokumin*, therefore, advises the Cabinet to demand an increase of the indemnity and the occupation of the peninsula for 15 years. Such a stay is absolutely necessary as a guarantee not only against a possible breach of faith on the part of China, but also against "a still greater contingency that is instinctively felt by the Japanese."

It is now reported that the *Doshi-kai*, the new political association whose organization was planned by the leaders of the recently suppressed anti-Cabinet agitation, will not come into existence. The avowed reason is that the projectors apprehend its dissolution by the Government. But the *Chuo Shimbun* professes to know the true reason, which is as follows. When it was decided to organize the new party, application for membership was suddenly made by a large number of men who are under the immediate control of Count Goto, such, for instance, as Messrs. Takahashi Chuji, Inagaki Shimesu, Yasuoka Yukichi, Ayai Takeo, and so forth. This roused the suspicion of the projectors, Messrs. Taguchi, Shiga, Suzuki and a few others who, by piecing together various circumstances that had hitherto escaped their notice and making fresh investigations, were startled by the humiliating discovery that they had been the unconscious instruments of an ambitious conspiracy on the part of Count Goto. The memory of the fate of the *Daido Danketsu*, seven years ago, being still fresh in their minds, they thought it unsafe to be associated with the Count, and consequently decided to abandon the project of forming a new party. Such is the explanation offered by the *Chuo*. But the projectors of the *Doshikai* must have been aware from the first that there was among them a personal follower of Count Goto, namely, Mr. Mori Hajime, and we find it difficult to suppose that they would have complacently allowed themselves to be guided by him, had they entertained so much distrust of the Count.

Count Goto, in an interview with a certain newspaper representative, is stated to have avowed his desire to go to Korea as Japanese Minister. He said that he knew perfectly well how to coin the hearts of the Koreans. All that he wants is money and the consent of Count Ito. The former he has no doubt of being able to obtain, but as to the latter he is very uncertain. Alluding to the rumour that he was secretly pulling the strings behind the curtain in the recent drama of opposition to the Cabinet, he is reported to have strongly denied

the accusation, alleging that, although subjected to much persuasion, he did not allow himself to be led away.

ECONOMICAL AND INDUSTRIAL.

According to investigations made in the Department of Finance, the Government and Bank notes in circulation at the end of April and May were as follow:—

	End of May. Yen.	End of April. Yen.	Decrease. Yen.
Government paper money of 1 yen and higher denominations	9,516,024,000...	9,798,524,000...	282,500,000
Government paper money of 50 sen and lower denominations	2,895,311,750...	2,995,311,750...	100,000,000
Totals	12,411,335,750...	12,793,835,750...	382,500,000
Bank Notes	21,219,719,000...	21,219,719,000...	—
Notes of those banks which have been closed	78,655,500...	78,655,500...	—
Totals	21,298,374,500...	21,298,374,500...	—

Grand Totals ... 33,709,710,250...34,092,210,250...382,500,000
Adding to the above mentioned total (yen 33,709,710,250) the amount of the convertible notes in circulation at the date, namely, yen 119,811,204, the aggregate sum of paper currency in circulation at the end of May last was yen 153,520,914,250. The following table shows the volume of currency in circulation for the past six years:—

	Yen.
May 31st, 1895	153,520,914,250
May 31st, 1894	147,039,315,250
May 31st, 1893	142,297,435,850
May 31st, 1892	132,980,839,900
May 31st, 1891	125,762,049,400
May 31st, 1890	131,832,715,400

The *Chugai Shogyo Shimpō* informs us that a project is on foot in Kobe for the establishment of a bank, with a capital of 1,000,000 yen, under the name of the Nippon Boyeki Ginko (Japan Trade Bank). The object of the projected corporation is to afford facilities to the import and export business of the country. The projectors are the leading merchants of Kyoto, and the scheme has obtained the support of Messrs. Hirose Mitumasa and Mitumura Riso of Kobe, Messrs. Tanaka Ichibei and Matsumoto Jutaro of Osaka, and Mr. Shimogo Dembei of the province of Omi. Nearly one-third of the capital will be supplied by the business men of Kobe. The inauguration of another banking enterprise is reported from Hyogo, its projectors being Messrs. Sawada Seibei, Kawanishi Seibei, Sawano Sadashichi, and Kashiwagi Sobei. Their original plan was to fix the capital at 200,000 yen, but Mr. Yasuda Zenjiro having joined the enterprise, the amount has been increased to 1,000,000 yen.

The same journal states that there is a project among the business men of the Capital to establish a big industrial company in Formosa. The affair is said to have so far matured that a public announcement may be expected in a few days.

The bankers, merchants, and manufacturers of Kyushu 250 in all, recently assembled in Fukuoka to consider various questions relating to the commercial development of the southern island. With the exception of No. 8, the following resolutions were unanimously adopted:—

- 1.—That the port of Moji be made a special port of export.
- 2.—That a large warehouse company be established at Moji.
- 3.—That steps be taken to secure the smooth working of the economic machinery of Kyushu.
- 4.—That a Kyushu Central Bank be established.
- 5.—That an industrial association, named the *Chinsei Kyokai*, be established for the promotion of industry in Kyushu.
- 7.—That Kagoshima be made a special port of export.
- 8.—That the railway be extended to Kagoshima.
- 9.—That Karatsu, in the province of Hizen, be made a special port for export.
- 10.—That the regulations of the *Chinsei Kyokai* be drawn up.

The task of making the necessary investigations in order to carry out these resolutions, was entrusted to a commission composed of three commissioners from each Prefecture in Kyushu.

The continuance of cool weather causes considerable anxiety to the sericulturists of the

Kwanto Provinces. A correspondent of the *Chugai Shogyo Shimpō*, writing from Mayebashi, states that in the neighbourhood of that place sericulturists have given up all hope of a plentiful crop. He believes that the weather may have proved equally injurious in the North-Eastern Provinces. At all events, it now seems probable that the silk crop will not be so good this year as had been expected.

Insufficiency of steamers for purposes of coastwise carriage during the recent war caused a rise of freight charges by as much as from thirty to forty per cent. But of late the rate has gradually fallen. At present the charge for herring guano is 100 yen per 100 koku from Otaru to Osaka, and 60 yen from Otaru and Yokohama. Most of the ships requisitioned by the Government in connection with the war will be disengaged by the end of August, provided that no unexpected emergency requires their continued retention for State service. It is expected, therefore, that freight will undergo further reductions about that time. In anticipation of such a result, there is a tendency among merchants to postpone the shipment of goods.

The Bank of Japan has decided to pursue the policy of affording as much accommodation as possible to business men. In pursuance of that resolve, the Bank is said to have issued convertible notes considerably in excess of the prescribed limit. At the end of last week the excess reached 7,587,023 yen, an increase of 4,504,647 as compared with the figure for the preceding week. This great increase is attributed to a general need of funds to settle half-yearly accounts and to pay the instalment of the War Loan falling due at the end of June. It is believed that, in the course of the present month, the amount of convertible notes over and above the prescribed limit will decrease considerably, inasmuch as the demand for money will be less.

The *Fuyu Shimbun* states that Count Soyejima has been appointed President of the Japan-Russia Industrial Association (*Nichi-Ro Yitsugyo Kyokai*), which was organized last year for the purpose of promoting commerce between the two countries. Viscount Enomoto, Mr. Tomita Tetsunosuke, and Governor Miura had been requested to accept the post, but they all declined. The regulations of the Association have been translated into Russian by Mr. Suzuki Otohei, an interpreter of the Russian Legation. Letters, it is further stated, will shortly be addressed, through Mr. Hitrovo, to the principal manufacturers and merchants in Russia inviting them to join the Association.

The prosperous condition of the silk trade is viewed with universal satisfaction. In spite of the damage caused by the recent inclement weather, the *Shogyo Shimpō* still believes that the crop of cocoons will show an average increase of from 20 to 30 per cent. when compared with that of last year. Consequently, the quantity of silk produced throughout the country will be from 120,000 to 130,000 bales. Estimating the quantity to be exported at 120,000 bales, or 6,750,000 cattie, at an average price of 850 yen per 100 cattie, this year's silk trade will realise the gross amount of 57,375,000 yen. Subtracting from this amount the cost of production, insurance, commission, and so forth, the net profit to the silk producers is estimated at 13,875,000 yen. It may be interesting to reproduce here the cost of production based on experience of silk producers of Suwa in the Province of Shinano. It is as follows:—

	Yen.
Cost of raw cocoons	306.00
Wages of female reelers at 20 sen per diem each	24.20
Board of female reelers	8.80
Wages and board of male labourers	6.00
Cost of fuel	9.00
Miscellaneous	4.00
Insurance, transportation, hypothecation	4.50
Total	362.50

The *Shogyo* thinks that interest on capital, commission paid to dealers, and the *kankan*

fee, need not be considered for they are more than balanced by the value of the waste silk. The above profit, realised by the silk trade, will have all come into the pockets of the local producers by February or March next, and will give a powerful impetus to the reviving prosperity of business throughout the country.

The probable establishment by the English of cotton factories in China, in virtue of the Shimonoseki Treaty, is causing considerable anxiety to Japanese cotton manufacturers. The united guild of the cotton spinning factories in Osaka recently decided to send a commission to China to make investigations *in loco* about the prospect of erecting factories in that country. The manufacturers of Tokyo also intend to send a similar commission.

FRANCE AND RUSSIA.

The news that official allusion has, for the first time, been made to the Franco-Russian alliance in the Chamber of Deputies, naturally excites much comment in Tokyo, and much enthusiasm among those directly concerned. Last autumn, *réunions* at which Frenchmen and Russians alone were present, constituted quite a social feature in the capital, and the intelligence just telegraphed from Paris seems to have revived this particular and decidedly genial species of demonstration. Rumour has it that the bumpers drained on England's account at these festive meetings are not filled with overkindly sentiments. How should they indeed? Powers unfortunate enough to be compelled to strike hands despite divergent interests and unforgotten quarrels, may well contemplate with envy, amounting to dislike, the attitude of independence that Great Britain is able to maintain.

BAPTISM OF COUNTESS COUDENHOVE.

The ceremony of administering the sacrament of baptism to Countess Coudenhove took place in the Tsukiji Cathedral on the morning of the 1st instant. The Cathedral was crowded with friends and acquaintances, and the whole affair was very imposing. The Countess, wearing a costume of pink brocade that became her admirably, performed her part in the ceremony with grace and self-possession. His Grace Archbishop Osouf delivered an address full of kind sympathy and gentle thoughts, concluding with an expression of hope that his hearers might soon re-assemble for a similar purpose. It need scarcely be added that the organ in Chevalier de Kontski's hands and the singing of the "Ave Maria" by Mr. Braccialini were fully worthy of the occasion.

CHOLERA IN TOKYO.

Cholera first made its appearance in the Capital on the 24th of May, and has since gradually increased until 20 new cases were reported on Wednesday last. It being feared that the Hospital at Fukagawa may soon become inadequate to accommodate the increasing patients, the Governor convened an extraordinary session of the Local Assembly on the 2nd inst. to consider a bill for repairing and refitting the three other cholera hospitals at Okubo, Komagome, and Hiroo. These hospitals being temporary sheds erected some years ago, require extensive repairs, cost of which, together with that of engaging physicians and purchasing medicines and so forth, was originally put at 27,005 yen. The Standing Committee, however, deeming it needless to engage physicians and collect medicines and other articles before the opening of the hospital became actually necessary, recommended the rejection of the appropriations on these accounts, and the retention of only the items relating to the repairs of existing buildings and the erection of new ones. The Governor pointed out the inadequate character of such a measure, and urged the necessity of having a medical staff in readiness, but the Assembly approved the recommendations of the Standing Committee and voted only 7,026 yen.

THE SIBERIAN RAILWAY.

Writing under this heading, the *Nippon* deprecates the proposed alliance with England, and strongly criticises its countrymen's tendency to attach undue importance to the Siberian Railway from a military point of view and to regard the completion of the line as a direct menace to the safety of the country. In the *Nippon's* opinion, such a view is quite erroneous. The Siberian Railway may be considered in the same light as the Suez Canal. The primary object of the railway may be military, but, after all, it is a highway between Europe and Asia that Russia cannot monopolize for her own purposes. From the very necessity of maintaining it, she will have to throw it open for the use of all nations. There are, continues the *Nippon*, two forces of exactly opposite character at work in human society; namely, a tendency to promote the universal brotherhood of mankind, and a propensity among the nations to fight with each other. The opening of the great trans-Asian railway may doubtless serve the purposes of the latter proclivity, but the line must not on that account be regarded with dislike and apprehension, since it will certainly, at the same time, facilitate the federation of mankind. The *Nippon* refers to the history of the Suez Canal, and severely criticises the conduct of the English Government which employed various devices to prevent the digging of that waterway. Great Britain doubtless feared that the opening of the canal would endanger her Empire of India by providing a route for Russia and France to send their forces eastward. But the result has not justified that apprehension. England is now repeating her mistake in taking an alarmist view of the Siberian Railway. It may, perhaps, suit her purpose to represent the Northern Power as entirely engrossed by the ambition of military conquest, but it can hardly make for Japan's interest to take such a view of Russia's position. It is Japan's mission to convert the Siberian Railway into a means of consolidating the peace of the world. Passing, then, to the question of a foreign alliance, the *Nippon* observes that although the recent diplomatic episode has placed Russia in a position of antagonism to this country, it is important to keep the permanent policy of the empire distinct from temporary considerations. The permanent policy that Japan ought to pursue is to be self-reliant and to uphold the peace of the East. With that aim constantly in sight, it is necessary for her to hold herself aloof from either Russia or England, and to pursue an independent line of action. Instead of dreading, as some elder politicians do in imitation of English newspapers, the completion of the Siberian Railway, Japanese should think how they can turn the new line to their own advantage. One of the best measures they could take would be the construction of a railway running northward from either Fusan or Jinsen to some point on the Siberian line. What is more dangerous to the peace of the Orient than the Siberian Railway, is the big fleet that England keeps in these waters; while the Russian Railway is capable of promoting the common interests of the world, the British fleet in the East can serve no such useful purpose. It is a standing menace to the peace of the Orient. Especially dangerous will be the presence of this fleet when it has the island of Chusan, at the mouth of the Yangtze, for a base. "Speaking frankly," says our contemporary, "Japan ought to take the position of a neutral arbitrator between England and Russia, the two Powers destined to disturb the peace of the East. As to the Siberian Railway, its results will be at least in part like those of the Suez Canal. If anything can endanger the peace of the East, it is certainly the presence of an overwhelming fleet incapable of performing any generally useful function. The acquisition of a station at the mouth of the Yangtze by such a fleet is far more dangerous than the seizure by Russia of a port in the Gulf of Pechili."

DINNER AT THE BRITISH LEGATION.

Her Britannic Majesty's Chargé d'Affaires entertained Admiral Buller, the new Commander-in-Chief on the China and Japan Station, at dinner on the evening of the 1st inst. The guests were Their Excellencies Count Ito, Minister-President of State; Count Saigo, Minister of State for the Navy; Marquis Saionji, Minister of State for Foreign Affairs; Viscount Enomoto, Minister of State for Agriculture and Commerce; Baron von Gutschmid, Representative of Germany; Mr. E. Dun, Representative of the United States; M. Hitrovo, Representative of Russia; M. Harmand, Representative of France; Count de Bylandt, Representative of the Netherlands; Vice-Admiral Ito; Mr. Sannomiya, Vice-Grand Master of Ceremonies; and Mr. Hara; Vice-Minister of State for War; Mr. Nagasaki, Private Secretary to the Minister of the Imperial Household; Captain Login, R.N.; Mr. Pullen, Lieut. H. Bradshaw, R.N., Mr. R. Paget, Mr. J. H. Gubbins, Mr. J. H. Longford, and Mr. H. G. Parlett.

THE SZECHUAN OUTRAGES.

It is difficult to make out exactly how many missionary establishments have been destroyed in Szechuen. A correspondent of the *China Gazette*, writing from Chungking under date of June 3rd, says:—

The riot, which began at Cheng-tu on 28th May with the destruction of the Canadian Hospital and Mission houses, has since become more disastrous. The mob proceeded to the other Mission houses and have now completely destroyed the China Inland Mission, the American Methodist Episcopal, and the Roman Catholic Mission houses in the city. After three or four days rioting it would appear the Viceroy woke up to his responsibilities, as on Saturday, 1st June, the fifth day from beginning of the riot, a telegram arrived saying "Viceroy now acting." It is probable he waited till he was poked up from Pekin by the action of the British Minister. (Fancy the British Minister poking up anything!)

The Missionaries are still in the Chengtu yamèn and are well. A messenger is now on his way to this city with full particulars.

Late news has just come to hand saying the ladies and children are on board boats on their way to Chungking.

A lying Chinese "Service" telegram has been put in circulation stating that the remains of a mutilated male child was found in the ruins of the Mission houses.

This story went all through the province like a firebrand, and is the current report in this city.

The authorities in this city are on the *qui vive*, and spies are out ready to report the first indications of disturbance.

We publish the above verbatim, noting, however, that the silly and wholly unjust allusion to the British Minister discredits the whole of the details. According to the same journal, M. Gerard, the French Representative in Pekin, has taken a very firm course with the Chinese Government. Given *carte blanc* by the Cabinet in Paris, and having a considerable naval force to support his demands, he presented an ultimatum covering not only the Szechuan outrages, but also a number of claims that had been outstanding for some 20 years. Everything was acceded to within the specified time "Amongst the points insisted upon," we read, "are the trial of Liu, the Viceroy of Szechuan, and of all the officials implicated in the recent outrages, before a tribunal at which a French Commissioner will sit; the reinstatement of all French Missions in the places from which they have been driven out in recent years, and the rebuilding of their premises by the Chinese Government. The Missions on the Thibetan frontier are included in the claim." It is extremely difficult to credit the statement that the Viceroy and the officials of Szechuan are to be tried before a tribunal at which a French Commissioner will sit, but we give the account for what it may be worth.

AN INTERESTING POLITICAL CASE.

The suit instituted against the projectors of the anti-Cabinet agitation, who are charged with violating the Law of Public Meetings and Political Associations, came up for hearing before Judge Yoshii Ryukichi in the Shiba District Court at 9 a.m. on the 29th ultimo. The prosecution was conducted by Public Procurator Matsuda Komao. The defendants were Messrs. Suzuki Shigetoo, Ozaki Yukio, Suyehiro Shigeyasu, Taguchi Ukichi, Shiga Shigetaka, and Kudo Kokan. This last named gentleman was unable to attend on account of sickness. With the exception of Mr. Shiga, the accused are all members of House of Representatives. Counsel for the accused were Messrs. Numata Ugenta, Matoba Heiji, Maruyama Meisei, Moriya Konosuke, Matsuo Seiji, Minato Sengo, and Amano Kinosuke. The court is reported to have been full of eager spectators. The accused were examined one after another in the order mentioned above. In the course of their examination, they sought to ventilate their sentiments about the question of the return of Liaotung, and the Judge's firm suppression of all political digressions evoked loud protests from the barristers engaged, who are all zealous politicians in favour of the agitation out of which the present case originated. The facts elicited are that conferences were held at the Atago-kan on the 1st, 4th, 7th, and 15th of June; that these conferences were attended by from twenty to thirty persons; that at the meeting on the 7th a manifesto was discussed, which was finally adopted at the meeting on the 15th. The accused contended that those conferences were spontaneous gatherings of men who held the same views on certain political questions, that no body could be called a projector, and that the manifesto was not drawn up by any particular person or persons, being simply a spontaneous expression of views held in common by all present. The Public Procurator argued that the facts of the case plainly showed that the accused had really organized a political association, and contended that their negligence to give notice of the fact to the police within three days was a violation of Art. XXI. of the Law of Public Meetings and Political Associations. Counsel for the accused urged that the politicians who assembled at the Atago-Kan had not organized any political association, because they did not either assume any collective name or establish any head-quarters. The Public Procurator, however, thought that a collective name and head-quarters are not essentials of a political association which begins its existence so soon as a number of men unite to take common action on a political question. It was 2.30 p.m. when the trial came to a close, and the Judge announced that judgment would be given at 9 a.m. on the 1st of July.

A singular coincidence is noticed about this case. One of the accused, Mr. Suyehiro, happens to be the introducer in the Diet of the very Law under which he has been now arraigned before a court of law. He is compared to Eio Shimpei, the celebrated rebel, who was beheaded under the very criminal code that he had caused to be compiled in his capacity of Minister of Justice.

The case against the projectors of the anti-Cabinet agitation came to a close on the 29th ultimo, as already related by us, and judgment was delivered on the 1st instant. The defendants, Messrs. Suzuki Shigetoo, Ozaki Yukio, Suyehiro Shigeyasu, Taguchi Ukichi, Shiga Shigetaka, and Kudo Kokan, were pronounced guilty of violating the provisions of the Law of Public Meeting and Political Association, in that they had organized a political party and held meetings without complying with the prescribed formalities as to notice and registration. They were fined 20 yen each. The action of the police in preventing the continuance of the new party's meetings has thus been endorsed by the finding of a Court of Law.

ANTI-CABINET POLITICAL MEETING IN THE KINKI-KAN.

The anti-Cabinet political meeting held yesterday in the Kinki-Kan, Kanda, was a disappointment both to the speakers and to the audience. Thirteen orators appeared on the platform, but one after another their speeches were interrupted by the police as calculated to disturb public tranquillity. Evidently the police were under instructions to deal summarily with the meeting, for a word or hint hostile to the Cabinet at once evoked a mandate of suspension. Intrinsically the meeting was of no particular interest, but it served as an indication of the Government's resolve to adopt the most determined measures for suppressing the unreasonable agitation fomented by these politicians.

The big hall of the Kinki-Kan was crowded to overflowing. There must have been fully 2,000 hearers, a number due in great part, doubtless, to the fact that no fee was charged for admission, for since the projectors foresaw that their speeches would be quickly suspended by the Police, they deemed it unfair to exact any payment from the audience.

Mr. Iwasaki Manjiro, an ex-M.P. and a deserter from the camp of the Radicals, spoke first. His topic was "A Problem;" but when, after making a few preliminary remarks, he proceeded to observe that the Cabinet had incurred a grave responsibility in connection with the return of the Liaotung peninsula, and must be held accountable for the act, a police-inspector sitting close behind him ordered him to cease his oration.

Next appeared Mr. Takata Sanaye, a Progressionist Member of Parliament, whose reputation is in the ascendant. He took for his theme the "Diplomacy of Count Ito," but in less than five minutes after he had appeared on the platform, he was directed to withdraw, though the precise nature of his objectionable language could not be discerned from the place where our reporter sat. We pass over the speeches, or rather the few words, delivered by the next two speakers, who were cut short on the threshold of their attempt, and come to the address of Mr. Mori Hajime, a member of the Tokyo bar. He professed not to offer any opinion of his own, but undertook to read a few quotations from the lectures of the celebrated Austrian publicist, Stein. Producing a book translated into Japanese, he observed that, as Count Ito himself had written a preface to the work, he must be held to have recognised the opinions of the Austrian juriconsult. One of the quotations was to the effect that the ruler of a state must be held infallible in matters of diplomacy, and that when any of his subjects are discontented with diplomatic measure taken by the Government, the Ministers of the Crown must be called upon to answer for it. So soon as Mr. Mori proceeded to apply this principle to the case of Japan, he was saved the trouble of continuing his speech.

Mr. Taguchi Ukichi, a member of Parliament for a section of Tokyo and the editor of the *Keisai Zasshi*, followed Mr. Mori. On ascending the platform he was greeted with loud applause. "Thirty-four years ago," observed this much respected politician and economist, "when the Porte oppressed the Bulgarian Christians, Mr. Gladstone raised his voice loudly against the Government of the day for not interfering in favour of the oppressed people, and delivered burning speeches at numerous places in the United Kingdom. Public sentiment being thus roused against the Disraeli Cabinet, it was at last overthrown, and succeeded by a Cabinet with Mr. Gladstone at its head. The course pursued on that occasion by the celebrated English statesman was so thoroughly appreciated by the University of Glasgow that he was elected Rector of that seat of learning. Let us turn now to Japan, and consider how matters stand here. The slightest movement unfriendly to the Government is dealt with in an unsparing manner, and politicians engaged in it are subjected to the most vexatious process of espionage. Is this not derogatory to the Government?" This last expression

being considered injurious to public tranquillity, Mr. Taguchi was directed to resume his seat. Mr. Ozaki Yukio, one of the most celebrated Progressionist members of Parliament, next appeared on the platform, and attempted to speak about the relation between Military Strength and Diplomacy. He observed that, it being impossible for any nation to make its military defences sufficiently strong to cope with more than one of its possible enemies—the national finances not permitting greater effort—Japan must keep that point in view, and must remember that it is the function of diplomacy to supplement insufficiency in the military defences. But in that very respect Japan was conspicuously weak. Her diplomacy was still in its childhood, because she had not hitherto experienced any need of diplomatic skill. Count Ito and Viscount Mutsu were still pupils in the school of diplomacy for—Here the inspector ordered Mr. Ozaki to refrain from further remarks. Mr. Kokubo Kihichi, an ex-M.P. and now chairman of the Local Assembly of Ibaraki, appeared on the platform, after another speaker had been cut short for referring to the return of the Liaotung Peninsula. Mr. Kokubo commenced thus:—"Why are the Japanese Army and Navy so strong? Because they are thoroughly imbued with the spirit of loyalty to the Court. The preservation of that spirit is therefore essential to the strength of the Empire. To preserve it, the Government must strive to keep the Court out of the sphere of politics; must be ready to hold itself answerable for any administrative or diplomatic mistake, must refrain from the slightest attempt to shelter itself behind the ægis of the Sovereign. The incorporation of the Liaotung peninsula into the dominion of Japan was necessary for securing the integrity of Korea, and for maintaining her independence against aggressive designs on the part of either Russia or China. Why was that peninsula returned? Do the Cabinet Ministers hold themselves responsible for it?" Here the speaker received his *quietus*.

Mr. Shiga ascended the platform amid cheers. The title of his subject was, "Three questions of the day;" that is to say, (1) skill in diplomacy, (2) rectitude in diplomacy, and (3) the Emperor's solicitude. He proceeded to dilate on each of these points, but when, in connection with the first, he referred to the return of the peninsula, he was stopped by the Inspector.

Mr. Hatoyama, M.P. for a section of Tokyo, and a noted Progressionist, followed Mr. Shiga. After a few preliminary remarks, he began to read the various Imperial Rescripts issued in connection with the Treaty of Peace, but when he commenced to read the definition of the boundaries of that portion of Manchuria originally ceded by China to Japan, the Police ordered him to proceed no further. Thereupon the audience seemed to become incensed at what they considered a display of excessive severity on the part of the Police. Several began to ask in loud tones why the recital of the text of official documents published by the Government itself should be considered injurious to public peace, and presently the whole audience stood up, clamouring for an explanation. It was a critical moment. A little thing would have precipitated a collision between the hot-headed men and the Police on duty, but the latter, who, evidently apprehensive of some such incident, had attended in force, succeeded in silencing the malcontents.

Mr. Koizuka, a Progressionist member of Parliament, spoke last, but he was interrupted so soon as he began to refer to the peninsula. The names of many other politicians were placarded as intending speakers, but the projectors thought it useless to continue the proceedings, it being evident that the Police were resolved to suspend every address before any comments essential to the agitation could be made.

The meeting opened at half-past 1 p.m. and closed two hours later. It was understood to have been organized by the so-called Strong Policy Party, but we have to note the singular fact that not one politician belonging either to

the National Unionists or the Constitutional Reformists put in an appearance. It was practically an assembly of Progressionists (*Kai-shin-to*) only.

THE MILITARY COOLIES AFFAIR.

The suit instituted in the Shiba Peace Court by a section of the military coolies against the contractors that engaged them—the Hosho-gumi—has been decided in favour of the plaintiffs, and the defendants have been ordered to pay to each coolie a sum of over 17 *yen*, with costs. The application made by the plaintiffs' advocate with regard to the temporary distraint of the property of the President of the Hosho-gumi was also approved by the Court, and sheriffs proceeded, on the day of the decision, to the President's house and executed this part of the judgment. Whether the defendants will submit to the award of the Court is not yet clear. The decision was received with unbounded joy by the plaintiffs, several of whom were present in the body of the Court. They executed a kind of dance of victory outside the building. Their success has inspired new courage in the other coolies, who at first consulted to compromise the trouble for a sum of less than 2 *yen* each. They also now purpose seeking satisfaction by the aid of the law.

The disturbances caused by *soshi* the other day in connection with this affair was incorrectly described in our previous statement. The *soshi* were not instigated by the litigants, as then alleged. Their actions had its origin in another cause. It appears that when the coolies that had determined to seek satisfaction by force were clamorously pushing their claim, the President of the Hosho-gumi engaged the services of a number of *soshi*, promising that if they induced the coolies to listen to reason, they should receive a certain sum of money. The *soshi* did succeed, but when they came to distribute the reward, they could not agree about the amount falling to each one's share. A quarrel ensued, and the dissatisfied *soshi* loudly called upon the President to adjudicate their claims. Failing to obtain satisfaction from him, they decided to appeal to force, the result being a general fracas. We wonder whether the law can not interfere to prevent the employment of *soshi*. Their avowed avocation is recourse to physical force. For any other purpose they are absolutely useless. Any person employing them, must therefore do so with the object of taking the law into his own hands. That kind of thing should not be permitted in any country where the preservation of public peace and good order is duly considered. Why is it permitted in Japan? If the *soshi* found no employers they would soon die of inanition.

The coolies, engaged by other contractors, that accompanied the First Division—as did those of the Hosho-gumi—being also dissatisfied with the treatment accorded to them by their employers, have resolved, in consideration of the issue of the present case, to appeal to the law for redress. Those of the Yamato-gumi lodged a complaint before the same Court a few days ago against their employers, and following in their wake the coolies of three other firms are about to do the same. The number of contracting companies that supplied coolies to the Tokyo corps was six, and each of them has been, or is about to be, involved in lawsuits. It seems not improbable that the complication may extend to all the contracting firms throughout the country, or that the affair will assume very large dimensions. It is certainly not an edifying spectacle by way of sequel to a victorious war, but nobody will pity the unscrupulous contractors who have sought to rob men that rendered stout service to their country.

According to a Reuter's telegram to the Hong-kong papers, Sir W. V. Harcourt and the Ministry entirely shared the responsibility with Mr. Campbell Bannerman on the Army vote, which virtually amounting to a vote of censure, compelled the Government to resign.

COUNT INOUE INTERVIEWED.

Count Inouye, Japanese Minister to Korea, was interviewed by a representative of the *Kobe Pushin Nippo*, during his sojourn in Kobe en route for Tokyo. We cannot vouch for the accuracy of the account published by our contemporary, but we produce its substance for what it may be worth. Speaking first, of Boku Eiko, Count Inouye denied the truth of the rumour that he had turned into an enemy of Japan, and that he had established relations with a certain foreign Minister. He is, said the Count, the same Boku that he was some years ago; but being young and rash, he is very liable to commit blunders. During his long exile in Japan, he experienced great hardships, but did not cultivate his mind by study; his only knowledge of western things having been obtained by intercourse with politicians of various schools. His ideas are therefore necessarily vague and unsettled. On his assumption of an important post in Korea, he at once proceeded to put into practice the dreams formed during his sojourn in Japan; and he is so sanguine in his hope of regenerating Korea that he expects to attain that object in the short space of three or four years. Under these circumstances, it is unavoidable that he should come into serious collision with his colleagues. Though open to the charge of being ignorant, superficial, and rash, he must be acquitted of ingratitude to Japan. As to his relations with the Queen, his object is doubtless to use her as an instrument. But in Count Inouye's opinion, she is the ablest person in Korea, and is more likely to use Boku than to be used by him. Count Inouye more than once strongly warned Boku against the inadvisability of maintaining intimate connections with her, but his advice was not accepted.

Concerning his future course of action, Count Inouye did not impart much information to his visitor. But he is reported to have led the latter to understand that Korea should not be abandoned to herself, and that probably it might become incumbent upon him to go to Korea once more and labour for the benefit of that country. The *Pushin's* representative states that, whatever may be the opinion of the Cabinet, Count Inouye seemed willing to cross the sea once more. In spite of the report about his sickness, he is described as looking healthy and strong.

Alluding to the Korean Queen, Count Inouye did not hesitate to pronounce her the ablest person in the whole country. She is often accused of meddling with politics, but that is an inevitable result of her vast superiority in statesmanship to all the Ministers of the Crown. She is well versed in Chinese learning, and possesses wonderful tact and address. Her manner of treating her subjects as well as the foreign diplomats elicited the unmeasured admiration of Count Inouye. Her strength lies in her power to win the confidence of everybody coming into contact with her, even men of great ability and sagacity finding it very difficult to resist her power of persuasion. On the occasion of Count Inouye's audience with the King immediately after his arrival in Korea, the Queen heard what passed between the two from behind a screen in the next chamber. Having listened for some time, she accosted Count Inouye, and, after expressing her regret that the immemorial usage of the country did not permit her to talk with him face to face, thanked him for the genuine interest he had shown in the welfare of the Kingdom, and presented him with a small pouch of gold brocade made by her own hands, a distinction that she never bestows except upon her best friends. The Japanese Minister observed with a smile that his body was a little too large to be conveniently packed into the pouch; upon which the Queen assured him of the absence of any sinister meaning in the gift and begged him to accept it.

Speaking of Korean statesmen, Count Inouye fails to find any essential difference between them in point of ability. They are equally distinguished by crass ignorance. A suggestive anecdote is told about an interview between Count Inouye and the Tai Wön-kun in the latter's palace of

Un-yön, the Tai Wön-kun being then Regent of the kingdom. The Japanese Minister desired to explain his views in the presence of the Tai Wön-kun and the Ministers of State. The Regent objected to this proposal saying that, the Ministers of State being forbidden to take seats in his presence, he would be sorry to cause them to stand while the Japanese Minister was pleased to expatiate upon his ideas. But Count Inouye was not to be put off by such excuses, and as the result of his persistent application, the Tai Wön-kun had to give way, though at the conference he proposed to sit separately behind a screen. At the same interview, the old statesman asked Count Inouye if he liked pictures; to which the latter replied that he was fond of pictures if they were good. Then the Tai Wön-kun promised to paint a picture of an orchid for his guest, but the latter declined the offer, bluntly saying that he did not care for such a thing, having already seen plenty of his host's pictures of orchids. Somewhat put out by this, the Tai Wön-kun offered to entertain Count Inouye at dinner. This, too, was declined by the Count, who told his host that he had come to Korea not to get pictures or entertainments but to assist the country in consolidating its independence, and that, consequently, the best present to him would be the adoption of his views.

The leaders of the Tonghaks, though ignorant like the rest of the Koreans, are stated by Count Inouye to have been men of some ability and great force of character. Count Inouye tried, as far as he could, to save the lives of these men, but they put so little value upon their own lives that they had to be sentenced to death.

He next referred to the intolerable annoyance caused to him and the members of the Korean Cabinet by Japanese adventurers who swarmed in Söul. They had various plans and schemes which they sought to have adopted by the Korean Government, and they demanded special consideration on the ground that they were subjects of an Empire to whose exertions Korea owed her independence. One had a big plan of agricultural reform, another insisted on the adoption of his educational schemes, a third advocated the establishment of banks. But they had no idea as to the method of carrying out their projects.

Lastly, speaking of the Chinese merchants in Korea, Count Inouye expressed surprise at the rapid rate of their increase since the restoration of peace. Though they had gained the victory in the war, the Japanese were about to be defeated in commerce. Count Inouye thinks that there is a natural affinity of character between the Chinese and the Koreans. They get on very amicably with each other. Moreover, the Chinese merchants are zealous and persevering; they cannot help prospering. The Japanese, on the other hand, always treat the Koreans with contempt, a tendency that has increased since the war. Under these circumstances, Japanese merchants trading in the interior of the peninsula can not successfully compete with the Chinese. Count Inouye then alluded to an evil that saps the energy of the Japanese residents in Korea, namely, the presence of Japanese women of ill fame, increasing in number month after month. He thinks that the removal of this evil is one of the most important measures for the development of Japanese commerce in Korea.

AUDIENCE OF THE FOREIGN REPRESENTATIVES.

The Foreign Representatives and the Staffs of the Legations were received in audience by His Majesty the Emperor on the 29th ultimo, for the purpose of congratulating His Majesty on the return of the Imperial Court to the capital. It seems to have been originally contemplated that the whole of the Foreign Corps Diplomatique should be received together, in which case the duty of congratulating the Emperor on behalf of the various States represented would have fallen on the Doyen, Baron von Gutschmid. But His Majesty having signified a desire to receive the Legations separately, the programme was modified in that sense.

RETROSPECTIVE OBSERVATIONS.

Under the above heading, Mr. Ozaki Yukio, the well-known Progressionist member of the Diet, contributes an interesting article to the June number of the *Taiyo*. Notwithstanding the recent date of the publication, it is evident that the essay was written just after the conclusion of the Peace Treaty at Shimonoseki, and before the combined protest of the three European Powers against the possession by Japan of the Liaotung peninsula became known to the public; for not only does the author make no reference to that important affair, but in one place he speaks of the cession of the district as if it were an accomplished fact. This much must be premised in order to understand the essay clearly.

Mr. Ozaki's comments on the wonderful success of the Japanese arms, and its causes, need not be noticed, for the topic is somewhat hackneyed and his observations contain nothing new. There is, however, one point worthy of reference in his remarks upon the Japanese nation's unprecedented unanimity of view with respect to the war. It was this union of hearts, among other circumstances that so powerfully contributed to the brilliant victories of the Japanese forces on land and sea. Indeed, the readiness with which the Japanese, whatever be their internal dissensions and mutual animosities, can unite against a foreign foe, is one of the most remarkable traits of their national character. The Chinese Representative in Japan previously to the breaking out of the war, is understood to have assured Viceroy Li that, in the present state of party politics in this country, the Cabinet would be incapable of declaring war against a foreign country, and that, even if it did so, it would be unable to obtain the support of the people. He did not know the character of the Japanese, and his mistake proved disastrous for his country. The point, however, that we desire to notice is not the remarkable capacity of the Japanese for union, but the inference suggested by the circumstance. We have pointed out in these columns time and again the great influence exercised on the minds of the Japanese by the fashion of the hour. This truth is recognized by Mr. Ozaki. He says that, although patriotism was at the bottom of the marked power of combination shown by the Japanese during the war, their unanimity was part of the result of the national propensity to follow the fashion. There must have been some who secretly condemned the war whether from selfish considerations, or from abhorrence of war in general, or from reasons of policy, or from reverence for the sages and philosophers of ancient China. But no section of these persons dared to ventilate their opinion: they feared to differ from what was fashionable in society. Perhaps Mr. Ozaki goes a little too far in discussing this feature of the national character, but we are constrained to think that there is much truth in his remarks, and it is well that attention should be directed to the matter by a writer of his eminence and weight.

He then proceeds to review the different stages through which the attitude of Japan's mind toward foreign countries has passed since the Restoration. He discovers four distinct stages; namely, first, the age of self-conceit; secondly, the age of self-humiliation; thirdly, the age of reaction; and fourthly, the age of conscious strength. During the age of self-conceit, extending from the Restoration to the return of the Iwakura Mission from the West in 1873, the Japanese imagined themselves a very strong nation and were ambitious of entering upon a career of continental conquest. They also thought that they could easily accomplish the object of Treaty Revision. Iwakura and his fellow-envoys came back strongly impressed with the splendour of European civilization, and their return is said to have marked the inauguration of an era of self-humiliation, which reached its highest point in 1885-1886. During this period, the consciousness of their inferiority in civilization and power led the Japanese to over-estimate the superiority of European peoples. Mr. Ozaki

contends that this tendency was originated and encouraged by those in office. Whenever any influential functionary showed symptoms of revolt against the fashion, he was at once ordered to make a tour in Europe and America. A large number of officials were in this way sent to the Occident, the idea being that they would thus discover the folly of opposing the process of denationalization then going on in their country under official patronage. But singularly enough, it was principally by these officials, on their return, that a powerful reaction was inaugurated against the indiscriminate introduction of European customs and institutions. The reaction was in harmony with the spirit of the time. It soon became the ruling characteristic of the third period, extending from 1885-1886 to the beginning of the recent war. Unquestionably it pushed the people to some extravagant extremes but that it proved, on the whole, distinctly beneficial, is beyond question. The final period of conscious strength commenced, according to Mr. Ozaki, a little previously to the recent war, as may be seen from the unanimity of all the political parties in the beginning of last summer as to the necessity of a decided policy toward Korea, even at the risk of war with China. Fortunately the war did not take place in any of the preceding periods, that of self-humiliation, for instance, since then the nation could not have been so perfectly united. Another happy circumstance about the war is that it broke out at a time when the national coffers contained a surplus of 26 million yen, in consequence of administrative reforms carried out in deference to the suggestions of the Opposition parties.

Mr. Ozaki further considers the position occupied by Japan among the nations of the world after her victories over China. If European Powers misunderstood China before the war, they were equally ill-informed as to the true character of Japan. Consequently when hostilities broke out between the two empires, they all believed that the smaller State would prove no match for the larger. Here, however, Mr. Ozaki shows himself the victim of a curious delusion. He maintains that the Russian press opposed the cession of territory on the mainland of China, apparently indifferent to the offence they thus gave to the Japanese, because they believed China to be the more formidable Power. Assuredly the prevailing interpretation of the utterances of the Russian press is quite the reverse of that suggested by Mr. Ozaki. Japan, he proceeds to say, now holds a unique position in the East, and in proportion to the rise of her prestige, she has excited the envy and dislike of European Powers. She is, therefore, in a situation of immense difficulty. But she is able to take care of herself. Her Military and Naval forces are sufficient to defy the combination of any two great Powers, a declaration that at once establishes Mr. Ozaki's title to be counted a leader of thought in this era of "conscious strength." His chief anxiety is about the future of China. She is decrepit and corrupt, and what is more, her decrepitude and corruption have been disclosed to European Powers. That disclosure no less than the discovery of a new Power in Japan, will impart a fresh and vigorous impetus to Europe's mania for territorial aggrandizement in the East, and facilities for the gratification of the mania will probably be afforded by China herself. In her impotent ignorance, she may entrust to Europeans the task of reform and reorganization within her borders. Another danger is the rise of domestic insurrections, such as the Central Government may find itself incompetent to suppress. Thus, unless the keenest possible watch be kept by Japan over the course of events in the East, and prompt action be taken in case of emergency, Mr. Ozaki fears that China, one of these days, may pass out of the hands of Asiatic races. In conclusion, he strongly urges the Administration to avail itself of the present unique opportunity for removing the evils of personal influence, and he recommends a firm union between the Government and the people for carrying out the important measures that demand immediate attention.

FORMOSA NEWS.

We are without any further news from Formosa. Assuming that the Second Brigade of the Guards left Port Arthur on the 15th ult. for Tainan, intelligence of their arrival there may be expected very soon. It would seem that the Black Flag leader Liu has his headquarters at Tainan, and that he is resolved to offer a stubborn resistance. It will be interesting to see whether this redoubtable chieftain can induce his men to fight better than their compatriots did in the northern part of the island. A correspondent of the *Hongkong Daily Press*, writing from Tainan, under date of June 17th, says:—

Affairs here assumed such a serious aspect on Thursday afternoon, the 13th inst., owing to the threatening attitude of the Black Flags, that Captain Winsloe, of H.M.S. *Spartan*, decided to send to Hongkong for assistance. Accordingly arrangements were made to despatch the steamer *Wenchow*, in port at the time, to Amoy with telegrams for the Commodore, and she left on Friday evening, returning here on Sunday morning. All feel under great obligation to Messrs. Butterfield & Swire, for allowing the *Wenchow* to proceed. On Sunday morning the strain was much intensified by a demand from the rebels that the British guard should be withdrawn. Without more assistance it is doubtful if the fifty odd men in the settlement could have held their own against an organised attack, and the situation became very grave. To the satisfaction of everyone H.M.S. *Rainbow* appeared on the horizon coming at full-speed, and she dropped anchor at 3 p.m., just forty-five hours from the time the *Wenchow* left this for Amoy, which speaks well for all concerned in this work of relief. Great excitement prevailed when it was reported that the forts were clearing for action, and that the *Rainbow* and *Spartan* were both ready to reply if attacked. Mr. Hunt, H.M. Consul, promptly interviewed an officer in charge of a detachment of Black Flags, who said that the *Rainbow* was Japanese and that they were determined to fire. On receiving a guarantee from the Consul that such was not the case, a messenger was despatched to the fort with instructions to stay proceedings. General Liu was then notified that the marines could not be withdrawn and that further reinforcements would be landed. Just before dark, in order to avoid too much display, 60 marines were landed under the command of Captains Shubrik and Brabazon, and 25 blue-jackets under the command of Lieut. Grouse. It was feared that resistance would be offered, but all were safely landed on the bund by eight o'clock and billeted in different parts of the settlement.

Utter confusion prevails, and the steamers *Whampoa*, *Wenchow*, and *Bygdo* are all detained owing to the scarcity of boats and coolies to work cargo. It is hoped that actual danger is now past, but, of course, there will be further trouble when the Japanese arrive. The fort fired at a Japanese cruiser last week, without taking effect, and it appears certain that Liu is determined to oppose the invading force when they come to take possession.

All ladies and children are on board the steamer *Bygdo* in the roadstead.

In the same journal of the 21st June we find the following:—

By telegram received by the Naval Authorities from Formosa yesterday morning, *via* Amoy, the situation in Anping remain unchanged. H.M.S. *Redbreast* having coaled at Amoy was to return to Anping yesterday evening. The Douglas steamer *Hailoong* brings confirmatory news of the peace which has been established at Tamsui by the Japanese. Trade is being carried on as formerly. At first there was a slight hitch, as the Chinese showed much reluctance to pay duties in conformity with the Japanese tariff, but the difficulty was overcome by the Chinese paying the duties "under protest." Several missionary ladies left Tainanfo in the *Bygdo* and landed at Amoy, while the daughters of Dr. Myers, of Tainanfo, left that port in H.M.S. *Tweed*. Many refugee soldiers also left in the *Bygdo* and were conveyed to Amoy.

The latest letters from Taipeh, published in Japanese papers, are dated June 23rd. At that date, no report had yet been received from a detachment sent on the 19th ultimo to reduce Sin-chuh, a town 40 miles south of Taipeh, as the crow flies. This force consisted of a battalion of the 2nd Regiment and two companies, in all 1,200 strong. Before its despatch, a company had been sent on a reconnoitering

expedition. It proceeded, despite great difficulties, to a point within sight of the town of Sin-chuh, but owing to the enemy's strength it could not push any farther. This party brought back intelligence, obtained from Chinese spies, that the enemy's forces in Sin-chuh aggregated about 2,000. It was also ascertained that the insurgents were hourly expecting the arrival of Liu, at the head of five battalions of infantry, which he had collected in Chang-hua. The reconnoitering company was repeatedly surrounded by bodies of insurgents, but always succeeded in extricating itself by a bold charge.

It is believed by the correspondents that the town of Sin-chuh must have been occupied by the Japanese troops on the 22nd or 23rd of June, but telegraphic communication had been interrupted by the insurgents, who also threatened to cut the commissariat line in the rear of the advancing detachment. It was necessary in consequence, to send a company by way of reinforcement to an intermediate station.

From Kelung comes a report that the insurgents are mustering in force in the vicinity of the place where the Japanese army originally landed. Scouts sent to that locality are said to have come back with news that the rebels had mustered there in considerable numbers.

No report has been received about the movements of the Second Brigade of the Imperial Guards, which was sent to the south of the island, leaving Port Arthur on the 15th ultimo.

The following telegram, signed by Governor-General Viscount Kabayama and dated Tamsui 2 p.m. July 2nd, has been received at the Imperial Military Head-quarters in Tokyo:—

"Reports thus far received about the movements of the enemy in the direction of Sin-chu are as follow. The enemy's leader, Liu, fled from Sin-chu to Chang-hua on the 22nd of June, at the head of 1,000 troops. The leader of a hostile force, 1,000 strong, that came to the defence of Sin-chu from the direction of Miao-li on the 25th ultimo, was named Ko Nanken (?). In the vicinity of Heong-san are stationed four or five hundred of the enemy, and a body of raw recruits occupies a position mid-way between Takoham and Sin-chu. The villages in this neighbourhood are the quarters of a race of volunteers called *Hakka*, who cause much annoyance to the people of the locality. It is reported that 2,000 of these volunteers are at Sin-bu and in its vicinity, and that another large force of them is assembled in the neighbourhood of Miao-li. These troops are young recruits marked on their breasts with the ideographs 義民 (volunteers). Men not thus marked are not allowed to go about, and are sometimes shot down. These troops are under the command of Wa Teisai and two other leaders. The volunteers recruited from the vicinity of Miao-li are stationed at Sin-bu and Miao-li. These are the men that threaten to cut our commissariat line. They hide themselves in the villages and make raids from thence. In Tai-nan and its vicinity, Liu Yung-fu is at the head of over 10,000 troops. He is reported to have issued a proclamation promising the people immunity from taxation for three years, and to be otherwise endeavouring to win their good will. He seems to be engaged in adopting various defensive measures."

KOREAN NEWS.

Latest intelligence from Korea points to a cooling of the alleged friendship between Boku Eiko and the Queen. That of course, would mean the decline of Boku's influence in the Government. The *Fiji Shimpō* says that the following telegrams were received in the Capital on Saturday last:—

The attempt to displace the guards of the Palace by troops trained under the new system has given offence to the King, who indignantly declared that it was an act of disloyalty to change the existing regulations and remove His Majesty's body guards. Premier Boku Teiyo thereupon tendered his resignation. On the following day, Boku Eiko had an audience with the King, and

his explanations seem to have somewhat soothed the latter's wrath. The situation is uncertain.

Of late the relations between the Queen and Boku Eiko are not satisfactory; and the King is also inclined to treat him with less consideration. A crisis is impending in the political situation.

The telegram does not give the date of the incident about the Palace Guards, but it must have been a recent occurrence.

According to a letter from Söul, a party antagonistic to Japan has arisen in the Korean Government. This party nominally advocates the study of the English language, but its real object is believed to be opposition to Japanese influence. It includes officials that have visited Europe or America. Boku Eiko, who is now believed to be friendly to Japan, heads the other party which insists upon the utility of the Japanese language as the medium through which modern civilization must be imbibed by the Koreans. *En passant*, it may be noticed that the schools conducted by Japanese in Söul are in a prosperous condition. The ex-Minister-President, Kim Koshu, is reported to be effectively promoting the success of the schools.

The *Pomiuri Shimbun's* correspondent states that Mr. Sassa Tomofusa, M.P., and Mr. Shiba Shiro, M.P., who had gone to Korea for the special purpose of ascertaining the truth about the alleged combination between Boku Eiko and the Russian Minister, paid a visit to the latter on the 15th of June. The following dialogue is said to have taken place between M. Waeber and his guests:—

M. Waeber—As your country has had long intercourse with Korea, the historical relations between the two States include several unhappy episodes. It is well that you should endeavour to effect reforms in Korea, but there is danger that your friendly intentions may cause bad feelings among the people of the country. Japan would do well to be careful in her work of reform here.

Mr. Sassa—Japan's endeavours to regenerate Korea have received the recognition of the world. I do not know what Koreans of the lower class may think, but I am sure that all Koreans having the least sense and judgment appreciate the kindly motives of Japan. History proves that, in spite of one or two unpleasant incidents in their past intercourse, the Japanese and Korean nations have been on friendly terms. Whatever feelings of umbrage may have remained in Korean minds, are now entirely dissipated. Allow me, therefore, to ask you to entertain no uneasiness on Japan's account.

Mr. Shiba—The latest newspapers from Europe contain a statement that your country intends to acquire in the East a port open during all seasons of the year. May I ask you whether there is any truth in that report?

Mr. Waeber—There is no truth in that. Such statements may perhaps be found in English papers. The English are very cunning. They always say bad things about us in their papers, and thereby inflict no small injury upon Russia. The story that Russia intends to obtain such a port is a canard manufactured by the English. Russia does not pursue an aggressive policy. You know that she had not invaded any country during the past ten years. You may conclude from this that Russia has no ambition either to make any conquest or to obtain a port in these waters.

The Russian Minister is represented as having then proceeded to criticise the policy of the English Government. How accurately the interview is reported we can not say of course.

The *Kokkai's* correspondent states that there is a tendency in the Korean Government to dislike the Japanese Advisers. He further mentioned that a large number of Occidental adventurers have come to Söul to get positions in the Korean service.

Söul correspondents of the Tokyo papers report that the new Local Government System was promulgated in the *Official Gazette* of the 20th ult. The country is divided into twenty-three administrative parts under the name of Prefectures (*Fu*), and each Prefecture is subdivided into a number of Districts (*Gun*). In consequence of this reform many local officials will be deprived of their position, and will go to swell the ranks of the anti-Japanese faction.

The *Fiji Shimpō's* correspondent states that the actual income of the Government this year will fall far short of the amount estimated. The total Income in the Budget for the current year

is 4,468,000 *yen*, of which 3,000,000 *yen* represents the sum borrowed from Japan, the rest being the produce of the land tax, miscellaneous taxes, the tax on ginseng, and customs duties. The machinery for collecting taxes being extremely incomplete, it is expected that it will be impossible to obtain the estimated sum from that source.

The *Kokkai's* correspondent mentions the organization of an association called the *Chosen Kyokai*, composed of the higher officials of the Korean Government and the leading Japanese residents. The object of the association is to promote friendly intercourse between Koreans and Japanese. The first meeting of the association was to have taken place on the 23rd ultimo, when all the Ministers of State were expected to be present.

As an illustration of the absurd rumours circulated in Korea, it is reported that the priests of the mountains expect that an army of half a million braves will be sent next Spring by the Ming Emperor for the rescue of Korea. They do not even know that the Ming dynasty ceased to rule in China three centuries ago.

The number of Korean students sent to Japan since the inauguration of the new régime must be nearly two hundred. The latest intelligence states that several ladies of rank will soon come to Tokyo to learn the art of sewing and the culture of silkworms. The mother and the wife of Li Keikan, the Assistant Chief of Police, are stated to be among the number. On their arrival in Tokyo, they will stay for some time with the wife of Mr. Saito Shuichiro, Japanese Adviser to the Korean Government.

The correspondents concur in stating that the relations between Boku Eiko and the Queen are becoming more and more strained. Her Majesty is reported to be engaged in the formation of a Bin (Ming) faction. Bin Eitatsu and Bin Eikan, who are out of office, are said to be acting in close concert with the Queen. A large number of the officials of the Household Department, such as Li Gakukin, Boku Yowa, Kin Shitetsu, and so forth, are believed to belong to the same coterie. Prince Wi-Hwa, Korean Ambassador charged with the duty of expressing thanks to the Japanese Emperor for His Majesty's generous assistance, and Ko Eiki, Korean Minister to Japan, were to leave Söul on the 26th or 27th ultimo.

THE JAPANESE MINISTER TO CHINA.

Letters from correspondents that accompanied Mr. Hayashi to China have just been published in Tokyo. From them we learn that the warship *Izumi Kan*, with the Japanese Minister on board, leaving Port Arthur on 3 p.m. on the 13th ultimo, reached Taku at 11 a.m. the following day. The number of the party was increased at Port Arthur by the addition of Captain Y. Inouye, Imperial Navy, Mr. T. Takasu, a Student Interpreter, and a servant. Before reaching Taku, at about a quarter to four in the morning, the *Izumi* grounded on a shoal, but was soon afloat again and resumed her voyage without damage. On account of her draught, however, she had to drop anchor about 15 miles from the mouth of the Pei-ho, where she was soon besieged by a number of Chinese boats offering vegetables and other things for sale, but neither the Japanese gun-boat *Chokai*, which had been sent to the Pei-ho previously, nor any Chinese launch came out to convey the Minister's party up the river. Early on the morning of the 15th, however, a Chinese launch arrived with two officials on board, who placed their vessel at the service of the Japanese Minister. The party embarked in her at 7 a.m., when a salute was fired by the *Izumi*, and soon afterwards by the Taku forts. At Taku the steamboat was met by two launches specially sent by Viceroy Li to carry the Japanese Mission to Tientsin. Here also the Japanese gunboat *Chokai* was found at anchor. The party then proceeded up the river in the two launches escorted by the *Chokai*. A little way up, a salute with bamboo rockets was fired from

the left bank, and presently the *Chokai* had to anchor in the middle of the stream, the state of the tide not permitting her to proceed any farther. Shortly before 5 p.m. on the 15th instant, the launches reached Tientsin. On the wharf an escort of some twenty soldiers awaited the coming of the Minister, and accompanied him to the Japanese Consulate, the Minister and Consul Arakawa riding in palanquins, and the rest of the party walking. The road was lined on both sides by a crowd of Chinamen, who were kept in good order by police constables. At the Consulate, another body of twenty soldiers were found acting as guards. The Consulate was in good order, not so much as a pane of glass having been broken. The Japanese Minister and a portion of his suite, including Captain Inouye, I.J.N., Lieut.-Colonel Kamio, I.J.A., and Secretaries Kawasaki, Tei, and Nakajima, took lodgings at the Astor House. The *Nichi Nichi's* correspondent says that at the Astor House were staying Mr. Stephen Hart, who had been found by the Japanese army at Port Arthur when it fell into their hands, and Mr. Howie, whose disreputable conduct has made his name a by-word. On the 16th, the Japanese Minister and Consul paid a visit to Viceroy Li, who is said to have treated them with marked consideration. The Viceroy, according to Chinese custom, asked Mr. Hayashi's age, and congratulated him on his brilliant prospects. On the 17th, Mr. Hayashi, Consul Arakawa, Captain Inouye, Lieut.-Colonel Kamio, and Commander Hosoya of the *Chokai Kan*, were entertained at tiffin by the American Consul, Mr. Read. A number of officers from the U.S.S. *Monocacy* were also present. At 4 p.m. on the same day, the Japanese Minister received at the Consulate a visit from Viceroy Li, who came in great state accompanied by the Taotai, Messrs. Wu Ting-fang, Lo Fung-lo and others, and escorted by over a hundred mounted guards. At the interview, which lasted about an hour, there were present on the Japanese side, besides Mr. Hayashi, Consul Arakawa, Lieut.-Colonel Kamio, and Commander Hosoya. Student Interpreters Koroku and Takasu left Tientsin for Peking on the 17th, the Viceroy sending two military guards to escort them. None of the letters state when Mr. Hayashi was to go up to the Capital. In addition to the Japanese gunboat *Chokai*, there were at Tientsin the U.S.S. *Monocacy*, H.B.M.S. *Swift*, and the Chinese gunboat *Chen-Hai*. Some of the correspondents say that the Viceroy Li is apparently as influential as ever. A private letter, published in the *Chugai Shogyo Shimpō*, states that, when Mr. Hayashi announced his intention of going to Peking, the Viceroy earnestly begged him to defer his journey for the present, in as much as the people, being still in a state of excitement, might insult him. The writer of this letter seems to be a Naval officer of the *Izumi Kan*. He says that, on the occasion of his proceeding to Tientsin in a steam launch on the 17th ultimo, an old Chinaman ran along the bank of the river with a spear in his hand pursuing the Japanese boat. He further alleged that Mr. Detring visited the *Chokai*, and requested the Captain to leave Tientsin, but on what grounds the request was preferred we are not told. Probably it was because the presence of the Japanese ship seemed calculated to excite the Chinese mob. The request was not complied with. The *Izumi Kan* left Taku on the 19th and reached Port Arthur the following day.

MRS. DRAPER'S BLIND SCHOOL.

"Great oaks from little acorns grow," was a favourite copy-book heading of the later seventies. An hour spent in the rooms at 35, Ume-gai-cho, Yokohama, a scholastic establishment conducted under the superintendence of Mrs. Draper for the benefit of the indigent blind of Yokohama, induces one to hope the old aphorism possesses a prophetic truth which may be exemplified in the career lying before this modest undertaking. There are upwards of 150,000 blind folk in the Empire of Japan, and of this vast total Yokohama is the *habitat* of

500. Mrs. Draper's school, an entirely denominational affair, started three years ago with one pupil: to-day it has over 30. The system adopted is the Braille, by which the blind are taught to read and write by raised characters—characters punctured on thick paper in an arrangement of six dots, or less, somewhat after the style of the Morse Code of telegraphy. Besides this, instruction is afforded in the arts of acupuncture and massage. Instruction is also afforded orally; and pathetically sweet is the chanting of the Ten Commandments, the Lord Prayer, or even a dozen aphorisms of Confucius by a class of blind Japanese. It is Mrs. Draper's ambition that the thirty pupils at present in the school should become teachers and instructors to their blind brethren in Japan, so that the good work may spread like a ripple in the water, ever widening, ever increasing the sphere of its good influence. There are four qualified teachers now engaged in the school, and, if funds would allow, more pupils could be gathered in: but at present pecuniary resources are limited, and reluctantly Mrs. Draper finds it necessary to "cut her garment according to her cloth." We feel sure that when the good work she is doing among the blind of Yokohama is known to the outside world, many contributions will flow into her treasury, and she will be able to extend the scope of her labours. On Tuesday week, July 9th, the School will appear at the Van Schaick Hall and go through some exercises preparatory to breaking-up for the summer. In the meantime, any readers in Yokohama who may desire the services of a clean and expert *anma*, would do well to engage one from the school, and so help forward the good work. The address is Sudzuki Kakujiro, 40, Nichome, Hagoromocho.

COLLISION AT MOJI.

The singularly fortunate record of the Japanese naval and transport services during the war has been broken by a collision that occurred at Moji on the 28th ultimo. At 6.30 p.m. on that day, as the *Moji Maru* was entering Moji harbour, she was carried by the tide which happened to be racing very strongly at the time—into collision with the *Toyo Maru*. The latter vessel was lying at anchor. The *Moji* was struck aft on the starboard side, and received such damage that the water poured into her cabin, and she sank by the stern in from 6 to 7 fathoms. The water does not appear to have got into her engine-room, and at the date of latest advices every effort was being made to keep her from being flooded forward. Her injuries do not appear to be very extensive, and there is every hope of saving her. The *Moji Maru* is a stamer belonging to the Nippon Yusen Kaisha. She was built at Newcastle in 1877, and is an iron vessel of 2,111 tons displacement. The *Toyo Maru* belongs to Mr. Hamanaka Hachisaburo of Kobe. She is a steamer of 2,497 tons, and was built at Glasgow in 1873.

ORDERS FROM FRANCE FOR TEXTILE FABRICS.

The work done by Japanese weavers surprises even severe foreign critics, says the *Yiji*. The cheapness of manufacture, the skill of the mechanics, the delicate finish of the productions of the loom, and the refined taste displayed in the designs all combine to elicit admiration. The exportation of textile fabrics has developed greatly during the last few years, and lately large orders have been received by Japanese weavers from merchants in Lyons—the world's centre for textile fabrics—who seem to have discerned the excellence of Japanese silk materials. The chief point in the orders is to the effect that if the Japanese weavers bind themselves to sell certain goods to them only, they wish to conclude a contract for such goods for a stipulated period of time. The Japanese are willing to consent to this condition provided

that the terms are satisfactory. They are now carrying on negotiations with the Lyons merchants in connection with this point. It seems strange, at first, to think that the merchants of Lyons should have conceived the idea of purchasing a large amount of Japanese fabrics, but a little thought makes the matter clear. The produce of the Lyons looms sent yearly to the East totals a large figure, and the merchants of that city most likely think that Japanese fabrics are most suited for the purpose. Some day or other, therefore, Japanese silks may appear in the Oriental market with the Lyons label attached to them. At any rate, the prospects of the Japanese weaving industry seem very bright.

CONSCIENCE.

The writer of "Our Handbook," in the *Referee*, recently allowed his thoughts to run upon the subject of "conscience," which, he concluded, "is a habit of mind created by the circumstances of a people or a race, and varying, therefore, according to circumstances." In the course of his dissertation we find the following paragraph:—

In support of this definition one may point to the difference between the sort of conscience known to the Greek schools from which the principles of our philosophy are derived, and the conscience of nineteenth-century England. We have incorporated in our modern conscience a deal of Christian doctrine quite foreign to the civilised Pagan mind. Not only is this divergence shown between the ancient Greeks and ourselves, it is discovered in a marked form between ourselves and other civilised communities that have not been subjected to the same course of educational and religious discipline. That reminds me! I dined the other night with a gentleman, who, two years ago, was travelling in Japan, and who had some curious first-hand information to give me of the Japanese. At the best hotel in Tokyo a young lady was told off on his arrival to act as his companion during his stay. For this service he was charged in the bill one *yen* per day—say three shillings, or three and sixpence. He challenged the item, but was assured that it was entirely regular. What was still more astonishing, in a private house, to which he had letters of introduction, he was shown the same gracious attention, except, of course, that it was entirely gratis. Such things commend themselves to the Japanese conscience, but would not, I fear, secure the approbation of Mrs. Grundy. Yet I am not sure that the practical difference in the morals of the East and the West is mainly one of form. What happens to a travelling young Englishman who, instead of going to Tokyo, puts up, say, at the Grand Hotel, Paris, on his first visit to that city? There is no geisha girl told off for his entertainment by the hotel authorities, and there is no charge in the bill that the British Matron need object to. But after dinner our traveller betakes himself, according to the season, to the Jardin de Paris, the Folies-Bergère, the Casino de Paris, or, mayhap, the Moulin Rouge, and I do not know that morality is the gainer.

The curious thing about this illustration from life in Japan is its absolute falsehood. There could be no more baseless lie conceived than the story told by the "gentleman" who travelled in Japan two years ago. He never had "a young lady told off, on his arrival at the best hotel in Tokyo, to act as his companion during his stay." He never was charged "one *yen* per day for her in his bill." He never "challenged the item," or was "assured that it was entirely regular." He never had "the same gracious attention paid to him, entirely gratis, in a private house." In brief, he told five large lies to his guest of the *Referee*, and the latter most innocently proceeded to deduce from them some interesting conceptions of Japanese "conscience," whereas he ought really to have discussed them in connection with the conscience of travellers, a curious faculty that does not appear to have changed in any material respect since the days of Mendez Pinto.

THE small Messageries Fluviales steamer *Météore*, plying between Hanoi and Namdinh, was sunk by the Chinese river steamer *Kianpink* in the Hanoi river on the 11th June, with 23 passengers, of whom all were saved except four. She was struck on the port side, and sank in ten minutes.

RIOT AT NANAO, NOTO PROVINCE.

Particulars of a riot that occurred at Nanao, Noto Province, about the middle of this month, are now given by the vernacular papers. The cause of such disorderly conduct on the part of the poor inhabitants of the town was dissatisfaction against a rice broker, one Hinome Masakichi, whom they suspected as having engrossed rice and thus caused an appreciation of the price of their food stuff. At first the disturbers of the peace sent deputies to the rice-broker to apprise him of their distress and ask him to discontinue his speculative proceedings. The broker being absent, the deputies submitted the case to his wife and left the house peacefully, some policemen that had attended to provide against any accident having also assured the deputies that their cause would be furthered so far as circumstances might permit. Next day, it was rumoured that the poor people would come to the broker's house in large numbers to renew their demand, and to compel attention to it even by force. The rumour proved true, for in the evening of the same day some scores of young men assembled in front of the broker's house, making a loud din. One of them rushed into the shop, seized a brazier, and hurled it into the inner room. Thereat the others followed that leader into the house and threw down every article of furniture they could lay hands upon. In the meanwhile, according to an apparently preconcerted plan, about 200 people came to swell the number of intruders and the work of smashing furniture was kept up for about half an hour. Three constables then arrived upon the scene to restore order, but to no purpose. The rioters not only refused to attend to the remonstrances of the constables, but even abused them for having failed to fulfill the promise made on the preceding day. Some even had the audacity to strike down the lanterns that the constables carried, and others, principally women, went up to the constables, exclaiming, "Give us food." The light of the lanterns and that in the house having been totally extinguished, wrecking went on with more and more violence, and the attempted restraint of the constables was entirely disregarded. A portion of the mob proceeded towards the granary of Mr. Hinome, situated some distance away in the town, and there the violence was renewed. In the meanwhile, the Chief of the Town Police arrived at the head of a few constables and tried to restore order with drawn sabres. This frightened the mob at first, but only for a short while. They surged back soon after, and pressed the constables to kill them, declaring that it mattered little whether they died on the edge of the sword or of starvation. The police being at a loss how to deal with such desperate fellows, the Inspector had recourse to peaceful measures, and offered his assurances to the mob that on the following day steps of such a nature as to satisfy them would be taken. Two or three leading inhabitants of the town also came to the spot and remonstrated with the rioters, urging them to discontinue such lawless conduct. The mob, by this time tired by their exertions, promised to leave the matter in the hands of the Inspector of Police and the influential inhabitants of the town, and dispersed after loud and prolonged cheers. It was now past midnight. On their way home from the scene of violence, the rioters called at the Town Office, demanded an interview with a petty clerk that had charge of the office for the night, and reprimanded him for the Town Office's negligence to give relief to the needy out of the Pauper's Fund. They next visited the Headman of the town, and required him to promise that no time should be lost in giving relief out of the fund, to which the Headman replied that the matter should be considered the next morning. As to the casualties that occurred in connection with the riot, we learn nothing, and it may therefore be inferred that there was nothing serious. The next morning, about a dozen men, believed to be the ringleaders of the affair, were summoned before the Police Office and severely reprimanded. A meeting

of the City Assembly was also held to consider the question of distributing the relief fund, and the local Rice Exchange was closed. There the matter ended, so far as our information goes.

CHINESE ITEMS.

The Korean correspondent of the *North China Daily News* writes:—

Inouye left Chemulpo for Japan on the 11th of June by the *Chowchowfu*. He is very angry with the Koreans and especially with Pakyengho. This individual has turned his back on the Japanese and is now smiling on the Russians or any foreigners who are willing to be pleased at his smiles. It is worth while, perhaps, to compare this correspondent's statements with what Count Inouye says himself. So far from being "angry with the Koreans, and especially with Pak Yengho" (Boku Eiko), the Count defends Pak's conduct, and declares that he has acted in a proper and conscientious manner. So far from accusing Pak of "turning his back upon the Japanese and smiling on the Russians," Count Inouye says:—

Boku Eiko is neither a saint nor a man of surpassing ability and courage. But, thanks to his experience while an exile in a foreign country, he is intelligent for a person of princely birth. At all events he may be regarded as a Korean of capacity. The rumours about his intrigues with Russia and his ingratitude to Japan, may be traced to the chagrin of disappointed Japanese. Reasons why he is unpopular in the Japanese settlement have already been explained. He is frequently admitted to the presence of the Queen, because his title of *Kinryō-i* gives him free access to the Court. The Queen also seems to regard him as a man of some utility. To speak frankly, he is not to be compared with Her Majesty in sagacity. I used to give him warning, and he on his part came to seek my counsel whenever any question of importance demanded his attention. He never failed to do so while I was in Seoul. It is true that he has of late become very powerful in the Korean Government, but there is no truth in the imputation that he has turned his back on Japan. Apart from the disappointed section among the Japanese residents, there is a party of Koreans, both in and out of Government, who are opposed to Boku. He may have been indiscreet, but I cannot believe that he is guilty of the charges brought against him by his enemies.

We do not know whether the present correspondent of our Shanghai contemporary is the same writer whose accounts of affairs during the early stages of the China-Japan war made him a general laughing-stock. But if that remarkable observer has been succeeded by some one else, his mantle seems to have fallen on his successor.

Particulars of the Chêngtu outrages are beginning to be published by the Shanghai journals. We take the following from the Chungking correspondent of the *N.-C. Daily News*:—

On the 28th of May, the fifth of the fifth moon, a riot occurred at the premises of the Canadian Methodist Mission, their hospital, dispensary, and chapel being looted and burned. Although the mob were kept at bay for an hour or two, and although *yamén*s were near and soldiers' barracks were about five minutes' walk away, no attention was paid to requests for assistance. After resting for the night, the mob began the next day, and when the day was ended nothing remained of the eleven places of the Protestant and Roman Catholic Missions. In every case the officials made a mere pretence of protection or flatly refused it. All took their cue from the Viceroy who had been degraded and seemed to think nothing worse could befall him. His hostility to foreigners has been notorious for several years, and he seems to have intended to give a parting hit as he was about to leave. Even when the flames were bursting out of the premises of the Roman Catholic Bishop, a stone's throw away, he lifted not a finger to help, merely remarking that this was a calamity for his successors to attend to. There is a mass of harrowing details which I cannot stop to give. No doubt you will have heard them more fully from some one at or near the scene of trouble. Ladies with their little ones climbed over back walls and hid for hours in the dirtiest holes. When discovered there were cases where ransoms were paid by both foreigners and native Christians. There were cases of flight from one Mission to another, only to be mobbed and compelled to flee again. The members of the American Methodist Episcopal Mission climbed by a ladder over a wall to a neighbour's and remained twelve hours in a dirty

little loft, watching at the distance of six feet the destruction of their property. Some of the Canadian Methodist missionaries who sought protection at the soldiers' barracks were driven out, one of the ladies with her little ones being kicked by the brutal soldiers. At length all took refuge at the *yamén* of the District Magistrate. This is now the twelfth day and they are still there without so much as a change of clothing. There are nearly a score of them, men and women, and a large number of small children. We do not know certainly about the Roman Catholics.

In the meantime the contagion is daily spreading. Yesterday we learned that Kiatingfu and Yachoufu had met the same fate as Chêngtu. Yachou is about 100 miles west of Kiating. The report is that the missionaries there have been beaten. Some of the Kiating missionaries took refuge in the *yamén* and some got away on boats and have arrived at Chungking. As at Chêngtu, so at Kiating, the officials would render no assistance until the mob had done their work. The presence of students for the examinations furnished unlimited material for a mob. The Kiating riot occurred on the 4th of June, just a week after the work began at Chêngtu. The Yachou riot was earlier than the Kiating one, but we have not the particulars. Other smaller cities have met the same fate, and the list is almost daily increasing. Much apprehension is felt for the missionaries of the China Inland Mission scattered in several stations over the Chêngtu plain, away from water and telegraph communication.

When the Kiating refugees passed Suichou they found most of the missionaries on boats a few miles below awaiting developments. The city had been placarded, but there the officials were vigilant and patrolling the streets.

Of course Chungking is not a little stirred by the riot news from elsewhere; but the Taotai is friendly and is apparently doing his best to keep order. It is impossible to tell what may be the end of it all. There are about a score of stations in the province occupied by Protestant missionaries, who number about 140, including both sexes. The Catholics are almost everywhere.

We cannot tell when the ball set rolling by the Viceroy will stop. If the foreign governments do not take stringent measures there may be a clean sweep of the whole province. People are saying that the Emperor has ordered the Viceroy to drive out all the foreigners, beginning at Chêngtu.

A private letter from Chungking, dated the 8th of June, says the riot appears to have been almost altogether a matter of looting:—

"The Viceroy," continues the writer, "had plenty of notice, and I believe could have stopped the row had he wished to do so. As it was, he allowed the Roman Catholic Mission, separated from his own *yamén* by a narrow lane only, to burn without an attempt to save it. We think that if he gets his deserts he will finish up without his head. If he didn't instigate the row he did nothing whatever to stop it, and appears to have treated the foreigners as shabbily as he could.

It will be observed that the tone of this correspondence does not justify the violent diatribes against the Viceroy of Szechuen penned by some critics in the foreign press of Shanghai. A private letter from a Chêngtu missionary throws some interesting light on the details and origin of the trouble:—

We escaped the riot by about two hours and a half, in this way. We left the city at four o'clock p.m. on the 28th. We could not have left the next day at all as it was the big Dragon feast, and at four o'clock of the 29th our compounds were burnt to the ground, that is, the dwellings, schools, and chapel in one, and adjoining was the hospital. From our place they went to the C.I.M., carrying off every stick on the place. The compound where the ladies of our W.M.S. lived was also rioted, the ladies going over the wall into a neighbour's. Next morning they began with the M.E. Mission, cleaning it out completely, even to the walls and the leaves on the trees. The new house belonging to our mission that Mr. Hartnall was living in was also looted and burned. Mrs. Hartnall escaping to the C.I.M. after being driven with the W.M.S. ladies out of their house. The Catholics had five different stations, at one of which was a cathedral two hundred and seventy feet long, or rather the whole building in which the cathedral was that length. All these different places are utterly wiped out. All the foreigners are at the *yamén* of one of the magistrates. The *Fu* himself came and looked at the work of destruction going on, then got into his chair and had not gone forty yards before they were at it again. I don't know whether or not you know that in Chêngtu we have two *Hsiens* who manage the city's affairs, each in his own district which are quite distinct

the one from the other. Well, a curious fact in connection with the American missionaries is, that they were taken to the magistrate on our side, out of their own district entirely, as if it were a well-planned scheme between them that the foreigners should be collected in one place. They may have been liberated by this time and on their way down the river, for all we know, but Hartnall says the rumour there is that no foreigner will be allowed to leave the city. We don't know whether to believe this or not. But it does not seem reasonable to watch the city gates, when they are all in one room at the *yamen*. Mrs. Stevenson and Mrs. Kilborn with four children crawled out on to the street through a hole in the big hospital gate that the mob was breaking in. And this so upset the rioters that it gave them a chance to escape. They tried several houses, as well as the fort near by, but were driven off each place, one of the soldiers kicking Mrs. Stevenson and driving them off with curses. These women with the children wandered about the city wall till midnight, then went to the C.I.M. till the early morning when the mob reached there. Of course we sent a messenger to the capital at once, and now we are anxiously awaiting developments. The Endicotts leave for down river early Monday morning; another family leaves for the Suifu mountains the next day. But the doctor will remain here for the present. And of course I remain with him. We are making all preparations for a hurried departure, and we have a good strong rope, which we will use to let ourselves down over the wall if they make any fuss in the night. The city is full of students who are just going into their examinations, and when they come out, they may make a fuss, and it is well to be prepared. Endicott takes most of the silver and all the deeds of the various properties with him to Chungking, and perhaps farther. . . I had what might have been a serious thing happen to me some time ago. I had operated on a woman in confinement. . . As a result of the care they get in their homes, she had a good deal of temperature and I went to see her twice a day for over a week, generally paying my own chair hire. She got almost well, and I did not see her for five or six days, when they sent for me and I found general pelvic peritonitis. I did all I could for her at the time, but she was vomiting everything and I saw she could not live. The child, however, was thriving. That evening I saw her again and for the awful pain I gave her morphine injection. She died somewhere about seven or half-past, and at eleven o'clock at night they sent for me. I went, taking a couple of assistants, and as it was only about half-a-mile I walked. A very casual examination convinced me that she was dead, and as soon as I said so, the husband sprang and barred the door and would not let me out. I shook him up pretty lively and he opened the door, and I sent my second assistant on ahead with my grip, keeping the teacher with me. No sooner did we get out of the court-yard on to the street than he was after me and begging me to give his wife some foreign medicine and cure her. He called out two or three times and men came running out of all the houses round, putting on their clothes as they came. In a very few minutes I had a crowd of nearly fifty, and this man began to catch hold of me in a way I did not like. I told him if he came to the hospital next day I would talk to him. But he would not listen. He then caught hold of me by the collar of my flannel shirt in a way that was anything but gentle, but I made no resistance. At last his hold loosened a little and at the same time a man hit me from behind and ran sideways. I broke from the fellow that held me and caught the other fellow firmly and knocked him endways, and it felt good too. The crowd calling out "Strike the foreigner!" "Kill the foreigner!" and getting larger and larger every minute, determined me to make a run for it, which I did, with the whole pack after me like devils. I soon saw that I could out-run them, and kept ahead of them, till I overtook my assistant with my grip, and I made him travel I can tell you. He got the street gates open for me. And we soon got to the hospital; that was shut of course, and it seemed like an eternity before the man opened it. I hadn't time to shut it before they were at the gate, and, throwing themselves against it, forced it open. Not a man would help. I caught the ringleader, and half dragged, half carried him into the hospital, then dropped him as I saw no one was trying to shut the gate, and people still coming in, though it was now midnight. I got them out all except the dead woman's husband, and I wanted to keep him, but as I was trying to put up the bars he caught me by the knees and dragged me down and fled. I lost my hat and walking stick I took with me, and will never see them again, of course. After getting the gate shut I went up to the house, washed the blood out of my eyes, from a cut head, then went back

and opened the gate and went out, but could not see anybody that looked like the man I wanted. Next day, of course, we took up the matter and brought it to the notice of the officials, but they have done very little in the matter. They held an inquest on the corpse, and for a couple of days the whole section was in an uproar, thousands of people going to see her, if you can believe our servants. On top of this affair came all kinds of extravagant rumours of what I had done to her—cutting her open, etc. People going past our doors would say, "Burn out the foreigners" and such like remarks, and still we thought nothing particular of it. Stories about four of us going to carry a large stone full of gold that was in the river outside the East gate were started and for days you couldn't get near the place for the throng going a foot and in chains to see it. The huge stone cone outside the West gate has spoken and told the people that all the dry weather was on account of the foreigners and next year we were going to take the whole province. Such stories as these evidently inflamed the people, and when the city was crowded at least time, the whole thing broke out. You cannot calculate the harm to the mission work at present, to say nothing of the monetary loss. This will be a thing for the home offices to settle through Peking, which will take time. Meanwhile, there will be nothing done in Chêngtu, and perhaps in the whole province. . .

The above should be supplemented by the statement of a Chêngtu Chinese correspondent of the *Shên-pao*:—

The Canadian Mission had been in existence in Chêngtu for several years. In the 4th moon of this year (May) a certain native woman in the city happened to be dangerously ill through childbirth and in consequence her family engaged the services of a foreign doctor. It was not a success, and the woman died. The family of the dead woman laid the blame upon the foreign doctor and from this time forth false rumours began gradually to be spread about impugning the honesty of the missionaries. Anonymous placards also began to be posted up traducing and libelling the foreign missions, the most serious charges accusing the foreigners of killing young boys to obtain certain drugs and in some cases actually eating them. The missionaries therefore reported the matter to the local authorities requesting them to issue counter-proclamations denying such charges and forbidding the posting of such libels in the future. But it must be confessed that the authorities paid no attention to the protestations of the missionaries. It is a popular custom handed down by tradition in Chêngtu for the people of the city and suburban villages to gather in large numbers at the military assembly grounds at the East gate of the city on the 5th day of the 5th moon (28th of May this year) or Dragon Festival, and forming into parties of hundreds and even a thousand or so, to pelt green plums at each other: the rich providing this sort of ammunition which is given free to those who wish to join the sports. It unluckily happened that a female convert in charge of several native pupils of the mission schools also went to view the sports there. During the fun a plum accidentally hit the woman, which being taken as premeditated was at once resented by her. A wordy war resulted. This attracted a crowd and the woman fearing the consequence began to leave the grounds with her youthful charges, pursued by a mob of young rowdies. She was apparently recognised as a convert, and the people being already inflamed against the missionaries by the placards, the crowd began to be hostile; but before they could catch hold of the woman she and the children got inside the mission compound and the gates were at once shut upon the mob outside. Hereupon a number of them began to call out that the foreigners had kidnapped some children and demanded that they should be given up to the people. The mob gathering in size became bolder and succeeded at last in breaking down the heavy entrance gates of the compound. They then made a rush inside, eager to plunder and pillage whatever they could lay their hands upon. By the time the mandarins and their runners made their appearance on the scene the hospital and chapel had already been burned down. On the 29th and 30th of May (the 6th and 7th of the 5th Moon) the other Protestant missions were wrecked and pillaged in succession by the rowdies and desperadoes, winding up with the tearing down and burning of the Roman Catholic Church and houses situated within a stone's throw of the Viceroy's *yamen*. Although in a capital like Chêngtu there is a large army and the various *yaméns* have a strong force of runners and thief takers, they made only a hollow show of pretence when ordered to suppress the riot, preferring to remain spectators. But the most extraordinary thing was the production by the rioters of a dead man's head, two hands, and some human bones which they

carried to the *Chehsien's yamen* charging the foreigners with having murdered the man, declaring that they had dug them out of the mission compounds. I wonder where they managed to get these gruesome objects. They also daubed the walls of the mission houses with blood, saying that this was a proof that people had been murdered by the foreigners. With regard to the missionaries, young and old, a number of them were compelled to fly for their lives and crouch under the city walls exposed to the dews of heaven for a night. The next day they were temporarily domiciled in the *yamen* of the Huayang *Chehsien*. As for the missionary buildings and chapels there is not a single one now left in Chêngtu. The desolation is complete. It is also reported that soon after the news of the Chêngtu riots was spread into the inland towns the mobs of the districts of Hsinchin and Pengshan followed suit, and the objectionable rumours which had inflamed the populace of Chêngtu are now being disseminated in the lower portions of the Yangtze valley. The affair has become such a grave problem that the future can be only a matter of conjecture."

All these details do not bear out the wholesale charges so freely preferred against the Viceroy and officials of Szechuen. A medical mishap and a misdirected and misunderstood pelting of green plums appear to have been the petty causes that led to the razing of mission buildings and cathedrals, the sending of international ultimatums, and the employment of gunboats and men-of-war. Is it possible for foreigners to live in the interior of China without the constant recurrence of these serious incidents? So ignorant and prejudiced are the Chinese people that every-day happenings, wholly insignificant in themselves, may at any moment become the origin of riot and mob violence.

The sufferings of the ladies and children confined in the *Yamen* at Chêngtu for nearly three weeks, with the thermometer ranging from 91° to 97° in the shade, and without any proper supplies of food and clothing, must have been terrible.

The Kiangsu riots, regarded at first as a second Taiping Rebellion in embryo, seem to have subsided completely. The quondam rebels are now quietly pursuing their usual agricultural avocations.

We take the following paragraph from the *China Gazette* of the 21st of June:—

We are able to confirm our news of last night respecting the completion of the Russian loan of 100 million Kuping taels to China. The final documents were sent into the Russian Legation at Peking yesterday, all duly signed and sealed. The documents were really signed the previous day. The loan is given to China in the name of the Imperial Russian Government, and is issued at 93/100, 4°/100 interest and 1°/100 *amortissement* (sinking fund). We have good reason to believe that the Chinese Legation in Paris will notify the Japanese Legation in that city that 50 million taels lies to its credit in the Bank of France, and the question is then, whether this Japanese Government will immediately convert that sum into gold. The other 50 millions, we are inclined to think, will be paid over, by order of the German Syndicate, in Tientsin in silver. But these details are not yet quite settled and the problem of exchange which, meanwhile, remains, is thereby again enormously disturbed. We have further good reason to believe that the Russian Government has insisted upon the principle being conceded by China that, as Russia makes and guarantees the loan, a Russian official should have a voice in the administration at the I. M. Customs, should it be deemed necessary. But as long as Sir Robert Hart remains at the head of that service, it is not likely that any such appointment will be made, though it is provided for.

The same journal writes in a very alarmist strain about China's temper toward Japan. It alleges that instructions have been sent from Peking to the effect that the new Japanese Minister must on no account be suffered to proceed to the capital, the idea underlying this injunction being that as the Viceroy Li was not allowed to go to the place where the Imperial Court had located itself in Japan, neither should Mr. Hayashi be permitted to go to Peking. We read in the same columns that every possible obstacle will be thrown in the way of the negotiation of the commercial treaty between the two empires, and that a large party of politicians in Peking are anxious to precipitate another rupture. We do not, for our own part, share these views.

ONE OF ENGLAND'S CRITICS.

THE majority of our English readers will be disposed to treat the *Nippon's* article, translated elsewhere in our columns, after the manner of the United States Senator, who answered an elaborate oratorical assault by a wave of his hand and a disyllabic interjection. But the luxury of indifference cannot always be enjoyed. The *Nippon*, being a journal of uncompromising and extreme views, commands the attention always attracted by violence, and there consequently rests upon us an obligation to expose the fallacy of some of its assertions. It is not easy, we confess, to deal seriously with such trivialities, but very probably the comments of many foreigners on Japanese affairs seem just as shallow and insignificant to Japanese readers as do the *Nippon's* criticisms to us, and if neither side can boast any marked superiority of knowledge or discernment, it is as well that each should treat the other's misconceptions with consideration.

That while poets and philanthropists dream of the federation of nations, the nations themselves "snarl at each other's heels," is about the only proposition we can endorse among those advanced by the *Nippon*. Otherwise we venture to think that our contemporary is entirely "off the track." Its comparison of the Siberian Railway with the Suez Canal seems particularly fallacious. England has often been blamed by philosophers and sentimentalists because she threw obstacles in the path of the projectors of the Suez Canal. Probably she deserves some blame. But if she does, it is not because her political instinct was at fault, but because she lost for a moment the full trust in herself without which the cares of her vast empire would crush her incontinently. She might have had faith that if the command of the Suez Canal were essential to the integrity of her dominions, she would manage somehow to obtain command of it. But for a moment she forgot her own history, and tried to protect herself by exclusiveness. Not the smallest miscalculation was she guilty of, however, when she foresaw that the Suez Canal in the hands of a foreign Power would seriously compromise her hold upon India. Suppose that it were now in the hands of France, for example, how fatally weak a link would exist in the world-encircling chain of Great Britain's possessions! The *Nippon*, thinks that England's forecast was false; that a path to promote the world's intercourse was mistaken by her for a way to warfare. It is true that the Suez Canal has assumed the former character. But why has it assumed it? Simply because it is under British control. Wherever England plants her foot, thither she frankly invites the nations to follow. That is the secret of her unique success as a colonizer. She acquires not to monopolise, but to develop. The

competition that she invites creates an atmosphere of effort that can never exist where exclusiveness is counted the first privilege of ownership. She has contributed more to the "brotherhood of mankind" than have all the other nations together. Yet the *Nippon* talks as though she had sinned in that very respect, and inferentially accuses her of repeating in the case of the Siberian Railway the misconception that inspired her hostility to the Suez Canal scheme. There is no comparison. England's paramount control of the Suez Canal guarantees its universal accessibility for all the purposes of legitimate commerce. Russia's paramount control of the Siberian Railway guarantees its universal inaccessibility for purposes of commerce, and its exclusive employment for military objects should occasion arise. The Japanese newspaper charges its English contemporaries with writing in a blindly alarmist strain about the contingencies incidental to the conclusion of the Siberian Railway. If there has been any exaggeration of the kind, Japanese journals have been the exaggerators. During the past three years they have written as though the opening of the Siberian Railway must shift the commercial centre of gravity, make Japan the *entrepôt* of a vast trade, and, at the same time, expose her to a perpetual menace of aggression from the north. To-day, the *Nippon* itself writes as though the new line were destined to become the main artery connecting the hearts of Occidental and Oriental commerce. It will be nothing of the kind. The rich Ussuri regions may be tapped by it, but as a carrier of merchandise coming eastward from non-Russian Europe, it will play no considerable part. What it may do, what it probably will do, is to bring Russia's military base within negotiable distance of the Pacific coast. The great Northern Power, with such a line in its hands, will be able, provided that it can proceed leisurely, to assemble and equip a large army on the frontiers of Korea and Manchuria. We need not discuss what that would signify. Japan understands it already. What it certainly does not signify is that the Siberian Railway will prove a means of "consolidating the brotherhood of mankind."

The *Nippon* further declares that the maintenance of a powerful British fleet in Eastern waters is a far greater menace to the tranquillity of the Orient than would be a completed Siberian Railway. May we be permitted to ask, then, why the *Nippon* and its vernacular contemporaries constantly urge the increase of the Japanese Navy to a size at least equal to that of the two strongest foreign squadrons in these waters combined. The answer will doubtless be that Japan's fleet is intended simply for defensive purposes. So is Great Britain's. England has to protect her commerce and her colonies in the East. Insufficient preparations for defence

would invite the very danger that the *Nippon* dreads. If the sentiment of the Japanese nation be truly reflected in the columns of the *Nippon*—a hypothesis that we do not for a moment entertain—then the British Squadron in these waters is not nearly large enough. If Japan can not trust England, neither can England trust Japan. If Japan thinks that Russia's southward expansion is less dangerous to this empire than England's northward growth, then England knows what she has to anticipate, and will obey the first law of nature, the law of self-protection. The *Nippon* has always been generally anti-foreign and particularly anti-English. It is also, in our opinion, emphatically anti-Japanese.

THE WEIHAIWEI SALUTE.

A CORRESPONDENT, "A.E.B.," re-opens the subject of the celebrated Weihaiwei salute. He evidently believes that the *Alacrity* saluted Vice-Admiral ITO's flag before 8 a.m. on the 10th of August, and he asks us to define more accurately the expression, "about 8 a.m." used in the detailed account of the affair published in the *Japan Weekly Mail* of November 24th. It really seems as though this business were destined to remain perpetually shrouded in mystery. The story originally circulated was that the *Mercury's* salute had been fired before sun-rise, thus rousing the garrison of Weihaiwei, and rendering abortive the torpedo attack contemplated by the Japanese squadron under cover of darkness. This tale, as we pointed out at the time, was inherently impossible. Salutes are never fired before daylight. In point of fact, it mattered not the least, so far as concerned the success of the Japanese attack, whether the *Alacrity's* salute on the morning of August 10th was fired after or before sun-rise, inasmuch as the Peiyang Squadron, the sole object of the projected torpedo enterprise, was not in Weihaiwei at the time. But apart from that circumstance—vital as it is in its bearing upon the charge brought against the British man-of-war that she played into the hands of the Chinese—no one, we presume, can possibly imagine that Admiral FREMANTLE would have lost the use of his senses so far as to direct that a salute should be fired from his ship before the day had broken. Such a conception being obviously absurd, and it being further certain that no procedure on the part of the *Alacrity* could have mischievously interfered between the Japanese squadron and a number of Chinese vessels not present at the time, we really see very little use in discussing whether the saluting took place before or after 8 o'clock. Still, as we are now confronted by a marked discrepancy of assertion, and since our own accuracy is strongly impugned, we shall devote a few lines to the matter. But we

must premise that "A.E.B." does not quote us correctly. He writes:—"You yourself said that the salute took place before the cannonading from the Chinese forts began." We did not say so. What we said was:—"At about 8.40 a.m., the Third Japanese Division, being then 5 or 6 miles distant from the British man-of-war, began to exchange shots with the eastern batteries." At what hour the batteries themselves first began to throw shells at the Japanese ships we do not know. It may have been 7 a.m., as our correspondent says. Our account referred to the time when the ships began to reply, and that, we believe, was at about 8.40 a.m., or some thirty minutes after the *Alacrity* and *Matsushima* had exchanged salutes. We may now say at once that our account of the *Alacrity's* doings, as published in the *Weekly Mail* on November the 24th, was taken from a written statement penned by Admiral FREMANTLE himself and placed at our disposal. The Admiral, believing that a torpedo surprise was contemplated, kept well outside the Japanese Squadron until after day-light. Then he saw the whole squadron standing in towards Weihaiwei, "and a gallant sight it was," he wrote, "in the bright sunshine of an early summer morning." By and by, he gave orders to steer for Chefoo, and went below himself for a short time. At 7.15 a.m. he came on deck again. The Japanese ships were then hull down, but thinking that it would be as well to see the end of the affair, the Admiral put the *Alacrity* about and steamed back towards Weihaiwei, keeping nearer the shore than he had been on his previous course. Owing to this latter fact, and to an unexpected manœuvre on the part of a division of the Japanese Squadron, the *Alacrity* found herself close to the latter, and her Captain asked the Admiral whether he should salute. He received a reply in the affirmative, and the salute was accordingly fired and answered, the time being a few minutes past 8 o'clock. Such are the facts, our authority for them being Admiral FREMANTLE himself. "A.E.B." must not suppose that when we said "about 8 o'clock," we could possibly have meant "before 7." The *Alacrity's* salute according to our information, was fired after, not before, 8 o'clock. As for "the recognised rule that no salutes are fired before 8 o'clock in the morning," we must be permitted to observe that Admiral FREMANTLE'S familiarity with such rules may be taken for granted. It seems almost frivolous to discuss whether or no the Commander-in-Chief of the British Squadron in these waters acted in accordance with the A.B.C. of his profession. Our correspondent further informs us that our phrase, "it would have been a palpable discourtesy not to salute under the circumstances,"

has become a standing joke among naval men. Well, we are quite willing to be a "standing joke" in respect of our views on international courtesy as practised in the British Navy, when Admiral FREMANTLE'S procedure forms the basis of our opinion.

The queerest thing about the whole affair is that Flag-Lieutenant OGILVIE, writing to the *Naval and Military Record*, denies the firing of any salute at all on August 10th, and alleges that only on two occasions—November 3rd and November 24th—during the whole war were salutes interchanged by Admiral FREMANTLE and Admiral ITO. Yet we have it on the written statement of Admiral FREMANTLE himself that the *Alacrity* saluted the *Matsushima* on August 10th. Perhaps this strange discrepancy is to be referred to the fact that the *Alacrity* is said not to have been flying the British Admiral's flag on the occasion of the Weihaiwei affair. But we can only conjecture.

Two things seem to us to be clearly established; the first, on the testimony of both sides, the second on the strength of Admiral FREMANTLE'S written statement. They are, first, that at whatever time the salute was fired on the morning of August 10th, it could not have marred the Japanese torpedo programme, since there were no Chinese ships in Weihaiwei to be torpedoed; secondly, that the *Alacrity's* salute was fired after 8 o'clock in the morning.

THE CHISHIMA-RAVENNA CASE.

WE understand that Mr. M. KIRKWOOD, legal adviser to the Japanese Government, upon whom has devolved the duty of controlling and managing the appeal from the Judgment of the Supreme Court in Shanghai in the *Chishima-Ravenna* case, and by whom solicitors and counsel were retained and instructed, received on the 4th instant a telegram from London to the effect that their Lordships of the Privy Council (the LORD CHANCELLOR, Lords WATSON, MACNAUGHTEN, DAVEY, HOBHOUSE, SHAND, and Sir R. COUCH), gave their decision on the 3rd instant, advising HER MAJESTY to reverse the judgment of the Shanghai Supreme Court, and to allow the Appellant Japanese Government its costs in all courts. The ground on which their Lordships based their decision was that the British Courts in Japan have no jurisdiction to entertain a counter-claim in any suit against a Japanese plaintiff. The question had been discussed more than once in these columns long before the *Chishima-Ravenna* collision took place, and our contention always was that the Order in Council imposing upon Japanese plaintiffs in a British Court the obligation of submitting to the jurisdiction of the Court in respect of a counter-claim, was *ultra vires*. The line of reasoning upon

which this conclusion was based takes the form of a simple syllogism:—The jurisdiction referred to in Orders in Council being acquired by treaty, must never exceed the provisions of the treaty; the treaty provides that all suits in which Japanese subjects in Japan are defendants shall be heard by Japanese Courts; therefore, a counter-claim by a British subject against a Japanese can not be heard in a British Court in Japan. A Japanese subject has a right, by treaty, to sue a British subject in Japan before a British Court, and the Court has no competence to hamper the enjoyment of that right by imposing conditions not contemplated in the treaty. That, as our readers doubtless remember, was the main point involved in the appeal just decided. The other incidental points were, first, that even if a British Court in Japan had jurisdiction to entertain a counter-claim in the case of an action brought by an ordinary Japanese plaintiff, it could not entertain the counter-claim in the present case, since the Japanese Government was the plaintiff, and since, according to Japanese law, the Government is not responsible for the wrongful acts of its servants; secondly, that, having regard to the place of collision, Japanese law must be applied; and thirdly, that no counter-claim could be brought where no direct action would lie. On the main point now decided in the Japanese Government's favour both the Court for Japan and the Supreme Court in Shanghai gave judgment against the Government, in spite of the strenuous and able pleading of Mr. KIRKWOOD before the latter tribunal. It must be very pleasant to that gentleman to know that every head of argument on which he relied before the Shanghai Supreme Court, and indeed his whole line of reasoning, were adopted by Mr. COHEN, Q.C., and Mr. FINDLAY, Q.C., the learned leaders for the Japanese Government before the Privy Council, and that no fresh arguments were adduced by them; for such, we understand, was the case. It must further be very satisfactory to the Japanese Government to find that, not to any fault of advice or advocacy, but only a mistaken view of the Treaties and Orders in Council, as well as of international law, must be attributed the unfortunate judgment of the Court in Shanghai, which provoked so much comment and caused such long and costly litigation. On the other hand, the Peninsular and Oriental Company are to be sincerely sympathised with. Acting under excellent legal advice, following the procedure plainly indicated by an Order in Council, and having had their case admirably presented by Mr. J. F. LOWDER in Yokohama and Shanghai, and by counsel of the highest eminence at home, they find themselves condemned, at this initiatory stage of the proceedings, to pay costs that probably amount to a great part of their counter-claim.

The Privy Council having decided the main question in favour of the Japanese Government, it was not necessary for their Lordships to deal with the incidental points. We feel assured, however, that they took care to guard against the possibility of the opinions expressed by the Judges in Shanghai being elevated hereafter to the rank of precedents.

The decision in this appeal is of great importance, not only to Japan, but to every country where the QUEEN exercises extraterritorial jurisdiction under treaties and Orders in Council similar to those applicable in Japan's case. It is our privilege to believe that, so far as concerns the assurance of obtaining justice, no suitor can suffer by submitting to the jurisdiction of a British tribunal under any circumstances. The principle involved in this particular case, however, belongs rather to the realm of international law, and we may frankly congratulate the Japanese Government and its legal advisers upon their complete and unqualified success.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

THE WEIHAIWEI AFFAIR.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your issue of June 20th, I noticed a letter from Lieut. Ed. D. Ogilvie, in which he passes over in silence the "saluting canard" of August last. Your *Weekly* of November 24th, however, established the following points:—

The *Mercury* was watching the movements of the Japanese squadron since the preceding evening, and since daylight manoeuvred in such a way that at a certain moment she found herself very close to the Japanese flagship.

To quote from your article, "it would have been a palpable discourtesy not to salute." Allow me to say in passing that this phrase has become a standing joke among naval men. I will not discuss your opinion on international courtesy, all I wish to do is to fix the actual hour at which the salute was fired.

You said "that was about 8 am." The recognised rule is that no salutes are fired before 8 o'clock in the morning, and I am sure had you been certain of the hour that, writing with an accuracy which you guaranteed again and again, you would have said "that was after 8 am." Your *about* appeared to me so lacking in precision that my curiosity was excited and I tried to inform myself upon the subject. I have just received reliable information from China and Japan which leads me to believe that the Chinese forts opened fire at 7 a.m. Now, you yourself said that the salute took place before this cannonading began; then, at what time was your "about"?

It will not be difficult for you to substantiate definitely the facts, which now belong to history and, in so doing, you will oblige,

Yours sincerely,

A.E.B.

Tokyo, June 28th, 1895.

POOR STRATEGY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In his letter of June 26th to the *Mai*, Mr. E. W. Barrett endeavours to turn aside attention from his misdeeds by methods which in some parts of the world may be thought ingenious, but which no one in the country whose "civilization," as he asserts, is "overestimated," will regard as praiseworthy or even honourable.

He begins by pleading that "the American correspondent does not write his own headlines." The intention of this remark is to make it appear

that the offensive statements attributed to him were not his own writing, but were prefixed as headlines, by some other person, to the letter of which complaint is made. If this is not the purpose, Mr. Barrett might as well have said—"The American correspondent does not use Chinese ideographs," or "The American correspondent cannot fly." He wishes your readers to believe that at least some of the shameful accusations brought against my countrymen were invented as headlines in the United States, not sent by himself from Japan. As a matter of fact, every one of the extracts given in my previous communication was from the body of the letter signed by Mr. Barrett, and published in the San Francisco *Examiner*. I did not copy, nor think of copying, a single headline. This is the first example of what I venture to call Mr. Barrett's poor strategy.

In the next place, he says:—"The statement of what I believed to be facts were taken from the *Japan Mail* of April 20th and from an article in the *North China Daily News* of a previous date." I think the English of this sentence is faulty, but I am quoting Mr. Barrett, and at any rate the meaning is plain. He wishes to have it understood that he is supported by two authorities,—one of them a very good one, which would not be likely willfully to misrepresent the Japanese. The *North China Daily News* is not within my reach, but I have taken pains to find the article in the *Japan Mail* to which he refers. Permit me to recall the charges made by Mr. Barrett to the defamation of our soldiers and people:—

- 1.—"The last battle of the war between Japan and China at Tienchwangtai resulted in a butchery equalling the atrocities at Port Arthur."
- 2.—"It demonstrated that the common soldiers of both Oriental races are as bloodthirsty and as brutal as the American Indians."
- 3.—"The Custer massacre was not more horrible than the slaughter of Chinese by Japanese at Tienchwangtai."
- 4.—"The wounded were dispatched on the field in the American Indian style."
- 5.—"Letters from eye-witnesses describe the butchery as horrible."
- 6.—"After bayonneting the wounded on the field, the Japanese entered the town and killed every Chinaman who offered resistance."
- 7.—"The civilization of Japan has been overestimated."

Now, Mr. Editor, what will be thought of Mr. Barrett when it is known that not one of these allegations appears in the *Mai*'s article, and that nothing resembling them can be found there? The very strongest statement made is this: "There appear to be valid grounds for concluding that some of the wounded were killed by the victors, and the question arises, was this an act of wanton cruelty, or does some extenuating explanation offer." There is nothing about "atrocities," "slaughter," "massacre," "barbarism," or "bayonneting." These words are not used. Nor are the soldiers described as "bloodthirsty," or "brutal." American Indians, to whom Mr. Barrett is so fond of comparing the Japanese, do not appear anywhere in the *Mai*. Nor are there any letters from eye-witnesses "describing the butchery as horrible." The only letter mentioned is from a correspondent who explains that the Chinese were treated mercifully, except in cases where their own behaviour made generosity impossible. The whole tone of the article is directly opposed to that of Mr. Barrett's writing. Yet he claims to be justified by the *Japan Mail*. I call that another example of poor strategy. The authorities upon which he relies are reduced to one; and I have now my own opinion as to the accuracy of his alleged quotations from even that source.

Again, Mr. Barrett seems to have an idea that he can weaken my rebuke by affecting to disbelieve that I am a Japanese, and intimating that he is assailed by some personal enemy in disguise; as if the question of his misconduct depended upon the nationality of the person who calls him to account. It is true that I am a Japanese; but what Mr. Barrett has done would be none the less heartless and wanton if I were a Frenchman, an American, or a Hindoo. I am sorry to say that few foreigners care enough about the abusive things written against us to take the trouble of denying them. We must begin to look after our own reputation if we wish to keep it from being unjustly attacked. But it is evidently Mr. Barrett's opinion that by throwing a doubt upon the truthfulness of my signature he can open a new subject of inquiry, and thus escape some of the censure that is his due. And this, in my judgment, is a third example of poor strategy.

With regard to my selections from Mr. Barrett's correspondence, he asserts that they were "garbled extracts from a garbled report of what I did write to my own paper, the *Atlanta Constitution*, which

was printed in other American newspapers." This seems to mean that he sent his letter to the *Atlanta Constitution*, that other papers copied it from that journal and mutilated it in doing so; and that I further mutilated these "garbled" versions before presenting them to the readers of the *Mai*. It is a serious charge. If it could be sustained, I should be proved a dishonest trickster. If it can not be sustained, I will leave others to find a fitting designation for my accuser. Now we shall see. Mr. Barrett's letter was dated April 25th. It arrived in San Francisco on May 12th, and was immediately published in the *Examiner* of that city, with his name appended. It contained every one of the statements which I reproduced in my former communication to the *Mai*, and which are repeated above, without alteration in the slightest particular. The copy of the newspaper in which they appeared is at your disposal, Mr. Editor, whenever you may desire to inspect it, and you will see that my extracts are literal transcripts. What Mr. Barrett expects to accomplish in declaring that I had "garbled" his language, I cannot understand. But in saying that he thus gives an additional example of poor strategy, I think that I keep well within the bounds of moderation.

Mr. Barrett calls attention to one or two compliments which he condescendingly pays in his San Francisco letter to the "upper classes" of the Japanese. It probably would not occur to him that the flatteries of a writer who professes to know all about the Japanese character after a sojourn of ten days in this country are scarcely less offensive than his denunciations. Nothing is more disgusting to a sensible Japanese than to be patted on the back by superficial people whose judgment he despises. But praises, even if clumsily expressed, can do us no great harm, whereas such misrepresentations as this correspondent is guilty of may give us an evil repute all over the earth. It is for this reason that several Japanese, of whom I am one, have resolved to keep watch upon foreign periodicals, and when we discover unjustifiable attempts to discredit our country, like this in which Mr. Barrett is engaged, to do all in our humble power to expose them and counteract their bad effect. It is not a pleasant duty, but it ought not to be avoided, and I thank you sincerely, Mr. Editor, for allowing me the opportunity of performing it in this instance. Trusting that it will be entirely unnecessary to tax your courtesy further,

I am, Sir, yours gratefully,

A JAPANESE.

June 28th, 1895.

STRAY BULLETS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I read with some surprise in your issue of 26th ult., the paragraph under the heading of "Proposed revival of a dangerous nuisance," for before penning the paragraph I think you should have consulted with some of the gentlemen interested, who would willingly have explained under what conditions it is proposed to reopen the range and what rifle shooting through a screen is.

For years rifle shooting was enjoyed here by the members of both the Tir Suisse and the Yokohama Rifle Association without a single accident. The stray shots referred to in your paragraph were from squads of men landed from some of the men-of-war in port for rifle practice, as was proved by the government stamp on the base of the bullets picked up.

I enclose a rough sketch of the part of the range it is proposed to reopen, and will explain what rifle shooting through a screen is. To begin with, there will be but one range to be shot from, say 300 yards at the firing point, and immediately in front of the marksmen is a high bullet proof screen; in the screen are apertures or "doors" for each target, and from the sketch enclosed you will see that these "doors" are so arranged that it is impossible for any bullet to go over or wide of the butts,—any bullet fired high or wide must find its billet in the "screen." I may add that rifle shooting on this principle was carried on for years at Mukugaoka, and this place was practically surrounded by houses, being just close to the pond at Ueno.

Mothers, children, nurses, and all others may still enjoy their rambles on or around the Race-course in absolute safety from bullets; in fact they will be as safe there as on the Bluff or in the Settlement.

I am, Sir, yours faithfully,

MARKSMAN.

Yokohama, July 2nd, 1895.

THE SHIMONOSEKI INCIDENT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In a leading article published in the *Japan Mail* of June 14th, you offer a criticism on

the Special Correspondent of this *China Mail*, who speaks of a want of decent feeling among the Japanese people at the outrage upon Li Hung-chang. As a further evidence that your criticism is deserved, I enclose an article written in English for the *Kokumin-no Tomo*. The author of the article is Prof. T. Iyenaga, who holds the chair of History in the Keiogi-juku.

Yours, &c.,
June 20th, 1895.

ON THE SHIMONOSEKI INCIDENT.

The excitement of the nation occasioned by the Shimonoseki incident—the inflicting of a wound by Koyama on the Chinese Plenipotentiary Li Hung-chang—seems to be over, or is, at least, growing less. The time is drawing near when we can and ought to examine with cool minds the causes which resulted in such a sad phenomenon, and consider the ways of avoiding its reappearance. It will not be enough to say that Koyama was a lunatic, a fanatic, a mad and crazy fellow, and the work of such a being cannot, like some of the natural phenomena, be forecast or avoided, and console ourselves by reminding ourselves that such an act is not of infrequent occurrence even in the civilized countries of the West. The bad impression which the Shimonoseki accident created upon the foreign nations may not be so serious, not of so wide a dimension, as was once feared; the outcry of the foreign critics which the event has raised against the so-called skin-deep civilization of our people will be greatly modified, when the true nature of the case and the national feeling respecting it be known to them. Nevertheless the fact—that a hand, a Japanese hand, was raised against the Chinese Peace Envoy, that it was an outright breach of the law of nations will remain written forever on the pages of history. We can never forget the simple fact that the doer of the outrageous deed, Koyama, is one of our countrymen, a member of our community, stained our national honour, disgraced our country, and brought, to a certain extent, suspicion and ill-will of uninformed foreigners towards our good fellow citizens.

Nor is the case of Koyama an isolated one. There was a few years ago the case of Tsuda Sanzo, and years ago the cases of Kurushima, of Nishino, of Shimada, and his fellow workers. All these human phenomena, which, like volcanic eruptions, occasionally burst forth, and strike terror into our hearts, must have their hidden source of action in some of the crevices of the strata through which flows the current of our national thought. Whether the sword of the assassination be drawn against his own countrymen or against foreigners, it matters not, it must have the same spring, the same motive of action. To discover such causes, which are surely many and also complicated,—complicated as the constitution of the human mind and that of the social fabric,—is not an easy task, and even after they are seen, it is still more difficult to state them, lest it might offend the feelings of a certain class of people. But let us be frank, and have the boldness of our convictions. Among the causes may be numbered the excitable temperament, and uneven balanced nature of the brains of some of our countrymen, but the real and chief causes, it seems to me, are:

1. The way in which the *soshi* have been allowed to play their rôle recently on the political stage.
2. The old principle of feudalism, which still lingers in the head of the conservative class.
3. The inadequacy of the Chinese doctrines of loyalty, patriotism, and morality, to meet the moral demands of our people in the present status of our national growth.

The way in which the *soshi* have been allowed to keep their wretched and mischievous existence in our political society have always appeared to me strange. It is needless for me to recount here what damage the *soshi* have done. Professing to be the mouth-pieces of liberty, they have been its chief enemies. Acting as the tools and instruments of politicians, they have obstructed the march of constitutionalism. Threatening with blows, if their wishes were not complied with, they have carried terror into the hearts of peaceful citizens. Living like parasites, they have sucked out the juices of the plant they live on. They have been the hotbeds where germinated with mushroom growth all sorts of distorted political plants,—distorted Patriotism, distorted Liberty. Full of these distorted ideas; they are men of ambition, of strong passion, of physical strength, it is not unnatural that they should plan to distinguish themselves by some feat, and, as no avenue of honourable career is open before them, to celebrate and immortalize their names by braving their lives, and hitting a mark of the State which will send a thrill of awe and amazement throughout the Empire and probably throughout the world. It is thus that the *soshi* turn themselves into braveoes. It was thus that the swords ran through the bodies of the lamented Okubo and Mori. It was thus that Count Okuma lost a leg, that Count Itagaki and others endangered their lives. It was thus that Li Hung-chang was wounded. Such heinous crimes as these seem to them as nothing but the acts of true patriotism and honour. That no one but these ruffians are responsible for this monstrous deed no intelligent person will hesitate to declare. And yet, philosophically considered, are not these misconceptions, these distorted ideas of patriotism and of loyalty, which give birth to the actions of these men, the result, in a certain degree, of education, of the historical growth, of the principles and teachings which once ruled our society, and with which our youths have hitherto bred.

The old feudal principle of complete devotion to a feudal lord, to live and die for him and for him alone, to have his joys and sorrows, his friends and enemies, to sacrifice, if necessary, our lives, our home, our property for his cause, to consider as our sacred and first duty to avenge his murder or his wrongs with whatever means in our power,—this old spirit of the *samurai* has, in certain respects, the nobleness of character, which naturally extorts our praise, and is well worth its life of many hundred years during our feudal period. But this same principle, when misquidged and misapplied in this enlightened age of ours, when carried to its extreme, converts into evil, into lawlessness and crime, not to say of provincialism and bigotry. Again the Chinese doctrines of loyalty, patriotism, and morality, which since their importation have moulded our public opinion and guided our

conduct of life during our past absolute monarchical age, however they might contain large amounts of truth, however they might have done good in the old times, are certainly inadequate to rule us in our constitutional age. And, moreover, among these Chinese doctrines and feudal principles, or in what might be called hybrid Chino-feudal principles, are contained the seed which, in an immature mind, ferments into a poison, some teachings, which as their natural conclusion, will lead us to justify the crime of certain murder, namely the assassination of the high officials or men whom the assassins consider as tyrants, oppressors, or evil-doers of the State,—nay, not only to justify us for such crimes but to deem them as the acts of patriotism, of loyalty, and of high morality. When we examine the letters or utterances of the perpetrators of those crimes hitherto committed, do we not always find them announcing and boasting that, from the pure motive of loyalty and patriotism, they have done their work. If there is nothing in some of the current opinions and doctrines to back them in their declarations and deeds, how can they, without shame and fear, stand before the public and declare themselves so boldly? Do they not think as finding their precedents in our history, or in that of China? Do they not deem themselves as ranking among the patriots and loyal subjects, who have saved their country and their lord by similar deeds? Do they not consider themselves as enrolled among those immortal heroes, as the forty-seven *ronins*, upon whom we have heaped honours and praises, whose shrines are brightened by ever-burning lights, and are the resort of thousands of pilgrims every year? And are not, in fact those murderers Shimada, Nishino, and others, upon whom we ought to look with the utmost detestation and horror, and whose remains ought to have been scattered to the four winds, enshrined in tombs, and have become objects, it is strange to say, of adoration and worship! Can we say, in face of these facts, that the spring of those atrocious acts is wholly in the constitution of their abnormal brains, and not in a tributary of the old current of our national thought, in some of the old feudal principles and Chinese doctrines?

If such are the true causes which result in those murderous deeds which greatly reflect upon our national honour, here also shall we find our effective remedy. The old garbs of feudal principle and Chinese doctrines were fine and well suited in their days. But they are too old, too rotten, to clothe us today. The times have changed. We have outgrown the old society of feudalism and of absolute monarchy. In our constitutional age, we need new garbs, new principles. It is time for us to uproot the rotten parts of the old principles of society, and to supplant them with modern, healthy, liberal thoughts. The time is past when we were taught to worship our king as a supernatural being. The time is come when we adore our Emperor as the personification of the sovereign state, as the incarnation of law in him, when it must be clearly understood that a breach of the law of the country, of the law of nations, which our Emperor respects, is an act of violation against him, and against the country. The time is come when every member of our community should understand that true patriotism lies in the performance of the duty allotted to him in his own sphere, in being an industrious, lawful, peaceful, at the same time brave citizen. That the diffusion of modern liberal ideas is of the first importance, is the most effective means of preventing those crimes of Koyama, Tsuda Sanzo, and others, needs no further remark. The second measure of importance will be the complete expulsion of the *soshi* from our political arena. Our public opinion must be strong enough to crush such scandalous human existence. It must come to be considered as a great shame for politicians to use such rascals as the instruments of furthering their political designs. The third is that strong measures must be adopted not only to punish those assassins, but to show clearly the indignation of the nation against them. The burning of incense by ignorant people before their tombs, or any such sign of respect paid to their remains, must be strictly forbidden by law.

In conclusion, whatever may have been the causes which produced such an incident as that of Shimonoseki, it teaches us how delicate, how wonderful is the mechanism of an organized State, how its composite elements, when individually considered, however unrelated they may seem to an organized whole, how even one of these elements may inflict, when it touches us how one man may raise or spoil the honour of the State, and change the course of history. It teaches us how closely we are as a nation related to one another, how the interests and welfare of the nation depend upon the well-being of individuals, and hence how important is the national education. It teaches us how powerful in its influence, how weighty in its consequences, are the ideas which mould and guide the public mind, and hence how careful we must be of the intellectual and moral atmosphere in which we move and have our being.

CRICKET.

YOKOHAMA VERSUS THE FLEET.

An all-day match was played on Saturday between a local eleven and a team from Her Majesty's Fleet, and resulted in a win for the Y.C. & A.C., by 27 runs on the first innings. The day opened bright and breezy, but as the afternoon drew on the heavens clouded over, and the match concluded under leaden skies. The Fleet went in to bat, Arbutnot and Thring defending against the bowling of Walford and Philip. Thring was the first to score, a couple off Walford. In the next over he obtained another couple from the same bowler, while Arbutnot obtained a 3 and a single from Walford, Philip's first two overs being maidens. Five more runs were made off Walford and then White relieved him. In this bowler's third over Arbutnot went under, and the score stood, 27—1—9. Upon Powlett joining Thring a long stand was made the newcomer staying in until 69 were registered, then he was clean bowled by

Denne: 69—2—26. Dr. Harries was caught by Kenyon off Denne before he had broken his duck: 69—3—0; and Keary had only added a single when Denne found his wickets: 70—4—1. Fitzherbert, who followed, put up a ball, which Kenyon held; meanwhile, Thring had scored another two: 72—5—0. Hale, who took the vacant crease, made a little better stand, and succeeded in knocking up 7—including one to the boundary for 4—ere he was caught by Mair. 87—6—7. Keys scored two singles and was then held by Philip. Thring had been quietly getting runs during all these changes, and when Keys left the field the score stood, 100—7—2. After this the end came quickly; Denne scattered Thring's wickets, White bowled Compton and Steel—the score still sticking at the century—and Reinold carried out his bat without scoring. Denne's bowling analysis was: 55 balls, 32 runs, 2 maidens 7 wickets, and 2 wides; not a bad performance for a hot June day.

Crawford and White opened for Yokohama; but the latter made only a short stay, being cleaned bowled by Powlett in the fourth over: 1—1—5. Denne succeeded and opened in dashing style with a boundary hit, this was followed by a single and another boundary; then Arbutnot stopped what looked like a brilliant career, the ball breaking off the bat on to the wickets: 17—2—9. Crawford had quickly settled down to his usual play, cutting to leg, and when Walford joined him the score began to mount steadily but surely. At 81 the partnership was sundered, Walford playing a ball right into Arbutnot's hands: 81—3—36. The retiring batsman's score included 3 fours, 1 three, and 5 twos. Crawford did not remain long after losing Walford, for at 84, Fitzherbert caught him prettily off Powlett: 84—4—33. Johnson was dismissed without scoring, then Tyng and Bugbird came together, and before the former was bowled the score lacked but two of the Navy's total. Kenyon next joined Bugbird, and by some careful play the result was soon placed beyond question, the score being taken to 126 before a separation was brought about. The next three men added nothing to the score, and the innings closed for 127, Bugbird carrying out his bat for a capital 21. It was now about half-past four o'clock, and after a few minutes the Fleet went in again. In their second venture they compiled 90 for eight wickets, of which Fitzherbert made 38. A naval band was in attendance and played a capital selection of music, greatly to the delight of the many ladies who graced the match with their presence during the afternoon. Scores:—

THE FLEET VERSUS YOKOHAMA.
The return match, Fleet versus an Eleven of the Y.C. & A.C., took place on Thursday, and proved another win for Yokohama, this time by 66 runs. Notwithstanding the heavy soaking the ground had undergone during the preceding three days,

the wicket was in very good condition, though at the start the ball hung somewhat. The Fleet won the toss and put in the local players. Dickinson and Denne went out first to defend against the bowling of Arbuthnot and Powlett. The light was terribly bad, the sun though hidden behind fleecy white clouds, diffusing a nasty glare. To this must be attributed the disastrous opening of the Yokohama team: within about five minutes of commencing three wickets fell for two runs, both White and Denne being dismissed by Arbuthnot without breaking their ducks. This must surely be a record in the history of the Club. Upon Walford joining Dickinson, Yokohama's hopes began to ascend a little, though the fielding and bowling of the Navy's representatives were not to be trifled with. At 50 Dickinson was caught by Noble: 50-4-29. Crawford filled the vacancy and opened with a dash, making 19 in couples and fours, before scoring one single. Meanwhile, Noble had caught Walford: 52-5-13. Soon after an adjournment was made for tiffin. Healing and Crawford went out together upon play being resumed, and Healing stayed until 103 was telegraphed. He made the biggest hit of the day during his innings, sending the ball outside the ground for 6: after which he was caught by Powlett, 103-7-18. Kenyon was the only other man to get into double figures, scoring a useful 13, not out. The innings closed for 140, which included only eight extras.

The Navy did not show to the advantage expected when they went in to bat, all their wickets falling within a couple of hours for 84, though the light and ground had much improved. Three players only got into double figures;—Thring 10, Fitzherbert 12, and Veale 10. Lias and Denne's bowling averages both read well—Lias bowling 90 balls for 24 runs and 4 wickets; Denne 33 balls, 20 runs, 4 wickets. The extras, however, doubled the Navy's and one over, being just 17. Yokohama in their second innings made 142 for two wickets, Dickinson being not out, 57, and Kenyon 1, not out, when the stumps were drawn. A band was in attendance, and many ladies graced the game with their presence both morning and afternoon. Scores:—

"THE FOURTH."

The sun, which has been playing truant for several days past, came out in all his splendour on Thursday, in honour of the Fourth of July, the national holiday of citizens of the United States of America. From an early hour bombs and fire-crackers were discharged in the Settlement and from ships in the harbour. Bunting was liberally displayed from the business houses in the Settlement, and at private residences on the Bluff; and in the evening the U.S. Naval Hospital and the Grand Hotel were profusely decorated with lanterns. At noon a salute of 21 guns was fired by the warships in harbour, those comprising the U.S.S. *Baltimore*, H.M.S. *Centurion*, *Undaunted*, *Edgar*, *Leander*, *Alacrity*, H.I.R.M.S. *Razboynik* and

Manjur, and the French flagship *Bayard*. All these ships, as well as many merchant vessels, were dressed rain-bow fashion. A cricket-match took place during the day, in which team from H.M. Fleet was worsted by the Y.C. & A.C. by 66 runs. The sailing race resulted in a win for *Maid Marion* after a good struggle. As night drew on crowds collected on the Bund to witness the display of fireworks, which were discharged from floats moored opposite the Grand Hotel. The set pieces were very fine. Several of the warships were illuminated and let off rockets and other fireworks. A procession of boats gaily hung with lanterns, and carrying a band, was towed round the shipping between 9 and 10 o'clock, creating a pleasing effect. A model of the *Baltimore*, which was taken round the harbour during the day, created quite a sensation, so beautifully finished was it in detail. Admiral Carpenter received during the afternoon on board his flagship, the *Baltimore*, and nearly the whole of the American community were present.

Owing to the weight of the boys and men who climbed up on to the iron palisading of the Grand Hotel (on the side nearest Farsari's) the whole structure was pulled down during the evening. Fortunately nobody was hurt.

SILK SHIPMENTS.

YOKOHAMA CHIHIO SAIBANSHO.

(CRIMINAL SECTION.)

Before Judge KATSUURA and Associate Judges MIYAJIMA and OHASHI.

SATURDAY, 29th JUNE, 1895.

THE BARRADAS CASE.

Judgment in the case of Augusto C. Barradas and Morikawa Ginnosuke, charged with having attempted to obtain money under false pretences, was given by the Court this morning.

The Judge first stated that the evidence showed that Morikawa Ginnosuke first swindled his friends in July last when he obtained yen 6, pretending to pay that sum for a translation of an inventory of the property, whereas he explained the matter to Barradas in Japanese without the aid of an English translation. Secondly, Morikawa fraudulently obtained yen 30, under the false pretence that he had paid that sum to Barradas as a portion of the expenses of a dinner given at the Kaiko-ro to persons that had been asked to raise a loan of yen 100,000 from a foreigner. Morikawa next obtained yen 40 for expenses of inspecting the mine in Toyama Prefecture, and then yen 20, which he alleged was for some presents to Barradas. Finally, Morikawa attempted to obtain yen 324, which he stated had been paid by Barradas to Fonseca in connection with the loan. These circumstances having raised the suspicions of the borrowers, they distrusted Morikawa and the latter failed to accomplish his nefarious design. The above facts being proved by the evidence of witnesses, the Court sentenced Morikawa to major confinement for one year and six months, a fine of twenty yen, and to police supervision for six months and costs of Court, in accordance with Section 390 of the Criminal Code. Evidence that Barradas was associated with Morikawa being wanting, the accused, Barradas, was found not guilty and acquitted.

THE RHEINGOLD CASE.

MR. ENSLIE'S AWARD AND THE REASONS.

The finding in this case was delivered by Mr. Ensle in H.B.M.'s Court at Kobe on Tuesday morning. He said:—Whereas a certain Charter Party was on the 10th day of November, 1894, signed by Messrs. Faber and Voigt of Kobe as agents for the master and owners of the German steamship *Rheingold* and Mr. Matahachiro Tachikawa, also of Kobe; and whereas certain disputes and differences have arisen and are still existing between the parties aforesaid with regard to an alleged breach of the said Charter Party; and whereas the *Chiji* of Hiogo Ken and the Imperial German Consul for Hiogo and Osaka, respectively acting under instructions from His Imperial Japanese Majesty's Minister for Foreign Affairs and from the Imperial German Minister at Tokio, have requested me, James Joseph Ensle, of Lincoln's Inn, Barrister at-Law, to undertake the duties of Umpire in the disputes and differences aforesaid, it being distinctly understood and agreed upon that my decision as Umpire shall be final and without appeal; and

whereas subsequently the *Chiji* of Hiogo Ken and the Imperial German Consul for Hiogo and Osaka, acting under the instructions aforesaid have requested me to undertake the duties of sole Arbitrator in the said disputes and differences; and whereas Counsel for the parties in the said disputes and differences have drawn up and submitted to me certain issues, to the following effect:

1.—Whether a breach of Article 7 of the aforesaid Charter Party was committed by the Captain of the steamer *Rheingold*, and if so what amount of damages is payable in respect thereof.

2.—Whether a breach of Article 10 of the aforesaid Charter party was committed by the Charterer, and if so, what amount of damages is payable in respect thereof;

Now I, the said sole Arbitrator, having, with the knowledge and consent of Her Britannic Majesty's Minister at Tokyo, taken upon myself the burthen of this reference, and having duly weighed and considered the several allegations of the said parties and of their witnesses, and also the proofs, vouchers and documents which have been given in evidence before me, do hereby make and publish my award in writing of and concerning the matters above referred to me, in manner following, that is to say:—

(1).—A breach of Article 7 of the Charter Party dated the 10th day of November, 1894, made between Messrs. Faber and Voigt, of No. 25, Settlement, Kobe, as Agents for the steamship *Rheingold* and Mr. Tachikawa Matahachiro, was committed by the master of the said steamship.

(2).—The charterer was by reason of the default of the master of the steamship *Rheingold* relieved of the obligation imposed on him by clause 10 of the Charter Party.

(3).—Losses have been caused to Mr. Tachikawa Matahachiro by reason of the said default.

(4).—The following sums of money are due and payable by the master and owners of the S.S. *Rheingold* to Mr. Tachikawa Matahachiro by way of damages and other compensation.

Claim No. 1.—Making and fixing accommodation for about 1,200 passengers on S.S. <i>Rheingold</i>	\$1,818.00
Claim No. 2.—Items A—G inclusive ...	676.12
Claim No. 3.—Penalty paid on freight and passenger contracts to Kofuji Shoten	4,500.00
Claim No. 4.—Travelling expenses only allowed	195.41
Claim No. 5.—Eleven days' freight 11 to 21st Feb. last	1,613.33
Claim No. 6.—Admitted	1,000.00
Claim No. 7.—Item C. telegrams	70.00
Item E. Provisions for Compradores	20.00
Item F. Salary of 5 Compradores...	50.00
Item G. Sampan hire	5.00
Item H. Commissions, etc.	204.00
Item I. Customs fee	25.00
Claim No. 8.—Item B. Coolie hire	89.62
Item C. Lighterage	54.50
Item D. Landing and Carriage to Godowns	49.36

(5).—The following sum of money is due and payable by Mr. Tachikawa Matahachiro to the Master and Owners of the S.S. *Rheingold*:

Consular fees, 41.81.

And I award and direct that the Master and Owners of the S.S. *Rheingold* do pay all reasonable costs incidental to this Arbitration to be taxed if necessary and on application by me.

And I award and direct that all sums of money due by or to the parties under this award shall be forthwith paid out of the monies now deposited with me in this arbitration, and that the balance, if any, shall be paid to him or them to whom the same shall be lawfully due.

And I award, order, and determine that the said damages and the several matters and things awarded and directed to be done by or with regard to the parties to this reference, respectively as aforesaid, shall respectively be paid, received, done, accepted, and taken as and for full discharge and satisfaction, and as a final end and determination of the several matters aforesaid, and in difference between the parties referred to me.

In witness whereof I, the said James Joseph Ensle, have hereunto set my hand this second day of July one thousand eight hundred and ninety five.

(Sgd.) J. J. ENSLE.

Witness to the signature of

James Joseph Ensle.

ERNEST A. GRIFFITHS.

* * * * *

REASONS.

As the proceedings in this arbitration have, at my suggestion, in which Counsel for both parties acquiesced, been of a public character, it is quite unnecessary, in stating the reasons for my award,

to refer at any great length to the evidence on which it is based.

It is proper to state that in arriving at my decision I have been guided by the broad business principles enunciated at various times by eminent men, whose opinions are held in high esteem in commercial circles and have been invariably received with great respect throughout the civilised world.

During the course of these remarks I shall, when occasion requires, quote from those views in support of the conclusion I have arrived at.

The matter referred to me for arbitration is an alleged breach of a Charter Party, and the damage, if any, resulting therefrom. On the 10th of November, 1894, a Charter Party was signed by Messrs. Faber and Voigt of Kobe as agents for Captain and Owners of the German steamer *Rheingold*, and Mr. Matahachiro Tachikawa therein described as the Charterer.

The following is the substance of portions of that document, material to this arbitration:—

Par. 1.—The steamer in every respect thoroughly seaworthy, with necessary officers and crew, and so maintained by the owners during the continuance of the charter, shall between 25th Novr. and about 10th Decr. 1894 be placed at the disposal of the charterer or his agents for voyages on the coast of Japan.

Par. 2.—The entire capacity of the vessel shall be placed during a period of 5 months at the disposal of the charterer, with power to re-let the ship in whole or part.

Par. 3.—Charterer shall provide fuel for the steamer, and be entitled to lay a 'tween deck and or a lower deck at his own expense for passengers.

Par. 4.—Exception clause as to the Act of God, perils of the sea, etc., and every danger and accident to hull and machinery, of whatsoever kind or nature.

Par. 7.—Time consumed in repairing any accident to hull or machinery if exceeding 24 hours shall be deducted from the time of the charter: in which case the Captain must previously notify Charterer or his Agents that he will require more than 24 hours to complete repairs.

Par. 9.—Charterer to be allowed to load passengers.

Par. 10.—Charter money 4,400 yen per month, payable every half month in advance at Kobe.

Par. 11.—Captain and owners to have a lien on cargo for charter money.

Par. 22.—Disputes to be settled by arbitration at Kobe.

Par. 23.—Damages for non-performance to be the estimated amount of loss and payable as liquidated damages by the party delinquent to the party observant.

Added paragraph.—A deposit of 1,000 silver yen to remain with steamer's agents at Kobe during running of the charter.

The charter actually commenced on 3rd December, 1894, and consequently expired on 3rd May last. Some days consumed in repairs being allowed the last payment was made on 8th February last, the next one falling due on 25th of that month. As to the nature of the charter, the witness for the owners, Mr. Clement, said in his examination in chief:—"The charter is a time-charter. A time-charter is one which is closed by time, also called a monthly charter, being usually paid by the month. It is paid for either half-monthly or monthly, in advance. The charterer has to take care of the ship as far as loading and discharge of cargo is concerned; he furnishes coal, etc., as ordered by the Captain. The steamer furnishes provisions and engine room stores only. For dispatch of steamer the Captain looks for orders to charterer, who also pays the necessary advances to the Captain as required at various ports."

From this it is evident that the instrument under consideration is a time-charter, in which notwithstanding the temporary rights of the charterer to have his goods loaded and conveyed in the vessel, the ownership remains in the original owners, and, through the Master and crew, who continue to be their servants, the possession of the ship also. There is here no demise of the ship itself either express or implied. It amounts to nothing more than a grant to the charterer of the right to have his cargo conveyed in the ship, while the ship continues, through the Master and crew, in possession of the owner, they remaining his servants.

The charterer availed himself of the rights conferred by Clause 2 of the Charter Party and promptly transferred the rights he had obtained in the ship to Shohachi Nishitani as sub-charterer. The Agents and Master of the *Rheingold* have throughout been aware of this, and there is abundant evidence that they consented to this arrangement and that they have always treated the sub-charterer in every respect as a principal in the daily transaction of all business matters. It

is perfectly clear to me that Mr. Tachikawa's principal if not sole object in chartering the *Rheingold*, was to sub-let the ship. The acts of the Captain show unmistakably that he was aware of this fact. Mr. Tachikawa is accountable to Mr. Nishitani; the former of course looks to the Captain and Owners of the steamer *Rheingold*.

In pursuance of the Charter, the steamer arrived at Fushiki on the North-West coast of the island of Nippon, with the supercargo of the sub-charterer on board. After discharging, and while other cargo was being put on board by the supercargo, the loading was, about noon on the 11th of February last, stopped by the Captain on account of a leak in the after peak tank. He, the Captain, stated in his examination-in-chief that he told Mr. Koto, the comprador and interpreter then on board, it was better to stop loading to avoid damage to the cargo, and to save expenses, perhaps having to again take out the merchandise, because, as he says,—"I had to observe where the leak properly was." Mr. Koto, on the other hand, states that when he asked the Captain why he stopped the loading, the latter said he had forgotten one thing at Kobe, therefore he had to telegraph; and when Mr. Koto asked him what he should say to Mr. Kano, the agent for the sub-charterer, the Captain told him to say that the loading had been stopped by the Captain's orders.

In this connection, the evidence shows that though repeatedly applied to by the sub-charterer, through his agents, for explanation and written notice, nothing was given till the evening of 12th of February, when an interview took place on board and the Captain finally gave the sub-charterer's agent the following letter:—

Fushiki, 11th February, 1895.

To the Sub-Charterer

Mr. NISHIYA SHOHACHI.

DEAR SIR,—Please take notice that on my order I was compelled by some reason of the ship to stop loading cargo this date noon, and shall give immediate further notice what will be done as soon as I have received answer about my telegram as instructions for me from Europe.

W. G. BAHLIS,
Master of S.S. *Rheingold*.

With regard to the date of this letter, Captain Bahlis says it was written on the evening of the 12th, but dated the 11th in compliance with a request made by the sub-charterer's agent. Mr. Kano expressed much dissatisfaction at the vagueness of the notice, and the expression,—"by some reason of the ship," and, having repeatedly pressed the master for something more definite, Captain Bahlis stated that he remembered saying in reply:—"You want me to answer at once, I cannot do so, as I may have to go back to Kobe, according to the answer from home."

As regards notice by the Master of the *Rheingold*, it is urged on behalf of the Charterer, that the proper form under the Charter Party was one in writing. There is ambiguity in paragraph seven of that instrument as to the form of notice to be given by the Master. It is a well approved rule that where the parties to a document have used language which admits of two constructions, the one contrary to the apparent general intent, and the other consistent with it, the latter shall be observed to be the true construction. Moreover, ambiguity may be explained by the conduct of the parties.

I find the present intention to have been that written notice should be given, and that for the following reasons:—

(1).—Captain Bahlis gave written notice on a previous occasion, when on the 23rd of January last he, in Kobe, informed the sub-charterer that the vessel would be put on the slip.

(2).—In his examination in chief, Captain Bahlis says:—"At first I did not notify the sub-charterers in writing because I did not know what was the matter, and because I had to observe and find out where the leak was."

(3).—In the absence of written notice it would be difficult, if not impossible, to correctly assess the time allowance to which the charterer would on occasion be entitled under clause seven.

Exception was also taken to the vagueness of the original verbal and the ultimate written notice. A limited knowledge of the English language, and the inability to obtain cement, as alleged by Cap. Bahlis, are in no way valid reasons for not giving intelligible explanations as to the stopping of work on board ship. Moreover, in giving notice on the former occasion, referred to above, the Master's action was satisfactorily explained. Captain Bahlis telegraphed to his Owners somewhere about 4 p.m. on February 11th. The exact nature of the leak was discovered about 3 p.m. on the 12th. The Master is uncertain whether he obtained cement on the morning of the 12th or the morning of the 13th, but he is very clear on the following point, namely, that after the Engineer had tried to chisel

the leak tight on the 12th, the repairs commenced at about 6 a.m. on the 13th, and took about four hours to complete.

The reply from Europe was received at the Fushiki Telegraph Office at 9.30 a.m. on the 13th, as marked on the message put in as an exhibit. The necessary repairs were therefore begun 3½ hours before the Owners' instructions reached the town of Fushiki. The witness, Mr. Caswell, a member of the Institute of Mechanical Engineers, called on behalf of the Captain and Owners of the S.S. *Rheingold*, says that he is an Engineer, and that he made a report for the Bureau Veritas on the machinery of the ship in January last. In cross-examination he stated:—"I have not seen the leak. I had been told the leak was in the after tank. I do not think it a place where any very bad leakage could take place." There is nothing before me to warrant the conclusion other than that the leak was of no great importance.

Eminent exponents of the legal and equitable principles, which must govern business transactions, hold that ship owners are liable for accidents occurring on the voyage of a ship, such as damage done by the explosion of a boiler, the bursting of a screw shaft made by one of the best firms, no flaw having been discovered until laid bare by the breaking of the shaft. It has been urged that the leak in the after peak tank was a peril of the sea. I do not hold that view; it is not one of those dangers peculiarly incident to being on or passing over the seas.

Paragraph 4 of the Charter Party is a very sweeping clause, in favour of the ship owner as regards the Act of God, Restraint of Princes, Enemies, Fire, and every other danger and accident to hull and machinery and perils of the sea and navigation of every kind and nature.

The evidence before me does not, however, show that the Master acted with necessary, reasonable diligence in the matter of discovery of the exact nature of the leak, nor in the repairing of it; neither did he in my opinion take such steps as a prudent man would have in the interests of all concerned in the venture.

On receipt of the written notice, the agent of the sub-charterer informed the Captain that he had committed a breach of the Charter Party and that he would be held responsible for all damages. A Charter Party is originally made with a view to carrying out a commercial project, which may be frustrated by an unreasonably prolonged delay; and the parties must be considered to have entered into it contemplating that a delay might have that effect. An enforced interruption of the loading will not excuse that charterer from completing it, unless the effect has been to change the commercial character of the voyage. On the other hand, a Master is justified in reasonable delay to ascertain the nature of a danger, a reasonable delay to avoid it, or to consult his Owners if communication with them is possible. If the Master delays unreasonably, or to a greater extent than a prudent man under the circumstances would, the cargo owner's position depends on whether the delay is so unreasonable as to put an end to the contract from a commercial point of view. The Captain was aware of the nature of the engagements of the sub-charterer, he knew that arrangements had been made to carry cargo and passengers. The advisability of communicating with the owner, must be estimated by a consideration of the facts rendering immediate action necessary, and of the delay resulting from an attempt to make such communication. I am distinctly of opinion that the despatch of the telegram to the owners caused much loss of valuable time, that immediate action was necessary and possible and that there was unreasonable delay in the repairing of the leak, rendering it impossible for the charterer to carry out his engagement.

With regard to damages for breach of contract, it is a universally recognised principle that every wrong-doer is responsible for the natural consequences of his civil wrong, and for those only; for such he must make fair compensation to the injured. Damages must be the immediate result of the act complained of; if they be not the proximate, natural and ordinary consequences of the wrong-doer, they are too remote. The damages alleged, must fairly, reasonably, and naturally arise from the breach; it therefore follows that damage resulting indirectly from a wrong-doer to another is not recoverable.

Damages for breach of the Charter Party are assessed upon the same principles as damages for breach of other contracts. They must have arisen in the usual course of things from the breach itself, or have reasonably been in the contemplation of the parties at the time they made the contract, as the probable result of the breach of it, and they must have been sustained.

These well established rules have been followed

in deciding the amount of damage payable to the Charterer.

Claim 1.—\$1,818.—By reason of the breach committed, the fittings for the accommodation of passengers could not be used; loss was caused and the compensation payable is the expense incurred.

Claim 2.—Items A to G have been proved, not so item H.

Claim 3.—\$4,500.—This sum is the amount of penalty payable by the party delinquent to the party observant in the matter of four contracts entered into between the sub-charterer and the Kofugi Shoten. The sub-charterer's breach of these contracts was the direct and immediate result of the default committed by the Master of the *Rheingold*.

Claim 4.—I have some knowledge of the manners and customs of this country and of the business habits of its people. I am aware that entertaining is largely done in connection with business transactions, and Mr. Nishitani is doubtless quite justified in placing great confidence in Mr. Kano. As regards third parties, however, the items for hotel expenses, entertainments, and telegrams appearing in this claim cannot be admitted owing to the absence of proof positive of their correctness. Sundry items for travelling expenses, amounting to \$195.41, are allowed, as it is not infrequently impossible to produce vouchers for expenditure of that description.

Claim 5.—Eleven days' freight 11th to 21st February last—\$1,613.33. It appears that on the 8th of February, one half month's charter-money was paid in advance, and under the terms of the award this amount of charter money is returnable. I do not admit the correctness of the amount claimed, but I am precluded from awarding a larger sum than that which is thought to be recovered. Items A. and B. are disallowed as they ought to have been claimed on the various occasions on which half monthly payments in advance on account of charter money were being made. Moreover, I have not been able to satisfy myself that these amounts are now properly due.

Claim 6.—This item has been admitted.

Claim 7.—Items A. and B. are disallowed, because the steamer continued to be at the disposal of the Charterer until the 11th of February last. It is, moreover, in evidence that cargo from Kobe was being discharged at Fushiki up to about noon on February 11th. Item D. is also disallowed owing to absence of proof. The other items are allowed.

Claim 8.—Items A. and E.—\$2,250 and \$25. These are disallowed owing to want of proof. The other items are admitted.

Claim 9.—Eminent authorities hold that profits or advantages, which are the direct and immediate fruits of a contract entered into between the parties, are part and parcel of the contract itself, entering into and constituting a portion of its very elements; they are something stipulated for, the right of the enjoyment of which is just as clear and plain as the fulfilment of any other stipulation. They are presumed to have been taken into consideration and deliberated upon before the contract was made, and formed, perhaps, the only inducement to the arrangement. It is not to be denied that there are, on the other hand, profits or gains derivable from a contract, which are uniformly refuted as too contingent and speculative in their nature, and too dependent upon the fluctuations of markets and the chances of business to enter into a safe and reasonable estimate of damages. This distinction has reference to what are commonly termed primary and secondary profits. To the latter class belong the estimated results of the voyages from Aomori and Fushiki, \$7,331.19. They cannot be allowed.

Claim 10.—Coal remaining on board the *Rheingold*, \$440. Evidence on this point is altogether vague and unsatisfactory. The amount is disallowed.

The Master's claim, for Consular Fees paid, is allowed under clause 3 of the Charter Party.

The Master's claims for fresh water are disallowed, there being no evidence to show that this was required for the passengers under clause 3 of the Charter Party.—*Kobe Herald*.

MINISTER KURINO.

JAPAN'S REPRESENTATIVE INTERVIEWED UPON THE WAR AND ASIATIC MATTERS IN GENERAL.

There is no abler diplomat in Washington than His Excellency Mr. Shinichiro Kurino, the Minister from Japan. He came to the capital at the beginning of the war between his country and China, and he has handled Japanese affairs in a masterly manner. He is a man of broad culture, is full of ideas, and he is less backward in expressing his

opinions than many of the others of the Diplomatic Corps. He is a man of social qualities, and his functions at the Legation have been among the most noted given there. Straight, well formed, and dignified, he has the features and complexion of a Japanese, but his personal appearance is such as would command attention in any company.

He is a man of wide experience. His father was one of the most prominent of the Samurai in the service of Prince Kuroda, and when that prince in 1874 sent a number of Japanese youths to America to be educated, Mr. Kurino was among them. He went to school in Boston and graduated there at the Cambridge Law School about 1881. He then went back to Japan and entered the Foreign Office or Department of State. He has been connected with this office in different positions from that time until now, when he has come to the United States to represent his country at, perhaps, the most critical time in its history. He was for a time chief of the Bureau of International Telegraphs, and as such was sent to Europe not long ago to an international conference on the subject. He has at different times been sent to Korea on diplomatic business, and he was there in 1882, and in 1884 when the revolution occurred, and he was again in Korea just before the opening of the present war, having been sent there to report to the government as to the situation. Knowing, as he does, all about his own country, and having had a long experience as to all matters connected with China, there is no man in the world who is better fitted to discuss the present situation in the Far East. I called upon him the other day at the Legation and had a long talk regarding the settlement of the war and its effect upon Japan and the nations of the West. The talk was entirely a personal one, and Minister Kurino was very particular to state that his views were those of an individual, that he spoke only for himself, and not the Japanese Government.

WHAT JAPAN GOT BY THE WAR.

One of my first questions was as to what Japan got by the war, and as to what changes the war would make on the face of Asia.

He replied:—"It will make changes of a very important description in Asia. Japan will, of course, have the Island of Formosa, but as regards the occupation of the mainland of China or any portion of it, the matter now being the subject of negotiation of the most delicate nature, it would hardly be proper for me to express an opinion on the subject.

"There is one thing, however, that I would like to say, and that is as to the assertion which seems to have gained some credence that the Japanese nation are eager to aggrandize themselves by the acquisition of foreign territory. We are not land crazy, and we have never striven for colonial acquisition. Whatever concessions we may have gained from China in this direction are the legitimate results of the struggle we have waged with her, either in the extension of territory which our geographical position renders natural or proper, or by its acquisition for purposes of necessary defence against future attacks."

THE ISLAND OF FORMOSA.

"How about Formosa, your Excellency?" I asked. "Does Japan gain much by its acquisition?"

"I think it does," replied the Minister. "Formosa is essentially a part of a long train of the Japanese islands. These run from Yezo down to Nagasaki, then break out a little further below in the Loo Choo Islands. Formosa is a natural part of this chain. The island can hardly be called a Chinese province, except in name. Its Chinese population is not large, and a great many of the inhabitants are savages, who live by hunting, and who have long been a menace to all strangers shipwrecked on their coasts. They have in the past killed Japanese, French, English, and Americans, and it is said that they eat part of the bodies of their enemies.

"They are not cannibals in the ordinary sense of the word, but they celebrate their victories by feasts of this kind. They tattoo their faces and skin, and they are divided up into tribes. These men are very fierce, and the Japanese, in taking the island, will control them. Under the Chinese rule they have been allowed to do as they pleased. You remember, in 1872, a Japanese crew which was shipwrecked on their coasts was slaughtered by them. We sent an embassy to Peking and demanded redress, and that the offenders be given up to justice. The Tsung-li Yamén, or Bureau of Foreign Affairs, said they could not restrain the savages. Our embassy then replied that if they would give the Japanese permission to do so they would control them. This was acceded to, and an expedition was sent from Japan to Formosa. The savages were conquered and subdued. Our men began to make some improvements, and we instituted a government over the parts we had

conquered. The Chinese at once became alarmed, and they demanded that the Japanese leave Formosa. They were so earnest about it that they paid the Japanese the sum of 500,000 taels in order to get them to go. In the presentation of the money, it was put on the ground that the Japanese had done work to the amount money in given road, building, &c."

RICHNESS OF THE ISLAND.

"Is Formosa a rich country?"

"Yes. It is very rich," was the reply. "It has been at times called the granary of China. It produces the finest tea, and the Formosa tea commands the highest price in China. It yields great quantities of rice. It has valuable forests, and it is said to contain fine sugar growing territory. It has coal, and its mineral resources are as yet undeveloped. A chain of mountains runs through the island, but it has large alluvial plains, and it is well watered. It is, indeed, a very valuable acquisition."

"What will the Japanese do with it?"

"I do not know," replied the minister.

"But I presume it will be colonized and developed. The government will probably offer extraordinary inducements to the people to emigrate to it. Japanese capital will be organized to develop its resources, and it may be that the Japanese of the Sandwich Islands will come to Formosa and be induced to go into sugar raising there. They know all about the business, you know, from their employment in Hawaii, and they will probably be glad to make the change. The Japanese government has hitherto endeavoured to promote the colonization of the Island of Yezo with some degree of success, but private enterprise, from lack of capital, and, perhaps, partly for climatic reasons, has not done so well there. Formosa will prove a more tempting field for immigration, especially to the inhabitants of southern Japan."

WILL JAPAN MONOPOLIZE KOREA.

"I suppose the Japanese will monopolize all concessions which may be given out for the development of Korea," said I.

"No, I think not," replied the minister. "It is not the intention of Japan to ask for any special favours for herself or for her people in Korea. The citizens of European nations and those of the United States will have the same chance to get concessions there as will the Japanese. The probability is that the Japanese will not invest much in Korea, and that they will turn their attention more to Formosa. What Japan has done in this respect is to make such concessions possible. In the past the Chinese Minister Yuan took care to prevent such concessions. I know that several big contracts were about to be let at different times to American capitalists when, for some mysterious cause, they were broken off at the last moment. I have been told that the Chinese Minister was this cause."

KOREA'S OPPORTUNITY.

"What has Japan done for Korea?" I asked.

"She has established her independence and given her a chance to do everything for herself," was Minister Kurino's reply. "From now on it can have the right to send ministers to such foreign countries as it pleases, and it will take its place throughout the world as an independent nation. As to its future, Japan expects Korea to work that out herself. She will be ready to advise and assist, if called upon, and she has given a list of reforms to the King which she thinks should be inaugurated. The King has promised to do this, but politics are in such a condition, and the state of society is such, that his power is very limited. Already the nobles of country are clogging his efforts in this direction in many ways. The officials of Korea are degraded and corrupt. They have been living off the people, and they dislike to give up their power. The Augean stables of Korea cannot be cleansed in a day, but Japan has laid out the plan, and if the Koreans follow it they will eventually become civilized."

"Give me some of the reforms which Japan advises the Koreans to make."

"They are many," replied Mr. Kurino. "They are being introduced into Korea at the instigation and under the supervision of Count Inouye, and, if the country and the people will adopt them, they will lead to a thorough reorganization of the government and to the prosperity of the people."

WHAT JAPAN HAS DONE.

"What has Japan done as to carrying out these reforms?"

"It has made it possible for the Koreans to carry them out if they will," replied Minister Kurino. "They are having the advice and assistance of one of the ablest men of the Far East. No statesman stands higher in my country than Count Inouye. He ranks with Count Ito as one

of the greatest of our statesmen. He has held the most important positions in our government. He is one of the chief advisers of the Emperor, and he sacrificed a great deal when he stepped down from his high position and took the office of Minister to Korea, in order that he might be able to help them in the work of civilization. Count Inouye signed the first treaty of peace which Japan made with Korea, about twenty years ago, and he was connected with the country in nearly every movement in which Japan has been connected with it since then. The most of the reforms which have been proposed to the Koreans have been suggested by Count Inouye. He has been the adviser of the King and the Cabinet in carrying out these new ideas since the Chinese were driven out of the country. He gives advice, but he believes that Korea should act for herself."

"Then, it is not the intention of Japan to make Korea in any respect tributary to her?"

"Not in the least," replied Mr. Kurino. "The administration is left entirely with the Koreans. The King, the Queen, and the Tai Wön-kun, or the King's father, are all concerned in the new administration. A new Cabinet has been organized, and it contains ten members now instead of six, as before. It has its Ministers of Finance, War, Education, and Foreign Affairs. It has its Secretary of Justice, and its Secretary of the Interior, and other officials, just as the Japanese Cabinet has. The Cabinet consult with Count Inouye, and some of them undoubtedly wish to see Korea modernized. Others do not, and the desire for personal aggrandizement and personal profit is a strong element in every question."

WHAT THE WORLD GAINS.

"What has Japan done for the world in this war?"

"I think it has done a good deal," replied the Minister. "It has made a number of experiments in the art of war which will benefit the other nations in their wars of the future. It has tested the value of modern ships and guns. It has given the world a number of new avenues of trade in China. By the terms of peace, as I have seen them, the Chinese now agree to allow all kinds of machinery to be imported into their country. They consent to allow foreigners to establish and to engage in manufacturing industries. Japan did not ask these things solely for herself. She demanded them for the world, and they are more to the advantage of the United States and Europe than they will be to Japan. We do not as yet, make machinery for export. It is doubtful whether we ever will. The Americans make some of the best machinery in the world, and one of their chief articles of export is machinery. On the above lines such development as occurs in China will be largely through Europe and America. The other concessions demanded of China were also fully as valuable for the United States and Europe as for Japan. Take the deepening of the river which leads to Shanghai. The ships of all the world will sail up that river, and the opening of the new ports will give the whole world access to vast cities and to millions of people. The new territory opened to trade by this treaty is one of the richest of the Chinese empire. It comprises a number of cities and towns. It contains, it is said, a population of nearly 200,000,000, and a vast trade ought to be developed up to Chun-king, and foreigners will be able to go further into China than they ever have before."

"Tell me something about our new treaty with Japan. Does it give the Americans many more advantages than they now have?"

"Yes, indeed," replied the Minister. "By it citizens of the United States can go to any part of Japan and engage in business. They can establish manufactures and trade directly with the people. Heretofore they have been confined to the open ports, and the most of their business had to be done through the Japanese Government. They can now lease property, and from now on Japan will be open to American manufactures."

AMERICAN CAPITAL IN JAPAN.

"Is Japan a good field for the investment of American capital?"

"In some respects, I think, yes. Factories could be built by foreigners in Japan to use Japanese labour to make articles for export to America. The Japanese buy a great deal of machinery, and more American machinery should be shipped to Japan. What the United States needs to do business with us is lower freight rates. As it is, we use millions of dollars' worth of your cotton every year. Our cotton mills are rapidly increasing, and our consumption of American cotton will increase, as it is of a special kind, and we need it to mix with the cheaper cottons which we get from China and India. At present, however, it comes to us via Liverpool. If the Pacific lines would make special rates it could be shipped by

San Francisco. If the Nicaragua Canal is opened the United States will probably ship direct through it. I am surprised that Americans do not study the Japanese market. The people here are so rich and they have such a vast trade among themselves that they have not yet begun to consider the trade outside of their own boundaries. In order to do business with Japanese your merchants and factories must study the Japanese people and their wants, and when they do that they will probably supply them with many other things than machinery."

THE JAPANESE AS MACHINISTS.

"Can the Japanese use machinery equally well with the people of the United States?"

"Yes," was the reply. "The Japanese are a nation of mechanics. They take naturally to machinery and use it gladly. All over Japan foreign labour saving inventions are creeping in. Silk is now reeled and woven by machinery. We make our own railroad cars, and we have made some locomotives. Nearly all the arms and munitions of war which were used during the recent campaigns with China were made in Japan, and we are almost doubling our cotton machinery every year."

ASIATIC LABOUR.

"What do you think of the future of the Asiatic labour market in competition with ours? Can we successfully compete with you?"

"On our own ground, perhaps not," was the reply. "But I see nothing to alarm the American labourer in the possibilities of the future. You have been competing here for years with the cheapest labour of Europe. You have had the Belgians and the Germans to fight, and you have conquered again and again. The Americans are people of wonderfully inventive brains. No matter how cheap the labour of the rest of the world is in any line of work, the American gets up a machine which will do it cheaper; and you have such vast aggregations of capital that you can organize undertakings on a scale which is practically beyond competition. Take your great iron works. Take the Carnegie works, for instance. They buy in such vast quantities that they can cut all expenses, outside of those of labour, to the minimum. I believe the Americans will always hold their own. They cannot work so cheaply nor live so cheaply as we do, but they can turn out a greater product. Another thing is that there is bound to be a great demand from Asia for American raw materials. Cotton is one of these and lumber is another. As to machinery—I doubt whether we will ever be a great machine making nation. We have plenty of coal, and we ship vast quantities of it to China and India. We have not yet, however, discovered large enough deposits of iron to make us hope that we will manufacture much machinery. The iron we have is of a very fine quality, but so far it has not been discovered in large quantities. It may be that we will find mines in Yezo."

"What about the future civilization of Japan? Will it be purely occidental?"

"No, I think not. It will be a combination of the best of the Occident and Orient adapted to fit the Japanese character and needs. We find this so in many lines. There is a strong tendency in Japan to stick to the old things wherever they are best, and in some directions I have no doubt that the old is the better."

RELIGION IN JAPAN.

"How about religion in Japan? What are the missionaries doing, and is there any prospect of Christianity ever becoming the religion of the Japanese people?"

"Who can tell?" replied the Minister. "The Japanese are fanatically wedded to their old beliefs. Many of the better classes, and notably those who have travelled much in Christian countries, are practically agnostics so far as either Buddhism or Christianity is concerned. They might be called free-thinkers."

"The missionaries have done a great work in Japan. They have made many converts and it is a curious thing that the Japanese Christians prefer to have their own churches, and to be independent of the foreigners. They like to map out their own religious lines, and to pray and think for themselves. You remember the discussion of the Briggs question, which tore the Presbyterian churches of the United States almost asunder some time ago. This question found its way out to Japan and the native Christian pastors got together and discussed it. They shook the dust out of the Thirty-nine Articles, and they were by far more rigid than the opponents of Dr. Briggs in their ideas of liberality. I think there is a possibility that the Christian religion may at some time so grow as to be one of the great religions of Japan. Already some of the Christian churches have been discussing the sending of native Japanese Christian missionaries to Korea and China."

THE SANDWICH ISLANDS.

"By the way, your Excellency, returning to the war question, how about the Sandwich Islands? Is it true that the Japanese are seeking to acquire them?"

"No; emphatically no," replied Minister Kurino.

"How about the possibility of a union of the Asiatic nations as against the Occidental ones?"

"There may be, but it depends entirely upon circumstances, the force of which cannot at present be accurately estimated, and concerning which, therefore, it cannot at present be safe to make any prediction."—*New York Herald*.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, June 30.

The following Ministerial appointments are announced:—

Lord GEORGE HAMILTON, Secretary of State for India.

The Marquis of LANDSDOWNE, Secretary of State for War.

Sir MATTHEW WHITE RIDLEY, Secretary of State for Home Affairs.

Lord CROSS, Lord Privy Seal.

The Rt. Hon. C. T. RITCHIE, President of the Board of Trade.

Lord ASHBOURNE, Lord Chancellor.

The Earl of CADOGAN, Viceroy of Ireland.

Lord BURLEIGH, Secretary of State for Scotland.

London, July 5.

The Chinese loan for one million sterling floated in London has been covered ten times. The Russo-Chinese loan has been signed in Peking, but the details of the agreement are not yet made known.

["SPECIAL" TELEGRAMS TO "JAPAN MAIL."]

Kobe, July 2.

H.B.M.'s Consul delivered the award in the "Rheingold" arbitration case to-day. The verdict was against the ship, which has been ordered to pay about \$9,250 to the Japanese charterers, besides the cost of the arbitration.

Hakodate, July 3.

Yesterday the schooner *Arctic* arrived here with 219 sealskins, and the *Louise Olsen* with 628.

Hakodate, July 5.

The Italian cruiser *Cristoforo Colombo* arrived here to-day.

[FROM N.-C. DAILY NEWS.]

London, June 27.

Relations are strained between Bulgaria and Turkey owing to the latter's warning to the Bulgarians to abstain from agitation in Macedonia.

Mr. Chamberlain, in his Election Address, states that the Unionists were absolutely agreed to discard the wild constitutional changes planned by the late Government, and to devote their attention to social reform and to the safe-guarding of the defensive resources of the Empire.

[FROM JAPANESE PAPERS.]

Soul, June 27.

Boku Tei-yo, Minister President, has resigned. Prince Wi-hwa, Korea's Ambassador Extraordinary to Japan, will leave here on July 4th.

Nagoya, June 29.

The Chief of the Third Army Division has visited the Town Office, and stated that no soldiers belonging to that Division will be present at any welcome-home prepared by officials and residents.

The following telegram, dispatched by the Japanese Chargé d'Affaires in Soul, has been received by the Home Department.

Soul, July 2.

From the 26th ult. up to the 30th ult. 11 Japanese soldiers and coolies were attacked by cholera in the neighbourhood of Wiju, where 159 Koreans have succumbed to the malady. Of the Japanese patients, 4 have died. A Korean has died at Seshisen. Major Isomura, at Wiju, states that one Japanese coolie was affected and 61 Koreans died of cholera there up to the 1st inst.

Shimonoseki, July 5.

A British man-of-war passed here for the west to-day.

The *Tosa Maru*, which arrived here yesterday, will proceed to Talien to convey a detachment of the Imperial Guards to Formosa.

The two following telegrams have been received by the Yokohama Specie Bank.

London, July 3.

The Chartered Bank has offered to raise the Six per cent. Chinese loan bonds to the amount of £1,000,000 at the market issue of £106.

London, July 4.

The Chinese loan is covered ten times, and is issued at £109. The overplus of money seeking investment on the London market is said to be the reason for this result.

Shimonoseki, July 5.

The *Fusan Maru*, *Soyoku Maru* and *Hinode Maru* arrived at the Hikoshima Quarantine Station yesterday, and the *Toyei Maru* passed here last night. The *Hokushin Maru* and *Katsuyama Maru* passed here this morning, and the *Kumamoto Maru* arrived here shortly before noon. The *Hikoyama Maru* passed here about the same time. They were fully loaded with troops.

Aomori, July 5.

Owing to the recent severe rains some of the rivers have done damage in various parts of this Prefecture.

Fukuoka, July 4.

Captain Koshi, of the Infantry, committed suicide this morning.

Sapporo, July 5.

In consequence of the overflowing of rivers caused by the heavy rains, which occurred on the 3rd inst., damage was done to the railway between Muroan and Oiwake, and railway communication has been interrupted since yesterday morning.

CHESS.

(All Communications to be addressed to the CHIEF EDITOR.)

The Yokohama Chess Club is closed for the season: and re-opens on Thursday 3rd October.

The Tokyo Chess Club is now closed for the holiday season and will reopen on Friday, 4th October, 1895.

SOLUTION OF PROBLEM No. 183.

WHITE.	BLACK.

3—Q to Kt 8, mate	2—Kt to B 5 ch.
2—B x P (Q 6)	
3—Kt x Kt, mate.	

Correct solutions received from Omega, Kr., W.H.S., E.D., Diganima, J.D., and E. J. King.

PROBLEM No. 185.

By JAN PILNACECK.

BLACK.

WHITE.

White to play and mate in three moves.

VIENNA TOURNAMENT.

A contest between the players in the Austrian capital was begun in April and finished in May. A notable feature in the tourney was the reappearance of some players who had been apparently

in retirement for some few years, e.g. Englisch, Judd, Meitner, and Weiss. We reprint an excellent game between Meitner and Judd, drawing especial attention to the end-play. Black gives a classical example of how to nurse and queen a pawn. The notes are by Mr. Max Judd, who during his long sojourn at St. Louis, Mo., has evidently not allowed his Chess-talent to remain altogether idle.

GAME No. 289.

Played in the Vienna Tournament, April, 1895.

FRENCH DEFENCE.

WHITE. Dr. Meitner.	BLACK. Mr. Max Judd.

61—P takes P	61—P takes P
62—P to K R 4	62—P to R 6
63—P to R 5	63—R takes P
64—K takes P	64—R to Q 7 ch.
65—K to B 4	65—P to R 7
66—R to Q R 5	66—K to K 3 (d)
67—R to R 7	67—K to K 4
68—K to B 3	68—R to R 7
69—P to R 6	69—R takes P
70—R takes P	70—R to R 6 ch.
71—K to B 4	71—K to B 5
72—R to R 8	72—R to Q 6
73—R to K R 8	73—R to Q 2
74—R to B 8 ch.	74—K to K 6
75—R to K 8	75—K to B 6
76—R to B 8 ch.	76—K to K 7
77—K to B 3	77—P to K 6
78—R to K 8	78—K to B 7
79—R to B 8 ch.	79—K to K 8
80—R to K 8	80—P to K 7
81—K to B 2	81—R to Q 5
82—K to B 3	82—R to K B 5
83—K to Q 3	83—R to B 6 ch.
84—K to B 2	84—K to B 8
85—K to Q 2	85—R to B 7 & wins.

(a) Both short of time. White could win by R to K B sq. ch.
(b) If K x P, K to B 5 ch would soon win for Black.
(c) K to Kt 5 would be stronger.
(d) P to K 6 would win quicker. Supposing 66..... P to K 6; 67—K to B 3; 70—R to R 2; 68—K to Q 3; P to K 7; 69—K to Q 2; P Queens ch; 70—K x Q; P to R 8; Q ch; 71—R x Q; R to R 8 ch and wins the R and the game.

PROBLEM CHESS.

The game given below illustrates the proposition maintained by Mr. Mason, that skill in designing and solving problems does not necessarily develop quickness of insight in play over the board. Herr J. Dobrusky, who had the White men, is a celebrated problemist at Prague, and the game was given in *The Times* as an example of his high chess skill. Yet both the player and the annotator twice overlooked a mate in two moves:—

GAME No. 290.

THE SCOTCH GAME.

WHITE. Herr Dobrusky.	BLACK. Herr N.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—P to Q 4	3—P takes P
4—Kt takes P	4—Q to R 5
5—Kt to Kt 5	5—Q takes K P ch.
6—B to K 2	6—B to Q 3
7—Q takes B	7—Q takes K Kt P
8—Kt takes P ch.	8—K to Q sq.
9—B to Kt 5 ch.	9—P to B 3 (a)

BLACK.

WHITE.

10—Kt to Q B 3 (b)	10—Q takes R ch.
11—K to Q 2	11—Q takes R
12—Kt from B3 to Q 5 (c)	12—Kt to K 2
13—B takes P	13—P takes B
14—Kt to K 6 ch.	14—K to K sq.
15—B to R 5 ch.	15—Kt to Kt 3
16—Kt to Kt 7 ch.	16—K to B 2
17—Q takes B P ch.	17—K to Kt sq.
18—Kt to B 5	

And Herr Dobrusky wins.

NOTES.

(a) A blunder. Black's only resource was to take the Bishop. (b) Overlooking the following mate in two:—10 Kt to K 6 ch, K to K sq; 11 Q to K B 8 mate. (c) The Times annotator says:—"White appears to miss a direct mate here by 12 Q to B 8 ch, K takes Kt; 13 Kt to Q 5 ch, K to Kt sq; 14 Q to Q 6 mate. But his continuation leads to a most remarkable, though not quite original, finish." The annotator again overlooks the mate in two which has been already pointed out.

TOBACCO AND CHESS.

The game published below was played recently in the Colonies. Many highly entertaining and instructive positions will be found in this *partie*.

GAME No. 291.

VIENNA GAME.

WHITE. H. Tylour.	BLACK. S. Henderson.
1—P to K 4	1—P to K 4
2—P to K B 4	2—Kt to K B 3 (a)
3—Kt to Q B 3 (b)	3—P to Q 4
4—P to Q 3	4—Q takes P
5—B takes P	5—Kt to Kt 5
6—P to Q 4 (c)	6—P to K 6
7—B to B 4!	7—B to Kt 5 (d)
8—Q to B 3	8—Q takes P (e)
9—Q takes P (f)	9—K to Q sq.
10—Kt to K 2 (g)	10—Q takes K P
11—P to Q R 3?	11—R to B sq.
12—Q to Q 5 ch.	12—B to Q 3
13—P to R 3	13—Q to B 3
14—Kt to K 4 (h)	14—Q to R 3
15—Kt takes B	15—P takes Kt
16—Kt to Kt 3	16—Q to B 5!
17—Kt to K 4	17—Kt to B 7
18—Kt takes P (i)	18—Kt takes R
19—Kt to B 5 dis. ch. (j)	19—Kt to Q 2
20—B takes P (k)	20—Q takes Kt
21—Castles O R	21—Q takes Q
22—B takes Q	22—Kt to Kt 6
23—B to Kt 5 ch.	23—R to B 3
24—B takes R	24—P takes B
25—R to Q 3	25—Kt to R 4
26—P to K Kt 3	26—K to K 2

White resigns (l).

(a) Seldom played, but not a bad move. Steinitz adopted it in his last match with Tschigorin. (b) Or 3, P takes P—Kt takes P. 4, Kt to K B 3, &c. (c) Obvious, but inferior to 6, Kt takes P—Kt takes K P. 7, P to Q 4—Kt to Kt 3. 8, Kt to K B 3—Q to K 2. 9, B to Q 3—P to K B 4, &c. (d) The right move here is 7, Kt takes K P. (e) Extremely risky; here, also, Kt takes K P seems the proper play; e.g., 8, Kt takes K P. 9, Q takes K P—Castles, with a good game, for if 10, P takes Kt, Black recovers the piece by 10, Q to R 5 ch, &c.

(f) We like 9, B takes P ch better. (g) 10, Kt to B 3—B takes Kt ch. 11, K to K 2 is a variation worth working out by the student. (h) If 14, P takes Kt, Black mates by 14, Q to B 7 ch, 15, K to Q 1—Q to B 8, &c. The situation hereabouts is complex. (i) Better would have been 18, Kt takes Kt—P takes Kt ch. 16, K to B 1 with a good game. (j) 18, Q takes Kt ch. 19, K to Q 2—B to B 4. 20, B to Q 3, and White is better off than in the actual game. (k) The position promises more than it performs for White. Seemingly good is 19, Kt to B 7 d. ch—19, K to B 2, 20, Q to B 3 ch—Kt to B 3, and White dare not take R on account of B to Kt 5. Nor does 19, Kt takes P d. ch relieve White as K to B 2 is a winning answer. (l) An error which destroys any chance of saving White's game. He should have taken K P with Kt. (m) The recorder of this game, referring to Mr. Tylour's recent abandonment of smoking, quaintly concludes his record with the remark:—"White's play has not the energy and skill which the use of nicotine begets."

CHRSS—"GOSSIP."

There has been much merriment at the Montreal Chess Club over the question raised by Gossip as to whether a man may or may not talk while he is playing chess. Someone expressed the opinion that a player who said nothing during a game except check, check, check, must be an "unspeakable Turk." Someone else resented this remark as being a slander on the Turk, and was moved to write the following set of occasional verses:—

"The grim unutterable Turk is but
A shadow to the human wreck,
Who, playing chess, can utter naught
But, now and then, a 'check.'
"His visage sour is framed between
Two bloodless hands; his scrawny neck
Is full of wasted vocal chords
That only croak a 'check.'
"His back is bent just like a 'C.'
Of that he doth but little reck;
He only lives to move a piece,
And then to howl a 'check.'
"What Turk so void of soul as this,
On bloody field or pirate deck?
No fiend can beat the silent fiend
Who speaks not but to 'check'!"

Gossip resented the publication of these verses in the *Montreal Daily Herald* as being a "malicious and brutal attack upon him," and presently instituted a suit *in forma pauperis* for libel against the offending journal, assessing the damage which he had sustained at 375 dollars. Meanwhile he went away from Montreal, and when last heard of was at Buffalo. The *Baltimore News* remarks that it has transpired that Gossip "has travelled in Turkey; that he regards that country as highly civilised; that he has written reams of letters to different persons adducing incontrovertible evidence—a, that his visage is not sour; b, that his neck is not scrawny; c, that his vocal chords are not wasted; d, that his back is not bent; and e, that he himself is not a Turk." It is only natural, then, that the Canadian people should have been interested in the question, "Upon whom is the libel?"

REPORTS.

The American steamer *City of Peking*, Captain Wm. Ward, reports:—Left Hongkong the 28th June at 1.58 p.m. Arrived at Nagasaki the 1st July at 11.28 p.m. and left the 2nd at 10.15 p.m. Arrived at Kobe the 4th at 3.16 a.m. and left the same day at 3.45 p.m. Arrived at Yokohama the 5th July; had light winds and pleasant weather.

LATEST COMMERCIAL.

IMPORTS.

Still in the doldrums and very little if any improvement. Beyond actual necessities, buyers will not, or cannot, operate; and the money market appears to be as tight as ever.

COTTON PICK GOODS.

COTTON PICK GOODS.	PER YARD.	PER PIECE.
Grey Shirtings—84 lb., 38 1/2 yds., 39 inches	\$2.25	to 2.85

METALS.

No change worth noting of any description whatever. Sales of damaged cargo ex steamer *Eton* are said to interfere with the regular trade.

METALS.	PER PIECE.	PER HULK.
Flat Bars, 4 inch	\$3.30	to 3.35
Flat Bars, 1 inch	3.35	to 3.40
Round and square up to 2 inch	3.30	to 3.40
Iron Plates, assorted	3.40	to 3.50
Sheet Iron	4.40	to 4.60
Galvanized Iron sheets	8.25	to 8.75
Wire Nails, assorted	5.60	to 6.00
Lin Plates, per box	5.65	to 5.75
Pig Iron, No. 3	1.55	to 1.60

KEROSENE.

Quotations as before. Rumours are again rife of decrease in the output of Pennsylvania wells; but Oil continues to arrive here all the same, and buyers are not to be frightened into heavy operations at present.

American	\$2.40	to 2.50
Russian	2.30	to 2.40
Langkat	1.90	to 2.00

SUGAR.

Brown—Some business doing at quotations but the market is not very lively. White unchanged in tone.

SUGAR.	PER PIECE.	PER HULK.
Brown Takao	\$3.60	to 3.65
Brown Manila	4.30	to 4.40
Brown Daitong (New)	3.10	to 3.20
Brown Canton	3.00	to 3.50
White Java and Penang	6.20	to 6.50
White Refined	6.00	to 9.25

EXPORTS.

RAW SILK.

Business has continued at full rates and a parcel of Mino (extra) fine-size is said to have been done at \$930. We leave other quotations unchanged, but they are strong and tending upward.

QUOTATIONS.—(NEW SILK.)

Filatures—No. 1, 10/13 deniers	\$870	to 880
Filatures—No. 1, 13/15, 14/16 den.	None	
Filatures—No. 1, 10/14 deniers	840	to 850
Filatures—No. 1, 13/16, 14/17 den.	840	to 850
Filatures—No. 2, 10/15 deniers	820	to 830
Filatures—No. 2, 14/18 deniers	820	to 830
Re-reels—No. 1, 13/15, 14/16 deniers	840	to 850

WASTE SILK.

No change during the week. Holders find that they can do little towards raising prices and will probably frighten buyers out of the market should they attempt such a course.

QUOTATIONS.—(OLD WASTE.)

Pierced Cocoons—Good to Best	—	
Noshi-ito—Filature, Best	\$115	to 120
Noshi-ito—Filature, Good	105	to 110
Noshi-ito—Filature, Medium	95	to 100

Kibiso—Joshu, Good to Fair	26	to 224
Kibiso—Joshu, Middling to Common	20	to 174
Kibiso—Hachoji, Good to Fair	20	to 18
Kibiso—Hachoji, Medium to Low	16	to 15
Kibiso—Neri, Good to Common	10	to 6
Mawata—Good to Best	—	

TEA.

A fair amount of business, at quotations. Buyers grumble at the quality, but have to take what there is, or stay out of the market altogether. Export opportunities are plentiful this year. The steamer *Eskdale* had a large quantity, and the ship *S. P. Hitchcock* sails on Sunday with a full cargo.

TEA.	PER PIECE.	PER HULK.
Choicest	\$30	to \$32
Choice	27	to 28

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In 1 short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls butter, and horse feed poured in upon us, until at last a tea, spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout World.
May 1st, 1890.

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dinero, London.

"MONEY" is a fearless critic and exposé of all shams, frauds, and swindles.

"MONEY" is THE Journal for Investors, Speculators and Business men.

"MONEY" is a thoroughly up-to-date Weekly Record of all Financial and Business Matters.

"MONEY" is not subsidised by any financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing Shipping, Trading, and Trust Companies, are fearlessly and impartially criticised in "MONEY."

THE MONTHLY FOREIGN AND COLONIAL EDITION, called "MONEY AND TRADE," is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

"MONEY AND TRADE" enjoys a very large circulation in all Foreign Markets where English goods are sold; and, as it goes direct into the hands of the WHOLESALE AND RETAIL BUYERS, it offers unique advantages to advertisers.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 13TH, 1895.

SUMMARY OF NEWS.

THE Korean Minister with his *suite* has arrived in Japan.

VISCOUNT TORIO has resigned his seat in the House of Peers.

COLONEL FUKUSHIMA returned to Tokyo on the 7th from Formosa.

THE "Neptune" Cup has been won this year by the *Maid Marion*.

THE Empress has presented 1,650 bandages to the Hiroshima Military Hospital.

IT is stated that the Government has decided to dispatch another Brigade to Formosa.

THE trouble between the returned military coolies and their contractors still continues.

THE Tokyo Electric Light Co., have declared a dividend of 8 per cent. for the half-year.

MISS GRACE HAWTHORNE'S company open a short season at the Public Hall to-night.

COUNT INOUE returns to Korea on the 13th,

with full powers to deal with Korean questions and complications.

THE "Baltimore" Minstrel troupe entertained a large house at the Public Hall on Monday.

OVER ten 17 c.m. and 28 c.m. guns captured at Port Arthur were lately brought to Yokosuka.

THE weather has been showery and very cold for the time of year for the greater part of the week.

PAK YONGHYO (Boku Eiko) has fallen from office through some Palace intrigue, and fled the country.

Two Chinamen, both British subjects, have won cases brought by them in the British Court this week.

THERE has been no cricket this week owing to the exigencies of the outgoing and incoming mails.

THE Kyoto Electric Light Company declare a dividend of 18 per cent. per annum for the past half-year.

THE Tokyo Rice Exchange has declared a dividend for the half-year at the rate of 30 per cent.

IT is stated that the Tai Wön-kun refuses to attend Court, though repeatedly commanded to do so by the King of Korea.

MANY changes are being made in the *personnel* of the Korean Cabinet, owing to the late intrigues, but Söul remains tranquil.

PRINCE WI-HWA, who was to specially convey the thanks of the King of Korea to the Emperor of Japan, has resigned the position.

News from Formosa is very scanty, but important intelligence is hourly expected from Anping and its immediate neighbourhood.

ONE thousand military coolies left Moji on the 5th inst. for Formosa. Some 1,500 other coolies will shortly leave there for the south.

THE students of the Nobles' School for Boys will shortly leave the capital to spend the summer vacation at Katase near Enoshima.

FORTY-SEVEN miners were drowned through the flooding of the Komatsu coal-mine at Yugetamura Tagawa-gun, Fukuoka Prefecture, on July 9.

TELEGRAPHIC service between Japan and Korea, which was interrupted between Izuhara and Gonoura for some time, was resumed on the 8th inst.

RELIGIOUS services for the repose of the souls of Yokohama soldiers who died during the past war, took place at the Noge Shrine, Yokohama, on Sunday last.

MESSRS. CORNES & Co. have won the case brought by them against Kimura Riyemon, a yarn merchant of Yokohama. Defendant is ordered to pay *yen* 29,528.

FOUR surveyors, who were sent from Headquarters with a party of soldiers dispatched to occupy the Pescadores, completed the survey of the islands on the 17th ult.

THE boycott of Chinese dealers by Japanese commission merchants at Yokohama still continues. Several small Japanese dealers have been fined during the week for breaking their faith with the boycotting Guilds.

MR. HISAMIZU SABURO, Japanese Consul at Chefoo, Mr. A. Marks, Japanese Honorary Consul at Melbourne, and Mr. Grasmann, German Instructor in the Agricultural College,

were received in audience by the Emperor at the Palace on the 8th inst.

THE Chinese population in Japan at the end of May last was as follows:—8 in Tokyo, 28 in Hokkaido; 10 in Osaka; 1,391 in Kanagawa; 645 in Hyogo; 401 in Nagasaki; total, 2,574.

THE closing exercises of Mrs. Draper's School for the Blind attracted a large audience at the Van Schaick Hall on Tuesday afternoon. Signorina Belinfante sang two songs during the proceedings.

DURING June last the Osaka Mint struck coins to the following amounts:—5-*yen* gold pieces, *yen* 80,000; one-*yen* silver pieces, 1,370,000; 20-*sen* silver pieces, *yen* 400,241; and 10-*sen* silver pieces, *yen* 224,000.

REUTER telegraphs:—Bulgaria has demanded an explanation from the Porte of the orders that have been given to the Commander at Adrianople, in Turkey, to act on his own initiative on the Bulgarian frontier, and has intimated that Bulgaria will be obliged to adopt military measures on her own side. The Porte has made an amicable reply. The China loan, which is not redeemable for thirty-six years, will be secured by the Customs, and Russia undertakes to make good the payments should China fail. Lord Selborne has been appointed Under-Secretary for the Colonies. The House of Lords has read for the second time Lord Ripon's Bill enabling the Colonies to deal with the alteration of boundaries and annexations, all cases of which now require a special Act of Parliament. The British Parliament has been dissolved, and the new House is summoned for the 12th August. The majority of the elections will take place on the Saturday preceding; the London elections are fixed for the Monday.

THERE is not much improvement in the Import trade, which is nearly as feeble all round as it was a week ago. The only Yarns movable are doubles, singles being entirely neglected. There has been considerable business in heavy Shirts, but others are not looked at, nor has anything been done in other descriptions of Grey Cloth. Holders of Victoria Lawns having given way in price, have managed to clear out a few thousand pieces, but there has been no demand for Fancy Cottons of any kind. Woollens are dull, though there has been an enquiry for Unions and similar cloth. The Metal trade is somewhat miscellaneous, for while manufactured Iron is dull and Plates are lower, Pig Iron is in demand at better rates. There has not been much done in Wire Nails, but fair prices have been obtained for the lots moved off. Tin Plates have been offered at a considerable reduction on recent rates without result, and the stock is heavy and neglected. The Sugar market has not improved, Takao sorts being in little request, the parcels taken being mostly Canton and Manila brands, the former commanding rather more money. White Sugars are quiet, without change in value. Prices of Raw Silk, having been rushed up, are now feeling the reaction, and buyers are not so anxious to go on for Europe, though sorts suitable for the U.S. trade are without much alteration, as the competition for the best chops of Joshu re-reels continues. There has been a small business in old Waste, and of the 5,000 piculs remaining there is nothing choice. There has been a fair daily Tea trade, and prices have been well maintained. Settlements exceed those at same date last season by several thousand piculs, and shipping opportunities have been more than sufficient for all requirements. Fluctuations in Exchange have been slight, and rates remain about the same.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The Korean question has been the principal topic of discussion in the press during the week. The incident that excited so much attention here seems, after all, to have had little or no connection with the suspected *entente* between the Queen and the Russian Legation. Of course, the exact state of affairs is not yet known, but whatever may be the truth about Pak and his intended victim, it is probable that the incident has not seriously disturbed the balance between the party in favour of progress and the party opposed to reform. Political power is stated to be in the hands of Kim Koshu, Yu Kitsuei, and other politicians of the former school. The comments of the vernacular papers on the subject have already been reproduced separately. They do not, on the whole, betray any marked sympathy with the fallen Korean Minister of Home Affairs, not because he was recently understood to have acted in an unfriendly manner towards the Japanese, but because the facts about him in the present drama are still uncertain. It is even rumoured that some of his Japanese friends contemplate the advisability of persuading him to go to America instead of taking refuge in this country. Count Inouye's prompt departure for Söul has been viewed with evident relief and satisfaction even by the organs of the extreme sections of the Opposition. It is reported by some journals that the Count's stay in the Korean Capital will be only temporary, and that he will return again after placing the diplomatic affairs of the peninsula on a definite and permanent basis. Some go so far as to predict that his successor, in that case, will be Lieut.-General Viscount Miura, popularly known as "the Buddhist Soldier," on account of his strong zeal for that religion.

Questions of foreign policy still continue to engage the attention of the metropolitan editors. The drifting away of Germany from Russia and France, the reviving strength of the Triple Alliance, and the probable change of English foreign policy—such are the principal subjects of discussion in this field. Special importance is attached to Germany's failure to interpose between Russia and France with the object of loosening the tie that binds the two countries. This phase of European politics has considerable interest for the Japanese, who now believe it likely that, in the settlement of the Liaotung question with China, they need not be under any further apprehension of united interference by the three Powers. The *Nichi Nichi Shimbun*, for instance, after briefly reviewing the present state of politics in Europe, proceeds in the following strain:—"The German Emperor has declared himself the supporter of peace, and the new Premier of Austria is in favour of strengthening the Dreibund. If Signior Crispi should find a way to manage the new Italian Parliament, and Lord Salisbury should succeed in obtaining a working majority in the coming general elections, these statesmen will certainly coöperate for the maintenance of peace in Europe. We sincerely hope that their object may be attained. As to the Far Eastern Question, now that the so-called Triple Alliance has ceased to exist, we are convinced that at least one of the Powers recently forming that alliance, will join a combination tending to check the towering ambition of Russia in this part of the world. It is to be hoped that Japan may be allowed a free hand to settle the questions pending between herself and China. We do not think that the Powers will be able to meddle with the matter any more. After making suitable arrangements with China about these problems, Japan will not fail to consult her friends in connection with the permanent policy of the future."

The *Choya Shimbun* writes in a similar spirit. It says:—"The Triple Alliance between Russia, Germany, and France has come to an end. The question is, how far Germany, since she has said good-bye to Russia and France, will be

prepared to coöperate with England in isolating her northern neighbour. This question has very important bearing upon the determination of the future policy of Japan. We have little doubt that the Cabinet has already a diplomatic victory in view. No apprehensions need be entertained as to demonstrations made by Russia."

The *Nippon* takes much pains to remind its countrymen of the importance of clearly bearing in mind the distinction between the permanent policy of the country, which is based upon its natural position and history, and the temporary policy, which is dictated by the ever changing aspect of its relations with other states. In our contemporary's opinion, the permanent policy of Japan ought to be a defensive attitude in the north and an aggressive attitude in the south. The abandonment of Saghalien shortly after the Restoration, and the return of Liaotung recently—these events, though apparently forced upon the empire by external influence, were really natural results of Japan's geographical position. The inevitable tendency of Japan is to develop in a southerly direction. On these assumptions the *Nippon* more than hints that Japan's natural and permanent ally should be Russia, and that her enemies will be England, France, and Spain. The defence of Hokkaido and the maintenance of Japan's influence in Korea—these, says our contemporary, are the only points of possible friction between this empire and Russia. But in Hokkaido and Korea Japan's position will be simply defensive, whereas in the south she will strive to consolidate and extend her spheres of influence, and it is not difficult to foresee with what countries she must find herself face to face in that direction. The *Nippon* is not unaware of the necessity of pursuing a special and temporary policy to suit a temporary state of things, but contends that a temporary policy should not be suffered to blind the nation to the permanent policy dictated by natural considerations.

The projectors of the now collapsed anti-Cabinet agitation loudly complain of the indifference of the political public about the rigorous or, as they declare, despotic and unconstitutional measures pursued by the Authorities for the suppression of the movement. These measures are noticed by every paper, but are usually dismissed with a word or two of faint censure. In some cases, even such criticisms are dispensed with. So marked a want of sympathy with their cause is, of course, very provoking to the originators of the ill-starred agitation. Mr. Suyehiro vents his feelings on this topic in the editorial columns of the *Kokkai*. He profoundly deplores the indifference of his countrymen to the arbitrary measures taken by the Government in restricting liberty of speech and public meeting,—measures which, he declares, surpass in severity even those that the Authorities used to follow in pre-constitution days. He professes to be at a complete loss to understand why the Cabinet takes such despotic steps at a juncture like the present, when harmony between the Government and the people is of imperative necessity. With singular blindness he overlooks the fact that the agitation fomented so largely by himself, the agitation necessitating recourse to the measures complained of, was aimed at rendering that very harmony impossible. But it is perhaps too much to expect an impartial survey of the situation from a politician smarting under a recent and signal defeat.

The apparent tardiness of military operations in Formosa causes some uneasiness to the public. The insurgents in that island are too numerous and are spread over too large an area to be quickly suppressed by a force not more than 12,000 strong, especially as the troops have to feel their way carefully, the topography of the island being almost entirely unknown to them. There is no doubt that a fresh Brigade of about 3,000 strong having been shipped from the Chinchow peninsula a few days ago, the reduction of the remaining portions of the island will be speedily accomplished. Writing on this topic, the *Kokumin Shimbun* urges the importance of taking prompt measures for re-

storing order in Formosa. It thinks that Spain, which once appealed to France and Russia to interfere in connection with the cession of the island to Japan, is even now waiting for a favourable opportunity to repeat her request. It will suit Russia's interest to have Japan's hands fully occupied by complications in the south, while the French Minister of Foreign Affairs is resolved to give effective assistance to Russia about the Liaotung question. Our contemporary, consequently, thinks it important that the pacification of Formosa should be proceeded with vigorously. It recommends the Government to place the island for the present under a military administration.

The *Choya Shimbun* seems to express the sentiment of the public in general, when it criticises the tendency of some party politicians to give undue prominence to so-called Ministerial Responsibility. Our contemporary does not think it wrong to discuss the question of Ministerial responsibility in connection with the return of the Liaotung peninsula, but it cannot approve the conduct of politicians that concentrate their whole attention on that problem to the exclusion of far more important matters relating to the development of the country's military and commercial resources.

The *Fiji Shimpō*, in a series of articles, strongly criticises the narrow ideas entertained by some educationists on the subject of moral instruction in schools. It deprecates the policy of giving exclusive importance to narrow and exaggerated ideas of loyalty and patriotism, which very often form the basis of the text books on morality. Ideas of loyalty and patriotism ought to conform to the altered conditions of society; or else they will have the effect of preventing a healthy national growth.

THE SHIMONOSEKI CONFERENCE.

We observe that several foreign local journals are accepting with absolute confidence minutes of the Shimonoseki Conference published by the *Peking and Tientsin Times*. Doubtless the Tientsin paper received these minutes from the Viceroy's Yamên, and that they are correct in the main we do not question. But it should be noticed that they have not been submitted to both parties concerned in the conference, and can not consequently be regarded as altogether correct. All points of vital importance, when reduced to writing, were examined by the Plenipotentiaries of the two Powers, but the other portions of the Conference did not receive such treatment, and the Chinese version of them, transcribed more or less from memory, must not be taken as absolutely trustworthy. We call attention to this very manifest point because some of our Far-Eastern contemporaries have evidently failed to observe it, and are treating *ex-parte* minutes as though they were exhaustive records of everything that passed at the Conference.

EDITORIAL NOTES.

A MARE'S NEST.

"An accidental, but important discovery, is announced," writes a *Daily News* correspondent at Yokohama. "It must have occurred to many of your readers that, although the fights in Manchuria have been called very severe, the Japanese losses have invariably been few, and those of the Chinese very heavy. Much of this disparity has been due to bad marksmanship on the part of the Chinese, but a part of the immunity has been owing to the fact that to keep out the cold the Japanese wore a quantity of floss silk under their clothes. This is a very light and flexible material, and in many cases has acted as a bullet-proof shield. It is important enough to deserve attention at the hands of the British military authorities!" There can be no doubt that floss-silk is a "light and flexible material," but can any one imagine that the large force sent to China from Japan protected their bodies and limbs from Chinese bullets by encasing themselves in "floss silk"? And

is it not a fact that all the Japanese troops in action from Asan to Yingkow had much the same experience as to Chinese bullets? Many men have returned from China who were engaged with the Chinese at moderately close quarters in the exchange of compliments at rifle practice, and they declare that the Chinese bullets fell at their feet after striking them fully and fairly. At first this was a matter of great surprise, but was subsequently clearly explained. The "floss silk" story is absurd. All the "floss silk" in Japan for the last ten years would not have sufficed for the purpose alleged by the *Daily News'* correspondent for one tithe of the Japanese army, even supposing the properties attributed to it are correct. Many Japanese have testified to having been struck on the hands and face by Chinese bullets, receiving no more than contusions, and to having picked up the missiles on occasion. Still more frequently was this the case when bullets struck them on belts, boots, and even clothing. This puzzled the men, and became a matter of comment, and on the subject cropping up one night round a camp fire it was explained by an English officer, who had collected, after the previous day's engagement, cartridge cases bearing the date of 1872. He had also found cartridges that had been "pulled" upon without exploding and had been thrown away, the contents of which when placed upon a plate with fire applied failed even to "burn." Is it any wonder that there was no "penetration" of the bullets discharged, when the cartridge did explode, by powder 23 years old? This is the explanation of the *Daily News* man's "floss silk" mare's nest. "It is," he says, "important enough to deserve attention at the hands of the British military authorities."

EVADING THE LAW.

"*The Siam Free Press*," writes the *Hongkong Telegraph*, "has it on the best authority that the radicals of Japan will drive a coach and four through the provisions of the Imperial Peace Preservation Ordinance by publishing a paper outside Japan. Our Bangkok contemporary says that it is 'credibly informed that Bangkok has been selected for the honour of being the birthplace of the new paper, which will probably see the light of day in the course of next month. The plant as well as the staff are now (22nd June) on their way to Bangkok, and in view of the fact that the paper will be edited by a couple of keen Japanese barristers of the Inns of Court, we shall most probably have a lively political time to break the uninterrupted monotony of our existence in this land of 'white elephants.'" This is all very fine, but the Siam journal forgets that the projected newspaper's sphere of influence may be effectually circumscribed by an order interdicting its passage through the Japanese post. That has happened to journals started under similar circumstances before.

THE BALTIMORE MINSTRELS.

A VERY diversified programme was presented by the Minstrel troupe of the U.S. Flagship *Baltimore* at the Public Hall on Monday evening, and was gone through in a manner which evidently delighted the large audience. The proceeds of the concert were to be devoted to the funds of the Ladies' Benevolent Society and the Yokohama Charity Organisation, two local charities deserving of all support. The songs sung and the jokes sent circulating during the evening were strongly intermingled with up-to-date allusions drawn from topical and local sources, and several quite brought down the house. A boxing match between F. McKenny and J. W. Angus provided an interesting interlude between the songs. O'Neil and Sullivan made a hit with "The very latest," and in responding to a recall promised, in rhyme, to induce the troupe to give another entertainment in Yokohama, which we hope will happen. "The Regular Army, O" was another amusing song. In a musical sketch entitled "The Dutch Applicant," some splendid violin and flute solos were introduced by C. W. Hindley and O. C. Bergmann respectively. These were veritable musical gems, and the performers were recalled. After a song and dance by P. Kenney, a pantomimic sketch was given. It was called "Love

under difficulties," and the dumb show work of *Pierrot* (V. Bertoni), was exceedingly good. The *Miss Clementine* of C. Goss was also most attractive both in make-up and gesture. The entertainment concluded with a tableau introducing the Goddess of Liberty attired in the colours of "Old Glory" and supported by a sailor and a soldier of the U.S. service.

AN ADVENTUROUS FAMILY.

A WONDERFUL little schooner, named the *Kuisloff*, put in an appearance at Manila on the 16th June, says the *China Mail*, having come from Honolulu to Marianas and thence to Manila. From the story of her Captain (Frederick Vehling, a German by birth but a naturalized American), it would appear that the voyage was a most eventful one. The dimensions of the little craft are—45 feet in length, 9 feet beam, and 4 feet depth of hold; displacement 15 tons. The crew of the schooner is composed of the Captain, his wife, and five children (two daughters and three sons) the eldest of whom is scarcely 11 years of age, and the youngest 4 years. All hands assisted in the management of the vessel, and, as their father asserts, every one of them is a good sailor!

NAVAL MOVEMENTS.

THE French man-of-war *Forfait* arrived at Woonung on Thursday evening, June 27th, and the French gunboat *Comète* was ordered to Ichang. H.M.S. *Rattler* left Shanghai on Saturday, June 29th, for Chefoo to relieve the *Daphne* due there shortly to take the place of the *Porpoise*, which leaves there to join the Admiral at Yokohama, and afterwards proceeds to change places with the *Caroline* in Behring Sea. The *Firebrand* is ordered from Hankow to Kiukiang and the *Esk* leaves there shortly for Chinkiang. The Spanish man-of-war *Uolla* has gone to Taku.

THE "RHEINGOLD" CASE.

MR. ENSLIE'S award in the *Rheingold* case, says the *Kobe Chronicle*, will be a serious blow to the unfortunate captain and owners of the vessel, who, including the thousand dollars admitted and deducting the \$41.81 due to them, have to pay \$10,328.53 to the charterers. Altogether it is calculated that counting the loss caused by the delay of the vessel here for seven or eight weeks, during which time she was earning nothing, this unfortunate dispute will cost the owners some twenty-five thousand dollars.

SZECHUAN.

SAYS the *N. C. Daily News* of June 27th:—M. Gérard, the French Minister at Peking, has succeeded in procuring the issue of an Imperial decree, ordering the immediate settlement of the Szechuan outrages. Meanwhile, the French Squadron, to which M. Guillien, First Interpreter of the French Consulate-General here, is temporarily attached, has gone to patrol the Yangtze, and will stay *en route* at the principal ports long enough to make an impression on the officials.

CARBINE.

THE Orient liner *Orizaba*, from Australia, was expected at Tilbury on May 24th. So much the better for the world-renowned stallion Carbine, purchased for a large sum by the Duke of Portland. The horse was insured at Lloyd's for twelve months including the voyage from Australia to this country by Messrs. Malcolm MacIntyre & Co. for £13,000 at 10 guineas per cent. Carbine was well, on the vessel's arrival at Naples, and "in splendid condition" when the steamer called at Plymouth on May 23rd.

THE "VALKYRIE."

THE new *Valkyrie* is finished. Her length on the water line is 19ft., and over all 130ft. In tonnage she will slightly exceed the *Ailsa*, and thus be the largest racing cutter afloat. Moreover, she will have a larger spread of canvas than even the *Ailsa*, which was supposed to have the record in that respect. In model the new *Valkyrie* is an improved edition of the *Britannia*, from whose performances George Watson has gained some lessons. She is built of yellow metal planked

at bottom with American elm and at top with yellow pine. She is not, however, as ready for sea as the *Ailsa* was when put into the water, and will not have her rigging and outfit complete for another fortnight or so. Internally she is very lightly fitted up, with no more accommodation than is necessary for the business of racing.

THE TRANS-PACIFIC TRADE.

THERE is a report, says a Vancouver paper, that the vessels of Mr. Alfred Holt's "Ocean" line of steamships, which trade between Liverpool and ports in the Orient, will cross the Pacific, take a ballasting of ore at Vancouver and then fill up at San Francisco for the United Kingdom. While this may not be an improbable arrangement in the future for this or some other line, there is not, as far as we can ascertain, any foundation for the statement that definite arrangements have been made.

A BLOATED FLURALIST.

A MINIATURE Lord-High-Everything is to be found in the Australian Civil Service in the person of Mr. F. W. Myles, of Bowen, Queensland. Mr. Myles holds no less than twenty-one offices, including that of police magistrate, gold warden, land commissioner, clerk of petty sessions, registrar of deaths, and so forth, receiving for the whole lot the total pay of £330 per year. This beats Hongkong's record of "acting" appointments hollow.

TOKAIDO RAILWAY.

AN alteration will be made in the time table of the Tokaido Railway on and after the 12th inst. According to the proposed change the down-train from Shimbashi, which heretofore started at 5.50 a.m., will leave at 5.20 a.m., and the 8.05 a.m. train from Shimbashi will run down to Nagoya. An up-train from Kozu will start at 7.05 a.m. instead of 7.10 a.m., and a new train will leave Kozu at 8.08 a.m. for Shimbashi..

HOME NEWS.

THE latest papers from Canada bring news up to the eve of the dissolution of Parliament. The Government were evidently caught napping when the vote on the ammunition reserves was taken, Mr. Campbell-Bannerman, the Secretary for War, being engaged in conversation in the Lobby at the time. Much personal sympathy is extended by all parties in the press towards the late Secretary for War.

CHOLERA ON BOARD THE "MOUNT LEBANON."

THE *Yomiuri Shimbun* states that Mr. James Tasker, 2nd engineer of the *Mount Lebanon*, was attacked by cholera on the 6th inst. while the steamer was putting into Yokohama. The ship at once proceeded to Nagahama Quarantine Station where the patient was removed to the epidemic hospital, and the ship was quarantined.

A TYPHOON.

THE steamer *Queen Victoria*, upon arriving at Kobe on Thursday, reported passing through a heavy typhoon after leaving Hongkong on the 25th ult. She lost a lot of deck gear, the bridge ladders, and 364 cases of cocoa-nut oil.

THE SPRING CROP OF SILK.

The *Chugai Shogyo Shimpō* has collected reports on the Spring crop of silk cocoons from all parts of the country. These reports agree in announcing an unusually good crop, the rate of increase as compared with last year, ranging between 10 and 50 per cent. The localities reporting 50 per cent. increase are Higashi-Kasugai and Toyohara in Owari, Ryugasaki in Hitachi, Date-gun in Iwashiro, and Nagaoka in Echigo. The average seems to be from 20 to 30 per cent. As to the silk producing quality of the cocoons, the returns are not so favourable. In several localities, the yield is expected to be decidedly inferior to that of last year's cocoons. But even this factor seems to show an increase, on the whole, though not in the same proportion as the increase of the cocoons.

CURRENT TOPICS.

Twenty-six members of the Diet belonging to different sections of the Opposition held a réunion at the Kôyo-kan, Shiba, on the 4th instant. Conspicuous among those present were Messrs Shimada Saburo, Ozaki Yukio, Taguchi Ukichi, Kusumoto Masataka, Suyehiro Shigeyasu, Ohigashi Gitetsu, Nakamura Yaroku, and Junkai Ki. As had been anticipated, it was not a social réunion, but in reality an attempt to review the recently suppressed agitation against the Cabinet on the question of Liaotung. They resolved to organize an association called the *Chuo Giin-kai* (Central Association of Members of the Diet), which is to meet every Monday at the Atago-kan to deliberate upon various questions connected with the Diet. It will probably share the same fate as its predecessor. The meeting of the 4th instant was attended by one Radical, Mr. Shigeoka Kunguro, but it must not be inferred from this that the resuscitated agitation has the sympathy of the Radical Party, for the meeting at the Koyo-kan had been publicly described as a social réunion. No National Unionist was present.

Concerning the position of the Radical Party, there is a rumour that it finds itself now in a difficult dilemma. The leading members of the Party are opposed to the course pursued by the Progressionists and others on the question of the return of Liaotung. But the younger Radicals, namely, those that have no seats in the Diet, are more or less in favour of the anti-Cabinet agitation. A number of them recently presented a memorial to the Standing Committee of the Party, strongly urging the importance of joining the agitation. The Standing Committee could not disregard this representation, because, so rumour says, it was secretly supported by some Radicals having seats in the Diet. The results of the meeting held by the Committee a few days ago to consider the matter have not been made public. Some papers believe that it was decided to take the sense of the whole Party on the question, and Mr. Shigeoka's presence at the Koyo-kan réunion on the 4th instant is adduced as a proof that the attitude of the Radicals toward the anti-Cabinet movement is becoming more and more favourable. But for certain good reasons we are disposed to regard such versions of the Radical Party's position as apocryphal. They are probably fabricated by men who wish to persuade the public that the ill-starred agitation is making headway in political circles.

The *Fiji Shimpō* has not yet given up the hope of seeing its dream of a *Genkun Naikaku* carried into practice. It is perfectly aware of the difficulties that would, under ordinary circumstances, oppose the administrative union of the elder statesmen. But it holds that public necessity should overrule all other considerations at a juncture like the present, when every lover of the country should care for nothing except the permanent interests of the nation. These statesmen are compared to the leading actors of the day, Danjuro, Kikugoro, Sadanji, and so forth, each a consummate master of his art, but incapable of giving the full satisfaction to an audience without the coöperation of the rest. Our contemporary is at a loss to understand why men like Counts Ito, Inouye, Okuma, and Itagaki can not cast aside the restraints of petty personal considerations. Even looking at the matter from the standpoint of individual considerations, the *Fiji* is convinced that it is best for these statesmen to combine. The remaining years of their political life are already numbered. Sooner or later they must give way to the younger generation, members of which are already pressing hard upon them. Hence, in our contemporary's opinion, the present is probably the last opportunity for them to be reunited and to bequeath to posterity an unmistakable proof of their disinterested devotion to the interests of the country.

Our criticism of the contradictory and somewhat ambiguous attitude of the *Kokumin Shimbun* on the question of foreign policy (*Japan*

Mail of July 6th), has elicited the following reply:—"In our eyes there is neither England nor Russia. We do not necessarily regard England as an ally, neither do we necessarily look upon Russia as an enemy, so we do not take Russia for an ally. What we care for are the interests and dignity of Great Japan. Where our country's interests and dignity are at stake, we do not mind whether our antagonist is England or Russia. Neither hostility nor friendship is solicited by Japan; it is those Powers that either court the friendship or invite the enmity of Japan." That is exactly what we assumed to be the attitude of a section of the writers on our contemporary's staff. The fact that another section of the staff is in favour of a Russian alliance stands undenied.

The *Mainichi Shimbun* has taken a singular line of action in connection with the suppression of Mr. Shimada's speech, at a recent lecture meeting. Our contemporary originally charged the police inspectors with having stopped Mr. Shimada's speech while he was reading an Imperial Rescript. The chief of the Kanda Police Office thereupon required the *Mainichi* to publish a statement denying the charge. According to the Newspaper Regulations, the *Mainichi* ought to have published the statement, but it refused point blank to do so, at the same time repeating in an angry tone its former charge against the police. It is now understood that the police authorities will institute a prosecution against the paper. *Apropos* the conduct of the police at the aforesaid lecture meeting, some politicians threaten to make it a subject of discussion in the coming session of the Diet.

The alarming news from Korea is the absorbing topic of discussion in the Capital. Although the incident is in itself of minor importance, being merely an episode in the interminable war of factions for which Sôul is infamous, a great deal of anxiety is felt and expressed about the consequences of the re-establishment of the Queen's influence in Korean politics. The Government is urged by papers of all parties to take prompt and decided steps to deal with the new situation of affairs in the peninsula. How critical the situation is believed to be, is proved by the effect that has been produced upon the Stock Exchange. The state of feeling there is reported to resemble that which prevailed about this time last year, just before the commencement of the Chinese war. Now that Count Inouye is about to return to his post at Sôul, we have little doubt that he will soon restore things at least to the position in which he left them three weeks ago.

It is now widely rumoured in the capital that the much talked-of extraordinary session of the Diet will soon become a fact. The Military and Naval measures in the course of elaboration in the Cabinet will shortly be matured, and an Edict summoning the Diet for an extraordinary session will then be issued, fixing the date of assembly at two weeks from the day of the issue of the Edict. We publish this report for what it may be worth.

We hear little about the anti-Cabinet agitation. Meetings are occasionally held by the projectors of the ill-fated movement, but they seem to be merely devices for keeping up an appearance of continued vitality. The force of circumstances is irresistibly against the agitators.

A CORRECTION.

We find that in our article last week on the *Chishima-Ravenna* Appeal, we were guilty of an error. We wrote:—"On the main point now decided in the Japanese Government's favour, both the Court for Japan and the Supreme Court in Shanghai gave judgment against the Government," whereas we ought to have written:—"On the main point now decided in the Japanese Government's favour, the Court for Japan gave no decision for reasons stated in its judgment, but the Supreme Court in Shanghai gave judgment against the Government." We must apologise to the Court for Japan for inadvertently misrepresenting the position taken by it.

KOREAN NEWS.

The ceremony of inaugurating the *Chosen Kyokai* (Korean Society) was celebrated at the Nam-pyôl palace on the 23rd ultimo. The event proved an entire success. There were present 150 Koreans and more than 100 Japanese. Mr. Enami Tetsuo addressed the meeting on behalf of the Japanese originators of the Society, briefly recounting the circumstances connected with its origin and constitution. An exactly similar speech was delivered by Mr. Kim Jinshoku, Director of the Sanitary Bureau in the Home Department, as representative of the Korean originators. At the instance of Mr. An Keiju, Vice-Minister of Finance, Mr. Kim Inshoku, Minister of Foreign Affairs, was unanimously voted chairman of the meeting. At first he sought to decline the honour, but was finally induced to take the chair. The regulations of the Society were then submitted for deliberation, the draft in Korean being read by Mr. Gen Ô-un, Translator in the Foreign Office, but the Japanese draft was left unread. The regulations were at once voted without debate. The Chairman then invited the meeting to proceed to the election of officers of the Society, with the exception of the President, but Mr. An Keiju proposed that the officers be nominated by Mr. Boku Eiko, Minister of Home Affairs, and the latter at once nominated Mr. Kim Inshoten to be Vice-President; Messrs. Yu Kitsu-ei, In Chiko, An Keiju, Ken Zaiko, Cho Jno, Li In-yo, Li Sai-yen, Wu Hanzen, Ko Tetsu, Ren Chubo, Tei Heika, Sugimura Fukushima, Uchida Sadatsuchi, Okamoto Ryunosuke, Ishizuka Eizo, Tsuneya Seifuku, Hozumi Torakuro, Kunitomo Shigeakira, and Enami Tetsuo to be the Councillors; and Messrs. Kim Jinshoku, Gen O-un, and Aoyama Kokei to be Managers, which nominations were accepted by all present with evident satisfaction. This completed the organization of the Society. Speeches were then delivered by several members. Mr. In Chiko, Vice-Minister of Education, who is reputed to be one of the most promising young officials in Sôul, spoke first. He drew attention to the necessity of encouraging a simple, industrious, and healthy mode of life among his countrymen. He was followed by Mr. Kunitomo, who discussed the situation of affairs in the East and emphasized the importance of close friendship between Japan and Korea. Mr. Yamada Itaro referred to the Toho Kyokai (Oriental Association) in Tokyo, and suggested the advisability of establishing relations between the two institutions, since their aims had much in common. The proposal was favourably entertained by the meeting, Mr. Yu Kitsu-ei, Vice-Minister of Home Affairs, warmly seconding it. The whole party were then photographed on a hill in the rear of the Palace, after which they sat down to well furnished tables. In the course of the dinner the Vice-President, Kim Inshoku, called for three cheers for Korea, Japan, and the Society, and the invitation evoked an enthusiastic response. From the success of the meeting, it may be inferred that the misunderstanding between Boku's faction and the Japanese residents has been completely cleared up.

The Korean Government is reported to have made it known in the *Official Gazette* that, besides the Infantry, there shall be created three battalions of Engineers, and a battalion each of Artillery and Commissariat.

The Bin partisans, who are opposed to the present régime, are said to be increasing in the Court. Recently a bureau was created in the Household Department, and it is now filled with men who were dismissed at the time of the inauguration of the new state of affairs last year. The Queen is thus endeavouring to collect about her the friends and supporters of her family.

The *Fiji Shimpō's* correspondent states that General Le Gendre, who recently returned to Sôul, is now a frequent visitor at the Court.

The *Nichi Nichi Shimbun*, which has shown much industry of late in reproducing the utterances of the Russian press on the Korean question, writes in a recent issue in the following strain:—"There are Russian journals that vehemently criticise Japan's conduct in Korea,

alleging that the Japanese are behaving as though the peninsular kingdom were either an occupied territory or a dependency. These journals urge their Government to adopt the policy of expelling the Japanese from the peninsula. Even the less violent newspapers insist upon the withdrawal of the Japanese troops. We do not believe that these expressions of opinion are taken into serious consideration by the Russian Government; but we cannot dismiss them so easily. It is customary for the Russians to advocate a protectorate over Korea, on the ground that Russia has the greatest interests in the peninsula. Such a pretension is too extravagant to be seriously noticed. Should Korea be unable to maintain her independence and should it consequently become necessary to place her under the protection of the Power possessing the largest interests in her fate, such Power is assuredly Japan. Russian territory, it is true, lies contiguous with Korea through a short distance in Ham-gyōng-do. But there is not one Russian merchant resident in the Kingdom, and Russia's share in Korean trade is infinitesimal. The suppression of the Tonghaks, the expulsion of the Chinese, and the advice and assistance rendered in connection with internal reforms—these are but the latest instances in which Japan has spent both money and labour for the benefit of the peninsular kingdom. Russia has done nothing of the sort. If Russia can say that her interests are large in Korea because her ambition is to obtain a part of the peninsula, how much more important must be the interests of Japan which desires the independence of Korea as a bulwark and as a means of self-preservation? Whether Korea has capacity to be independent or whether she will have to be placed under the protection of a foreign Power, is a question that we do not propose to discuss here. But if a protectorate be at all necessary, it should never be a Russian protectorate: Korea's protector must be Japan. This Empire has endeavoured during the past twenty years to preserve the independence of Korea, originally by introducing her to the outside world and since last year by inaugurating political and economic reforms. The efforts made in the latter respect have not yet been crowned with complete success, the time occupied in the work being too brief. But, so far as concerns foreign relations, Korea has been made an independent country. It was China's attempt to re-assert her suzerainty over the peninsula that led to the recent war. It was also ostensibly for the purpose of safe-guarding Korea's independence that Russia opened diplomatic communications with Japan just before the outbreak as well as before the cessation of the war. Japan, of course, agreed to the preservation of Korean independence. It would, therefore, be a breach of faith as much on the part of Russia as on that of Japan, did either country place Korea under its protection. Supposing that Korea were found wanting in the qualities essential to independence, it would be proper that Japan and Russia should take concerted action about the settlement of the question. As Japan will not solve the problem according to her own will, neither must Russia essay anything of the kind. In taking concerted action, Japan will respect Russia's interests (however small they may be) and in like manner Russia should pay due regard to the interests of Japan. But that is only after it shall have been decided that Korea is positively incapable of maintaining her independence. For our own part, we believe her to be incapable, but Count Inouye thinks that Korean independence is not hopeless. Should the Government concur in his view, it ought to continue its present policy of giving advice and guidance to the little Kingdom, and should that policy succeed, Korea ought to be placed in the same position as that occupied in Europe by Switzerland and Belgium. The neutrality of these European States is possible only because they have the qualities essential for independence. Should Korea ever prove herself capable of independence, it would then be Japan's duty to invite the other Powers to join in guaranteeing her neutrality. Such is the brightest

future to which the Koreans can aspire. Should however, our prediction unfortunately prove true, and Korea be found incapable of existing independently, it would be well to reduce her to a state resembling that of Egypt. What England is to Egypt, or France to Annam, or Russia to Bokhara, that certainly must be the attitude toward Korea of the country possessing the largest interest in her fate. We think it necessary that Japan should keep this fact in view. As to the question of the presence of Japanese troops in Korea, it must be borne in mind that, in the present state of things, a long time must elapse before Korea can complete the organization of her army, and that in the meanwhile the presence of our troops is a condition indispensable to the maintenance of tranquillity in the peninsula. If the Powers recognize that the maintenance of tranquillity in Korea is one of the most important securities of Oriental peace, they ought to approve the stationing of Japanese troops in the peninsula after the war, just as they did not object to their presence there before the war. In short, Japan cannot withdraw her troops from Korea in view of their importance as factors making for the peace of the East. The excellent discipline of our troops in Korea at first astonished the Chinese and afterwards extorted the admiration of Europeans. But the Empire that has paramount interests in the peninsula ought to be preëminently careful to win the good-will of the people. We hope that no pains will be spared by the officers in command of the Japanese forces in Korea to keep their men under the strictest restraint. With reference to the civilian roughs that commit violent deeds in Korea, they are the worst enemies of Japanese interests. We are convinced that the Government will take all possible means to sweep away these mischievous folks."

Very disquieting telegrams were received yesterday from Korea. The first, dated Sōul, 7th instant, 10.50 a.m., says that on the night of the 6th, the Queen endeavoured to effect the arrest of Pak Yonghyo (Boku Eiko), Minister of Home Affairs, but that he escaped to Chemulpho. The telegram adds that the other Ministers were holding a conference in the Japanese Legation. This intelligence appears in the *Fiji Shimpō*, which journal conjectures that the Queen's attempt to seize Pak was the first overt step in her programme for recovering the reins of administration.

The *Hochi Shimbun* publishes a telegram dated 1.20 p.m. on the same day (7th), which says that Pak has been arrested; that the men of his party have dispersed; that some of them have been seized, and that the Opposition have suddenly developed great strength. It is further stated that stones were thrown at the Japanese Legation on the night of the 6th, but that the Japanese Settlement is well guarded and safe.

Concerning the fall of Pak Yonghyo (Boku Eiko), Minister of Home Affairs, and his faction, various opinions are advanced. The most plausible explanation seems to be that the events just telegraphed from Sōul were the result of the conflict for some time in progress between the Queen and Pak. Little credence is attached to an allegation of treason on the part of Pak. Documentary evidence, which, according to one telegram, is stated to be in the King's possession,—namely, an account of a written conversation between Pak and a Japanese,—is evidently apocryphal. In the first place, Pak speaks Japanese almost as fluently as his mother tongue, and consequently there would have been no necessity for him to carry on a conversation with any of his Japanese friends in written Chinese. Secondly, the particular Japanese now in question, Sasaki Tomizo, a man from the Prefecture of Akita, is a youth of no repute not even known to have been acquainted with Pak. And finally, even granting that a written conversation of a compromising nature did take place between the two men, it is not probable that slips on which such dangerous words had been transcribed, would have been suffered by Pak to be carried away.

Telegrams are contradictory about the fate of Pak, some stating that he was arrested while on his way to Jinsen, while others assert that he

reached that port in safety and arranged to take passage for Japan by a steamer leaving on the night of the 7th, before he was apprehended. The latter version is believed to be more trustworthy.

As to the train of circumstances that led to the present episode, much light is thrown on the subject by an interview with Mr. Yamada Itaro, reported in the *Kokkai*. Mr. Yamada went to Sōul, in company with Messrs. Sassa and Shiba, to ascertain the truth about Pak's position. He remained for a short time after his companions had left for home, staying in Sōul until the 28th ultimo. He is not at all surprised by the alarming telegrams from Korea, for he professes to have foreseen that things would come to such a pass. "To put it," he says, "in two words, this is the result of a conflict between the Court and the Cabinet, or more correctly between the Queen and Pak. Our countrymen recently accused Pak of an anti-Japanese tendency, but in that they were unjust. About the time of the return of Count Inouye, the conservative and progressive elements in the Korean Cabinet agreed to unite in the work of reform. At that time Pak was of opinion that true reforms were impossible until the Queen had been removed from the political sphere. In order to effect that, he thought it necessary to replace the Court Guards, who are the Queen's main supporters, by troops drilled under the new system. The matter was proposed to the king by the Prime Minister, but the change of Palace guards was vetoed by the Queen. The Cabinet Ministers, however, persisted in their demand for the measure, and the Premier, finding himself in a difficult position, resigned. This was the first occasion of an open rupture between the Queen and Pak Yonghyo. Soon another event precipitated a final collision between the two, namely, the establishment of the *Chosen Kyōkai* (Korean Society). The Queen regarded this association in the light of a demonstration against herself, and some of the foreign Ministers also looked upon it with suspicion. Thinking it high time to take some decided step, the Queen appointed sixteen Court Councillors from among the Ming (Bin) faction, and with the support of these partisans, her influence soon became irresistibly strong." Thus, at the time when Mr. Yamada left Sōul, namely June 28th, the situation was already critical. When he called on Pak the preceding day to bid him farewell, the Minister of Home Affairs is reported to have said:—"Your countrymen have charged me with coöperating with the Queen, but nothing is farther from the truth. It is my resolution to devote my whole energy to the solution of the present difficulties by restraining the Queen from interference in politics, and by placing an impassable gulf between the Household Department and the Cabinet. Then, and then only, will it be possible to effect internal reforms. Can that be accomplished, I am indifferent about my personal safety."

With regard to the question of Palace Guards, the present force consists of 1,000 men said to have been drilled according to an antiquated system by an American officer. It had been arranged, with the King's sanction, that these troops should be replaced by new soldiers trained under Japanese officers. The change was to have taken place in the month of May, but the Queen strenuously resisted the project, well knowing that it would be highly disadvantageous to her interests.

Great impatience is shown by the vernacular press to discover what course the Japanese Government intends to take in the present Korean complication. It is stated by some papers that Count Inouye will once more go to Sōul. All the journals urge the Cabinet to adopt prompt and resolute measures to cope with the situation.

The following telegram, dated Sōul 3.35 p.m., July 7th, is published by the *Kokumin Shimbun*:—"It was An Keiju, the new Police Inspector General, that went to arrest Pak. The latter, learning the fate that threatened him, fled to Jinsen. A party of 20 constables soon followed him, as did also two companies of troops drilled under the new system. Simultaneously with his flight to Jinsen, a part of the Japanese troops

marched down to the same place, while the rest were held in readiness for any emergency, sentinels being posted at various important positions. Pak's partisans have all left the capital. A party of American marines started for Söul immediately after the news of the incident had been received. A Cabinet meeting was convened, and was attended by Yu Kitsu-ei, Kim Koshu, and others. Kim Koshu will probably be appointed Minister President of State. Yu Kitsu-ei has been appointed acting Minister of Home Affairs, and all the important posts in the different Departments of State have been filled by partisans of the Ming faction. Jo Kohan, Minister of Justice, and Shin Kizen, Minister of War, have been deprived of their offices. Ko Keikan has been placed in command of the troops trained under the new system. The affair originated in a jesting remark made by Sasaki Tomizo in a conversation with Sai Koyeki, to the effect that Boku Eiko had a plan to surround the palace with Japanese troops and depose the Queen. Sasaki Tomezo, Ogawa Minoru, Kuroda Takuma, and a few others have been ordered to leave the country."

Little further news of importance has been received from Korea. Pak and his fellow fugitives are said to have fled from Söul in foreign clothes and taken a launch for Ninsen at Yong-san, about two miles from the capital.

As to Sasaki Tomezo, whose careless talk with a certain official unfriendly to Pak is alleged to have been the principal cause of the present incident, it is stated, on the authority of Messrs. Sassa and Shiba, that he had a grudge against the fallen Minister of Home Affairs because the latter persistently refused to see him. Messrs. Sassa and Shiba were repeatedly called on by Sasaki, while they were in Söul, and they say that he was always alluding to Pak in the most resentful terms, vowing, on the last occasion they saw him, to be revenged on the haughty Korean Minister of State. It is not impossible, according to some critics, that Sasaki invented a baseless calumny against Pak, and that the tale was at once carried to the Queen, who was glad to be supplied with a pretext for effecting the downfall of her enemy. But for our part, we can not be content with such an explanation.

With regard to Ogawa Minoru, who has been ordered to leave Korea or Söul by the Japanese Consul, it is stated that he was an old resident in the Korean capital, and that he there enjoyed close relations with several native officials of influence, especially An Keiju, the new Police Inspector-General. An was supposed to be a partisan of Pak, but it is believed by men versed in Korean affairs that he was all the while in secret communication with the Queen's party. It is further believed that Ogawa was mixed up in the plot against Pak. There is another Japanese adventurer, Kuroda Takuma by name, whose continued residence in Korea has been forbidden. He was probably connected with the affair, but nothing is known either about his antecedents or about his doings in Söul.

According to a telegram received by the *Fiji Shimpö*, it appears that the direction of affairs in Söul is in the hands of Kim Koshu and Yu Kitsu-yei. Kim Koshu was formerly Minister President of State, which position he had to resign on account of the strong opposition of the now fallen Minister of Home Affairs. It is believed that Kim is a great admirer of Count Inouye, and he has always been regarded as a genuine friend of Japan. But constancy is a rare virtue among Korean statesmen, and no one can say positively how much Kim's political views may have changed since his retirement. At all events, it seems likely that the accusation against Pak was not dictated by any deeply planned political scheme to overthrow Japanese influence. All intelligence agrees in stating that no excitement prevails in Söul. It remains to be seen whether Pak was sinned against or sinning. We incline to the latter view, however. He saw the imminence of his political enemies' advent to power, and he attempted to strike at the source of the danger. That is our own inference, however. We admit that materials for forming a decided estimate are still wanting.

ECONOMICAL AND INDUSTRIAL.

The increase of banking corporations is one of the most conspicuous features in the Japanese economic world. At the end of 1892, the number of private banks was 270, but it increased to 604 at the close of the succeeding year. Thereafter the increase has been at least equally great. The following table shows the private banks established in the City of Osaka during the two years ending February, 1895:—

Name.	Capital.	Date of Establishment.
Osaka Ginko.....	200,000.....	March, 1893.
Sakai Kyoritsu Ginko.	50,000.....	June, 1893.
Omi Ginko	500,000.....	March, 1894.
Nippon Shokin Ginko.	500,000.....	July, 1894.
Osaka Shogyo Ginko..	300,000.....	July, 1894.
Hirano Ginko	50,000.....	July, 1894.
Inouye Ginko	500,000.....	August, 1894.
Meiji Ginko	300,000.....	August, 1894.
Sekizitsu Ginko	1,000,000.....	October, 1894.
Namba Ginko	50,000.....	October, 1894.
Churitsu Chochiku Ginko	50,000.....	November, 1894.
Hirano Shochiku Ginko	30,000.....	November, 1894.
Sekizen Domei Ginko.	500,000.....	December, 1894.
Temma Ginko	100,000.....	February, 1895.

Total14.....4,130,000

The *Shogyo Shimpö*, from which we quote these figures, states that the tendency of private banks to grow in number has become even more marked since the restoration of peace.

The marine insurance companies sustained such losses during the first six months of the present year that some of them find it impossible to declare a dividend. Their misfortune was due to the frequency of shipwrecks among vessels engaged as transports or on foreign lines. Of the ships injured or destroyed in Korean waters and in the Yellow Sea, the majority were owned by the Nippon Yusen Kaisha and the Osaka Shosen Kaisha, which usually insure their own vessels. Consequently, the insurance company's losses extended only to the cargoes. But despite that saving clause the result makes a large hole in the income of the companies. It is generally feared that the insurance companies will have a hard time of it during the next few years, for the sudden increase of the mercantile marine is destined to cause keen competition between the different steamship companies, and such rivalry can not fail to increase the perils of navigation. Moreover, such an increase of ships necessitates the employment of unskilled navigators and crews. There are consequently apprehensions that during the next few years the risks of marine insurance will be greatly augmented.

That a number of capitalists in Tokyo have under contemplation the organization of a company to develop the resources of Formosa, has already been mentioned in these columns. As a preliminary measure, they have formed an association called the *Taiwan Kogyo-kai*, for the purpose of making investigations about the present condition and future prospects of the different kinds of industries in the island. Commissioners will shortly be despatched thither for the purpose. The enterprises under contemplation are the growing of sugar, camphor, and tea, and the working of coal mines. Of these the camphor industry is stated to be most popular. Among the supporters of the scheme may be mentioned Messrs. Amemiya Keijiro, Tanaka Heihachi, Abe Hikotaro, Inouye Kakugoro, and Yokoyama Magoichiro.

THE "REVUE FRANCAISE."

A correspondent, whose address we have unfortunately mislaid, recently questioned us with reference to the existence of a French journal or periodical in Japan. The only one now in existence is the *Revue Française du Japon*, published under the patronage of the Society of the French Language, the office being at the *Wa-Futsu Horitsu Gakko*, Kojimachi-ku, Fujimicho, Rokuchome, No. 16, Tokyo. The magazine is one of the very best publications of its class that have ever appeared in Japan.

RUSSIAN SENTIMENT TOWARD JAPAN DURING THE LATE WAR.

Mr. Kanbe Oichi, who started for Russia last winter, carrying with him specimens of black tea manufactured by the Kyushu tea men, returned home about the middle of the month, and has conveyed to several of his friends, who in their turn communicated to the vernacular press, an account of his experiences among the Russians. While busily soliciting, in St. Petersburg, orders for Japanese black tea, news constantly reached the Russian capital about the victories won by the Japanese Army and Navy. Wherever he went he found the topic earnestly discussed, and question after question was put to him about Japan and the Japanese. It may easily be conjectured that his answers were not unfavourable to Japan. Especially he was careful to impress upon his hearers the fact that Japanese soldiers and marines are deeply imbued with sentiments of patriotism and loyalty, and are ready to sacrifice their lives for the sake of their country and Emperor, in all of which points the Chinese, who join the Army solely from mercenary motives, offer a striking contrast. These expositions seem to have been well received. Everywhere Mr. Kanbe found a cordial welcome, and the specimens that he carried with him were soon exhausted; moreover, he obtained quite a number of orders for tea. During his sojourn in St. Petersburg, news arrived that the great Chinese strongholds of Port Arthur and Weihaiwei had fallen into the hands of the Japanese, that they had crossed the river Liao and marched upon Yingkow, and that Formosa had also been taken by them.

His mission—he had been sent, as stated above, by the Kyushu Tea Guild to show samples of tea and get as many orders as possible—having been satisfactorily accomplished, he left the Russian capital for Odessa, whence he took passage in the Russian steamer *Moscow*, and started for home in the early part of March. The steamer, being one of the Volunteer Fleet, was manned by naval officers or seamen on the retired list. She carried about 700 colonial troops destined to settle in Siberia. In the course of the voyage a religious feast was held, to which Mr. Kanbe was invited. From the captain down to the sailors, the whole crew effusively congratulated him on the victories won by Japan, and became so excited over the matter that several of them shouldered their guest and cheered him enthusiastically.

Three days later the ship reached Singapore. It was May 3rd. The captain then told Mr. Kanbe that as Russia, Germany, and France, had conjointly objected to the cession of the Liaotung peninsula to Japan, hostilities might break out between the three Powers and Japan, and that the ship, though originally bound for Nagasaki, had been ordered to proceed direct to Vladivostock. He therefore advised Mr. Kanbe to leave the ship at Singapore, but on reconsideration he withdrew that advice, and said that since, in the event of war breaking out, the ship might be captured by the Japanese before reaching Vladivostock, he hoped that Mr. Kanbe would stay on board so as to act as interpreter in the event of such a contingency. Under any circumstances, his remaining on board until the vessel reached Vladivostock was much to be desired, as he was well acquainted with Siberia, and would be of great service to the Russian Government after he reached that place. Mr. Kanbe concluded that as the ship had to call at Hongkong to coal, he could leave her there, and he accordingly signified his willingness to proceed in her. Thenceforth, however, his treatment by the crew underwent a marked change. They studiously tried to avoid his company, and when the vessel reached Hongkong, he was only too glad to get away from her. The story does not appear to possess any special value or significance, but it is told by the vernacular press evidently as an indication of the change that has come over Russian sentiment toward Japan since the association of the three Powers and the cropping up to the Liaotung question.

COUNT OKUMA ON THE FOREIGN REPRESENTATIVES.

Among the many utterances put into Count Okuma's mouth by interviewers and published in the columns of the vernacular press, one rather curious statement appeared in the *Chuo Shim-bun* of the 27th and 28th ultimo. We translate it verbatim:—"The British Minister, Sir Harry Parkes, was not a man of learning, in the foreign sense of the term, but his abilities were such as to qualify him even for a seat in the English Cabinet. He was originally a student-interpreter. A man of high courage and dignity, his deeds in China won for him the applause of his nationals. Among all the British Representatives that have been in Japan, not one could compare with him. Mr. Trench, for example, who recently went home, was nothing more than a good man. When pushed hard in a controversy, he would seem almost ready to weep, and would sit with his eyes fixed sorrowfully on the table, so that his *vis-à-vis* felt reluctant to press the discussion. Mr. Fraser, his predecessor, though learned, was not a diplomat. His abilities were literary and artistic only. Mr. Satow, who is soon to arrive, can not, of course, be classed with Sir Harry Parkes, but is probably one of the ablest of the British Ministers we have hitherto had. He, too, was a student-interpreter originally and acted in the capacity of interpreter for Sir Harry Parkes. An old resident of Japan, skilled in the Japanese language, and in Japanese lore, translator of the *Kojiki*, well versed in Chinese literature, his knowledge in these respects is something very different from the rough acquaintance that men like myself have of Western languages and literature. In pre-Restoration days, he with Sir Harry Parkes, mixed freely with the *Daimyo*, and *Hatamoto*, and acquired the pure, high-class dialect of the *Yedokko*. The United States Representative, Mr. Dun, has lived for 20 years in Japan and is almost like a Japanese. Of the foreign Representatives now in Japan, the Russian Minister, Mr. Hitrovo, is the ablest. He gave many proofs of his talents in the Balkan Peninsula, and he shares with Mr. Waeber, Russian Minister in Söul, the reputation of being a first-rate diplomatist. Mr. Waeber has not yet been much spoken of, but he and his wife make an exceptional couple, of whom much will one day be heard. As for the Japanese Representative in Söul, there is no occasion to send a man of such high reputation as Count Inouye to succeed the latter. A fairly clever man that has risen from student rank will suffice. Diplomacy is not an affair of learning: it is a special talent. A man like Sir Harry Parkes, even if he never read a volume on international law, had a special talent that made him the first diplomat in the East."

THE MONETARY SYSTEM INVESTIGATION COUNCIL.

A report embodying the results of the labours of the Monetary System Investigation Council having been completed by Mr. Hayakawa Sen-kichiro, the Manager of the Council, was submitted for the approval of the Council at its meeting of the 3rd instant. The report was immediately voted correct, and was presented by Viscount Tani, President of the Council, to Mr. Tajiri Inajiro, Vice-Minister of State for Finance, Count Matsukata, Minister of Finance, not then happening to be in the Department. Mr. Tajiri read a letter from Count Matsukata, thanking the members of the Council for the conscientious diligence they had shown in the discharge of their duties, and Mr. Sonoda Kokichi, President of the Yokohama Specie Bank, thanked Viscount Tani, in the name of the members of the Council, for the able manner in which he had directed their proceedings. The publication of the report is looked forward to with much interest.

The word "honeymoon" is derived from the German, and has its significance from the fact that the Germans formerly drank mead—a sweet liquid made of honey—for thirty days after the wedding.

THE JAPANESE MINISTER TO CHINA.

A second batch of letters from correspondents accompanying Mr. Hayashi, have just been received in Tokyo. On June 18th, the Japanese Minister visited H.B.M.'s ship *Swift* and the British Consulate in Tientsin, while Secretary Kawasaki and Lieut.-Colonel Kamio visited the French Consulate. The following day, about 8 a.m., the Japanese Minister and his party left Tientsin for the Capital by a train of boats, nine in all, under guard of two gun-boats, one leading and the other bringing up the rear. The party were escorted to the wharf by a guard of 32 braves. Immediately after the embarkation, the gun-boats escorting the flotilla fired a salute. Seven of the boats were occupied by the party, and two carried provisions. Each boat was provided with a Chinese cook who had been in the service of Japanese and, consequently, knew how to prepare food according to Japanese taste. None of the correspondents say that these boats were placed at the service of Mr. Hayashi and suite by Viceroy Li, but such appears to have been the case. The gun-boats were armed with brass mortars and had 12 soldiers on board.

The voyage up the Pei-ho took about seventy-five hours. Leaving Tientsin at about 8 a.m. on June 19th they reached Tungchow at about noon on the 22nd. When the boats were moored in the evening—they did not move during the night probably from considerations of safety—the gun-boats always fired salutes and landed the soldiers, who kept watch on shore, beating gongs and occasionally firing rifles to frighten away the banditti with whom these regions are supposed to be infested.

At Tungchow Mr. Hayashi, Secretaries Nakajima, Tei, and Kawasaki, Captain Inouye, I.J.N., and Lieut.-Colonel Kamio took chairs, while the rest of the party, including the newspaper correspondents, proceeded on donkeys. The correspondents seem to have been struck with the grandeur of the walls of Pekin, but their surprise was still more excited by the filth and dust-storms within the walls. On reaching the Legation, they found it guarded by ten constables. A student interpreter from the United States Legation was there to welcome the Minister.

On the 23rd, namely the day following that on which he reached Pekin, Mr. Hayashi called on the American Legation. On the 25th, he visited the Tsung-li Yamên, accompanied by Secretaries Tei and Kawasaki, Captain Inouye, and Lieut.-Colonel Kamio. The outer gate was guarded by a large body of constables. The Ministers of State came to the inner gate to welcome Mr. Hayashi, and he was received at the doorway by His Imperial Highness Prince Kung. Tea and cake were served. The interview being merely a formality, no business was brought up for discussion, and Mr. Hayashi soon took his leave, escorted to the door by Prince Kung, and to the inner gate by the other Ministers of State. On leaving the Tsung-li Yamên, he visited the British, French, German, and other Legations.

The *Fiji Shimpō's* correspondent draws attention to a marked contrast between the treatment of Mr. Hayashi by the Viceroy Li and by the Pekin Cabinet. The former did everything in his power to show respect to the Japanese Representative, by sending steam-launches to convey him to Tientsin, providing him with body-guards, and so forth, but the Pekin Government did not even send an official to Tungchow to welcome him. We (*Japan Mail*) do not attach much importance to this difference. It is not the custom of the Pekin Government to show courtesies of the nature alluded to by the *Fiji Shimpō*. We may mention, too, that the banditti in the regions along the Peiho are a novelty. We have never heard of any foreigners being molested by such gentry, and we have ourselves travelled frequently by boat on the Peiho without ever suspecting, or being led to suspect, the proximity of banditti.

THE WAR AND THE MERCANTILE MARINE.

The recent war with China has more than doubled the mercantile marine of Japan. Before the war, the total tonnage of the country's merchant steamships was between 150,000 and 160,000 tons. Since the outbreak of the war, more than 160,000 tons have been added, so that the aggregate is now more than 300,000 tons. A table published by the *Chugai Shogyo Shimpō* shows the names, tonnage, horse-power, and owners of the new ships of above 1,000 tons capacity registered during the ten months ending April last:—

Name.	Registered Tonnage.	Nominal H. P.	Owner.
Oturu Maru	1,507	400	War Department.
Kokura Maru	1,507	400	War Department.
Fusan Maru	1,541	300	War Department.
Sakura Maru	1,827	400	War Department.
Izumi Maru	1,999	350	Nippon Yusen Kaisha.
Fukuoka Maru	1,664	300	War Department.
Shinshu Maru	1,577	326	Mr. Kishimoto Gohei.
Ujina Maru	1,490	400	War Department.
Shibata Maru	1,714	750	War Department.
Matsuyama Maru	1,934	600	Naval Department.
Toyohashi Maru	1,870	650	Naval Department.
Soya Maru	1,669	153	Nippon Yusen Kaisha.
Edo Maru	1,723	144	Mr. Hiromi Nisaburo.
Doyo Maru	1,531	207	Doyo Shosen Kaisha.
Yamaguchi Maru	3,033	775	Naval Department.
Oyo Maru	1,892	175	Seiko Kaisha.
Tateyama Maru	2,162	250	Mr. Baba Michihisa.
Kagoshima Maru	4,130	600	Naval Department.
Yamato Maru	1,656	331	Seiko Kaisha.
Konoura Maru	1,406	201	Mr. Ukon Gonyemon.
Kinshu Maru	2,312	750	War Department.
Shin-yu Maru	1,835	397	Mr. Fusata Kyubei.
Hino Maru	1,083	151	Chu-etsu Kisen Kaisha.
Fukui Maru	1,531	247	Mr. Ukon Gonyemon.
Jinsen Maru	1,433	300	Nippon Yusen Kaisha.
Eijo Maru	1,534	221	Nippon Yusen Kaisha.
Tairen Maru	1,791	270	Nippon Yusen Kaisha.
Heijo Maru	1,823	329	Nippon Yusen Kaisha.
Ikai Maru	1,907	335	Nippon Yusen Kaisha.
No. 11. Kan-non Maru	1,606	216	Mr. Oaki Kikusaburo.
Shigaura Maru	1,616	250	Mr. K. Minamishima.
Moji Maru	1,560	134	Nippon Yusen Kaisha.
Hakusan Maru	2,193	240	Mr. Saba Michihisa.
Suyehiro Maru	1,244	140	Mt. Nakai Jiai.

Total, 34 61,171 11,632

Of these ships, those registered in the names of the War and Naval Departments are to be handed over when they are no longer needed for transport purposes. From the extraordinary increase in the tonnage of the mercantile marine, it is anticipated that close competition will ensue in the coast-wise carrying trade at the release of the transports from Government service. An inevitable consequence will be that the larger steamship companies, as the Nippon Yusen Kaisha and the Osaka Shosen Kaisha, will open new lines to foreign ports. The matter is now engaging the serious attention of these companies, and it is believed that the Diet will vote subsidies for the new routes.

In expectation of the keen competition that is sure to take place before long in the maritime carrying trade, shipowners, appreciating the necessity of union among themselves against the large companies, have just organized a combination named the Japan Marine Navigation League (*Nippon Kaiun Domei-kai*). The principal project of the league is said to be Mr. Hamanaka Hachisaburo of Osaka. The League is divided into two sections, the Eastern and the Western. The committee of the Eastern consists of Messrs. Asano So-ichiro, Baba Michihisa, Minamishima Kansaku, and Oaki Kikusaburo; and that of the Western, of Messrs. Hamanaka Hachisaburo, Hiromi Nisaburo, Oya Shichibei, and Ukon Gonzae-mon. The principal members of the League recently held a meeting in the Osaka Hotel, Osaka, and adopted the following resolutions:—

- 1.—That the League shall have nothing to do with sailing vessels.
- 2.—That the expenses of the League be borne by its members at the rate of less than 1 *sen* per ton of the vessels in their possession.
- 3.—That captains of the second class at present in charge of ships below 500 tons shall be transferred to ships between 500 and 1,000 tons.
- 4.—That the existing lines in home waters shall be extended to Shanghai.
- 5.—That engineers of the second class who have taken charge of engines of and above 150 horse-power for upwards of two years, shall be raised to be first engineers.
- 6.—That a petition shall be presented to the

Department of Communications respecting the amendment of the regulations for the inspection of vessels.

7.—That the views of the Authorities be ascertained with respect to the repairs of the transports after they cease to be required for public service.

"RAILWAY MANNERS."

Under the above heading, a correspondent signing himself "English Tourist" sends an indignant letter to one of our local contemporaries. He complains in bitter terms of four lads, apparently American, whose conduct he designates, "rude, mischievous, dangerous, and very ill-mannered." They put their wet, dirty boots on the cushions; they left the doors open; they threw pieces of paper about; they pushed away the clogs of a dozing Japanese, and they jumped off the train as it was travelling at a speed of 6 miles an hour. How they managed the last feat we fail to understand, since they alighted on a station platform and we have never heard of trains in Japan entering a station at a speed of 6 miles per hour. Be that as it may, however, it does seem that this "Tourist"—who, by the way, calls himself "English" while claiming co-nationality with American boys—is a decidedly stiff-backed person. Was he never a boy, as boys go in England and America? If he was, surely the offences that he charges, with such solemn rhetoric, against the four lads ought not to seem so very heinous. They do not sound particularly terrible in the telling, though the narrator's intention is evidently not to blame for that, and we are strongly disposed to suspect that the lads—quick as all boys always are to detect priggish tendencies—played a part, at any rate, of their farce for the edification of this special tourist. We don't mean to approve such practices, but we certainly do not think them worthy of so much fuss and censure.

THE YOKOHAMA SPECIE BANK.

Some changes have been effected in the internal regulations of the Yokohama Specie Bank, in pursuance of resolutions adopted at the general meeting of the Bank held in March last. Hitherto the salaries of officials were fixed at extremely low rates, their principal income consisting of the rewards allowed them out of the profits of the Bank. Under the old system, the nominal salary of the President was 80 *yen* per month, and that of the Managers 60 *yen*, while the lowest servant of the bank received only 6 *yen*. Their annual salaries were less than one-half of their income in the shape of rewards. But from the 1st instant a new arrangement has been adopted. Rewards are no longer to be allowed, and the scale of the salaries has been correspondingly raised. The President will receive 350 *yen* monthly, the Vice President and Managers 250, and the Assistant Managers, 200. The rest of the officials are divided into ten classes, the names of the newly created sections and their heads being as follow:—Foreign Section, Mr. Totsugu Hyokichi; Domestic Section, Mr. Aoki Naoto; Correspondence Section, Mr. Noritake Kotaro; Book-Keeping Section, Mr. Sawai Mune-yuki; Mortgage Section, Mr. Ogawa Komakitsu; and Financial Section, Mr. Takahashi Masanobu. Three new Assistant Managers have been appointed; they are Messrs. Yamakawa Yuki, Kawashima Chunosuke, and Totsugu Hyokichi. The officials of the bank are not required under the new system to make a deposit of shares as security. But they are required, in proportion to their salaries, to contribute to a common fund which will be kept by the Bank as security against losses caused by their mistakes. Rules have also been established for giving gratuities to officials on their leaving the service. For instance, those that have been in service for upwards of five years will receive a sum equivalent to four months' salary, while those that have served upwards of ten years will be entitled to ten months' salary.

MRS. DRAPER'S BLIND SCHOOL.

The closing exercises of Mrs. Draper's Blind School, took place in the Van Schaick Hall on Tuesday afternoon, in the presence of a large assembly. After an introductory prayer by the Rev. E. S. Booth, some students of the Ferris Seminary sang "My Dream," the solo being taken by Miss Hayashi Sada. The rendering of this song was very sweet. Miss Griffin next contributed a pianoforte solo, after which Dr. Meacham read the School report. He stated that the scholars now number 37. One of the most notable effects upon the pupils attending the school, was their conversion to personal cleanliness, a quality almost unknown to some of them on their first appearance. He mentioned that the pupils experienced some persecution from their fellows, upon first attending the school, but this had now died away. As an instance of the interest taken by the blind in the work of the institution the report noted that on one occasion 60 blind people attended the Bible meeting. Signorina Belinfante, who takes warm interest in all work connected with the blind, then sang "Daddy," in a manner all her own, and won warm applause; Mrs. McIvor accompanied her. A short programme was then gone through by the pupils of the Blind School. Shotaro Nagaoka, a little blind boy, read an essay on "Blindness," in the Japanese language, which he himself had written. The same small fellow and a girl named Tsuru Yoshizawa, sang "We will gather at the river"; then a dialogue on the benefits of a Christian education was given by two lads. A koto quintette with flute obligato, "Rokudan," was excellently well given, after which a young girl sang a short Japanese song. This concluded the School's contribution towards the programme. Signorina Belinfante next gave an exquisite rendering of "The Valley by the Sea," and secured an encore, but owing to the state of her throat had reluctantly to decline. Bishop Walden then addressed a few words to the meeting. He said that the education and care of the blind was one of the brightest outgrowths of our civilization. Anything that tended to broaden the sphere of the minds of poor folk so afflicted was worthy of support, and he hoped that success would attend the labours of the School for the Blind started in Yokohama by Mrs. Draper. By the work thus done in a small way here something was accomplished towards raising the thousands of Japanese blind, whose lives were verily cast within the shadow, towards a higher and a broader life.—(Applause.) A pianoforte solo by Miss Moulton followed, and then the Rev. H. Loomis pronounced the Benediction.

COUNT INOUE.

When Count Inouye returned to Japan there was a tendency in certain quarters to adversely criticise his conduct while in Korea, but fuller acquaintance with the actual state of affairs in the peninsular kingdom has, it seems, convinced these critics that the course adopted by the veteran statesman was the wisest under the circumstances, and that he is best qualified to take charge of the Empire's interests in that country. For the past few days the press has been unanimous in urging him to cross the sea once more. It is reported in some papers that he has converted the Cabinet to a resolute line of policy in Korea, the evident pre-supposition being that the Ministry were in favour of letting the little Kingdom alone. We believe ourselves justified in saying, however, that the Cabinet's policy toward Korea has been fixed from the commencement of the recent war, and that the position obtained by the country in the peninsula in consequence of that war does not permit any change of front on the part of Japan. If, contrary to general expectation, Count Inouye goes again to Seoul, it is not because the Cabinet has decided upon any new line of action, but simply because he is deemed the best man to complete the work begun by him in Korea. We are disposed to think, however, that although no change of general policy has taken place, the Counts'

return to Seoul depended, in great part, upon the establishment of a clear understanding between the Tokyo Cabinet and himself as to the means that may be employed in pursuing that policy, and as to the measure of freedom exercisable by him. It is impossible not to admire his intrepidity and patriotism in undertaking such a task. Able to command any official position at home that might suit his taste, he has nevertheless consented to descend from the high place of a Minister of State to that of a Minister Plenipotentiary, and to set his hand to a work from which credit can hardly be won, discredit easily.

JAPANESE TROOPS IN KOREA.

Concerning the presence of Japanese troops in Korea, the *Nichi Nichi Shimbun* has the following note:—"Japanese troops were first sent to Korea in virtue of the Chemulpo treaty of 1882 and for the purpose of protecting our Legation and Consulates. They subsequently continued in that country in consequence of the formation of an offensive and defensive alliance between Japan and Korea against their common foe, China, and also in consequence of a request from the Korean Government that they should be employed to put down the Tonghak rebellion. That alliance has already ceased to exist, and the Tonghaks have been subdued. But the Korean Government feared that, the organization of its own Army being still incomplete, the withdrawal of the Japanese soldiers might be followed by a revival of the Tonghak disturbance. Therefore it applied to Japan that her troops might remain in the peninsula, for the purpose of maintaining peace and tranquillity. The application was granted by the Japanese Government. This was about the time of the return of Count Inouye. Mr. Kim, the Korean Minister of Foreign Affairs, probably alluded to that circumstance, when he recently stated that the Korean Government could not very well request the withdrawal of the Japanese forces immediately after their continued presence had been solicited." *Apropos* the Japanese troops in Korea, their exact strength is not known, but we shall not be far from truth if we put it at a little less than 5,000. Of late it has been widely rumoured that the withdrawal of these forces is demanded by Russia. Whatever may be the truth of that report, it seems certain that Japan will not be easily induced to recall troops from the peninsular Kingdom.

THE POLITICAL CASE IN THE APPEAL COURT.

The defendants in the political case connected with the anti-Cabinet agitation having appealed against the decision of the Court of Conciliation, the appeal came up for hearing before Judge Saito in the Tokyo Local Court on the 10th inst. Judges Tsuda and Takahashi sat as assistants; and the prosecution was conducted by Public Procurator Nakanokoji. Of the appellants, there were present Messrs. Suzuki Shigetoo, Ozaki Yukio, Suehiro Shigeyasu, Taguchi Ukichi, and Shiga Shigetaka, but Mr. Kudo Kokan was unable to attend on account of sickness. Counsel for the appellants were Messrs. Numata Ugenta, Matoba Heiji, Maruyama Meisei, Moriya Konosuke, Minato Sengo, Matsuo Seiji, and Amano Kinosuke. Police Sergeant Oshima of the Shiba Police Office attended as witness for the prosecution. The evidence given by him was vague and unsatisfactory. His statements were inadequate to establish the point that he had in view, namely, that the appellants were the projectors of a political association. However, his testimony proved of secondary importance, since the principal point to be determined was, not whether the appellants were projectors, but whether the combination of which they were certainly the leading members had the essence of a political association. The arguments advanced on both sides were, for the most part, a repetition of those employed in the lower court; the appellants contending that the absence of any collective name, official head-

quarters, and internal regulations proved that no political association had been formed; while the Public Procurator insisted that such things were not the essentials of a political association, which must be considered to have come into existence as soon as a number of men agreed to take concerted action for a common political object. With regard to the point that the appellants had played the part of, and been regarded as, the originators of the political association, much discussion took place. The appellants and their Counsel maintained that their capacity corresponded exactly with that of the other men that held conferences at the Atagokan, and that the meetings there were spontaneous gatherings of persons having similar views on a certain political subject. The Public Procurator pointed out that the appellants were the guiding spirits of the movement, since it was always they that took the trouble of communicating with the different parties and arranging the dates and places of conference. The trial lasted from 8.20 a.m. until 4 p.m., with a recess of an hour at noon. Decision was reserved. The Court is said to have been full of spectators. A large number of people had assembled in front of the building long before the hour fixed for the hearing of the case, but the constables astutely opened a door leading to a courtyard connected with a chamber other than that in which the proceedings were to take place. This ruse proved completely successful. The crowd having been all decoyed into the spacious enclosure, were easily kept in good order and afterwards admitted into the court-room one after another without the slightest confusion.

THE "CHISHIMA"- "RAVENNA" CASE.

Judge Jamieson, in giving his decision in the *Chishima-Ravenna* suit, in the Supreme Court of Shanghai, said:—"If this Court has jurisdiction in the suit at all, must it not be taken that the plaintiff comes in on the same terms as he comes in to any Court in Her Majesty's dominion, that is, as submitting to the jurisdiction of the Court, so that all proper orders may be made against him, and thus enable the Court to do complete justice between the parties?" This view of the matter, though at the first blush it commends itself to common sense, totally ignores the fact that the British Courts in Japan are of limited jurisdiction, the limits being determined by the Treaty. Judge Jamieson apparently places the British tribunals in Japan on the same footing with British tribunals in any part of Her Majesty's dominions, and consequently argues that if a foreigner avails himself of the privilege of seeking redress at the hands of such tribunals, he must submit in every respect to their procedure. That idea was very summarily disposed of by the Lords of the Privy Council. Sir R. Webster, who appeared for the respondents, said that when a Japanese availed himself of the privilege of going to the British Court, he must be taken as submitting entirely to its jurisdiction. The Lord Chancellor interposed:—"Don't talk about 'privilege': it is his right to go there." And Lord Watson added:—"It is a fetter imposed on him. Without this fetter he could sue the British subject in the Japanese Courts." As for the theory advanced by Mr. Francis, Q.C., that the Queen has inherent jurisdiction, their Lordships pooh-poohed it, and emphatically maintained that whatever jurisdiction her Majesty has, is obtained from the Treaty.

THE COTTON SPINNING INDUSTRY IN JAPAN.

A writer on the staff of the *Chuo Shimpō* has collected a mass of interesting material about the history and the present condition of the cotton spinning industry in Japan. His interesting account of the origin of the earliest spinning factory established in Kagoshima more than forty years ago by the greatest of feudal princes in modern times, Shimazu Haruhisa, has already been reproduced in these columns

(*Japan Mail*, July 6th, 1895). The man that turned his attention to this industry after the Satsuma Prince, was Mr. Kajima Mambei of Tokyo, who set up a factory at Oji in 1867, while the country was still disturbed by the war of the Restoration. The machines were of the ring pattern, and the number of spindles was 720. The factory was called Oji Boseki-jo. This was the parent of the present Tokyo Spinning Factory.

These were the only spinning factories until 1879, in which year two others were established by the Government in Aichi and Tochigi. Four more were established in 1880, four in 1881, one in 1882, one in 1883, and one in 1884. These factories, 17 in all, have since been handed over to private companies and are now in a thriving condition. Their names, and their present number of spindles, are as follow:—

	Spindles.
Aichi Boseki Kaisha (Aichi)	2,000
Shinofuzuke Boseki Kaisha (Tochigi) ..	2,040
Okayama Boseki Kaisha (Okayama) ..	15,960
Watanabe Boseki Kaisha (Yamanashi) ..	2,000
Yamato Boseki Kaisha (Nara)	2,000
Miye Boseki Kaisha (Miye)	51,408
Kuwabara Boseki Kaisha (Osaka) ..	2,000
Tomashima Boseki Kaisha (Okayama) ..	1,326
Shinomura Boseki Kaisha (Okayama) ..	1,608
Shimada Boseki Kaisha (Shizuoka) ..	3,136
Miyagi Boseki Kaisha (Miyagi)	2,000
Hiroshima Boseki Kaisha (Hiroshima) ..	5,500
Totomi Boseki Kaisha (Shizuoka) ..	2,000

Total 92,978

The industry has since made striding progress, a large number of private factories having been established. The following table includes both the factories already in operation and those in course of erection, exclusive of those mentioned above:—

	Spindles.
Nagoya Boseki Kaisha (Aichi)	14,032
Osaka Boseki Kaisha (Osaka)	56,336
Nagasaki Boseki Kaisha (Nagasaki) ..	4,144
Dojima Boseki Kaisha (Osaka)	10,208
Owari Boseki Kaisha (Aichi)	30,712
Temma Boseki Kaisha (Osaka)	15,288
Tokyo Boseki Kaisha (Tokyo)	30,032
Naniwa Boseki Kaisha (Osaka)	24,024
Hirano Boseki Kaisha (Osaka)	27,648
Yawata Boseki Kaisha (Kyoto)	3,338
Fujii Boseki-jo (Kyoto)	1,136
Uwa Boseki Kaisha (Ehime)	4,120
Kurashita Boseki-jo (Okayama)	15,480
Wakayama Boseki Kaisha (Wakayama) ..	16,028
Himeji Boseki Kaisha (Hyogo)	4,128
Imamiya Boseki Kaisha (Osaka)	14,924
Kanakin Seishoku Kaisha (Osaka)	28,492
Settsu Boseki Kaisha (Osaka)	50,000
Kanegafuchi Boseki Kaisha (Tokyo) ..	82,000
(Inclusive of its Branch at Hyogo.)	
Miike Boseki Kaisha (Fukuoka)	31,104
Kurume Boseki Kaisha (Fukuoka) ..	15,144
Amagasaki Boseki Kaisha (Hyogo) ..	27,036
Shōtoshima Boseki Kaisha (Kagawa) ..	3,500
Senshu Boseki Kaisha (Osaka)	19,264
Kofu Boseki Kaisha (Yamanashi)	2,064
Fukushima Boseki Kaisha (Osaka) ..	11,592
Fukuyama Boseki Kaisha (Hiroshima) ..	7,680
Iyo Boseki Kaisha (Ehime)	6,376
Matsuyama Boseki Kaisha (Ehime) ..	4,993
Yamashiro Boseki Kaisha (Kyoto) ..	2,152
Nippon Boseki Kaisha (Osaka)	44,160
Meiji Boyeki Kaisha (Osaka)	7,634
Ajino Boseki Kaisha (Okayama)	2,000
Ise Boseki Kaisha (Miye)	2,029
Kasaoka Boseki Kaisha (Miye)	4,992
Onaki-kawa Mempo Kaisha (Tokyo) ..	4,060
Koriyama Boseki Kaisha (Nara)	10,368
Sakai Boseki Kaisha (Osaka)	5,376
Noda Boseki Kaisha (Osaka)	5,000
Temma Oritomo Kaisha (Osaka) ..	2,064
Kashiwazaki Boseki Kaisha (Okayama) ..	2,000
Tsushima Boseki Kaisha (Aichi)	19,600
Awaji Boseki Kwaisha (Hyogo)	5,000
Kishiwada Boseki Kaisha (Osaka) ..	11,136
Kumamoto Boseki Kaisha (Kumamoto) ..	5,000
Hanyo Boseki Kaisha (Hyogo)	2,164
Shokufu Boseki Kaisha (Wakayama) ..	5,696
Takaoka Boseki Kaisha (Toyama) ..	10,000

711,322

The aggregate number of spindles both in operation and in course of being set up, is put by the writer at 819,115, of which 580,564 represent those in actual operation.

THE KOREAN QUESTION AND THE JAPANESE PRESS.

The Japanese papers are as usual united in urging the Government to pursue a firm line of policy in Korea. They also call upon the Cabinet to send Count Inouye back to Sōul without a moment's delay. The fall of Pak is regarded as the result of a *coup d'état* on the part of the Queen and the Ming faction. Such a feat, the metropolitan journals assert, would have been impossible had Count Inouye been at his post, and consequently his immediate departure for the peninsula is earnestly desired by the friends as well as the foes of the Ministry. There is a strong tendency on the part of the Tokyo press to suspect that Russia may be at the bottom of the whole affair. But whatever be the true cause of the incident, all publicists call upon all their countrymen to watch the movements of Russia, for it is with her that Japan will ultimately have to deal in the solution of the Korean problem. Not a step is to be yielded to the Northern Power in the settlement of this question, so write all the papers. We give the gist of a few of their articles.

The *Chuo Shimbun* has little doubt that the trouble originated in the Queen's ambition to put the political power into the hands of the Ming family. Our contemporary also entertains a suspicion that the Queen may have been instigated by the diplomats of a certain State which has repeatedly played a similar game in the Balkan peninsula. "Russian journals," says the *Chuo*, "urge their Government to place Korea under its protection, and maintain that the present is the best opportunity to consummate such a policy. Journalistic discussions of that nature need not be considered seriously, but should Russia attempt to carry out such a scheme, Japan must by all means oppose it, and accomplish her object of preserving the integrity of Korea."

The *Nippon* observes that Japan has undertaken the task of Korean regeneration not only for the benefit of Korea but also in the interests of Japan. The Koreans requested Japan to quell their domestic disturbances and reform their administration, and Japan, in compliance with that request, has spent and is spending a large amount of labour and money. Thus it is claimed that she has a right to interfere in the internal affairs of the Kingdom, a right recognized by all the civilized countries of the World. In discharging the obligations created by this right of interference, Japan has to consider two things, namely, the Ming faction and Russian influence. The present revival of the former's activity may perhaps be owing to the secret assistance of the Russian Minister. Our contemporary professes not to credit the rumoured connection between the Russian Legation and the Ming faction, but at any rate thinks that the first step Count Inouye ought to take on reaching Sōul is the elimination of Ming elements from the Korean Government and the restoration of Pak to influence. Should the Korean Court insist on the maintenance of the Mings in power, that, says the *Nippon*, must be regarded as a declaration of animosity against Japan on the part of Korea, for the Mings have always proved hostile to this country.

The *Kokumin Shimbun* is not so narrow-minded as the above quoted journal. It thinks that Japan ought to support whatever Korean statesmen may be deemed capable of preserving the independence of the Kingdom, be they Mings, or Kims, or a Pak, for the only object aimed at by this empire is to create in the peninsula a bulwark for Japan's defence. "Should Korea prove herself so fickle as to be instigated by a foreign Power into demanding the withdrawal of the Japanese troops, Japan ought not only to reject such a demand, but to decline to recede, however slightly, from her present position in that country. On the contrary, she should increase her foot-hold in the peninsula." Our contemporary states that there are men who advocate the despatch of fresh troops to Korea, but it is inclined to think that the present state of affairs does not

necessitate such a step. If more troops be needed, they can be sent at any moment.

The *Yomiuri Shimbun* recommends all classes of the people to unite in supporting the Government's policy in Korea.

The *Kokkai* writes as follows:—"If the Korean Court should ever assign all the administrative posts to the Mings, and, breaking away from Japan, form an alliance with Russia, our country ought to take proper measures to chastise such ingratitude. In that event, it might become necessary to declare a protectorate over the peninsula. But before proceeding to that extremity a proper opportunity must be looked for, and success would require an unusual amount of caution and wisdom. For the present, our Korean policy should be to avoid all extreme measures. At the same time it is important that the management of the foreign policy of Korea should be brought under the control of the Japanese Minister." Unless the greatest vigilance be exercised by Japan, our contemporary fears that the peninsula may fall into the hands of Russia.

THE "NIPPON" AND THE SIBERIAN RAILWAY.

The *Nippon* still refuses to admit that the principal use of the Siberian Railway from an international point of view will be military. Our contemporary writes as follows in its issue of Sunday last:—"We thank the editor of the *Japan Mail* for sparing nearly two columns in yesterday's issue of his paper to discuss our views on the Siberian Railway. He attempts to prove the military character of the line by quoting the remarks of a Russian General that 'the railway is . . . of great significance especially from a military point of view.' But such a line of argument is incapable of solving our doubts. What tactician would not utilize a railway for the purpose of transporting troops? The General's observations were doubtless made from this standpoint. As to 'Russia in Central Asia,' to which the editor directs our attention, we beg to assure him that the work is an old acquaintance. Were not a large number of merchant vessels employed for military purposes as transports in the latest war? Are not the mercantile ships of the *Empress* type under contract, in the editor's own country, to serve military purposes in time of war? An undertaking of the magnitude of the Siberian Railway can never be in its character either wholly commercial or wholly military. Our editor, however, regards the line as being almost entirely devoted to the purposes of Russia's aggressive policy. May we not infer then that he labours under the influence of Russo-phobia? There is another thing we should like to ask him: Supposing that Russia is wedded to a policy of aggrandizement, is there any proof that England is not pursuing a similar policy?"

Our contemporary is an adept at propounding questions. Will he, then, allow us to ask one in turn, namely, how is the trans-Caspian railway to serve as a trade route between Europe and the Far East? The *Nippon* has classed the line in the same category with the Suez Canal as an international carrier. If it will explain exactly how a ton of goods can be carried by the railway from, say, Germany to Japan, more cheaply or more conveniently than by already existing routes, we shall be in a better position to appreciate its contention. As to commerce between Russia in Asia—especially the Ussuri regions—and the Far East, we have already recognised the uses of the railway, and we are quite prepared to admit that had no such prospect been in sight, the line would not have been built. But it appears unnecessary to pursue the subject in the present strain. We can only hope that the *Nippon's* utopian views will not be rudely dispelled. To the question whether England does not pursue a policy of aggrandizement as keenly as Russia, we have only to answer that it is entirely irrelevant.

CHINESE ITEMS.

The horrors that happen in China owing to the operation of uncivilized laws are illustrated by a story from Chinkiang:—

A dreadful murder was committed some time ago near my house. The victim was a young Shantung man, and no clue to the murderer has been discovered. The pernicious law that the man at whose door or on whose property the corpse is found is responsible for the crime until the murderer is found produced its ghastly results in this case. For three days this wretched creature lay in the open field naked, the hot blazing sun on one day and a pouring rain on another putrefying his wounds, and producing untold agony. When my colleague and myself found him he was still alive; his head, on which the wounds had been made was covered with thousands of the horrible products of swarms of flies. His eyes were gone—eaten away. In his agony too he had beaten hard the ground for several yards and his mouth was filled with mud. We washed his wounds and carried him to a place of shelter, but he died that night.

Japanese journals have been speaking of the anxiety felt by cotton-spinning industrials in this country lest enterprising Englishmen should start factories in China, under the clause in the Shimonoseki Treaty that removes all difficulties in the way of importing machinery or carrying on manufacturing industries in China. That this anxiety is well founded the following paragraph from the *North China Daily News* demonstrates:—

We understand on the very best authority that Messrs. Holliday, Wise and Co. are maturing a scheme for a large Cotton Spinning and Weaving Company in Shanghai, which will shortly be laid before the public. They propose to act as General Managers under a Board of Directors, and to run the Mill on the Indian system, with the strictest economy, receiving a small commission as agents for the sale of the products, and looking mainly for their remuneration to a share in the realised profits. The fact that they have consented to act also as agents for Messrs. Platt Bros. of Oldham, the well-known machinery makers, puts them in an excellent position, and they trust to get some of the mercantile community here to accept seats on the Board of the Company.

The following Imperial rescript issued by the Chinese Emperor is very suggestive:—

With reference to the terms of the new Treaty, we are certain that both Liu K'un-yi and Wang Wênshao feel as we do that the cession of two slices of our territory and the payment of two hundred million taels as an indemnity are terms which are extremely hard to grant: but the *Wojén* (Japanese) vaunting in their previous succession of victories are resolute in their declaration that unless we grant these terms they will not cease in their hostile operations against us. Granted then that hostilities recommence what are the probabilities? The enemy will attack Liaoyang and Moukden in the north, and westwards they will attack Peking. For the past few days we have been deluged with memorials from the various officers of our Court and the country in which they unanimously declare that we ought by no means to ratify the new treaty. Their arguments as a rule have all been based on unrefutable grounds; but they have left out of their calculations the extreme importance of Liaoyang, Moukden, and Peking and the necessity of providing for their safety and inviolability. If then we refuse to ratify the treaty hostilities will recommence at once. In such a crisis if we be not sure of the ability of our troops to repulse the enemy, disaster to the country will be instantaneous. Furthermore, there will then be no chance of returning to the *status quo*. In Liu K'un-yi's last memorial, telegraphed to us dealing with the terms of the Treaty, he states that "even if our armies be not victorious he will still be able to prolong and drag on the war;" while Wang Wênshao declares in his memorial that the army corps of Nieh Shih-chêng, Provincial Commander-in-Chief of Chihli, "is in very good condition and state of preparation," and that they will be "able to give a good account of themselves against the enemy." But the present crisis is one that does not admit of procrastination but requires instant decision. The question is, shall there be peace or war? The supreme importance of the question admits of no delay and we direct Liu K'un-yi (as generalissimo) and Wang Wênshao (as Chief Commissioner of Supplies) to give us an answer in plain Yes or No what it shall be. They are to give earnest consideration to the present state of affairs; they are to scan minutely the condition of the various army corps in the field; whether these troops can be relied upon in the

event of fighting being resumed, or not, and then report to us frankly what each individually thinks after he shall have weighed carefully the *pros* and *cons* for peace or war. We forbid the said Viceroy to return enigmatic answers to our question, and try to shirk the responsibility of the future consequences of their advice.

By way of corollary to the above we append another paragraph from the *North China Daily News*:—

According to a native telegram from Peking, the Emperor has sanctioned the Viceroy Liu K'un-yi's memorial for the formation of a standing army for Chihli and the Manchurian provinces. It is to be divided into four army corps of 20,000 men each, cavalry, artillery, and infantry, to be commanded by Liu K'un-yi, as Generalissimo, the Tartar-General E-k'ô-t'ang-à and the Chinese Generals Sung Ch'ing and Nieh Shih-ch'eng, Provincial Commanders-in-Chief of Szechuan and Chihli, respectively. Two army corps under the first and last named officers are to be quartered in the country inside of the Great Wall, while Generals E-k'ô-t'ang-à and Sung Ch'ing will command in Manchuria. This army is to be formed and drilled after the German pattern.

The *North China Daily News'* correspondent in Tientsin says that "Mr. Arakawa has settled down in the Consulate and the Japanese are to be met with all over the place, even in the heart of the city. Most of them, officials and tradespeople, have been in Tientsin before, and their old friends and clients are all glad to see them back again. It is surprising to see the absence of all resentment on the part of the Chinese."

The following two telegrams have been published in Shanghai:—

Hongkong, June 29th.

Admiral Buller has ordered the withdrawal of the force of marines and bluejackets landed in South Formosa, and of all foreigners. There is utter consternation among the foreign merchants, who find it impossible to comply with the order. It is hoped that some other Foreign Power will come to their protection. The position of the community is most critical.

Hongkong, July 1st.

In spite of the British Minister's telegram to retain the force landed at Anping, the marines have been withdrawn, and the community remain in a situation more than critical.

It is impossible to understand the intelligence given in these telegrams. We do not believe it.

We find the following telegram in the *N.-C. Daily News*:—

Tamsui, 29th June.

Advices from Teckcham of the 22nd, state that after fighting near Totaiken on the 21st and near Teckcham on the 22nd, the city of Teckcham, the capital of the Hsinchu district, was taken by the Japanese. Over one hundred Chinese were killed, and eighteen Japanese killed and wounded. The Chinese made a stout resistance between Tiengliak and Teckcham.

[Teckcham is a town in North Formosa, some forty miles south-west of Taipei.—Ed.]

Here is an advertisement of much interest to Japanese:—

Share List Closes in Shanghai at noon on July 20th, 1895.

PROSPECTUS.

THE EWO COTTON SPINNING AND WEAVING CO., LD.

Incorporated under Companies' Ordinances 1865 to 1890 of Hongkong, whereby the liability of Members is limited to the value of their Shares.

CAPITAL: TLS. 1,000,000, DIVIDED INTO 10,000 SHARES OF TLS. 100 EACH

(with power to increase),

Of which it is proposed to issue at present only 7,500, and of this number of Shares 5,500 have already been allotted by the promoters, leaving a remainder of 2,000 Shares which are now offered for public subscription. On this issue of 2,000 Shares Tls. 10 to be paid on application, Tls. 15 on allotment, and Tls. 75 in three subsequent calls of Tls. 25 each at three, six, and nine months respectively.

GENERAL MANAGERS.

Messrs. JARDINE, MATHESON & Co.

PROVISIONAL CONSULTING COMMITTEE.

A. P. MAC EWEN, Esq.

(or the senior representative of Messrs. Jardine, Matheson & Co.).

MAX ADLER, Esq., of Messrs. Reiss & Co.

JOHN PRENTICE, Esq., of Messrs. Boyd & Co., L'd.

TA FONG, Esq. (President Piece Goods Guild).

TEE SAN, Esq. (President Silk Guild).

BANKERS.

Hongkong and Shanghai Banking Corporation.
LEGAL ADVISERS.

Messrs. DOWDALL and HANSON.

THE Company has been under contemplation since 1893, but permission has hitherto been denied Foreigners to import Machinery, and the development of the enterprise has thus been checked. The continued exertions of H.E. the British Minister at Peking have at length been attended by success, a shipment of Machinery imported by the promoters to test their rights having, after nine months' persuasion, been passed by the I. M. Customs and admitted without obstruction. The Company is formed to take advantage of the increasing demand on this market for coarse counts of Cotton Yarn by erecting, to begin with, a Spinning Mill of about 28,000 Spindles, and availing of an abundant supply of locally grown Cotton and plentiful cheap labour, a Yarn can be produced which will command a ready sale at handsome profits.

Had such an enterprise as the present been advanced three years ago the attendant results would have been matters of uncertainty, whereas the working results of the 65,000 Spindles now running in Shanghai reduce conjectures to certainties and warrant an assurance of substantial profits on the investment. Basing calculations upon the average cost of raw material during the last two years, the lowest price at which locally Spun Yarn has sold since its introduction, and after making provision for the most liberal estimate of working expenses calculated on the experience of existing Mills, and writing off 10% per annum from value of Machinery, a handsome net profit on the Capital proposed may be accepted as a reliable computation of results.

In further evidence of the money making capabilities of local Cotton Spinning industries it may be mentioned that the published accounts of the various Native-owned Mills in Japan report an average dividend of over 15%. These Mills are very largely dependent for their supplies upon China grown Cotton, which pays an export duty of roughly 4%, and an import duty in Japan of 2% to 3%, together with packing, transport expenses, etc., making in all fully 7½%. The export of Cotton to Japan amounts to half a million piculs annually.

The management and direction of the Company will be in the hands of Messrs. Jardine, Matheson & Co., as General Managers, but subject to the supervision of a Consulting Committee, consisting at first of the Members of the Provisional Committee, whose names are stated above.

The promoters propose to purchase the very best Spinning Machinery, but no contracts of any kind have been entered into, nor has land yet been acquired, although the refusal of one or two desirable sites has been obtained.

Copies of the Memorandum and Articles of Association of the Company can be inspected by intending Subscribers at the Offices of the Company.

Application for shares must be made to the Bankers of the Company who will grant receipts for the deposits accompanying same, and from whom copies of this Prospectus may be obtained.

If the number of Shares applied for by any one applicant be not allotted, the surplus of the amount paid on deposit will be appropriated towards the sum due on allotment.

Where no allotment is made, the deposit will be returned in full.

Shanghai, 1st July, 1895.

Commenting on the above the *N.-C. Daily News* says:—

On our front page will be found the prospectus of the first Cotton Mill in China started by foreigners, and under foreign control; for though the promoters have thought it well to put two Chinese on the provisional committee, the control of the mill will be entirely in foreign hands. It is appropriate that Messrs. Jardine, Matheson & Co., who have fought the machinery question so long, should be first in the field with a foreign mill. The eager demand for shares in this enterprise is shown by the fact that only 2,000 shares out of the 7,500 to be first issued remain to be allotted, and we cannot doubt that in the able hands of the leading firm in China the Ewo Cotton Spinning and Weaving Co., Ltd., will be a conspicuous success.

"It appears," says the leading Shanghai paper, "that Germany is to be partially repaid for the assistance she gave China by backing-up Russia by getting the loan of £15,000,000, which the Chinese government has declined to settle with Russia. It is understood that Mr. Rehders, the Manager here of the Deutsch-Asiatische Bank, has gone up North as re-

presentative of a syndicate of German bankers, to settle this loan."

The Shanghai papers just to hand do not contain much about the Szechuan riots: The following paragraph gives the gist of all that seems to be known with reference to the escape of the missionaries:—

The story of the riots which have taken place in the last two or three weeks would fill a volume and will be told much better by those who participated in them. There have been thrilling escapes, but we are thankful to say that thus far no lives have been reported lost. One party of missionaries were escorted on board a raft in the dead of night by Chinese soldiers. Later they ran away from their dangerous escort and a less dangerous mob, themselves navigating the raft when necessary. The first city they passed had already been visited by a riot. There is no place where it is safe to touch the shore. They send a messenger ahead and learn of the clean sweep at Kiating and sweep out into the Min river and escape the crowds lining the city walls waiting for them. At the next place the rioting is just in progress. At Suifu they learn that there has been trouble and take the boat into their own hands when their boatman is determined to bring them up to shore. Twenty miles below they are visited by pirates in broad daylight. A couple of shots from a rifle frighten them away when they are trying to unship the rudder. At this place the previous night one of their associates while lying to waiting for them had his boat visited by robbers armed with knives and other weapons who stripped him of everything. His life is threatened, and jumping in the water he hides himself under the boat as long as he can hold his breath while they are trying to stab him. Then he makes his way to the shore and the ringleader intercedes for him, or rather he is given a respite. Later, when they are off their guard, he jumps on the boat and pushes off in the darkness. At length all arrived at Chungking. This morning between thirty and forty are leaving for down river ports, and many more are leaving soon. The Chêngtu refugees, who have to run the gauntlet of the dangerous river are anxiously expected daily. Chungking still holds and the officials are vigilant, but it is thought best to send away the women and children.

Jingals are evidently coming into fashion again in China. "According to an official report of the Board of War," says the *N.-C. Daily News*, "there were manufactured up to the 4th moon (May), in the Liangkiang, Liangkuang, Hukuang, Min-Ché, Chihli, Shantung, and Hunan provinces no less than 112,874 *tait'siang*, or the ridiculous "two men breech-loading jingals" invented at Nanking during the recent war, or an average of a little over 10,000 pieces for each of these provinces. Owing to the reputed superior carrying power of these *tait'siang* over the modern weapons bought from Europe, the Board of War has ordered the provinces above named to manufacture another 200,000 for distribution throughout the twenty-two provinces of the Empire. These weapons are a little over nine feet in length and have a bore a little less than an inch in diameter. It is intended to use cordite for the cartridges as soon as a sufficient quantity can be made in the various arsenals."

It seems that the action of Admiral Buller, in withdrawing the force of marines and blue-jackets from Anping, was dictated by the imminence of a Japanese attack on the Black Flags in that vicinity. In the *North China Daily News* of the 2nd inst., we find the following:—

The Shanghai Branch of the China Association announce for general information that having regard to the exceedingly unsatisfactory news from Formosa, enquiry was made to the Hongkong Branch for particulars in reference to the order said to have been issued by Admiral Buller; whether any steps had been taken in the interests of all concerned; and for any further available information.

The reply from Hongkong is as follows:—Information has been received that Japanese forces about to attack Anping, the head-quarters of the Black Flags. The English and German Admirals advised their nationals to leave in view of proposed attack. Nothing else can be done. Had communicated with Sir N. R. O'Connor previously as to position.

Another telegram from Hongkong, of the same date, says that the Imperial Maritime Customs at Anping have closed their doors and that all trade is suspended. The foreign community was safe at that date.

"It is reported from reliable sources at Tientsin," says the leading Shanghai journal, "that the Viceroy Li Hung-chang has sent up the names of four of his *protégés* for selection by the Emperor for the post of his Majesty's chief representative at the Court of Tokyo. They are Hu Yü-fên, Chief Commissioner of the Peiyang Commissariat and Commandant of the Tingwu Brigade (Major von Hanneken's); Wu Ting-fang (Ng Choy) Chief Director of the N.C. Railway; Lo Fêng-loh, Chief Naval Secretary to the Viceroy of Chihli; and Hsü Hsin-chai, formerly *Chargé d'Affaires* at Lima, Peru, and for the last few years the Viceroy Li's private secretary and writer of memorials to the Throne—a very important post. All but one are Taotais, and have in addition the red brevet button of the 2nd rank, while the first-named was Judge of Kuangsi and is now eligible for a Treasurer's post. Lord Li's name has been mentioned in this connection, but he is too well known to the Court as a Japanese sympathiser to make it safe to recommend him, and by the Viceroy his uncle especially." With regard to Hu Yü-fên, mentioned here, we read that "the native papers state that he has memorialized the Throne recommending the immediate sanctioning by the Emperor of a government bank, opening of mines throughout the whole empire, railways from north to south and east to west, and the establishment of military, naval, and scientific colleges in all the provincial capitals and large seaport towns, etc. The Emperor, we now learn by wire from Peking, has submitted the memorial to the "Six Boards and Nine Ministries of the Empire and intends to be guided by their report." It is to be feared that by the time the memorial has run the gauntlet of the Six Boards and Nine Ministries, it will be in a very attenuated condition.

In connection with the Szechuan outrages a meeting of American citizens was held on the 1st of July in the vestry of Union Chapel, Shanghai. Among these present was Mr. Consul-General Jernigan, who spoke, as usual, vigorously and to the point, urging his nationals not to trust to any strangers, but to form a committee themselves for the purpose of ascertaining exactly what had happened in Szechuan, so that the plain facts might be dispassionately laid before the United States Government. The result of the meeting was the appointment of the following five gentlemen as a committee of investigation: the Rev. Dr. Boone, the Rev. Dr. Bryan, the Rev. Dr. G. F. Fitch, the Rev. J. R. Hykes, and the Rev. Dr. C. F. Reid. Apparently the points to be investigated are, first, the property destroyed; secondly, its value; and thirdly, whether its destruction could have been prevented by a proper exercise of official authority.

A correspondent writing to the *N.C. Daily News* from Chungking, under date of June 19th, says:—

The Chêngtu missionaries have mostly arrived and are just leaving for down-river ports. They suffered much while in the yamén for ten days and during the nine days' journey to this place on account of lack of clothing and the common necessities of life. There have been trying experiences which we will leave to the sufferers to relate. While they were in the yamén all possible was done for them by way of providing food, etc. They were taken away in the dead of night, the city gates being opened especially for them. Both the District Magistrate and the Viceroy provided them a guard on the journey to this place. It is true they were treated as prisoners, but refugees could not be choosers. The weather was hot, they were crowded insufferably on the boats, and could only get Chinese food. On their arrival the Chungking ladies relieved them somewhat with supplies of food and clothing.

The following appears in the *Pekin Official Gazette*:—

THE OFFICERS OF THE PEIYANG FLEET.

Wang Wên-shao, Governor-General of the Yün-kuei provinces, Acting Viceroy of Chihli, and Acting Imperial High Commissioner of the Peiyang Defences, presents the report of a casual investigation made by his deputies into the circumstances which led to the loss of the Peiyang fleet and the results of an *ex parte* examination of the officers of the said fleet, together with the

penalties which he considers some of them richly deserve. It seems that the Peiyang fleet was lost owing to the successive captures by the enemy of Port Arthur, Weihaiwei, and Liukung Island. It was therefore incumbent to examine into the number of officers, high and low, who had lost their lives fighting against the enemy in order to recommend the posthumous honours each of them deserved and the amount of government gratuities due their families. To do so it was necessary to gather together the Captains and Commanders of such ships of the fleet as had remained at their posts to the last and examine them and their principal officers, and furthermore to find out who among them had deserted or run away and were still at large, in order that their case might be considered and the adequate penalties meted out to them. In this manner the disgraceful affair might be wound up and also serve as an example governing similar cases in the future, so that it might not be said that the affair been passed over without a just and impartial enquiry made into the circumstances which led to the loss of the said fleet. Under these circumstances memorialist accordingly deputed Chu Hsing-jui, the Taotai in charge of the pay office of the coast defence administration and recently appointed Tientsin Taotai, and the expectant Taotai Liu Ch'i-tung, to join the Board of Enquiry consisting of such of the high provincial authorities of Chihli as were at Tientsin at the time, to examine the officers of the Peiyang fleet in the manner noted above. The following facts were then elicited which memorialist now embodies in the present memorial:—The Peiyang fleet was under an Admiral, and subject entirely to the said Admiral's control. Thus it lay solely with him to despatch or retain any vessel of the fleet at his pleasure. In the 1st moon of the present year (January-February, 1895) the *Wofen* (Japanese) attacked Weihaiwei which fell into their hands and thus drove the entire Peiyang fleet for cover under Liukung Island. Although it lay with the Admiral to direct defensive or offensive operations, still it was under the circumstances also clearly the duty of Liu Kuo-siang, Yeh Chu-kuei and others, as Captains of the *Tsiyuen*, etc., and chiefs in command of their vessels, to lead their men bravely against the enemy if they found their Admiral wanting. These officers had risen up to their present rank either from a very low social status, or as graduates of the Foochow navy academy had been promoted to their commands; but all had participated in the Imperial bounty: hence when the island was besieged; when the last reserve of ammunition had been fired; and when all was lost, it was clearly their duty not to survive them. Such indeed were Tai Chung-ch'ien (Taotai and Commandant of the Suiking Brigade on the mainland); Chang Wen-hsuen (Brigadier-General in command of the Liukungtao forts); Liu Pu-ch'an (Commodore of the right squadron, *Tingyuen*) and Yang Yung-lin (acting Commodore of the left squadron, *Chenyuen*). These heroic officers, loyal to their sovereign, refused to survive their defeat; they held life light as a feather as compared with patriotism and honour. But the others, commanding as they did over a dozen huge ships-of-war gathered in defence of a stronghold, could have turned fiercely against the enemy as a wild animal at bay; with the force at their command they could have attempted to restore the day by desperate bravery; they could have bored holes in their ships and sunk them rather than give them up whole and safe into the hands of the enemy; all this they could have done, but instead, we find them cling dishonorably to life. Captains and Commanders indeed, but shipless, because surrendered to the enemy. What a vast difference when compared with the loyalty and heroism of the ancients! Nor can the utmost leniency free them of blame. As for such men as the expectant Taotais Ma Fu-heng, Nin Ch'an-pin, and Yen Tao-hung although they tried to find subterfuges in declaring that their duties were civil and that they were not commanders of war-vessels, etc., yet as chiefs of the naval and military secretariats, commandants of torpedo corps, etc., they had it in their power in times of peace to use their influence with the fleet for good, and hence they cannot escape from well-deserved censure. As for Ts'ai T'in-kan and other commanders of the torpedo boat fleet who ran away before the fall of Liukungtao and whose whereabouts are still unknown, their crime is greater than all the rest, and it is necessary to make out a list of the deserters in order that they may be summarily dealt with whenever captured in the future. While those who met their deaths or were wounded fighting the enemy their cases shall be carefully sought out and memorialist will present a memorial separately on their behalf. In conclusion, considering that the Peiyang fleet was organised eleven

years ago, it must be admitted that officers and men fought well and successfully at the battle of Tatungk'ou (mouth of Yalu) but upon the fall of Port Arthur their martial spirit apparently went down and enthusiasm was at its lowest ebb. With the loss of Weihaiwei all heart was lost and nothing could be done with the crews of the ships. As our country must in the near future reorganise and build again its navy it is necessary to institute a regular tribunal of enquiry of this nature in order to govern the conduct of the officers and men of the future navy. The following is the list of the commanding officers denounced:—Lin Kuo-siang, steel cruiser *Tsiyuen*; Yeh Chu-kuei, protected cruiser *Chingyuen*; K'ew Pow-jin, protected cruiser *Laiyuen*; Li Ho, belted cruiser, *Pingyuen*; Lin Yün-ch'ü, wooden corvette *Weiyuen*; Li Ting-sin, second in command, Admiral's flagship, *Tingyuen*; Ho P'ing chang, second in command, Commodore's flagship, *Chenyuen*; Lin Wen-pin, *Chenchung*; Huang Mingch'iu, *Chenpien*; Ch'en Chuepei *Chentung*; Pan Chaopei, *Chensi*; Lan Chien-ch'ü, *Chennan*; Lü Wenching, *Chenpei*; the last six being Armstrong steel mosquito boats. The civil officers with military power, hereby denounced are Ma Fu-heng, unattached expectant Taotai, Chief of the naval secretariat and Civil Commandant of the Fish Torpedo battalion; Niu Ch'angpin, attached expectant Taotai, commissioner of the Weihaiwei military and naval secretariat, and civil commandant of the submarine mines brigade at the east entrance; and Yen Tao-heng, Shantung expectant Taotai, and civil aide-de-camp of the Peiyang Admiral. The above officers are all recommended to be temporarily deprived of their rank to await trial by a regularly constituted court. As for the torpedo boat officers Ts'ai Ting-kan, commander of the 1st squadron (left wing); Liu Fang-fu, commander of the 2nd squadron (right wing); and Ts'ao Shang-pao, commander of the 3rd squadron (right wing) with six other commanders of torpedo boats, these all ran away on the 7th of February upon the fall of the Weihaiwei mainland forts, but being pursued by the enemy's cruisers and finding escape by sea impossible ran their boats ashore and so escaped. It is recommended that they be instantly cashiered and when captured be summarily decapitated. It is claimed also that some of the officers of the torpedo boats attached to the ironclad *Tingyuen* and *Chengyuen* escaped with the others at the same time. Memorialist will investigate their case and report later on.—*Rescript: Read.*

The Rev. B. Ririe, of the China Inland Mission, has written an account of the rioting in Kiatsing. It seems to have been a most casual kind of affair. Bills were posted ere morning in various parts of the city inviting the people to gather and beat the foreigners. The latter thereupon made preparations to depart, and some idle folks, attracted by these doings, assembled near the house of Doctors Hart and Hare. Trouble ensued with the gate keeper and he left his post, the two doctors also effecting their exit by a back-door. The place being thus abandoned to the mercy of the crowd, looting commenced in a nonchalant, leisurely fashion. Mr. Ririe, called to the spot, found people strolling off with all sorts of articles, most of which they complacently surrendered when invited to do. By and by the magistrate arrived with some soldiers and then Mr. Ririe left for his own home. There the inmates—among them his own wife—appear to have kept him locked out until they had comfortably effected their escape. Mr. Ririe, meanwhile, holding precarious converse with a rapidly increasing crowd. When he was admitted, the mob followed, and began to loot complacently, Mr. Ririe looking on and giving information as to the uses of the things stolen. Once a couple of men took it into their heads to try how much pressure he could bear on his girdle, but friendly citizens saved him from being cut in two. The whole story reads like a narrative of altogether secondary interest to the narrator, whose chattels and person were nevertheless subjected to very inconvenient usage. Finally, Mr. Ririe went into hiding until dark, and in the dead of night he and his fellow-missionaries, including ladies, repaired to the magistrate's Yamên, where they found "the officials most kind," and "a beautiful cottage and garden at the back of the Yamên" ready to receive them. This is how Mr. Ririe concludes his apathetic tale:—

It just seems as if the Lord had been making ready for us, for the cottage was just completed for the Magistrate's son to live in, but he willingly gave it up to us.

To day we hear reports that they want to capture foreigners also, and that some bands of robbers have followed the two Doctors and Mr. Beauman down the river. I do not, however, fear for them; nor do I fear a bit for ourselves here. I believe the Lord has inclined the hearts of the city people towards us. It is people from Chêngtu and students for examination that have caused all the trouble. I do not think any blame can be attached to the Magistrates. They have done their best here under the circumstances, and it is a cause for much thanksgiving that so many have saved their lives.

However much we may regret the suffering caused by anxiety and loss of goods and the hindrance to the work, yet I cannot say personally that I feel sorry for these riots. We were able to show the people that we can "take joyfully the spoiling of our goods." We have also been drawn nearer the people. I never knew I had so many friends in Kiating till yesterday. The Christians and servants have stood by us like bricks throughout; not only that, but the neighbours also could not have shown us greater kindness. We hope to stay on here and keep up connection with Yachou and Chêngtu. I hear Mr. and Mrs. Squire, and the Misses Naess Nilson, and Hol are safe. We rather fear for Suifu, as the examinations begin there in about a fortnight. Our street chapel has also been wrecked, as has the large Roman Catholic house outside the city. I hear they captured a quantity of silver there; that will sharpen their appetites for silver. A number of people are going to see the wrecked houses, but otherwise all is quiet to-day—a calm after the storm. There are rumours of trouble at Yachu, but we don't know the truth. I am writing this letter with the end of a chopstick, because I have lost my pen and pencils.

Pray for poor China!

We take the following from the *China Mail* of the 3rd instant:—

THE DILEMMA AT ANPING.

SIR N. O'CONOR AND ADMIRAL BULLER AT CROSS PURPOSES.

(From Our Own Correspondent.)

Anping, July 1.

Under instructions from Admiral Buller the British forces ashore and afloat have been withdrawn. The Admiral has also advised most urgently the withdrawal of the Foreign communities, but none have left. Sir N. O'Conor, the Minister at Peking, wired to Consul Hurst that he had advised the Admiral not to evacuate Anping, but as no contrary instructions had been received from the Admiral by the Senior Naval Officer he could do nothing but obey his original instructions.

There need be no anxiety about our safety; I expect the men-of-war will be ordered back again.

Later.—I think, after all, the British force will remain, as a wire has just come (per man-of-war from Amoy) sent by the Minister at Peking, saying he has ordered the Admiral not to withdraw.

Hongkong, July 3rd.

It is reported from Amoy, on the authority of British naval officers just arrived there from South Formosa, that the Japanese Army landed a few days ago forty miles North of Taiwanfoo, intending to close round the Black Flags and "finish them off" without giving them a chance of retreating to the hills to carry on an annoying brigandage for years as in Tonkin. Certainly there is now not much sign of any Japanese army near Tamsui or Keelung; and the force which is reported to have been fighting the Chinese at Tekcham is only a small portion of the army.

The Foreigners at Anping are believed to be removing to Takow, where they will have the *Tweed* to protect them. This is not matter of much difficulty. Anping cannot be always defended in the South-west monsoon. Even the little *Thales*, which goes there regularly during summer, has often to hurry away to the Pescadores for shelter; and at such a time of course the Black Flags would have matters all their own way.

It is believed that the Japanese Government has come to an understanding with the British Minister to get the foreigners out of the way if possible while the Black Flags are being reduced to reason.

Another story is that the British guard and gunboats were withdrawn for fear of "irritating" the Black Flags!

THE "NIPPON" ON RUSSIA AND ENGLAND.

IN reply to our criticism of its article on the subject of the Siberian Railway, the *Nippon* assures us that its object in discussing the subject was not to deprecate the proposed alliance with England, but simply to correct erroneous views entertained by its countrymen respecting the results of the completion of the great trans-Asian line. Our contemporary is of course aware of the fact that the completion of the line will add largely to the power of Russia in the East, but it contends that the peaceful uses of the new highway must not, on that account, be lost sight of. Since there is no possibility of preventing the construction of the railway, it behoves Japan, in addition to adopting such measures as may be necessary for self-defence, to take, at the same time, steps for securing as large a share as possible of the commercial advantages derivable from the new highway between Europe and Asia. Such, the *Nippon* claims, was the object of its essay. Any reference made to the policy pursued by England with regard to the Suez Canal, was for the purpose of exposing the fallacious notions that pervert the judgments of its countrymen concerning the Siberian Railway. It believes that these notions originated with the English, whom it declares to be "the only nation opposed to the Siberian Railway." "We knew, from the outset," writes the *Nippon*, "that our article on the Siberian Railway would not please Englishmen, but we never entertained any hostile feeling toward them. Neither have we the slightest intention to advocate an alliance between Japan and Russia. Much less did we entertain the faintest idea of making the article an attack upon the proposed alliance with England." Japan's foreign policy remains independent as ever. Japan does not regard England with animosity because England was unfair to her in some stages of her recent war; neither does she look upon Russia as an enemy because the latter objected to her permanent occupation of Liaotung, for the foreign policy of a country must be shaped in accordance with mature consideration for its permanent interests. The *Nippon* professes to make no distinction between England and Russia. It says:—"We are informed that the countries peopled by white races are all civilized, and that Christian nations all love peace. Well, let us apply this standard to Europeans and Americans and make no distinction between the different nations of the West. If England's control of the Suez Canal is beneficial to the cause of civilization, so must be Russia's possession of the Siberian Railway; for these two peoples are equally white in race and Christian in religion. The *Mail* only confirms our opinion, when it tells us

that 'England's paramount control of the Suez Canal guarantees its universal accessibility for all the purposes of legitimate commerce.' We esteem England and Russia equally as enlightened countries, and make no distinction in their relative degree of civilization. Under these circumstances, we have no motive to be anti-English. The *Mail* need be under no uneasiness in that respect." Such is the gist of the *Nippon's* leader of Wednesday last.

In an editorial note in its issue of the preceding day, our contemporary writes as follows:—"The *Japan Mail's* criticisms of our article on the Siberian Railway are not satisfactory. Its lengthy arguments may be reduced to a declaration that the railway in question will not become a highway of commerce between the East and the West, but will be used only for Russia's military purposes. We have heard this opinion for a long time, but we regret to say that no sufficient reasons have thus far been adduced to establish it. The *Mail* probably entertains that view under the influence of a dread of Russia—a sentiment that seems to be almost hereditary with Englishmen. If it is not so, we challenge our contemporary to set forth the bases of its opinion."

We (*Japan Mail*) are glad to have elicited from the *Nippon* a frank expression of opinions that certainly could not have been gathered from its previous writings. As to the commercial functions likely to be discharged by the trans-Asian railway, it should not be necessary to remind our contemporary that where a water route comes into competition with a land route, the former is invariably preferred for goods traffic. This will hold with special force in the case of the Siberian railway, since the trouble and expense of carrying goods to and from its termini will be almost, if not altogether, as great as the cost and labour of carrying the same goods from their original point of departure to their final destination *viâ* the Suez Canal. Besides, another important consideration must be taken into account: Russia's commercial policy precludes all hope that the management of the Siberian Railway will be adapted to grant general facilities for carrying other nation's goods. If the line can be made an instrument for differentiating against other peoples, and placing their trade at a disadvantage compared with Russian trade, that will be the dominant policy of the directors. We are not attempting to blame Russia when we make these assertions. She has her own ideas, and is perfectly entitled to maintain and act upon them. The facts alone concern us.

With regard to the *Nippon's* allegation that the military character of the line is a chimera inspired by England's hereditary dread of Russia, we reply very simply that in this matter England has merely accepted the definition given by the Russians themselves. We recommend for our con-

temporary's perusal that far-seeing and lucid work "Russia in Central Asia." It will there be found related how Russian illustrated journals, in publishing pictures of the line and its surroundings, invariably used the head-line "On the Road to India;" how General SOBOLEFF, one of Russia's foremost tacticians, hailed the Transcasian Railway as a factor rendering possible a Russian campaign across the Indus; and how General PRJEVALSKI wrote of the line:—"Altogether the railway is a bold undertaking, of great significance, especially from a military point of view." It is not, therefore, by England's distrust of Russia, however justified that sentiment may be, that the chief rôle of the railway is estimated; it is by the statements of its projectors themselves and by the sentiment of the Russian nation. If Japan regards the railway simply in the light of an aid to the "federation of mankind," she will awaken one morning to find that she has been sleeping in a fool's paradise.

We do not know whether our countrymen will feel complimented on learning that the *Nippon* gives them the credit of being as enlightened, and of standing on the same plane of civilization, as the Russians. At all events, it is not our business to discuss the justice of the dictum.

KOREAN AFFAIRS.

AT a Cabinet Meeting held on the afternoon of the 9th inst., it was decided that Count INOUE should return to Korea. This may be assumed to mean that the Japanese Government have resolved to have recourse to more determined methods than those hitherto adopted by their Representative in Söul. Count INOUE is not the kind of statesman to attempt the achievement of great results with manifestly inadequate resources. His consent to return to Söul must be interpreted in the sense that having acquired full knowledge of the difficulties lying in the path of Korean reform, he has stipulated for, and obtained, authority to deal with them in a thorough manner. He is to leave Tokyo, we understand, on the 13th instant. During the brief period of his absence from Söul, affairs there have assumed a grave aspect. The central figure of the reform party, PAK YONGHYO, is a fugitive, and the political power has fallen into the hands of the conservative faction, in the persons of the BIN family. By some writers these events are assumed to signify a revolt against Japanese influence, and the undoing of whatever part of the work of regeneration had been accomplished. Information obtained from trustworthy sources does not confirm that view. The truth appears to be that PAK YONGHYO has been plotting on his own account. The gratitude he owed to Japan for kindnesses received during years of refuge within her borders, and the prin-

ciples of civilization studied by him throughout those years, ought to have served as a guarantee against his relapse into the paths of intrigue and treachery. But there has not yet been found a single Korean capable of acting up to even moderately high standards of morality amid a Korean environment. PAK, when he succeeded in attaining a position of public responsibility, found himself tainted by the disrepute of his futile conspiracy nine years previously. He was still "PAK the rebel" in the eyes of the people, and to obtain influence proportionate to his position in the State, he saw no means except those commonly resorted to in Korea, namely, to attract friends by creating for them opportunities of peculation, and to overthrow enemies by intrigue. The BIN family were his unrelenting foes, and QUEEN, as the chief personage of that family, was a constant object of dread to him. When, therefore, it began recently to be evident that HER MAJESTY had conceived, and was casting about for means to give effect to, a project of restoring the BINS to power, PAK understood that he must close with his enemies, and either overthrow them finally or be himself overthrown. We do not yet know the details of his programme or how far he carried it out. But there is little question that he directed his plots primarily against the QUEEN, and that his intention was to remove her, whether from the throne or from the world we can not tell. Happily the QUEEN discovered his plot and adopted vigorous measures of repression, with the result that PAK and his chief accomplices have been obliged to fly, and the principal offices of State are in the hands of the BIN family. PAK is said to have been associated with two Japanese, whose names are not yet known. He has escaped from Chemulpho in a Japanese ship, but whether he will this time find a sanctuary in Japan is more than doubtful. His crime, if it was of the character assigned to it by the best information now obtainable, cannot be classed as political. It was conceived in the interests of personal ambition. Desirous of placing his own tenure of power on a strong basis, and seeing himself threatened by the ascendancy of his sworn enemies, he resorted to criminal devices. Such a malefactor does not merit sanctuary in any civilized country. Japan, above all, can not afford to invite the suspicions that would attach to her protection of him. We trust, however, that it will be found possible to guard his wife and children against the barbarous Korean law by which every member of a family is implicated in the crime of its head. The new criminal code, recently promulgated, corrects that terrible abuse, but will the provisions of the code receive practical recognition at such a time?

We have spoken here as though PAK alone were to blame. But who can say

whether he was a plotter or a counter-plotter; whether he obeyed instincts of self-protection or motives of self-aggrandisement? For some time the public has known that schemes, for the recall of the BIN family to power, were on the tapis in Söul. Among all the officials under whose extortions and tyrannies the unhappy Korean people have groaned, the palm of evil repute belongs to the BINS. Were the influences that restored them to power purely Korean influences, or have we to infer the existence of foreign instigation? For the moment this riddle must be left unsolved, but unless the Japanese are far less astute than we suppose them to be, they understand very well that in educating Korea's capacity for independence, they have to reckon with obstructive factors and embarrassing intrigues not wholly of Korean origin.

THE SHIMONOSEKI INDEMNITY.

WE must apologise to a correspondent, whose letter we publish elsewhere, for leaving his question so long unanswered, but to reply satisfactorily involved reference to State Papers not in our possession at the moment. The whole story of the Shimonoseki affair is contained in the British Blue Books, and has been over and over again recounted in the columns of local newspapers with at least sufficient accuracy to remove all justification for the curiously erroneous account of which our correspondent encloses a copy. Since, however, such mistaken views appear still to prevail in some quarters, we proceed to recount the story as briefly as possible, supporting each statement by quotations from State Papers.

The events that led to the Shimonoseki incident may be dismissed in a few words. Certain merchant vessels of France, of America, and of Holland, having been fired upon from batteries erected by the Choshu Clan at the Shimonoseki entrance to the Inland Sea, and it having been found impossible to obtain a satisfactory settlement of the affair by negotiating with the SHOGUN'S Government in Yedo (Tokyo), the Treaty Powers resolved to send a naval force to Shimonoseki, for the purpose of chastising Choshu, and obtaining guarantees against the recurrence of similar outrages. The force consisted of 9 British ships and a battalion of the Royal Marines; 3 French ships; 4 Dutch ships, and 1 American ship, 17 in all.¹ After a brief engagement, the Choshu batteries were destroyed, the magazines blown up, the whole of the guns, amounting to 65 pieces of ordnance, that had formed the armament, were embarked in

¹ The British ships were, the *Euryalus*, *Tartar*, *Conquerer*, *Barrosa*, *Leopard*, *Argus*, *Perseus*, *Coquette*, and *Bouncer*; the French, the *Semiramis*, *Dupleix*, and *Tancrède*; the Dutch, the *Metalen Kruis*, *D'Fambi*, *Amsterdam*, and *Medusa*; and the American, a chartered steamer, the *Takiang*, having on board an officer, a party of men, and a gun from the U.S. corvette *James Town*.

the ships of the squadron, and, finally, an agreement was signed by Choshu representatives, the 3rd Article of which declared "that a ransom should be paid for the town of Shimonoseki, which had been spared, although it fired upon the ships and therefore might have been destroyed," and that, further, the whole expenses of the expedition should be paid by Choshu, the amount of the ransom and the expenses to be fixed by the foreign Ministers in Tokyo.² The question of the amount of the ransom and of the expenses had then to be determined. Before any decision could be come to, the Government of the TAIKUN in Tokyo agreed to take upon itself the whole of the pecuniary responsibility,³ and without loss of time negotiations were commenced on that understanding. The British Representative maintained, from the first, that tradal advantages ought to be sought in preference to a monetary exaction, and further suggested that the latter should be put at such an amount as would clearly demonstrate to the SHOGUN'S Government the desirability of avoiding payment by means of some other concession,⁴ in which line of policy the QUEEN'S Government concurred,⁵ and, at their instance, the Governments of France, Holland, and the United States

² "On the 14th instant (i.e. 14th Sept., 1864) the Minister of the Prince of Nagato agreed to the terms proposed by the Admiral (Sir Augustus Kuper) for a permanent cessation of hostilities, which were reduced to writing and signed by the Minister. The ratification by the Prince was received on the 16th, by the hands of one of the Ministers. By this document the Prince of Nagato engages:—

1. * * * * *
2. * * * * *

3. That a ransom shall be paid for the town of Shimonoseki, which has been spared, although it fired upon the ships and therefore might have been destroyed. He further engaged to pay the whole expenses of the expedition; agreeing to abide by the decision of the Foreign Ministers at Yeddo, with regard to these two points." (Despatch from Sir R. Alcock to Earl Russell, dated Sept. 28th, 1864.)

³ "In reference to the convention entered into by Vice-Admiral Kuper, by which it was stipulated that the Prince of Nagato should pay a ransom for Shimonoseki and an indemnity to cover all the expenses of the expedition, the Taikun's Government has offered to take upon itself the whole of the claims preferred by the four Treaty Powers for the past acts of aggression on the part of the Prince of Choshu, and either to liquidate such amount as shall be finally agreed on, or to open a port—Shimonoseki or some more eligible port in the vicinity of the Straits—at the option of the Treaty Powers." (Sir R. Alcock to Earl Russell, Sept. 28th, 1864.)

⁴ "I shall be glad to receive your Lordship's instruction upon this point (the question of a monetary payment or alternative concessions), and, in the meanwhile, no indemnities will be exacted by me, nor, I think, by any of my colleagues. It may be necessary, in the progress of the negotiations to fix some amount as due or payable, in order to show what material advantages will accrue to the Taikun by its not being exacted in money payment. * * * I can only say that, if the result of these negotiations should be the ratification of the Treaties by the Mikado, and their acceptance by him and the Damios who now render all peaceable or profitable relations both difficult and precarious, it would be worth more to Great Britain and all Treaty Powers having any material interest here, than many millions of dollars, or any sum that could be extorted from the Taikun." (Sir R. Alcock to Earl Russell, September 28th 1864.)

⁵ "In your despatch of the 28th of September, you requested to be instructed whether, in lieu of any pecuniary ransom for the town of Shimonoseki,

concurred also.⁶ On the 22nd of October, 1863, a conference took place in Yokohama between a Japanese Plenipotentiary and the Representatives of Great Britain, France, the United States of America, and the Netherlands. At this conference the sum payable by the SHOGUN'S Government was fixed at 3 million dollars. There never was any pretence that such an amount had been expended on account of the expedition. The bases on which the claim was determined were, first, the payment of indemnities to France, Holland, and the United States on account of past aggressions by Choshu against ships of those Powers; secondly, a ransom for Shimonoseki; and thirdly, the defraying of expenses entailed by the operations of the allied squadrons.⁷ So little idea was entertained of establishing equality between the amount demanded and the expenses actually incurred, that there were included in the former three payments of unknown magnitude to be made to France, Holland, and the United States on account of Choshu's previous aggressions against their ships.⁸ While mulcting the SHOGUN'S Government in such a heavy sum, the Foreign Representatives placed it clearly on record that the receipt of money was not their object, and that an extension of tradal privileges would be preferred by them.⁹ With regard to the division of the money, should it be ultimately exacted, it was suggested by the Representatives

seki, and of any indemnity to cover the expenses of the late expedition against the Prince of Nagato, Her Majesty's Government would be willing to accept the opening to foreign trade of the port of Shimonoseki, or of some more eligible port in the vicinity of the Straits; and I have to acquaint you in reply that Her Majesty's Government are willing to renounce any money payment if greater or equal advantages can be secured by stipulations to be obtained from the Taikun or the Mikado." (Earl Russell to Sir R. Alcock, Dec. 3rd, 1864.)

* Vide despatches from Earl Russell to Earl Cowley; from Mr. Drouyn de Lhuys to Earl Cowley; from Mr. Burnley to Mr. Seward; from Mr. Seward to Mr. Burnley, &c.

† "The amount payable to the four Powers is fixed at 3,000,000 dollars. This sum to include all claims, of whatever nature, for past aggressions on the part of the Prince of Nagato, whether indemnities, ransom of Shimonoseki, or expenses entailed by the operations of the allied squadrons." (Art. I. Convention between the Taikun's Government and the Four Powers. Dated 22nd of October, 1864.)

‡ "As such sum" (i.e. \$140,000 previously demanded by the French Emperor on account of the attack by Choshu upon the *Kienchang*), "or a larger one may be justly claimed" (by France), "and as the Governments of the United States and the Netherlands are justly entitled to like indemnities for more serious attacks on national and merchant ships of those countries by the same Prince, it is reserved for those Governments to decide if any and what indemnities from the said gross amount" (of 3 million dollars) "to be paid by the Japanese Government shall be paid therefor." (Memorandum attached to the Convention of October 22nd, 1864.)

§ "Inasmuch as the receipt of money has never been the object of the said Powers, but the establishment of better relations with Japan, and the desire to place these on a more satisfactory and mutually advantageous footing is still the leading object in view, therefore, if His Majesty the Taikun wishes to offer in lieu of payment of the sum claimed, and as a material compensation for loss and injury sustained, the opening of Shimonoseki, or some other eligible port in the Inland Sea, it shall be at the option of the said foreign Governments to accept the same, or insist on the payment of the indemnity in money," &c. (Art. III. Convention of October 22nd, 1864.)

of the four Powers that, after deducting a sum separately payable to France, Holland, and the United States, on account of previous acts of aggression against their flags, the remainder might be divided in the proportion of the forces of each Power engaged at Shimonoseki.¹⁰ On the transmission of the Convention to the Governments concerned, France and Holland declared unwillingness to substitute tradal concessions for a monetary payment,¹¹ and the Japanese Government, on their side, decided that, since the state of their country's domestic affairs did not permit of the immediate opening of a port on the Inland Sea, the three million dollars should be paid in full. They asked, however, that instead of paying by half-yearly instalments, a year's interval should be allowed to separate each payment.¹² In forwarding this decision and request to London, the QUEEN'S Representative in Japan (Mr. WINCHESTER) strongly urged the impoverished state of the TAIKUN'S resources, and suggested that, after satisfying the special claims of France, Holland, and the United States, the remainder of the indemnity should be remitted in consideration of general tradal advantages being secured.¹³ These advantages he subsequently defined as, first, the opening of Hiogo on the 1st of January 1866, instead of the 1st of January 1868, as originally agreed; secondly, that the MIKADO should give his written adhesion to the Treaties; and thirdly, that the tariff be revised on a basis of 5 per cent. The British Government adopted this sugges-

¹⁰ In the event of the Treaty Powers electing payment in money, and a repartition becoming necessary among them of the whole amount of 3,000,000 dollars, a Memorandum has been annexed, signed by the four Representatives, declaring that, in respect to indemnities for all interior acts of the Prince of Nagato in firing upon the ships and flags of the Treaty Powers, they have assumed as a basis the amount of indemnity fixed at Paris by the Government of the Emperor for their share, namely, 140,000 dollars. If, therefore, France should adhere to this amount, as can hardly be otherwise, I conceive, and the other two Powers claim a like amount, the total for indemnities for acts antecedent to the expedition will be under 500,000 dollars (that is, 420,000 dollars) leaving 2,500,000 for division," &c. (Sir R. Alcock to Earl Russell, October 28th, 1864.)

¹¹ "It would appear, however, that the Government of the Emperor of the French do not feel disposed to renounce their claim to the indemnity money; and that the Netherlands Government concurs in that opinion." (Earl Russell to Sir F. Bruce, March 30th, 1865.)

¹² "Now if, in lieu thereof, a new port were opened, the difficulties between the two countries (Japan and the West) would greatly increase, and for this reason we have, after mature deliberation, decided for the latter alternative, namely, the payment of the indemnity." (The Japanese Minister for Foreign Affairs to Mr. Winchester, April 6th, 1865.)

¹³ While I feel satisfied that the Japanese Government, rather than consent to the opening of Shimonoseki as a Damio port, would assume for a time the responsibility of the indemnity, even were it double the amount, the known state of the finances of the Taikunate, impoverished by considerable sums paid to the Mikado as the price of abandoning Choshu, induce me to believe that the obligation to pay so large an indemnity as 3,000,000 dollars would be a very grievous burden. . . . Enough is known to satisfy us that the resources of the Japanese Government, so far as the power of making large money payments is concerned, must be very limited.

tion, and recommended it for the favourable consideration of the other three Governments,¹⁴ but the Governments of France and the Netherlands did not approve of the idea.¹⁵ Ultimately, however, it was agreed that the question should be submitted to the consideration of the Representatives of the four Powers in Japan, and Sir HARRY PARKES having been instructed in that sense, succeeded in persuading his colleagues to coöperate with him in the policy of seeking to have the above three conditions substituted for the payment of two-thirds of the indemnity.¹⁶ The TAIKUN and his Ministers being then absent in Osaka, Sir HARRY PARKES conceived the idea of a naval demonstration in Osaka Bay, for the dual purpose of conducting the negotiations under imposing circumstances, and of making a display of the force at the command of the Foreign Representatives. Accordingly, a united squadron of 9 vessels (5 British, 3 French, and 1 Dutch) left Yokohama on November 1st, 1865, having on board the Representatives of the Four Powers, and negotiations were commenced on the explicit basis that the sanction of the Treaties by the MIKADO, the immediate opening of Hiogo and Osaka, and the revision of the tariff, should be considered as equivalents for the remission of two-thirds of the indemnity.¹⁷ After debates extending over several days, two out of the above three conditions were accepted by the Japanese Government, but they declared their inability to fully secure foreign life and property were Hiogo and Osaka immediately opened. Despite this compliance with two out of three conditions, however, the whole of the indemnity was exacted, a transaction

¹⁴ "Her Majesty's Government are inclined to consider that the general interests of trade and of foreign relations with Japan would be best consulted by an arrangement which should absolve the Government of the Taikun from two-thirds of the whole sum of 3,000,000 dollars payable under the agreement of 1864" (500,000 was on the point of being paid, and another like sum would be paid in the course of six months); "provided, 1st, that the port of Hiogo and the city of Osaka are opened for the trade and residence of the subjects of the Treaty Powers on the 1st of January, 1866; 2ndly, that the sanction of the Mikado is formally given to the Treaties already concluded by the Taikun with the Treaty Powers; and, 3rdly, that the duties on imports into Japan are generally reduced to 5 per cent., and shall in no case exceed 10 per cent." (Earl Russell to Sir F. Bruce, July 12th, 1865, and Earl Russell to Earl Cowley, same date.)

¹⁵ "Your Lordship having apprised me, in your despatch of the 8th of April, that the views of the French and Netherlands Governments were averse to the renunciation of a money payment in favour of a port," &c. (Sir H. Parkes to Earl Russell. August 25th, 1865.)

¹⁶ Being agreed, therefore, that it was desirable to obtain the above-mentioned conditions in lieu of two-thirds of the indemnity, it remained for us to consider how the necessary negotiation could best be undertaken, in view of the absence of the Taikun and his principal Ministers at Osaka. (Sir H. Parkes to Earl Russell, Oct. 13th, 1865.)

¹⁷ "The proposals of the four Powers to accept the sanction of the Treaties by the Mikado, the immediate opening of Hiogo and Osaka, and the revision of the tariff, as equivalents for the remission of two-thirds of the indemnity, have been clearly placed before the Ministers of the Taikun." (Sir Harry Parkes, on board the *Princes Royal*, to Earl Russell, Nov. 14th, 1865.)

constituting one of the least creditable incidents of foreign intercourse with Japan.¹⁸ The Foreign Representatives themselves acknowledged that the opening of Hiogo and Osaka would not have been safe, and that they had secured "by far the most valuable of the conditions they were instructed to accept in exchange for two-thirds of the indemnity," yet not a dollar of indemnity was remitted.¹⁹ We come now, finally, to the partition of the indemnity. In the first place, a sum of 420,000 dollars had to be subtracted for the purpose of a special payment of \$140,000 each to France, Holland, and the United States, on account of previous outrages against their ships. There remained, therefore, a sum of \$2,580,000,—namely, the ransom of the town of Shimonoseki and a payment to cover the expenses of the expedition—to be divided among the four Powers. The French Government thought that the division should be made on the basis of the forces sent by each Power to the attack of Shimonoseki, but the American Government contended that, as the general coöperation of all the four Powers must necessarily have had great and equal weight, if not in the actual operations, at all events in the measures that preceded and followed them, the principle of equal shares should be adopted. England at once accepted America's suggestion though she alone suffered by it.²⁰ It is of interest to note here what share would have fallen to each Power had the partition been in accordance with the number of ships, and what share each actually received:—

	Share accord- ing to number of ships.	Share actually received.	Loss or Gain.
Great Britain ...	\$1,365,883	\$645,000	-\$720,883
France	\$ 455,294	\$645,000	+\$189,706
Holland.....	\$ 607,059	\$645,000	+\$ 37,941
United States ...	\$ 151,764	\$645,000	+\$493,236

This calculation is only an approximation: to obtain accurate results, the numbers of men and guns should be taken into account, but we are without data for that

¹⁸ "I beg your Lordship to observe that the sanction to the Treaties and the revision of the tariff, these being two of the three conditions for which her Majesty's Government were willing to relinquish two-thirds of the indemnity due under the Convention of October 22nd, 1864, have been obtained." (Sir Harry Parkes to Earl Russell, Nov. 25th, 1865.)

¹⁹ "I have acted throughout in concurrence with colleagues who, with long experience of the subject, held the decided opinion that the confirmation of the Treaties by the Mikado formed by far the most valuable of conditions we were instructed to accept in exchange for two-thirds of the indemnity. My colleagues were also as clearly persuaded that while the neighbourhood of Hiogo and Osaka continues to be the scene of military movements and political agitation, those places could not be occupied by foreign merchants without considerable risk. If, however, we have not secured the opening of these places, which, apart from the considerations above mentioned, we could not insist upon while the Japanese Government preferred so decidedly the payment of the indemnity, we have, on the other hand, relinquished no portion of that money, although two of the three conditions we were willing to receive in exchange have been secured." (Sir Harry Parkes to Earl Russell, Nov. 28th, 1865.)

²⁰ "M. Drouyn de Lhuys suggests that the division should be made according to the proportion the forces of each Power in Japan bore to the aggregate force of the four. The United States

purpose. The table conveys, however, a sufficiently close idea of the sacrifice made by England and of the gains that consequently accrued to other Powers.

It will be perceived that the above account is in exact accord with British official documents, careful reference to which is made throughout. We need scarcely point out that the story quoted by our correspondent abounds with the grossest misrepresentations and blunders. It is not true that "the Powers took the lenient course of imposing no fine:" they exacted a ransom for the town of Shimonoseki. It is not true that they "contented themselves by coming to a unanimous agreement that they should be indemnified by being recouped their actual expenses incurred in redressing the outrages:" their actual expenses formed only a portion of the sum demanded. It is not true that Great Britain's expenses were ascertained to be \$1,500,000 and those of the United States only \$40,000: no such calculation appears in any official document. It is not true that America "clamoured for an equal division of the indemnity." It is not true that "there was no pacifying America, except by agreeing to its over-reaching claim." America never "clamoured," nor ever required to be pacified. The first suggestion made by her on the subject was at once accepted by Great Britain: It is not true that "Great Britain was induced to surrender to America half the amount which was due to herself:" the sum that she agreed to forego was divided among the other three Powers in varying proportions. It is not true that a "flagrant injustice was perpetrated on England:" HER MAJESTY'S Government, as a point of far-seeing and prudent policy, agreed readily to America's suggestion, and even endorsed its propriety. It is not true that, in subsequently restoring

Minister, on the other hand, is understood to contend that as the general coöperation of all the four Powers must necessarily have had great and equal weight, if not in the actual operations, at all events, in the measures which preceded them, and afterwards in turning the result to good account, it would be fair to look upon the several Powers contributing in an equal degree to the success of the common cause, and therefore as entitled to share equally in the indemnity which the Japanese Government agreed to pay. Her Majesty's Government are not indisposed to concur in this view of the question. It cannot be doubted that the joint action of all the Powers collectively afforded, and still affords, the surest means of producing a most salutary effect on the Japanese Government and people, who would be only too glad to detect and would certainly take advantage of the slightest indication of the existence of a separate interest among them. The American principle of partition will secure to France a larger share of the indemnity than she would obtain under the principle of division suggested by M. Drouyn de Lhuys, while Holland and the United States would be benefitted by it in a still greater degree. England alone would be required to make a sacrifice, but Her Majesty's Government will consent to do so, if only to mark their conviction of the community of interest which the four Powers have in Japan, and as an evidence of their hope and desire that that community of interest will be the principle by which the conduct of all of them will invariably be regulated in that distant and peculiar country." (Earl of Clarendon to Earl Cowley, January 1st 1866.)

her share, America made any reduction on account of the expenses incurred by her. She retained the sum of \$140,000 that had been specially paid to her, in common with France and Holland, by way of indemnity for outrages prior to the Shimonoseki expedition, and she restored the whole sum of \$645,000 that she had received as her common share at the time of the partition. No less than eight falsehoods are contained in the story.

CORRESPONDENCE.

CHRISTIAN WORK FOR THE JAPANESE ARMY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—A meeting of the Local Committee for Yokohama, appointed some time since, for receiving and forwarding funds to the Central Committee for the carrying forward of Christian Work for the Japanese Army was held this afternoon, at which were present Rev. Dr. G. Meacham, and Rev. Messrs. E. S. Booth, and J. L. Dearing. The report of the Treasurer, showing that the sum of \$296.59 had been received and forwarded to the Central Committee was received, audited, and approved. While it was not though best to publish the list of subscribers, the accounts are open for inspection to any one who may wish to see them.

Yours very sincerely,

JOHN L. DEARING,
Treasurer.

July, 8th, 1895.

THE SHIMONOSEKI INCIDENT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The recent visit of Mr. Northrop to this country resuscitated the question of the Shimonoseki Indemnity and evoked an apparently erroneous account of that page of history. I append the account, and beg of you, in the interests of truth, to either correct or confirm it.

Your obedient servant, AN AMERICAN.

Yokohama, June 20th, 1895.

The Japanese having without any provocation, or shadow of excuse, fired on a number of passing foreign ships from shore batteries at Shimonoseki, that was an outrage which imperatively called for measures being jointly taken by England, France, America, and Holland by way of punishment, and in order to prevent anything of the sort being again attempted. The action taken was as a matter of course, attended with considerable expense, and was crowned by success. The Representatives of the Powers mentioned, took the lenient course of imposing no fine, which they would have been fully justified in doing, for such unwarrantable acts of aggression, though lives were lost, but contented themselves by coming to a unanimous agreement that the Powers should be indemnified by being recouped their actual expenses incurred in redressing the outrages. When these were ascertained, the money spent by Great Britain, which furnished by far the largest part of the force employed, was found to amount to \$1,500,000, whilst that of the United States was only \$40,000, for it had but one chartered vessel in the engagement, and the balance of the \$3,000,000 was devoted to the expenses incurred by France and Holland. On this equitable basis the whole affair was supposed to be satisfactorily disposed of. Presently, however, America, upon the frivolous pretence that as its "flag" was engaged, began to clamour for an equal division of indemnity amongst the four Powers interested; but it had no shadow of right to a fourth share, for the sum paid was not a fine, only a simple reimbursement of expenses incurred, yet as there was no pacifying America, except by agreeing to its overreaching claim, ultimately Great Britain was induced, in order to secure future united action amongst the Powers in the East, to surrender to America half the amount which was due to itself, and thus America received \$710,000 more than it had any shadow or right to, at the expense of Great Britain, which was subjected in consequence, to a loss of \$750,000. Some years passed after this flagrant injustice had been perpetrated on England, when a number of American schoolmasters in Japanese employment affected to wake up to the fact, that America had profited at the expense of poor, suffering Japan, by pocketing so much more than the expenses which it had to incur by reason of the outrage. The sacred cause of education was to be advanced by the money in excess being refunded, to be laid out in employing more schoolmasters and more school books from the United States; so an agitation was got up there, and lobbying resorted to.

On receipt of the excessive share of the indemnity which America succeeded in getting hold of, as the money was not capable of being classed as revenue, it was invested in six per cent. war bonds, and when the Legislature yielded to the cry which had been got up for the return of the

money,—less actual expenses incurred,—the original basis on which the indemnity had been calculated—the amount of interest which had accrued on the bonds, which had likewise been kept apart in the treasury, was found to exceed the sum invested in the bonds, but the interest was kept back by the United States, though if Japan could be considered to be entitled to the principal, the interest must be adjudged to belong to it also. Farther, the original legitimate claim of \$40,000 had become swollen to \$120,000, presumably by the accretion of interest, so that the return vouchsafed to Japan was, say \$630,000. It thus appears in consequence of what we have narrated, that England suffered by American overreaching to the extent of \$750,000, and Japan did not get returned the accrued interest on the bonds which represented say some \$650,000 (more or less). Thus both Great Britain and Japan have a right to consider themselves unjustly dealt with by America.

PRIZE-DAY AT YOKOHAMA SCHOOL.

The combined Prize-giving Day of the Winton House School for Boys (conducted by Mr. G. J. H. Schurr, B.A.), and the Girls' High School (conducted by Mrs. Cahusac), passed off most successfully on Saturday in the large school-room of the latter institution. This room was draped with flags of various nations, and on the wall at the back of the speakers' dais was hung a floral scroll done in hydrangeas, bearing the letters, "W.H.S.," on the wall at the other end hung a device of similar form, only the letters of this were "G.H.S." There was a very large attendance of parents and friends, and among others present we noticed the Rev. E. C. and Mrs. Irwine, Mr. and Mrs. Lindsley, the Rev. A. F. King Mr. and Mrs. J. A. Fraser, Rev. L. B. Cholmondeley, Mr. R. Home Cook, and many others.

Mr. J. F. LOWDER occupied the Chair and introduced Mr. Schurr, whose friendship, he said, he had only recently made. A man was to be judged by his works, and since entering the room that afternoon he (the speaker) had been shown some papers which had rather astonished him as to the extent of the work which Mr. Schurr had mapped out for himself. Mr. Schurr had, indeed, undertaken a task which few would have had the courage to take in hand, considering the past history of Schools in Yokohama. Mr. Lowder then referred to the extensive lists of subjects set forth in the curriculum and to the teaching staff of Winton House School, and then went on to remark that the gathering that day was a joint celebration, being also the first public appearance of Mrs. Cahusac, who had started the Girls' High School only a few months previously. Residents of Yokohama well knew that they had for a long time past felt the want of such an institution as this, where they could send their children for their education. Many attempts had been made in the past, and each one had failed. The most energetic attempt, and perhaps the greatest failure, had been the starting of the Victoria Public School, in which every one of them took a great interest—not only everyone of those present that day, but every single member of the community of whatsoever nationality. It could not possibly have had a better start than it did, and perhaps its dissolution was all the more painful because of the great promise of its beginning. The real reason for its stoppage he need not perhaps state in so many words: but his opinion was that it carried with it at its birth the seeds of its own dissolution. That was what was called an open secret. That secret Mr. Schurr had read as easily as any one who runs might read; and he was therefore determined to carry on his own institution on the old-fashioned lines of an English school, not attempting that which was impossible. From that alone the speaker was at all events bold enough to augur—but even if his augury might not turn out correct he was sure they would all join him in hoping that this school would be a permanent success. (Loud applause.)

(Mr. SCHURR then stepped forward and said—Mr. Chairman, Ladies and Gentlemen: In drawing up a report of my school since its commencement, I have to review a period of rather over a year. For it was in April, 1894, that I opened school with six boys—not a very large number, but as large as I could expect at that time. With the next term, in September, I opened with 13 boys, and before Christmas this number had increased to 19. After Christmas I commenced again with 27 boys, and since then my numbers have gone steadily up to their present total of 32. This gradual increase is very encouraging to me in my work, because I hope I may consider that it shows the appreciation of my (educational) efforts by the people of Yokohama, as my school has become better known to them. My aim has been, and is, to provide a thoroughly sound education, after the model of the best English traditions, which I trust the long training and experience I had in the old country has fitted me to undertake. As

most of you know, I am greatly indebted to Mr. Irwine for his kind help in teaching when I first started the school, and for the support since then which he has never withdrawn; I am at present ably assisted by Mrs. Schurr, who received a special training as a teacher in England, and in March I was fortunate in securing the services of Madame Salabelle, who takes charge of the French. Madame Salabelle is so well known to you all from her long residence in Yokohama that I need not expatiate upon the value of her assistance in my work. The subjects taught in my school are: English in its various branches, Arithmetic, Algebra and Geometry, Latin, French, and German. We have also a Drawing Class conducted by Mrs. Schurr, who holds South Kensington certificates in that subject, and not long since I started a short-hand class under Mr. A. F. Cahusac's care. Our school is divided, as a rule, into three classes, so that each boy may get a better share of individual attention than is possible in a large class. In this way, whilst I myself take the chief care of the elder boys, Mrs. Schurr gives the small boys a good grounding, and Madame Salabelle takes a French class, I make it a point, by frequent change of classes, and by the combination of classes at times when the subjects admit of it, of teaching each class myself in different subjects several times a week, so that all the boys come constantly under my own personal attention. I have thought it advisable to enter thus fully into my methods of teaching, as this is the first time that I have had an opportunity of making a public report on my school. With regard to the prizes, they have been decided by the term's marks and by the marks obtained in the examination, with the results of which we are well satisfied. We have small examinations at the end of each month, but this has been on a larger scale. There is no need for me to make a full report of the results of this examination, as that will appear from the prizes, consisting of books and cards, which will shortly be distributed. But I wish to congratulate the boys upon the very marked improvement in the style of their papers, particularly neatness, a result that is mainly attributable to the great care taken by Mrs. Schurr with them during the term. I may also mention that though Master Halstead Lindsley's marks give him only the third place in the examination, he would have obtained better marks if he had not omitted one or two of the subjects taken by the other boys. The same might be said of Caryl Hill, Harold Irwine, Kuhn, Van Smith, and Chocho. The apparent injustice which arises from this, can only be obviated by all the boys in a class learning every subject taught in that class, but such a blissful state of things can hardly be looked for in Yokohama. After a passing reference to the boys who had left or were leaving the School, the Head Master concluded:—I may say that as the school has so largely increased, I have been looking for larger premises, and I hope that by next year I may be able to open school on a more central site, in a school-room the plans of which I shall have drawn up after my own designs. These things take time to accomplish, and it is not so easy to find the accommodation in the way of ground and premises generally that one wants in Yokohama. I trust that my efforts to improve the condition of the school will result in my numbers being further increased, and that the people of Yokohama by thus continuing to support my school, will enable me the continue to increase its efficiency, to which end my best efforts will always be directed. Before sitting down Mr. Schurr desired to correct a misconception which had arisen from mere fact of his having combined his prize-giving with that of Mrs. Cahusac's. There was not to be any combining of the schools: it was quite out of the question. (Loud applause.)

The Rev. E. C. IRWINE next rose. He said he had been asked by Mrs. Cahusac to read a short report which she had drawn up about the work in her school. This he did with the greatest of pleasure. The report was as follows:—"Having had the School for only a little over two months, it is a very short period to make a report upon. But I may say that I think there is a very nice spirit among the girls in school; they work together in friendly rivalry, and I am pleased with the progress they have made in various subjects during this term, and therefore I have given a few prizes as an encouragement, and Miss Leach has kindly added two more for her class. Besides the usual English subjects, the course of study has extended over Geography, English History, Ancient History, Arithmetic, Science, and French. Nearly all the elder girls have now also begun German with me, and we have a Calisthenics Class conducted by Miss Leach, which I consider very good for the girls, and which I am glad to find is popular. For drawing I have secured the ser-

vices of Mrs. Schurr, who has passed several South Kensington examinations. In the recent Monthly Examination some good papers were shown up. Nora Griffin comes out top of the list, and has the distinction of being first in every paper, getting over 90 per cent. in three papers, being first in every paper; but several others did good papers, viz., Mabel Moulton second in Roman History and Botany, Ethel Fraser second in English History and Dictation, and Hilda Watson in English Grammar. Miss Leach also gives me a good report of the French. In the Term marks, Ethel Fraser was first, and Nettie McCance, but for being away the last week, should have been second. Florence Wales deserves mention for the marked general improvement she has shown, and Nina Orloff, and Nettie McCance have done well in music; Nina Orloff has also taste for drawing. Amongst the younger children, Mabel Wallace comes out first, she works well and steadily; Charlie Wallace is second, he also works well. Cassie Cook and Vera Irwine have not so many marks in the examination, as they did not come so early in the morning, but they too have done well in the Term's work, and Cassie and Vera are improving in music. Cassie Cook shows also a good deal of taste for drawing. Gerald Irwine is first in his class, and has much improved in reading and writing. I should like to add one word about my staff. I feel myself most fortunate in this respect, with Miss Leach taking the French, Miss Griffin for Arithmetic and Grammar, and Miss Wilkin having charge of the little ones, and I desire to express my thanks for the zeal and efficiency with which they have assisted me, and seconded my efforts in every way." Continuing, Mr. Irwine remarked that the capabilities of the teaching staff of the Girl's High School left nothing to be desired. The community was fortunate to possessing in this School and in Mr. Schurr's Boys School, teachers like Mrs. Cahusac and Mr. Schurr of long previous school experience, and both of them excellent linguists, especially in German, which they spoke fluently. For French Madame Salabelle and Miss Leach possess a complete acquaintance, conversational and literary, while Miss Griffin was a most thorough instructress in arithmetical subjects, and Miss Wilkin has an admirable method with the little ones, and the power of gaining their affections, which in the speaker's experience, was only bestowed by children upon zealous and competent teachers. In short, the schools exactly met the purposes for which they were required, and were thoroughly modern and efficient. (Loud applause.)

The following programme was then admirably rendered by the pupils of both schools:—

PROGRAMME.

Pianoforte Duet	Miss C. and Master H. Cook.
"The Inchcape Rock"	Master L. Graham.
"A Leaf for Life"	Master P. Moss.
French Recitation	Misses Fraser and H. Watson.
"Sennacherib"	Master S. Kuhn.
Pianoforte Duet	Miss N. Orloff and Master H. Cook.
"Daybreak"	Master T. Lindsley.
French Recitation	Several Children.
"Truth"	Miss H. Watson.
"The Combat"	Masters C. Hill and H. Irwine.
"A Tea-party"	Masters M. Fraser and P. Hill.
French Recitation	Four Boys.
"Robert of Sicily"	Miss N. Griffin.
"Lochinvar"	Masters W. Carst and J. Chocho.
"Suppose"	Master C. Pulford.
French Recitation	Master Jack Chocho.
Pianoforte Solo	Miss N. Orloff.
"A Boy's Aspirations"	Three Boys.
"Mercy"	Miss E. Fraser.
"Kept In"	Master P. Hill.
"The Jackdaw of Rheims"	Miss M. Moulton.
Pianoforte Solo	Miss N. Orloff.

The Rev. L. B. CHOLMONDELEY, at the conclusion of the recitations, expressed the pleasure which had been given to himself and the Rev. A. F. King to come down from Tokyo that day to be present at the prize-giving. He was about the first person who had welcomed Mr. Schurr to Japan. He wished him good-luck then, and his regret was very great when Mr. Schurr left Tokyo to come down to Yokohama; now he again took the opportunity of wishing Mr. Schurr good-luck, and he only expressed the hope of all present when he said that he desired to see his school increase in numbers and prosperity. (Loud applause.)

Mr. LOWDER next distributed the awards, accompanying each with most appropriate remarks.

PRIZE LIST.

CLASS I.

Albert Austen—First in the School. Prize for Class I. Cards for proficiency in Arithmetic and Algebra, Scripture, French, German, Short-hand.
Halstead Lindsley—Mathematical prize. Euclid (Books I. to IV.). Cards for Scripture, French, and improvement in English Composition.
Thayer Lindsley—Cards for Arithmetic and Algebra, Scripture, French, Short-hand.
Samuel Kuhn—Card for Arithmetic.
Van Smith—Cards for improvement in French and writing.

CLASS II:

Caryl Hill—Cards for French, Improvement in writing.
Henry Cook—Prize, First in Class. Cards for Arithmetic and French.
Harold Irwine—Card for improved writing.
William Carst—Card for improved writing.
Jack Choep—Cards for French and Arithmetic.
George Moss—Card for Scripture.

CLASS III.

Teddie Moss—Cards for marked improvement in Scripture, English Composition, and English History.

Charlie Roth—Cards for improvement in History and Composition.

Willie Graham—Prize for being first in Term's marks. Card for Arithmetic.

CLASS IV.

Osborn Bramhall—Cards for first in Term's marks, Scripture, Writing, and Reading.

Cyril Pulford—Prize for being first in examination, Cards for Arithmetic and Scripture.

Paul Hill—Cards for Scripture, Reading, and second place in examination.

Malcolm Fraser—Cards for Reading and Writing.

Vernon Hill—Card for Scripture.

GIRL'S PRIZES.

Class I.—First Prize, Leonora Griffin.

Class II.—First Prize, Mabel Wallace.

Class III.—First Prize, Gerald Irwine.

French Prizes—First Division, E. Fraser; Second Division, Mina Orloff; 3rd Division, Vera Irwine.

Progress in French—Cassie Cook, Mabel Wallace, Charles Wallace, and Gerald Irwine.

Mr. LOWDER, in returning thanks for the admirable manner in which the girls and boys had rendered the various items on the programme entrusted to their care, said he would take advantage of his position that day to say a few words to all the pupils, but more particularly to the boys.—(Applause.) He often met, on his way down to office, the pupils of Winton House on their way to school. He often wondered what they were thinking about, and no doubt they sometimes wondered what he was thinking about. Well, he would tell them what he had been thinking about that afternoon. Their little entertainment that day had turned his thoughts back to the days when he was about their age and a schoolboy at home in England. One of the earliest recollections of his school-days, and one which remained vividly clear to this day, was a motto sculptured upon the old time-worn cloister of his *alma mater*. It consisted of but five words, yet short as it was he would recommend it to the boys gathered before him, as a precept which they could follow with all advantage. The motto was, "Fear God, honour the King." They should fear no one on earth, but God, and they should pay all reverence to the rightful ruler of whatever country they might be living in. That was the King they should honour. Many of those present that day might, in after life, come to live in countries where there was no King, but to them the generic meaning of the term King was the ruler who had been elected by the sovereign people to rule over them and carry out their lawful behests.—(Loud applause.) Secondly, he would give them this advice, if you cannot speak well of another fellow do not speak at all. Eaves-droppers, tale-bearers, back-biters, bullies, sneaks, were detestable people; never condescend, my dear boys, to that. Above all, lead cleanly lives and keep the commandments. All this seems very simple and easy to carry out, but he warned them that nothing worth achieving in this world was easy. They were often confronted with difficulties now, and they would have many difficulties to contend with in the future, but no matter how appalling they might seem, they were never to run away. Difficulties were made to be overcome. Should the difficulty, however, be more than they could properly deal with themselves, then like manly fellows they should not be ashamed to ask for assistance from those older and wiser than themselves. Perhaps they would find that they could not even then surmount the difficulty; then they must remember the words of a great writer, "Successes rise phoenix-like from failures." That they had all been working hard during school-hours he had noticed from the prize-list, and he hoped they played hard when in the play-ground. Having worked hard in school they honestly earned their play-time, and he counselled them when in the play-ground to play fair. No doubt in the coming winter they would meet, on their way to school, two gentlemen on their way to office. They had done so in the preceding winter and had often snowballed those gentlemen. Now one of the gentlemen was himself. He thoroughly enjoyed the game and understood why they pelted him. They wanted to make him angry. Now he never got angry, so their labour was useless. His companion, however, who was a large and a very strong man, did get angry, very angry indeed, when they snowballed him. Therefore he would ask the boys, when they met him (the speaker)

next winter, when the snow was on the ground, to let him go and confine their attentions to the other gentleman.—(Loud applause, mingled with hearty laughter.)

Cheers were then given for Mr. and Mrs. Schurr, Mrs. Cahusac, and Mr. Lowder; after which the company adjourned for refreshments.

THE PELAGIC SEALING SEASON ON THE COAST OF JAPAN.

The sealing season on the coast of Japan being now over all the schooners engaged in the business have returned and sailed again for northern waters. The results of the season's catch have fallen very short of expectations, owing to the continuance of strong winds in the early and best part of the season, during which hunting operations could not be carried on, and although a fair amount of work was done during the latter part of the season the number of seals taken is far short of that of last year. The sealers on the coast of British Columbia have been equally unfortunate from the same cause, having had to contend against the severest gales ever experienced on that coast, with the result that the British Columbia catch is small compared with that of previous years. Seals were found to be plentiful, both here and on the other side, the weather alone preventing operations being carried on. Those engaged in the business now look forward to making fair catches on the northern trip, but even if the vessels make as good an average in the north as in former years there will still be a great shortage in the total catch for the season, and the only consolation for those engaged in the industry is that prices at present ruling are much higher than those of last season.

The following is a comparative statement of the skins taken on the coast of Japan this year and last by the British Columbia schooners:—

	1895.	1894.
Diana	812.....	1,961
Rosie Olsen	627.....	1,043
Viva	601.....	1,437
Casco	1,309.....	1,926
Agnes McDonald ..	710.....	1,707
E. B. Marvin	946.....	2,118
Geneva	1,137.....	1,092
C. G. Cox	906.....	1,947
Ocean Belle	1,056.....	530
Umbrina	1,187.....	2,558
Sadie Turple.....	749.....	1,783
Annie E. Paint.....	1,124.....	1,497
City of San Diego ..	370.....	1,304
Mary Ellen	797.....	1,909
Vera	853.....	1,075
Mermaid	1,156.....	1,603

Total14,340.....25,490

The catches of these sixteen schooners this season compared with last thus show a difference of 11,150 skins.

There was an equal disparity between the catches of the American schooners this year and last. The following are the figures for 1895:—

Sophie Sutherland. 193	J. Eppinger..... 785
Penelope 210	Alton 299
Josephine 306	Rattler 345
Louise Olsen 627	Jane Gray 1,128
Emma Louise 168	Mattie Dyer 661
Therese 388	Ida Etta 575
Anaconda 182	Bonanza 250
M. M. Morell..... 331	E. E. Webster ... 766
W. Ainsworth ... 915	
Hermann 465	
	9,206

The British Columbia schooners *Pioneer* (847), *Borealis* (733), and *Mascott* (787)—total, 2,367 skins, were not on this coast last year.

The Yokohama schooners' returns are:—*Arctic* (220), *Retriever* (562), *Golden Fleece* (642)—total 1,424.

The catch of the foreign sealing fleet on the coast of Japan for 1895 is:—

	Skins,
British Columbia schooners	16,707
American schooners.....	9,206
Yokohama schooners	1,424
	27,337

The sealing industry of Japan is gradually growing and should in a few years become an important business. The few schooners from Hakodate this year did fairly well, and some of them made as good catches as the more experienced British and American craft. Some ill-feeling, it is said, has been caused by Japan's refusal to enter into an agreement to prohibit pelagic sealing on the high sea off her coasts. Such a course could hardly be expected from Japan, apart from the fact that such methods are inconsistent with Japanese ideas of justice, to say nothing of establishing the pre-

cedent that a nation or combination of nations can close the high seas to the prosecution of a merely commercial pursuit when no national emergency justifies the action. The Japanese Government granted special concessions to encourage their people to invest money in the sealing industry, and this has already been done, so that the authorities could not now consistently agree to close the Pacific Ocean. In the interest of those Japanese who have invested capital in sealing vessels, the Government should do all in its power to protect the seals in their rookeries so that they may remain undisturbed during the breeding time, and permit pelagic sealing only. The rookeries in the possession of Japan have almost been destroyed through the exterminating raids made upon them by foreign hunters in years gone by, but not entirely so; in fact, if properly protected, in a very few years the recuperative power of these animals to restock the once swarming rookeries belonging to Japan would become apparent, and a valuable article of commerce be preserved from extinction to the benefit of those Japanese engaged in the pursuit of the fur seal, for there is no reason why, with a little experience, the schooners under the Rising Sun flag should not do as well as the best of the British or American craft. The course the Government of Japan has thought proper to adopt in this matter has been in the interest of its people, and has not been influenced by the action of other countries.

HAKODATE.

(FROM OUR CORRESPONDENT.)

Hakodate, July 4.

We have had exceptionally fine weather for the last two weeks and the health of the town is perfect. Yet, as cholera is making its way down south, the local authorities here have taken every precautionary measure and have had all drains cleaned and disinfected. To-day a change has set in and it is blowing quite a storm, with heavy rain.

Last week an inquest was held at the British Consulate on the body of Barney Neilson, aged 34, a Norwegian seaman belonging to the British schooner *E. B. Marvin*, who was found drowned in the harbour near one of the landing places. The night before he had been drinking rather heavily, and from the evidence of the doctor, police, and one of his shipmates, it appeared that the man had probably fallen into the water. The jury returned a verdict of "accidental death."

The Rt. Rev. Bishop Evington arrived here last week, and is now making a tour of the English missions in the Hokkaido.

THE PORT ARTHUR AFFAIR.

We have received "Appendix I. Foreign Relations of the United States, 1894," from which we extract the following:—

Mr. DUN to Mr. GRESHAM.
No. 90.] Legation of the United States,
Tokyo, Japan, January, 7, 1895. (Received January 29.)

Sir,—Referring to my dispatch of date December 20, 1894, relative to the Port Arthur affair, I have the honour to inclose herewith an extract from a personal letter to me from Lieut. M. J. O'Brien, military attaché of this Legation, Kin-chou, China, December 28, 1894, giving an account of the unfortunate circumstances attending the capture of Port Arthur by the Japanese forces.

Lieutenant O'Brien's statement corresponds with a statement made by Colonel de Wogack, Russian military agent to Japan and China; also with that of Mr. George W. Conner, an American in command of a Japanese transport, who was present at the taking of Port Arthur.

From the statements of these gentlemen it appears to be clear that there was a slaughter of Chinese soldiers at Port Arthur on the 21st of November, 1894, but that the horrors reported by Mr. Creelman in his communication to the *New York World* as having taken place subsequent to that date are not true, and that the impression Mr. Creelman's reports are prone to convey is a gross exaggeration of the truth.

I have, etc., EDWIN DUN.

[Inclosure in No. 90.]

Kin-chou, Liau-Tung Province, China,
December 28, 1894.

Dear Mr. Dun,—As to the unfortunate circumstances at Port Arthur, I can only say what I saw of it, of course; but I am sorry to say that even that little is such as to lay the army open to the most severe censure, especially as it was quite different from what one should have expected from

Marshal Oyama's proclamation. I have seen myself a number of cases of the killing of men who not only could have been made prisoners without resistance, but who were plainly unarmed and in a position of most humble surrender. I have also seen a number of bodies whose hands were tied behind their backs. I have seen bodies very much mutilated and bearing wounds indicating that they were killed with the bayonet, when I know beyond question that where they lie there was no resistance. I have seen these things, not as a result of going around for the purpose of seeing horrors, but in the ordinary course of my observation of the battle and of trips to the forts and main points of interest. I heard talk here among the correspondents of atrocities committed on the 22d and 23d of November. Of these I know nothing whatever. I did not see any atrocities on those days. I heard some firing in the hills around the town, but saw no act of violence on either of those days. I was about the town most of the 22d and during the afternoon of the 23d, but saw no new acts of war or pillage, except the looting of the houses and stores. That went on until there was really nothing much left to loot.

I find some excuse for the acts of the 21st in the barbarities committed by the Chinese. The mutilated heads of some Japanese captives were hung on some small trees at the entrance of the town, and this sight must have enraged the troops. Again, I doubt if the Japanese for a moment thought they were going to have such an easy task in taking the town and sea forts. When they advanced through the town it is my belief that they were momentarily looking for the resistance, and with such an idea began to clear the way, with the result that the troops soon got out of hand and made an unnecessary slaughter. I do not think this excuse sufficient, but it ought to be borne in mind that such occurrences happen in all armies and it is hardly fair to expect miracles of the Japanese. At the same time such acts have always met with censure, and so must this case.

To anybody who has—as I have since I joined this army—seen the kindness, courtesy, and gentle ways of the Japanese, the recollection of Port Arthur is especially unpleasant. Up to that time the behaviour of the army toward the poor people of this country was all that anybody could have wished. Since that time such has also been the case as far as I know. Here at Kin-chou the Japanese have treated the Chinese in the most kind and fair way. Everything that could be done had been done to quiet the Chinese and to insure a just and fair treatment to them. Markets have been opened and fair prices have always been paid. There is no lawlessness and no sign of ill treatment. In truth, I think these Chinese are now better off than they have ever been in their lives, and I think they appreciate the fact.

In view of these facts, I can not but feel that the acts of this army at Port Arthur ought not to be remembered and its acts at other times forgotten. There may have been special causes leading up to the affair at Port Arthur of which I am not aware. I have no doubt that exaggerated reports have been sent, but not having seen them I am not able to make any criticism of them. I have not up to this time made any report of this phase of the battle, and do so now only because I judge from your letter that reports of it have come to your ears and you may desire more solid foundation for any expression of view which might become necessary hereafter.

I have been very kindly and courteously treated by all the Japanese officers I have met. To Field-Marshal Oyama and his staff I am indebted for many comforts, all the more appreciated because of the especially friendly spirit in which they have been extended. To General Kawakami and his subordinates at Hiroshima I am also under many obligations. In fact, I cheerfully bear testimony to the fact that such general kindness and thoughtfulness is more than I could fairly have expected from any army in the world.

Yours very truly, M. J. O'BRIEN.

THE JAPAN SOCIETY.

The following speech was delivered by Sir Edwin Arnold, K.C.I.E., C.S.I. (Officer of the Order of the Rising Sun of Japan), at the annual banquet of the Japan Society at the Hotel Métropole, London, on May 22nd:—

Your Excellency, my Lords, Ladies, and Gentlemen:—The great and grave distinction has been laid upon me this evening of proposing before your honourable Society the health of His Majesty the Emperor of Japan. By your enthusiastic reception of the very mention of my toast I perceive, what was indeed well known to me, that no eloquence will be needed to recommend to you that august and victorious name! Yet the oc-

casions upon which we meet, thus to offer our united homage to His Imperial Majesty, and to convey to him and to his nation our good-wishes, is so unique and memorable that I ask permission to dwell upon it briefly, in words earnest but measured.

Thirty-one years ago, the combined fleets of England, France, Holland, and the United States unjustly bombarded Shimonoseki. Thirty-one days ago, more or less, at the same spot, a treaty of peace was concluded between Japan and China, terminating, in lasting glory and vast imperial advantages for the Island-Empire, a war which within nine months, has laid the colossal fabric of the Middle Kingdom at the feet of Japan, and advanced Japan herself at one step to imperial sisterhood and equality with the first class Western Powers. Those allied cannon-shots awakened indeed to a new and mighty life, a Nation, always gifted and capable, but destined henceforward, as I believe, to immense duties and unknown developments. Within the compass of a single reign, which we all here, I am sure, pray may be long and prosperously continued, the world has witnessed Japan first swiftly adapting to her ancient civilization, with a wonderful intelligence, the methods of modern science, and next employing them with so much skill, energy, valour, and foresight that her enemies have had no time to thwart her, while even her friends have found their highest expectations outstripped.

In what, then, resides the secret of such an amazing achievement? I venture to answer, unhesitatingly, in those national Japanese principles and qualities of which His Majesty the Emperor of Japan is the living and visible embodiment. If this had been a triumph only of mechanical equipments, of mere belligerent force over multitudinous feebleness, I, and you, would not be to-day full of thankfulness for the result, and of fresh affection for the fair land of Dai Nippon. But it has been the triumph of those enduring and most precious human virtues, which are named Loyalty, Patriotism, Self-devotion, Fidelity, and Faith; and these have had—from the very beginning of the Meiji Era—their concentration and consecration in the august person of His Imperial Majesty. At Hiroshima, amidst his Ministers and warriors, he has himself conducted this prodigious conflict, albeit, as is known in his heart, a lover of peace admirably linking by all his words and deeds, the majestic traditions of an immemorial dynasty, with the duties of a modern Sovereign. His proclamations, resolute in times of effort, magnanimous and moderate in the hour of success, have alternately animated or tranquillized his faithful people. By his side, too, that most noble and gentle example of all her countrywomen, the Empress, has tenderly aided him and the nation. Out of a hundred instances of Her Majesty's compassionate and noble nature I will only mention how she lately appeared with words of comfort and pity among the sick Chinese prisoners at Tokyo, and how, with her own hands, she wrought bandages for the hurt of H.E. the Chinese Envoy, deplorably wounded. Rendered irresistible by those Japanese virtues of which I have spoken, and surrounded as he is by such sagacious men of State, as my honoured friends Count Ito, Viscounts Mutsu and Aoki, Count Yamagata, and others, of whom we behold indeed, here, to-night a most accomplished and amiable representative in His Excellency our President—the Emperor's Army and Navy have gained all these astounding victories, thereby opening a new volume of the history of Asia.

I shall not, in this company, touch upon politics, nor even speak of what has followed after the peace of Shimonoseki, farther than to remark that in the intervention of the Three Powers may certainly be seen a magnificent tribute to the new greatness and strength of Japan, and that we may also recognize in the wisdom and self-restraint of the Emperor's partial compliance with their desires a guarantee of the future well-being of Japan almost more convincing than her victories. I am beyond measure glad that, in this year of trial, England was first of all and foremost to carry out Treaty Revision, and has next most wisely and properly abstained from joining the ill-assorted Powers in their recent action. My hope is that those unmistakable demonstrations of British good-will may form the foundation of a lasting friendship between Japan and England, since our political interests are and will be the same, since our inevitable opponents are identical, and since the rivalries which may arise in commerce do not affect that mission which East and West must now share of filling the Pacific Ocean with new life, and of re-organizing Asia.

There is no need to counsel the counsellors of Japan. Under their noble Emperor they will raise her Navy to a commanding standard; they will make a veritable treasure-house

of beautiful and fertile Formosa; they will heal the wounds of war with happy traffic, and they will know how to keep with prudence and firmness what is valuable in all they have won by valour, while China herself must by-and-by profit by the stern lesson she has received. They will be vigilant and judicious, bearing in mind their own old proverb, *Katte kabuto no o-wo shimeru*, which I may be allowed to translate, "In the hour of victory, tighten the straps of your helmets!" Your Excellency, My Lords, Ladies and Gentlemen, with these inadequate but very sincere words of admiration and attachment, I give you the health of His Majesty the Emperor of Japan; recommending my toast to the utmost honours which your generous enthusiasm and cordial goodwill can bestow upon it.

JAPANESE TOPICS IN AUSTRALIA.

BY JOHN PLUMMER, M.J.S.

Sydney, May 30th.

The fiscal struggle now taking place in New South Wales is destined to largely influence the future course of trade between Japan and Australia. New South Wales is essentially a free trade country, exporting raw produce in large quantities, and taking manufactured goods in exchange. Like the other Australian Colonies, New South Wales finds the heavy cost of labour and uncertainty of the labour supply a formidable obstacle to the development of manufacturing industries on an extensive scale, but it has been sought in Victoria, Queensland, Tasmania, South Australia, and New Zealand to foster native manufacturing industries by the imposition of heavy duties on imported articles, but its cannot be said that the system has been successful to any marked extent, for even with the import duties added to the selling prices, imported goods are often found competing with articles locally produced. At the present moment silk dressing-gowns from Japan are being sold in Sydney and Melbourne at rates considerably below those charged by local producers. Until within the last few years, the New South Wales tariff was one of the lightest character, forming no real burden on the import trade. But suddenly the late Ministry of that colony changed all this, by the impositions of duties on all the leading articles of import. Although the new duties were lighter than in Victoria and elsewhere, they have proved exceedingly irksome, and there has been strong feeling in favour of their immediate removal. Mr. Reid, the present Premier, was elected on the distinct understanding that he would support a free trade policy. This is what he is now doing. He purposes removing most of the duties at the end of June, those remaining to be gradually abolished. This would make Sydney an absolutely free port, but Mr. Reid's policy is opposed by Sir Henry Parkes on the ground that nothing should be done until Australian federation has become an accomplished fact, a result not likely to be achieved during the present century. To this end he has joined with Sir George R. Dibbs, the ex-Premier, in endeavouring to oust Mr. Reid from the premiership, but hitherto without avail. It seems strange, however, that Sir Henry Parkes should take the ground he has, for the various colonial tariffs are aimed as much at restricting intercolonial trade as at diminishing that of an international character. Should Mr. Reid succeed in giving effect to his free trade policy, it will lead to a great expansion of trade between Australia, Japan, China, and other oriental countries, at present impossible by reason of the one-sided nature of the business, as pointed out by Mr. A. Marks to the Australian merchants who besought his assistance in the work of opening Japanese markets for Australian produce.

Mr. Jerome Dyer has returned from his visit to Japan, and in the course of an interview with the representative of an Adelaide paper, he referred to a letter published in one of the Sydney Journals. "Among other misstatements," said Mr. Dyer, "the writer falsely asserts that I advised the Japanese to have nothing to do with the Europeans in Japan. This is so grossly untrue, and is so evidently meant to depreciate the good work which I know I have done, that I feel a simple denunciation of this writer's untruthfulness is all he is worth. On the other hand, *The Daily Telegraph* is right in saying that my mission was not regarded favourably by the European element in Japan. When there last year I saw much more of the Europeans than of the Japanese, and so did the Victorian Government agents. We were practically told by the European merchants that they could order little of our goods, for there was no demand. 'Create a demand,' said some of them to me, 'and we'll order soon enough.' In

fact, every other European in Japan is an agent for some European or American house, and therefore antagonistic to us in a great measure. Being the bearer of letters to the Japanese Government, and of a present to the Emperor from the Government of Victoria, I had necessarily to go straight to the capital, where I naturally met only Japanese and their commercial chambers. I had then to choose between these shrewd people and the European element in the treaty ports; for so great is the friction, owing entirely to the latter's fault, that had I neglected the Japanese and shown a partiality for the foreigners I would have met with only the same reception and success which all past Australian visitors have received. Still, I always referred, when practicable, in my addresses, to the obligation which the Japanese should be under to the Europeans for developing their country's trade and the Japanese have always admitted it. But they declare very emphatically that the foreigners (Europeans) residing in Japan, in their consistent and over-apparent hostility and unfriendliness, will not give them an opportunity of showing and proving their indebtedness, and they further declare that they (the Europeans) are making the breach wider every day. This sounds very ominous, and should prove a warning to the Europeans. They are behaving very foolishly, if one is to judge by their bitter, openly-expressed views, and by the views of the European settlement papers. The Home Office is aware of this, and has shown its opinion in its recent actions. The whole story is too long to recount here, but I can tell it when necessary. It is a melancholy one, and the pith of it all lies in the disappointed expectations of the majority of the Europeans in Japan." Mr. Dyer's letter has naturally produced a marked impression in the Australian mercantile world.

The *South Australian Advertiser*, alludes to the recent industrial and commercial developments in Japan. It says, after describing the encouragement which His Imperial Japanese Majesty's Government has extended to those engaged in the work of pushing Japanese commerce in every possible direction, that—"already the forests of chimney-stacks and clouds of smoke in some important centres reminds the visitor of Manchester of Birmingham. Having a practically unlimited supply of coal, excellent facilities for water carriage, and an industrious people who will work long hours for next to nothing a day, raw materials of certain kinds can be dealt with on terms which threaten to drive the British mill-owner to despair. In the list of imports for the latest available period raw cotton comes first; sugar, including molasses and syrup, second; and woollen materials third. Animal products, such as hides and leather hold a prominent place. These facts are exceedingly suggestive. Japanese cotton goods are already affecting the markets, and the manufacture of woollens is advancing with rapid strides. The import of wool from Australia last year was considerably more than half as much again as compared with that of the year before. Hitherto the woollen goods used in Japan have been almost exclusively imported, but the introduction of local manufactures at a cheaper rate will promptly augment the demand. Australian wool is admittedly finer, and also cheaper in the end, than the Chinese and Indian varieties. The new steam service is expressly designed to cheapen freights, which will give our flockmasters a better chance. The activity, intelligence, and enterprise which the Japanese are manifesting in industrial affairs bid fair to make the "land of the rising sun" the Britain of the East. It will become a manufacturing nation drawing its raw materials and a portion of its food supply from other lands. Many of the commodities it needs, including beef, wheat, wool, and wine, may be regarded as not only Australian staples but specialties. We can meet the demand for such articles, though we may not be able to export the manufactured products on satisfactory terms. It is evident, therefore, that the commercial development of Japan and the expressed desire to foster Australian trade may have an important bearing on some of our leading industries.

Dr. Cecil F. Davenport, of the London Missionary Society's station at Chung-king, and other visitors from China, are singularly unanimous in their remarks concerning the ignorance prevailing in China with respect to the war. Dr. Davenport said that the great bulk of the Chinese nation was ignorant of the fact that a war was being actively engaged in. Even a few miles out of Shanghai the inhabitants knew nothing of the war. It was to the advantage of the mandarins to keep the people in ignorance in order that they might deal with them as they liked. It was only the high officials and upper classes who were made aware of the existence of war. As soon as the populace was levied for the cost of the war he anticipated trouble. One of two things, in his opinion, would

then happen—either there would be an internal rebellion, or the war with Japan would be renewed.

The Chinese in Australia continue to display the utmost apathy with respect to the Japanese successes; nor do they evince the slightest hostility towards the Japanese residents in Sydney and elsewhere. They seem to take everything as a matter of course.

The movements of Russia in connection with the treaty concluded between Japan and China continue to be closely watched in Australia. The *Sydney Morning Herald*, taking Mr. Henry Norman's *In the Far East* as a text, says:—"At the present moment Great Britain would not be at all inclined to precipitate a general European war because of possibilities in the Far East, nor can Japan be ready for any overt action. Nevertheless, it is self-evident that if Japan and China ever should act in unison their aid to resist the Russian advance would be of prime importance to Great Britain, and while England has hitherto indulged in the belief that China would be the principal power, there would be no difficulty in recognising the leadership of Japan. "Alluding to the motives which are prompting Russia in its antagonism to Japan, the *Herald* points out that they have their origin in the necessity for having an open port at the end of the great Siberian line, and that the only two ports available "are Port Lazareff, on the east coast of Korea, and Port Arthur, splendidly situated for naval command on the Liautung peninsula, commanding the Yellow Sea, and with free access to the Pacific Ocean. "The probability is," says the *Herald*, "that Russia will occupy Port Arthur herself at no distant date, and hence her decision not to allow the Japanese to retain possession. She will endeavour to induce China to put herself under the protection of the Czar, Russia guaranteeing immunity from Japanese aggression and receiving the provinces which would give her for the first time in her history a magnificent open seaboard. And if China will not make a bargain of a peaceful surrender, why, Russia, with French aid, might take the territory when she is ready, China, Japan, and even England notwithstanding. To-day it may be said that the rival powers of the Far East are Japan and Russia, and that the immediate problem of the Far East is the answer which China will make to these two powers. Will she work with Russia to keep Japan down, or will she join with Japan to save the remainder of Asia for the Asiatics, Great Britain possibly helping in order to check the Cossack march?"

Alluding to the Chinese loan, the *Sydney Morning Herald* declares that Russia and France are looking after it, and then proceeds to ask,—"What security has China to offer? Hitherto she has floated her trumpery loans, amounting to £6,000,000 before the war, upon the security of her Customs revenue, this revenue being a semi-independent "Imperial service," officered and conducted by Sir Robert Hart; but the Customs revenue amounts only to £3,600,000 per annum, and is wholly insufficient for the purpose of a loan of the magnitude now talked about. Even if it could be doubled by new taxes it would be insufficient. And yet it is not for a moment to be supposed that France and Russia will give their aid to a loan the interest on which might be paid or not paid according to the discretion or the ability of the corrupt and ignorant Mandarins, whose life is spent in extorting from those below them and in defrauding those above. Such a loan may be the commencement of a protectorate of some kind. It gives the great powers the right to advise or to interfere, with what result may be seen in the Egypt of to-day. Egypt became a European province in one sense when Ismail made his plunge into debt; and when China puts herself in pawn to the West the consequences, if not so complete, may be equally momentous. Possibly we may yet see European "residents" or commissioners in Peking. Trade concessions now refused are sure to be demanded with authority, and so the day of China as a hermit nation may quickly pass away." The opinions thus expressed are largely shared by other Australian journals, and there is a widely spread conviction, that we are on the eve of fresh developments in connection with the late war.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL"]

London, July 8.

The China loan, which is not redeemable for thirty-six years, will be secured by the Customs, and Russia undertakes to make good the payments should China fail.

Lord Selborne has been appointed Under Secretary for the Colonies.

London, July 9.

Parliament has been dissolved, and the new House is summoned for the 12th August. The majority of the elections will take place on the Saturday preceding; the London elections are fixed for the Monday.

(FROM THE "N-C DAILY NEWS")

London, July 3.

A successful result of the negotiations for the Chinese Loan is now expected, enabling the Chinese to receive the amount by December.

A Chinese six per cent Loan of a million (sterling) is to be issued shortly in London at 106. This will not affect the Russian Loan.

Mr. Balfour stated in the House that the hoped the Dissolution of Parliament will take place on Monday next. The reserve of ammunition is to be increased at once, and the votes on account for the public Services have been adopted.

The Rt. Hon. Sir Michael E. Hicks-Beach, M.P. for Bristol, in a speech to the electors, stated that the policy of the Government was directly opposed to that of its predecessors, that it would be mainly constructive, in the direction of social reform, and that the Exchequer would be not unheededful of the demands of the War Office.

London, July 4.

Turkey has replied in the most amiable way to the explanation demanded by Bulgaria as reported on the 2nd of July.

The French have attacked a Hova position at Beritzova, en route to the capital of Madagascar, and captured two camps and a great quantity of stores. The Hova were routed with heavy loss, the loss on the French side being trifling.

Cambridge has won the odd event in the Inter-University Athletic Sports.

London, July 5.

The new *Valkyrie* is proving a complete disappointment.

The result of the "Princess of Wales Stakes" is as follows:—

Mr. Henry Milner's Le Var	1
Mr. Leopold de Rothschild's Utica	2
Mr. Henry Milner's None the Wiser	3

(FROM JAPANESE PAPERS).

Söul, July 10.

At a meeting of the Cabinet, held last night in the presence of the King, His Majesty announced that the appointment of Cabinet Minister and officials of *Chokunin* rank would be determined by himself instead of through the Cabinet.

The Korean Government has granted *yen* 300, accompanied with an Imperial Rescript, to Sasaki Tomezo, in recognition of services rendered by him in the Pak plot.

Some officials in the Korean Government propose appointing Sasaki a councillor.

Shimonoseki, July 11.

A Söul correspondent, under date the 29th ult., states that the King has not accepted the resignation of Boku Teiyo, the Premier, but the latter is strongly determined to withdraw from the Government. It is stated that if Boku Teiyo retires from the Cabinet his successor will be appointed from among the Ming family. The resignation of Boku Teiyo may be regarded as a result of the fall of Pak.

A Söul correspondent, writing on the 2nd inst., announces that cholera is very prevalent at Wiju, where about sixty deaths are daily reported.

Shimonoseki, July 11.

It is stated that the *Chinyen go*, formerly *Chin-yuen*, will remain at Nagasaki for three days, and the general public will be allowed to visit her.

Aomori, July 11.

Some experts have arrived to survey the site of the proposed forts at Tsugaru Strait.

Kobe, July 11.

The Korean Minister arrived here by the *Suruga Maru* to-day, and put up at the Nishimura Hotel.

Shanghai, July 11.

A Peking telegram, which reached here to-day, states that the Peking Government has appointed Yü Ko Chinese Minister to Japan, and the matter is said to have been reported to the Japanese Government.

Kobe, July 12.

The Italian men-of-war *Umbria* has arrived here from Nagasaki.

Nagasaki July 12.

The French ship *Bayard* and the *Duguay Trouin* have arrived here.

Fusan, July 12.

Pak, ex-Minister of Home Affairs in Korea, left here for Ujina by the *Fujigawa Maru* at 5 o'clock this morning.

Hiroshima, July 12.

The *Fukushima Maru* proceeded to Kobe this morning. She is to take Count Inouye to Jinsen.

Shanghai, July 12.

France has obtained the consent of the Chinese Government to her demand to cede a portion of territory bordering on Annam.

The British Gunboat *Linnet*, which left Anping on the 7th inst., has arrived with a report that Anping is quiet, and no disturbance has been created by the Black Flags. The *Rainbow* and *Redbreast* were staying at Anping, and another war ship at Takow.

CHES.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club is closed for the season: and re-opens on Thursday 3rd October.

The Tokyo Chess Club is now closed for the holiday season and will reopen on Friday, 4th October, 1895.

SOLUTION OF PROBLEM No. 184.

WHITE. BLACK.
1—Kt to Q Kt 7. 1—Anything
2—Mates accordingly.

Correct solutions received from Digamma, Kr., W.H.S., Shogi, J.D., and E. J. King.

PROBLEM No. 186.

By C. A. GILBERG, New York.

White to play and mate in two moves.

In the *Birmingham Weekly Mercury* of Saturday, January 12, the diagram of a very stiff four-mover was printed, the publication of the solution of which was purposely delayed for several weeks in order that "plucky solvers, who dislike to be beaten," might have ample time to conquer the position without help. Six weeks later the editor reported that he had just had a quite unique experience. A cablegram asking for the solution (reply prepaid) had reached him from Kutais, the capital of a Trans-Caucasian province that lies between the Black Sea and the Caspian Sea. The cablegram was from Prince Constantine, of Oldenbourg, who is in command of a regiment of Russian Guards. His request had been promptly complied with.

The *Saturday Review* gives the following as the laws which decide what is admissible and what is inadmissible in a chess problem. "There must be nothing on the board which is not necessary to the solution either for active coöperation or for obstruction. White can have only one first or key move; for more than one way of setting to work would argue an excess of force. For a similar reason, because it is better to win by strategy than by force, White must not on his first move either take a piece or give a check. To do either of these things would not be fighting a duel, but finishing off a prostrate enemy. The best problems are those in which the triumph of strategy over force is most conspicuous. The stronger Black's position seems to be at first sight, the more credit there is in beating him; though, of

course, it is also more creditable to give a weak enemy his quietus full, fair, and fetysly* than to bungle in despatching him. Thus it may be a very fine problem to mate in two moves when it would be both easy and inelegant to wind up the business in three or four."

END GAME No. 28.

SCOTTISH CHES.

Mr. Sheriff Spens is one of the most brilliant players over the Border. The following diagram shows position in a fine game awarded a special £5 prize:—

BLACK—(MR. SHERIFF SPENS).

WHITE—(MR. D. FORSYTH).

Here Black (to move) played the fine move R to R 3, which wins in all variations.

CHES IN NEW YORK.

The Manhattan Club seems to be unfortunate in its matches this season. It lost against Brooklyn some time ago and last month had to succumb to the Franklin Club of Philadelphia. We reprint the three best games, our esteemed contributor "Digamma" furnishing us with the score.

20—Kt to Kt 5	20—B takes Kt
21—B takes B	21—B to Kt 4
22—P to K R 3	22—Resigns.

THE EVANS GAMBIT.

This old favourite has been receiving fresh attention of late. We reprint from an Australian exchange a fine game, in which White has apparently struck out a new and brilliant line of play. We follow this up with a dictum of the great Steinitz which, however, seems to have been speedily upset.

GAME No. 292.

The following game is one of two played by correspondence between the Rev. A. Miller, of Sydney, and Messrs. Hodgkinson, McClelland, and Bruce, of Nowra. Mr. Miller, in following a "book" variation of the Evans, was met with a series of brilliant sacrifices not provided for by chess theorists:—

WHITE. Nowra.	BLACK. A. Miller.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to B 4	3—B to B 4
4—P to Q Kt 4	4—B takes Kt P
5—P to B 3	5—B to R 4
6—Castles (a)	6—Kt to B 3 (b)
7—P to Q 4	7—Castles.
8—P takes P	8—K Kt takes P
9—B to Q 5	9—Kt to B 4 (c)
10—Kt to Kt 5	10—P to K R 3
11—Q to R 5 (d)	11—P takes Kt
12—Q B takes P (e)	12—Kt to K 2
13—P to K B 4	13—Kt to K 3
14—P to B 5!	14—Kt to Q B 4
15—P to B 6!!	15—Kt to K 3
16—R to B 3	16—R to K sq.
17—R to R 3	17—B to Kt 3 ch.
18—K to R sq.	18—K to B sq.
19—B takes Kt	19—Kt to Kt 3
20—Q to B 8 ch.	20—Kt takes Q
21—R takes Kt, mate.	

(a) Authorities still differ on the merits of this move, and 6—P to Q 4. Tchigorin, the greatest living exponent of the Evans, plays the text move.

(b) We like 6—P to Q 3.

(c) Superior to taking the Pawn with either B or Kt.

(d) Mason's "Art of Chess," p. 267, gives the following variation:—11—Kt takes P—R takes Kt, 12—B takes R ch—K takes B, 13—Q to Q 5 ch—Kt to K 3, 14—P to K B 4—Q to B sq. and the two pieces ought to win for Black against the Rook. The bold sacrifice of the Kt by 11—Q to R 5, which seems to win for White against any defence is new to us. Perhaps our Nowra friends will inform us if 11—Q to R 5 is of local invention or otherwise.

(e) Further comment is needless. The White allies play to the end admirably, and Mr. Miller's defence, though unavailing, seems the best at his command.

Some amusement was created in New York chess circles a few weeks ago by the publication in the *New York Sun* of an article, copyrighted by Steinitz, in which Steinitz made the claim that he had by accident "discovered the move that would make all Evans gambit players bite the dust." After the moves—1 P to K 4, P to K 4—2 K Kt to B 3, Q Kt to B 3;—3 B to B 4, B to B 4;—4 P to Q Kt 4, B x P;—5 P to B 3, B to R 4;—6 P to Q 4, P x P—7 Castles, Kt to B 3;—8 B to R 3, Kt x P;—9 Q to Kt 3 he points out that the next should be Kt Kt 4 as the exchange of knights, followed by B x P ch., would not merely do no harm

but Black's K, would stand safer; the Q being out in the field for a king's side or centre attack, Black retaining the enormous majority of four pawns to one on the Q's side, as against three to two of the opponents on the other wing, which should make a win an easy matter for Black. Mr. Steinitz was, however, dumfounded to learn within a comparatively few hours after the publication of his article that his move was of no avail, as White's rejoinder B x P ch., followed by R to K sq. ch., wins the Q, and the game.

GAME No. 293.

The following game played between J. P. Morgan (White) and W. P. Shipley (Black) is taken from an American paper:—

STEINITZ GAMBIT.

WHITE.	BLACK.
1—P to K 4	1—P to K 4
2—Kt to Q B 3	2—Kt to Q B 3
3—P to B 4	3—P takes P
4—P to Q 4	4—Q to R 5 ch.
5—K to K 2	5—P to Q Kt 3
6—Kt to Kt 5	6—Kt to B 3 (a)
7—Kt to K B 3	7—Q to Kt 5
8—Kt takes P ch.	8—K to Q sq.
9—Kt takes R	9—Kt takes K P
10—P to Q B 4	10—B to Kt 5
11—Q to R 4 (b)	11—Kt takes Q P ch.
12—K to Q sq.	12—Kt to B 7 mate.

(a) This move is the invention of Mr. D. N. Martinez, of Philadelphia, and gives Black a strong game; this is the first game in which the move has been tried in actual play.

(b) Fearing Black's threatened R to K sq. The game was, however, lost to White after Black's 10th move.

GAME No. 294.

The following game, says the author of "The Art of Chess," was recently developed by Mr. Wordsworth Donisthorpe (White):—

WHITE.	BLACK.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—Kt to B 3	3—P to Q 3
4—P to Q 4	4—B to Kt 5
5—B to K 3	5—P to B 4
6—P to Q 5	6—P takes P
7—Q Kt takes P	7—Q Kt to K 2
8—P to B 4	8—Kt to K B 3
9—Kt takes Kt	9—P takes Kt
10—P to K R 3	10—B to Q 2 (P)
11—Kt to R 4	11—Kt to Kt 3
12—B to Q 3!	12—Kt takes Kt?
13—Q to R 5 ch.	13—Kt to Kt 3
14—B takes Kt ch.	14—K to K 2?

White mates in two moves.

Brevity and brilliancy with a vengeance. Altogether worthy of the good old times.

PASSENGERS.

ARRIVED.

Per British steamer *Empress of Japan*, from Vancouver, B.C.:—Colonel T. Amano, Mr. N. J. Ten Bosch, Mr. Bevier, Professor J. H. Biles, Miss Biles, Mr. and Mrs. N. Bowditch, Mr. and Mrs. Henry Bryant, Mr. E. K. Charrington, Sir Fielding Clarke, Lady Clarke, Mr. C. W. Collier, Mr. and Mrs. R. M. Johnstone, Mr. F. Gebhardt, Mr. Horikoshi, Mr. J. W. Hulst, Mr. J. H. Kobayashi, Mr. F. Kochler, Mr. Larial, Mrs. Leonard, Mr. K. Nakamura, Captain C. Cunliffe-Owen, R.A., Mr. Johan Paris, Mr. and Mrs. Redding and children, Mr. Reaggi, Don Jose de la Rica, Mr. Sieppel, Mr. Takimura, Captain and Mrs. E. W. Very, Mr. H. Wiebert, Mrs. A. D. Woodworth and daughter, and Mr. M. Yamano-

ouchi in cabin; 7 passengers in second class, and 70 Chinese and 4 Japanese in steerage.

Per German steamer *Hohenzollern*, from Hongkong:—Mr. P. Stollberg, Mr. K. Takahashi, Dr. Kawase, Dr. Kondo, Mr. Carlos Pereira, Mr. Fritz Kolberg, and Mr. and Mrs. Adler in cabin.

Per British steamer *Tacoma*, from Tacoma, Wash., via Victoria, B.C.:—Mr. and Mrs. F. E. Crew, Mrs. J. H. Laughlin and child, Miss R. Stanleigh, Mr. J. H. Mitchell, and Mr. A. Stewart in cabin; 6 Japanese and 13 Chinese in steerage.

Per American steamer *Peru*, from San Francisco:—Miss Augusta Dickerson, Mr. G. E. Potts, and Mr. H. A. Kenaricks in cabin.

Per British steamer *Empress of India*, from Hongkong via ports:—Dr. and Mrs. Harder, Mr. and Mrs. Neave, Mr. O. d'Oliveira, Lieut. de Carvalhoses, Mr. T. Dickson, Jun., Rev. and Mrs. Fix, Mr. and Miss Remedios, Mr. Digley, Lord Conyngham, Mr. and Mrs. Thomas and child, Mrs. Spry, Mrs. Mast and 2 daughters, Mr. Sim Kye Pong, Mr. C. H. Sim, Mr. T. Hance, Mr. J. McLachlan, Mr. H. J. J. Chambers, Mr. W. J. Vine, Mr. A. W. Rashi, Mr. M. A. Mosle, Mr. A. Price, Mrs. Jones and daughter, Mrs. and Miss Wilcockson, Mrs. Schlichling, Mrs. Rehders, 3 children, and nurse, Captain and Madame Fleurac, 2 children, and governess, Mrs. Chalfont and 2 children, Mrs. Lane, Mr. T. Ferguson, Mr. P. B. Nash, Mr. Mrs., and Miss Weir, and child, Mr. P. L. Pontalis, Mr. A. de M. Grancey, Mr. J. H. Cocksedge, Mr. H. W. Listler, Lieut. G. W. Brown, Lieut. Hutchinson, Captain Lillier, Miss Tennant, Miss Kidwell, Mrs. Fulkerson and 2 children, Mr. C. la Vaulx, Mrs. Crawe and child, Master Wilson, Mr. and Mrs. Alpine and 3 children, Mr. and Mrs. Price, Miss Holland, Miss McCleneghan, Miss Fugill, Rev. Warren, Rev. C. Warren, Bishop Bickersteth, Mrs. and Miss Lange, Miss Vincent, Mr. and Mrs. White, Mr. A. P. Whitney, Jun., Mr. C. W. Dimock, Mr. and Mrs. Pors, 2 children, and nurse, Mr. G. Sale, Mr. Hasche, Mrs. Denig and child, Mr. E. Passe, Mr. Fitzgerald, Mr. C. L. Barrow, Mr. Staunton, Baron Von Wauldthausen, and Mr. Hannah in cabin; 24 passengers in second class, and 6 native servants and 203 passengers in steerage.

Per French steamer *Yarra*, from Marseilles via ports:—Mr. Dumoulin, Mr. Weiss, Prince Belozersky, Mrs. Twentyman and family, Mrs. Groundwater, Mrs. Petersen and 2 children, Mr. Dennial, Mrs. Ramson and child, Mrs. Gaillard, Mr. Collins and family, Mr. Baillie and family, Mr. Vlez, Mrs. Limby and family, Rev. Patridge, Mr. Gordon and family, Mr. Inouye, Mr. Cholmeley, Mr. Montgomerie, Mr. Arundale, Mr. Saddlesmith, Mr. Durand, Mr. Dunstable, Mr. Western, Misses Hawthorne, Ripley, Booth, Tasselli, Brion, Mr. Apar, and Mr. H. Goldstein in cabin; 12 passengers in steerage.

DEPARTED.

Per British steamer *Verona*, for Hongkong via ports:—Mr. H. L. Dover, Mr. F. J. Organ, Major F. C. Farmer, Mr. M. Risk, Mrs. and Miss McCance, Mrs. Marshall, Mrs. Whitehead, Mr. W. M. Redwood, Mrs. E. F. Metcalfe, Miss Eldridge, Mr. J. S. Metcalfe, Mr. A. J. McGlew, Dr. F. Metcalfe, Mr. Go Chut Yun, Mr. Kwong Man Wing, Mr. Ming On, Mr. D. Macdonald, Mr. Chee San, and Mr. A. R. Whitney in cabin; 11 men, R.N., in third class, and 3 Chinese in steerage.

Per American steamer *City of Peking*, for San Francisco via Honolulu:—Mr. F. R. Jenkins, Mrs. C. Jenkins and infant, Mr. J. Murphy, Dr. and Mrs. F. L. Dibble, Mr. S. J. Smith, Mr. W. E. Porter, Mr. O. Harley, Mr. Geo. D. Nicol, Mr. E. Larodre, Mr. E. W. Barrett, Mr. W. A. Boord, Mr. and Mrs. Ho Tung and lady friend, Mr. and Mrs. D. H. Mercer, Rev. and Mrs. V. E. Hedburg and two infants, Mr. Geo. Thompson, and Mr. F. C. Hagle in cabin.

Per British steamer *Empress of Japan*, for Hongkong via ports:—Mr. W. Humphreys, Mrs. and Miss W. G. Humphreys, Miss Stephens, Mr. J. Gregory, Miss L. Thomas, Mr. Tanabe, Miss Stewart, Mrs. Smedley and family, Mr. H. Kessler, Mr. and Mrs. Kuhn, Mr. L. D. Abraham, Mr. W. F. Mitchell, Captain Thomas, Captain J. W. Lee, Mr. E. J. Cowan, Mr. and Mrs. Goffinet, Mr. J. C. Aiter, Mr. and Mrs. Galy and child, Mr. Marchman, Lieut. P. G. Davies, Madame Huart and child, Mr. Bybird, and Mr. A. L. Robinson in cabin; Mr. and Mrs. C. Gesbirel in second class, and Mr. Wilson's betto in steerage.

Per German steamer *Hohenzollern*, for Hongkong via ports:—Dr. and Mrs. Grassmann and children, Dr. Riess, Rev. J. Lindsay Patton, Mr. Th. Blacklock, Mr. Mocker, Captain R. Dowling, Captain Alex. Keith, and Mr. H. Isono in cabin; 2 Europeans and one Japanese in third class, and 9 Chinese on deck.

Per British steamer *Empress of India*, for Vancouver, B.C.:—Mr. F. Angus, Captain A.

Banarchon, Mr. Bash, Mr. Wesley Bick, Mrs. Wesley Bick and 2 children, Mr. Henry Binley, Mr. Blankenburg, Lieut. Guy W. Brown, U.S.N., Lieut.-Colonel Candau, Mrs. Candau, Mr. Jno. H. F. Carey, Lieut. Cavallaris, Mrs. Chalfant and 2 children, Mr. H. J. J. Chambers, Mr. G. R. Clover, Mr. J. H. Cockledge, Captain J. G. Cox, Mr. H. Dancocks, Mrs. Fairclough, Mr. T. Ferguson, Rev. Mr. Fix, Mrs. Fix, Capt. de Fleurac, Madame de Fleurac, 2 children, and governess, Mr. R. Fuhmann, Mr. A. E. Garnier, Mr. A. de Mandat Grancey, Mr. T. A. W. Hance, Mr. W. A. Hewett, Miss J. M. Holland, Dr. Horder, Mrs. Horder, Lieut. B. F. Hutchinson, U.S.N., Mr. H. Jaeger, Mr. Kennedy, Mons. V. de Laguerie, Mrs. Lane, Captain V. Lillier, I.R.N., Mr. Listler, Mr. R. W. Lomax, Mr. J. McLachlan, Mr. Menanda, Hon. G. Mills, Mr. Herbert Moore, Mr. P. B. Nash, Mr. Neave, Mrs. Neave, Lieut. N. J. O'Brien, Mr. O. de Oliveira, Mr. P. Lefevre Pontalis, Mr. Ernest Possé, Mr. W. V. Pratt, Mrs. H. B. Price, Count Carlo Raggio, Mr. J. G. Shortall, Mr. C. H. Sim, Mr. Staunton, Mr. J. H. Symington, Miss O'Brien Taylor, Miss A. C. Tennent, Mr. Uhrlaub, Baron von Wauldthausen, Mr. Thomas Weir, Mrs. Thomas Weir, and child, Miss Weir, and Mr. H. Whistler in cabin.

Sheet Iron	4.30 to 4.50
Galvanized Iron sheets	8.25 to 8.75
Wire Nails, assorted	5.60 to 6.00
Tin Plates, per box	5.25 to 5.50
Pig Iron, No. 3	1.60 to 1.65

KEROSENE.

Prices are still called nominal and are now said to be weak. Part of the recent arrivals of Russian oil goes on to Kobe. Present stock here is 850,000 cases—two-thirds American, one-third Russian.

American	\$2.40 to 2.50
Russian	2.30 to 2.40
Langkat	1.90 to 2.00

SUGAR.

A fair amount of business has been done, principally in Manila and Canton sorts. The latter are slightly dearer in price, but arrivals of the former by steamer prevent any improvement in values. In Takao sorts nothing done and prices nominal. White quiet, with quotations as last week.

	PER PICUL.
Brown Takao	\$3.60 to 3.65
Brown Manila	4.20 to 4.30
Brown Daitong (New)	3.10 to 3.20
Brown Canton	3.10 to 3.60
White Java and Penang	6.20 to 6.50
White Refined	6.00 to 9.25

EXPORTS.

RAW SILK.

Prices have apparently been rushed up too far and too quickly. Europe has accordingly backed out, and fine sizes are quiet, prices for these tending downwards. American sorts maintain their course so far, and there is considerable competition for the favourite marks of Joshi Re-reels. Coarse filatures appear dear at present figures, seeing that the so-called Shinshu filatures are at present reeled from alien cocoons.

QUOTATIONS.—(NEW SILK.)

Filatures—No. 1, 10/13 deniers	\$900 to 920
Filatures—No. 1, 13/15, 14/16 den.	920 to 930
Filatures—No. 1, 10/14 deniers	870 to 890
Filatures—No. 1, 13/16, 14/17 den.	900 to 910
Filatures—No. 2, 10/15 deniers	850 to 860
Filatures—No. 2, 14/18 deniers	880 to 890
Re-reels—No. 1, 13/15, 14/16 deniers	890 to 900
Re-reels—No. 1, 13/16, 14/17 deniers	860 to 870
Re-reels—No. 2, 14/18 deniers	830 to 840

WASTE SILK.

Small business in old waste. Remaining stock (about 5,000 piculs) is chiefly mixed and poor quality, but holders are firm, and there is nothing to tempt buyers. Quotations withdrawn pending transactions in new staple.

TEA.

A fair daily trade, and prices have been well maintained. Stock remains at about 7,000 piculs, and the export will show some increase when the details of shipments by *Empress of India* and ship *S. P. Hitchcock* are complete. Settlements to date are between 3,000 and 4,000 piculs more than last season, and shipping opportunities are now unusually plentiful.

	PER PICUL.
Choicest	\$30 to \$32
Choice	27 to 28
Finest	25 to 26
Fine	23 to 24
Good Medium	21 to 22
Medium	19 to 20
Good Common	17 to 18
Common	15 to 16

EXCHANGE.

Exchange has only fluctuated slightly, and rates are fairly firm at the close.

THE GREATEST WONDERS OF MODERN TIME HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health
for all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribu-
aries in Abyssinia," says—"I ordered the druggist Mahomet
to inform the Fakir that I was a Doctor, and I had the best
medicines at the service of the sick, with advice gratis. In 1
short time I had many applicants, to whom I served out a
quantity of Holloway's Pills. These are most useful to an ex-
plorer, as, possessing unmistakable purgative properties, they
create an undeniable effect upon the patient, which satisfies
them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations
of all kinds. It acts miraculously in healing ulcerations, curing
skin diseases, and in arresting and subduing all inflammations.
MR. J. T. COOPER, in his account of his extraordinary travels
in China, published in 1871, says—"I had with me a quantity of
Holloway's Ointment. I gave some to the people, and nothing
could exceed their gratitude; and, in consequence, milk, fowls
butter, and horse feed poured in upon us, until at last a tea-
spoonful of Ointment was worth a fowl and any quantity of peas-
and the demand became so great that I was obliged to lock up
the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughout
World. May 1st, 1890.

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United
Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dinero, London.

"MONEY" is a fearless critic and exposé of all shams, frauds,
and swindles.

"MONEY" is THE Journal for Investors, Speculators and
Business men.

"MONEY" is a thoroughly up-to-date Weekly Record of all
Financial and Business Matters.

"MONEY" is not subsidised by any financial association,
clique, or syndicate, but is absolutely free, independent,
and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing
Shipping, Trading, and Trust Companies, are fearlessly and
impartially criticised in "MONEY."

THE MONTHLY FOREIGN AND COLONIAL EDITION, called
"MONEY AND TRADE," is published on the last Wednes-
day in each month, and is forwarded direct to the Foreign
agents and Correspondents of all the leading English Mer-
chants, and to all the large Wholesale Buyers and Store-
keepers in the Colonies, India, China, Japan, South America,
and other countries.

"MONEY AND TRADE" enjoys a very large circulation in all
Foreign Markets where English goods are sold; and, as it
goes DIRECT INTO THE HANDS OF THE WHOLESALE AND RETAIL
BUYERS, it offers unique advantages to advertisers.

SPECIMEN COPIES POST FREE.

November 3, 1894.

BOARDING HOUSE FOR MISSIONARIES & OTHERS.

MISS H. G. BRITTAN, 2, Bluff, Yokohama,
will be happy to receive and accommo-
date Missionaries and others during their stay,
in Yokohama.

TERMS:—One Dollar and a Half per Day
Children under Twelve Half Price.

February 18th, 1892.

THAMES ELECTRIC & STEAM LAUNCH CO

ELECTRIC LAUNCH "GLOW-WORM," 53ft. by 7ft. 3in.

Are prepared to Estimate and Furnish Drawings
and Specifications for Launches in Wood, Steel,
Delta Metal, or Composite, either with Steam or
Electric Power—Speed from 6 to 20 miles per hour;
—also Tugs, and Stern Wheelers, which, if required,
will be prepared and constructed in Sections.

Launches of specially Light Draught constructed
for Shallow Waters.

Electric and Steam Pinnaces for Harbour or
Ferry purposes.

Builders of Electric Charging Stations, Floating
or Stationary; and makers of all required fittings
and equipments.

A selection of Electric Launches always ready
for prompt delivery, of which particulars will be
forwarded on application to

W. S. SARGEANT, M.I.M.E.,
Manager.

TWICKENHAM, ENGLAND.

YOKOHAMA: SATURDAY, JULY 20TH, 1895.

SUMMARY OF NEWS.

PAK and two other Korean refugees have reached Tokyo.

THE *Bon matsuri* was a very quiet affair in Yokohama this year.

It is stated that a Government Iron Factory will be established at Moji.

A SHORT earthquake shock was experienced in Yokohama on Wednesday evening.

CHOLERA is raging at Söul, Jinsen, and Wiju; it has been stamped out at the Pescadores.

THE authorities proposed to enforce the Admonition Law against the disorderly military coolies.

THE *Chishima-Ravenna* case is set down for hearing in H.B.M. Court for Japan, for October 14th.

THE diving and swimming competitions of the Yokohama Amateur Rowing Club took place on

Tuesday, in dull, cheerless weather. Ross, last year's winner, again pulled off the Quarter Mile Handicap.

THE closing exercises of Mrs. Draper's Blind School have led to the augmentation of its funds by \$111.75.

MR. KUSAKA YOSHIO, Governor of Fukushima, has been appointed a Resident Minister (unattached).

FORTY-SEVEN politicians of the Opposition are about to stump the country in support of the anti-Cabinet agitation.

THE half-yearly returns of the Foreign trade of Japan show an increase of 12,719,332 yen, in exports and imports.

YÜ KËNG, a Manchu, and a protégé of the Viceroy Chang Chih-tung, has been appointed Chinese Minister to Japan.

THE Hirano Cotton Spinning Co., Osaka, has declared a dividend of 20 per cent. per annum for the past half-year.

A BASEBALL naval nine met a shore team on the Cricket-ground on Monday, and came out the victors by five runs.

COUNT AND COUNTESS INOUE, left Yokohama on Sunday for Korea. They passed through the Straits of Shimonoseki on Thursday.

THE *Moji Maru*, which was lately damaged and partially sunk by the *Toyo Maru* at Shimonoseki, was floated on the 12th inst.

KAWAKAMI OTOJIRO, leader of the *soshi* actors, will leave for America in September next to inquire into theatrical matters there.

VISCOUNT MIURA, who is spoken of as the successor to Count Inoue in Korea, is expected to leave Tokyo for the peninsula in August.

A SPINNING factory with a plant of 30,000 spindles, and with its motive power supplied by water is to be started in the Hakone district.

A COMMEMORATIVE stone was placed in position at the new French Consulate on Sunday, the Russian Consul assisting at the interesting ceremony.

MR. KUSUMOTO MASATAKA, President of the Lower House, will, it is expected, be shortly made a Baron, and given a post as Court Councillor.

A VERY uninteresting game of cricket was played on the 13th inst. It was a bowler's day, one man taking seven wickets at a cost of two runs apiece.

MR. MIYOSHI GAKU, a *shizoku* of Gifu, has had the degree of doctor of philosophy (*Rigaku-hakase*) conferred on him by the Minister of Education.

THE French National Holiday on Sunday last passed off very quietly. At half-past twelve the Russian warship *Mandjur* fired a complimentary salute.

THE "Baltimore" Minstrels' Entertainment cleared \$303, which has been given to the Ladies' Benevolent Society and the Yokohama Charity Organization.

A PARTY of fifty-five physicians and nurses belonging to the Red Cross Society of Japan left the capital for Formosa on the 13th inst. to join the Imperial Guards.

MR. HANABUSA, Vice-Minister of the Imperial Household, has been appointed Chief of the Bureau of Court Auditors; Viscount Tanaka, a Court Councillor and Chief of the Bureau of

Court Auditors, succeeding him as Vice-Minister of the Imperial Household.

MAJOR-GENERAL FUKUHARA, who has been staying at Chinchow for some time, was attacked by cholera there on the 11th instant, and died the following day.

THE Grace Hawthorne Company has been attracting good houses to the Public Hall during the week. "Lady Windermere's Fan," was their best all round performance.

THE subjugation of Formosa progresses slowly, strong opposition being encountered, and the transport of troops by sea to the south of the island being rendered almost impossible by the monsoon.

THE boycott of Chinese in Yokohama has entered a new phase. Some Japanese caught dealing with the Chinese firms have been violently assaulted by the guards set to watch and prevent such proceedings.

CHOLERA now prevails in 26 different localities, but has not developed great force anywhere, owing to the strenuous efforts of the sanitary authorities. The total number of seizures up to the 17th instant was 7,305, and the number of deaths 4,376, a rate of mortality amounting to 60 per cent.

REUTER telegraphs that the British elections are going in favour of the Unionists; and that there is little excitement in the country. Sir Wm. Vernon Harcourt has been defeated at Derby; Mr. A. J. Balfour is re-elected by large majority at Manchester. Lord Knutsford, Secretary of State for the Colonies, and the Rt. Hon. H. Matthews, Q.C., Home Secretary in the last Cabinet of Lord Salisbury, have been created Viscounts, and Sir Henry James has been raised to the Peerage. Sir Richard Webster has been made Attorney-General, the post he held in Lord Salisbury's last administration. An Italian squadron of ten men-of-war has arrived at Portsmouth, where they met with a most hearty reception. The railway between Pretoria and Delagoa Bay has been opened. The correspondent of the *Standard* at Berlin positively re-affirms that the extension of the Siberian Railway through Manchuria has been definitely agreed upon.

THE usual slackness that takes place during the *Bon* festival has added its quota to the dullness of the Import trade, and Yarns and Grey Cloths have been in so little request that the business has hardly been sufficient to test prices. Fancy Cottons are neglected, but a weakening of prices for Turkey Reds has led to some small transactions. There is nothing doing in Woollens, and the trade is not likely to revive for some time. There is nothing to report in the Metal trade. The deliveries of Kerosene continue fair. A large sale of "Comet" is reported, but we cannot confirm the transaction. There is a current business in Sugar at late rates, and a fair amount of stock to work upon. Since last week, prices for Raw Silk have fallen, and some large parcels have been taken; holders being prepared to go on at current rates, and at the end of the week quite an extensive business was put through at somewhat reduced figures. Very little done in Waste Silk, holders entertaining an exaggerated idea of the value of the poor stuff forming the greater part of the stock on hand. There has been considerable activity in the Tea trade, full prices being paid, and holders still remain strong for the leaf on offer, which does not total a great amount. Exchange has been fairly steady, and rates close without much alteration.

SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The extreme sections of the Opposition are still making desperate attempts to foment agitation on the subject of the return of Liaotung. The politicians of this coterie are about to undertake a lecture tour through the Provinces of the North-East, and afterwards along the Tokaido. But this device does not seem likely to serve their purpose except, perhaps, as a means of keeping up an appearance of activity. Their organs in Tokyo continue to complain about the public's want of sympathy with their cause. The *Kokkai*, which used to be a moderate and reasonable paper, but which, under the editorship of Mr. Suyehiro Shigeyasu, is rapidly becoming an organ of the Cabinet's bitterest enemies, makes a strong appeal to the people in the provinces to render support to the Opposition politicians, who are about to engage in a death struggle with the Government in the coming session of the Diet. Our contemporary alleges that the policy proposed by these politicians has elicited most hearty sympathy among the citizens of Tokyo, but complains that no enthusiasm has thus far been manifested by the people in the country. The latter are, therefore, earnestly counselled to imitate the conduct of their fellow countrymen in the capital and extend whole-hearted support to their Representatives, for without such support the Diet will be powerless in the impending contest with the Cabinet. Appearances indicate that the provincial population is following the example of the Capital in wisely keeping aloof from the inconsiderate agitation projected by the Progressionists and their allies.

The Radical Party's positive declaration of opposition to any collision with the Cabinet on the Liaotung question, and the news that a similar attitude will be maintained by the National Unionists, have been severe blows to the Progressionists and their allies. The exasperated organs of the extremists are trying to discredit the Radicals and the National Unionists by denouncing them as tools of those in power and as traitors to the people's cause. The Radical organ, the *Jiyu Shinbun*, by way of reply to its Party's detractors, writes as follows:—"The Radical Party has decided upon a definite course of action. Formerly criticised as being extreme and violent, our Party now enjoys a reputation for moderation and practicality. Some people say that the Radical Party has lost its bones. We need scarcely reply to such an error. Our critics seem incapable of perceiving that the exigencies of the time do not permit rash and fickle conduct; neither can they understand the true nature of the policy adopted by our Party for the future development of Japan as a great Power." We may note, here that the *Jiyu* does not always write in this tone. It is eminently inconsistent and extravagant, and we are very often tempted to doubt whether it has any intimate connection with the great Party it professes to represent. The Radical leaders would do well either to effect thorough changes in the editorial staff of the *Jiyu*, or to establish an entirely new organ. There is no reason why a Party like the *Jiyu* should not be able to maintain a creditable journalistic representative.

The apprehension that their victories in China might make the Japanese overbearing in their conduct toward foreigners, has been proved to lack foundation. But it could scarcely have been expected that they could be entirely proof against the temptation to form a more or less extravagant estimate of their country's wealth and power. This tendency, though not yet very marked, offers a theme for timely warnings by the *Nichi Nichi Shinbun* and the *Nippon*. The *Nichi Nichi* remarks that the sudden prominence attained by this country as a civilized military Power, and the extravagant style in which Japan is praised and admired by the Occidental press, are calculated to be anything but beneficial to the Japanese

themselves, who may thus be induced to entertain too high an opinion of their capacities. The great noise made in Europe and America about Japan, only shows how low she had formerly been rated abroad. Her present reputation is a reaction against the extremely poor position she formerly held in the estimation of foreign nations. The Japanese are earnestly recommended to regard the empty praises of the west at their true value, and guard against the ruinous vices of pride and extravagance. The *Nichi Nichi* notes that no tendency to form a mistaken and exaggerated estimate of their country's real power is observable among the officers and men in the Army and Navy, or among those that have had any share in the control of diplomatic affairs. Such a mistake is limited to men that have had nothing to do either with fighting or with diplomacy. These persons are recommended to carefully peruse the Imperial Rescripts issued immediately after the war, in which His Majesty enjoins moderation and perseverance. Many important measures have to be carried out before Japan can truly lay claim to the position of a first class Power. To be satisfied with what she has already achieved is to remain small and comparatively insignificant.

The *Nippon* writes in a similar strain, though from a different standpoint. It seems to believe that the Government, or at least the principal members of it, are in danger of being unduly puffed up by the favourable notice given to this country in the West. The signal successes obtained by Japan have doubtless caused astonishment abroad. But that sentiment will certainly be followed by a reaction when Europeans and Americans are thoroughly awakened to the weakness of China. Moreover, the *Nippon* thinks that the praises showered upon Japan by European journals are not necessarily expression of the true opinions entertained by the writers about Japanese civilization and strength. "Are they not the Russians that say the ugliest things about our country, and do not the English papers, on the whole, show a disposition to praise and admire us? It is not difficult to perceive that international denunciation or admiration is really a matter of accident." With this enigmatical comment, the *Nippon* advises its countrymen to devote their energy to the increase of the national strength without paying the slightest attention to what outsiders may say about them.

The Korean question continues to occupy a prominent position in the columns of the metropolitan papers. Articles on this subject contain little that calls for special notice. On the whole they are a repetition of what has always been urged by the press. It is, however, worth while to summarize briefly a series of articles in the *Jiji Shimpō*. In the first of these, our contemporary deeply regrets that the Japanese in Korea are prone to be overbearing and rough towards Koreans, some of the younger bloods even offering insults to Korean Ministers of State. The *Jiji* earnestly recommends its countrymen in the peninsula to be more considerate and self-respecting in their behaviour. At the same time it urges the Japanese Government to delegate to Consuls in Korea fuller authority to deal with the *soshi* that seem to be swarming in Seoul. In a second article, the difficult situation of the Korean Government is pointed out, and compared with that existing in Japan in pre-Restoration days. Our contemporary thinks it a mistake to regard the task of Korean regeneration as hopeless, for just as Japan successfully emerged from the ordeal, Korea may finally prove herself capable of independence and progress. Patience and perseverance are strongly recommended to all concerned with the difficult task. In the third and last article, the *Jiji* discusses the importance of promoting education in Korea. While slowly but steadily assisting the Korean Government in the task of general reform, Japan should pay special attention to the question of education. There are various methods of infusing knowledge into Korean minds; such, for

instance, as the establishment of common schools, the publication of newspapers, the inauguration of public lectures, and so forth. But the most effective plan would be to send students to Japan and have them educated according to modern systems. The number of Korean students now in Japan is a little over a hundred. The *Jiji* thinks that at least a thousand should be sent here, and it recommends that they be educated at the expense of Japan. Estimating the annual expense at 200 *yen* per student, the total sum required would be only 200,000 *yen*, an amount that Japan can very well spare for the sake of her poverty-stricken neighbour. Petty as the outlay would be, its results would be large, and Japan would be more than recompensed by the strengthening of her position in Korea, politically and commercially. The *Jiji* writes very warmly about this matter.

The report that Russia and France have obtained from China promises of cessions of territory in consideration of certain diplomatic services rendered by them, has not been left unnoticed by the Japanese press. Complete credence is not attached to the story, but the metropolitan papers, strange to say, see nothing improbable in it. They declare, however, that apart from the disastrous consequences of such transactions to China herself, Japan and other Powers have an undoubted right to protest against any proceedings of the kind on the part of Russia and France. Should the intelligence prove true, the Japanese Government is urgently called upon to enter a formal protest against the fulfillment of China's promises. One journal, the *Choya Shinbun*, seems to entertain little doubt about the truth of the report. The assembling of the British fleet at Vladivostock is connected by our contemporary with a diplomatic complication said to have arisen between England and Russia in consequence of the latter's attempt to obtain a large slice of land in Kashgar. Russia, in the *Choya's* opinion, will not surrender such a prize easily, and the course of the negotiations on the subject is likely to be fraught with serious danger to the peace of the East.

The *Nippon*, the *Mainichi*, and the *Kokkai* urge the Government to be quick in suppressing the insurgents in Formosa. The *Mainichi* suggests that the Japanese troops in Formosa are not fired by the ambition that made their comrades in the north so strong—namely the desire to get to Peking. That, our contemporary thinks, accounts in a measure for the tardiness shown in the reduction of the island. The *Kokkai* directs its attention to the question of the development of Formosa's commercial and industrial resources. Much of the trade of island is in the hands of foreigners. Our contemporary believes that keen competition is inevitable between them and the Japanese, and that victory will ultimately rest with the latter. But in order to secure such a result, the *Kokkai* thinks it necessary that the Japanese should be early in the field. It urges the Government to remove the restrictions now placed upon the emigration of private individuals to Formosa.

EDITORIAL NOTES.

POLITICAL ECONOMY IN JAPAN.

Works on Political Economy were the first to be translated into Japanese after the Restoration. Japanese students of this science can now study in their own language the works of most of the leading European and American writers, especially those of England and the United States. The latest addition to the Japanese literature of Economy is a translation of the "Philosophy of Wealth," by Professor J. B. Clark, of Amherst, Mass. The translation is by Mr. Hamada Bunkichi, of the Aoyama Ei-Wa Gakko, under the general superintendence of Prof. J. O. Spencer of the same institution. The price being only 28 *sen*, this valuable work is brought within reach of every student. It has a brief but interesting sketch of the American author, and an equally interesting preface

by Mr. Taguchi Ukichi, Editor of the *Keizai Zasshi*. Mr. Taguchi welcomes the translation. He begs leave to differ from the author on a few points, especially in connection with free competition, but on the whole he regards the work in the light of an inestimable reinforcement of his own school of Economics. He is especially delighted with Professor Clark's definition of Political Economy as the science of wealth, and his criticism of the prevalent erroneous notions of the English school of writers on this subject. One of the principal complaints of Mr. Taguchi against the English economists is that they are not consistent and thorough-going in their advocacy of the doctrine of Free Trade, because they admit the necessity of protection in new countries. It is owing to this circumstance, says Mr. Taguchi, that Japanese disciples of the English writers very often turn out Protectionists of the most advanced type. A devoted advocate of Free Trade, Mr. Taguchi thinks it necessary to counteract the influence of the English school of economists in Japan.

IMPERIAL ORDINANCE.

IMPERIAL ORDINANCE No. 110, dated the 15th instant, announces that some changes have been made in the amounts of pensions attached to the Order of the Golden Kite. The following table shows the new and the old scale:—

	New Scale. Yen.	Old Scale. Yen.
First class.....	1,500.....	900
Second class.....	1,000.....	650
Third class.....	700.....	400
Fourth class.....	500.....	210
Fifth class.....	300.....	140
Sixth class.....	200.....	90
Seventh class.....	100.....	65

These changes have been made in order to preserve a due ratio between the pensions attached to this Order and those attached to the Order of the Rising Sun.

EMIGRATION AT RANDOM.

We translate the following from the *Kokumin-no-Tomo*:—

We are told by statisticians of unquestioned learning and profound research that the world is rapidly increasing in the number of those who dwell under the style of "human beings" upon its surface. If we remember correctly, it is calculated that $1\frac{1}{2}$ human beings die in each second of time, while $1\frac{3}{4}$ are born. Moreover, as sanitation is making vast and rapid progress, hygiene better understood now than ever before, and the medical science learning each year to cope more and more successfully with diseases that have hitherto decimated mankind, the average duration of human life is unquestionably growing greater. In a word, life is prolonged to an average extent unknown to history hitherto, while, as a whole, each generation is far more numerous than the last, far healthier, and far better able to struggle with the great problem of existence. Under these circumstances, as Camille Flammarion, the great French astronomer, has recently predicted, a time will come when the products of the earth as we now know them will cease to be sufficient nourishment for the teeming, seething multitudes which will encumber the earth's surface. Even now the great mammals and reptiles are fast disappearing under the masterful approach and attack of conquering man; the extinction of the fur-seal is only a question of a few years; the buffalo, once the lord of the American plains, has entirely disappeared, only a few private herds being kept in the parks of wealthy land-owners; the Australian kangaroo is doomed to speedy extinction; the elephant, greatest and most sagacious of terrestrial mammals, is on "its last legs" in Africa, where indiscriminate slaughter for the sake of ivory (the commercial demand for which is always getting larger, despite the adventitious aid of celluloid and the ivory-like fruit of certain South American trees) goes on unrestricted; the whale, the greatest and least well protected mammal of our age—which will be known as the "whale age" in the zoological history of the future—is being driven from its time-honoured haunts, and it rapidly becoming scarcer; the whole race of beautiful African antelopes is nearing an end; and so on with scores of other animals, who have paid with their lives the fact of their usefulness to man from an economic standpoint, or else the fact of their impeding the supremely selfish and wholly hard-hearted, matter-of-fact

spread of the human race. The mountains are being denuded of their forests. In the United States the relentless axe of the settler combined with vast forest conflagrations started by some unfortunate spark from his nomadic hearth, have denuded enormous tracks of territory of their once luxuriant growth of tree-life, wholly changing, in some cases, the climatic aspects of the country, and making a dry, arid soil where once was a fertile and rich earth. The stores of coal, the fossil forests of bygone ages, have been treated in a no less thoughtless manner. They have been wasted in a thousand thoughtless ways, and the race will in a few centuries more have completely exhausted this precious deposit of light and heat, necessitating the use of other, not so easily obtainable fuel. And just at this point I cannot refrain from inveighing against the indiscriminate export of coal from Japan, alien though this be to my theme. Readily obtainable wealth is always most tempting to us frail men; and so one can sympathise with the owners of local coal-mines in attempting to find—as indeed they readily do—a market for the precious black diamonds outside the borders of this Empire. But as it has been proved, time and again, that the coal deposits of Japan are by no means of enormous magnitude, and that, even under favourable circumstances, it can hardly be expected that they should last for more than a century or thereabouts, I hold that it is a most short-sighted and unpatriotic proceeding to sell Japanese coal recklessly to extra-territorial consumers. The great-grand-children of the present generation will have to rue the greed and covetousness of their progenitors if this sort of thing is permitted to go on undisturbed.

In the foregoing there is ample reason, for one thing, for the territorial greed so conspicuously characteristic of European nations. They may seek—indeed they do so seek—to cover their annexations with the cloak of civilization, alleging either that they take this or that less powerful nation because of the misrule prevalent within its borders; or because they desire to teach it civilization; or perhaps because some one more of their adventurous subjects has been maltreated within its limits and the wholly preposterous and absurdly enormous indemnity claimed is not promptly forthcoming. There is no lack of excuses when a man is determined to act according to his pleasure, be that pleasure justifiable or not; and how much more in the case of a powerful European nation, always ready to enforce its arguments with shot and shell. The process is well put in the words of an intelligent Chinaman:—"The methods employed by you foreigners," he exclaimed, "are childishly simple, they all end in one thing: territorial annexation. First some missionaries come as the pioneers of civilization. They mean well, I do not doubt, but this is the beginning of the end; for soon a consul comes to look after the missionaries; then a gunboat to look after the consul—and there you are!" But unjust as European methods in this direction certainly are—flagrant breaches of international law and the rights of the individual—they are undoubtedly dictated by the fact that the growing home-populations require broader fields and newer pastures. The policy which dictates the seizure of this or that group of islands is not so much one of duplicity as it is one of actual necessity. The overflowing millions in the home-land must find some outlet, where the struggle for existence is less fierce and competition less keen. In some cases, however, I am quite willing to admit, the greed for territory is not the result of such inevitable circumstances. The population of France, for example, is almost stationary: the growth is so slow that the Government has enacted provisions which really amount to a premium on immorality or illegitimately begotten children. A husbandless mother—of whom there are tens of thousands in the fair Republic—is certain to receive 10 francs each month for every son she begets, no matter who the father is. Her only duty is to give this son up to the military forces of the Government so soon as he arrives at the weapon-bearing age. And yet, in spite of all this, France is insatiable in her territorial greed. She will have Madagascar, regardless of the fact that her vast Cochinchina possessions are sparsely inhabited and inflict a huge annual loss on the Treasury; she would have Formosa and wrest that fair Island from its geographically and historically righteous lords, the Japanese. Russia is not one whit less culpable in this matter; if anything her methods are harsher, more tyrannical, more inexcusable. If nothing else, let Japan teach the French that she, albeit until recently flippantly called an "uncivilized nation," will never use her power to seize from the weak their proper belongings; that she will grasp no territory but that won as the guerdon of a righteous war; that in her dealings with all Eastern Asiatic nations, she means to be, and seeks to be, just.

One of the most interesting phases of Japan's modern regeneration is to be found in the sudden and surprising increase in her population. It has been often alleged that "soap and Western civilization" are absolutely poisonous to non-developed or semi-barbaric nations. It has proved true in the case of the Australian aborigines, the Tasmanians, Maoris, Hawaiians, North American Indians, and a host of other mentally retrogressive or unprogressive peoples. But as far as Japan is concerned, contact with the outer world has meant popular emancipation from shackles of galling caste and prejudice; "soap," or personal cleanliness in other words, is one of the most eminent characteristics of the Japanese. Individually as well as a race they are the cleanest of clean nations, and may well, in this respect, teach Europe and America a needed lesson. While as for what the Western world terms "civilisation," Japan has shown in the recent war with China qualities for which we might vainly seek in more than half of the haughty little kingdoms and empires of Europe. So instead of suffering from her contact with the Occident, Japan has markedly increased in strength in every direction. It follows that this Island Empire is growing slowly but surely too small in its dimensions for the numbers that dwell within its borders. There must be an outlet.

I need not here dwell on the various and mistaken attempts to colonise Hokkaido; yet I cannot refrain from making a passing reference to Lieut. Gunji's brave, though from a foreign standpoint visionary scheme, with regard to the Southernmost Kuriles (Chishima). The Japanese although they have the blood of hardy northerners in their veins, are not, in my humble opinion, constitutionally fitted for prolonged sojourn and exhausting labour in a cold climate. There is too much of the tropic in their natures to let them grow acclimatized amidst the rigours of a semi-arctic winter. Now that Formosa has become once again—for I hold, in common with certain Japanese historiographers, that the greatest of Japan's female monarchs was originally the sovereign of a certain easily definable tract in Southern Formosa—the prospects of emigration to that island are much more promising; under Japanese administration and with Japanese colonists Formosa's great potential wealth ought to make the island the most precious possession of the Crown. Yet the object of the present article is not to invite attention to the "Beautiful Island;" it is rather to show that emigration to Mexico and particularly to the great Peninsula opposite that Republic, is not consistent with either reason or even the dictates of ordinary prudence. During my last sojourn in the United States, I not only heard these matters thoroughly discussed, but had opportunities to thoroughly acquaint myself with the nature of the territory which seems to be the "happy hunting-ground" of speculators and emigration-visionaries. I refer to that great stretch of land marked on the map as "Lower California," and which on nearly every but an ordnance map, we shall find delineated as a blank space, something like certain interior parts of Africa—without rivers, mountains, or towns.

In order to treat this subject with clearness and justice, let us for a moment examine two points:—(1) the condition of Southern California from the emigrants' point of view; and (2) the condition of the Japanese now actually resident in that part of the world.

1.—It is quite true that as we travel southwards along the littoral of Southern California we come across many prosperous towns, great vineyards, and excellent pasture lands. We find the flourishing cities of Santa Barbara, Los Angeles, San Luis, and San Diego. But on advancing towards the interior we shall find, outside of a tropic and almost unbearable heat, a strange aridity of the soil—a desert bordering on a paradise. Irrigation is the first and greatest problem of settlers. With plenty of water, tens of thousands of acres that have lain waste for centuries, indeed perhaps for thousands of years, have been reclaimed and now form one of the "garden spots" of the world. But the difficulty in obtaining a sufficiency of water is vast and well-nigh insurmountable; possible indeed only to united capital of great dimensions and forming an undertaking of gigantic magnitude. Port Yuma, on the Colorado River, at the juncture of the borders of the States of California and Arizona and of Mexico, is notorious as being the hottest and most insalubrious of military posts. In its way it is the counterpart of Fort Aamca in British India—a place cursed alike by gods and men. To give a sportive example of the torrid heat of this place, a certain story is well-known in American military circles. It is narrated that a very wicked soldier once died at Fort Yuma. Of course his soul travelled at once to the infernal regions, represented as being a lake of fire. But his friends were surprised at

receiving a telegram from him from hell, begging them to send him some blankets, as the temperature in the infernal regions was incomparably colder than that of Fort Yuma! We have, then, already two very objectionable features, the lack of water and an unusually high temperature. To these should be added two other decided drawbacks, the enmity of the local settlers, and the rapacity and greed of those engaged in the sale or transfer of real-estate. That the former presents a well-nigh insurmountable obstacle—no matter what may be urged to the contrary—is the unfortunate experience of those who have chosen this part of the world as a home. For in speaking of Japanese emigrants, I do not refer to such as are going out to foreign lands under contract or with the positive assurance of a monthly stipend; true emigrants I take to be those who go to win a livelihood from the soil of their adoption; agriculturists in particular, and then craftsmen and artisans of various kinds. As agriculturists, some of the readers of this magazine may know that Japanese emigrants have proved dismal failures in California, simply because of the intense race-feeling against Mongolians, with whom, though quite unjustifiably, the Japanese are confounded by ignorant Americans. Of course, there are occupations—steady work often—open to Japanese fruit-pickers who are, on account of their steadiness and diligence, preferred even to Caucasians; but when it comes to fields tilled, sown, and reaped by Japanese hands for Japanese profit, the experiment has been proved a failure. And while I am on this subject I cannot refrain from repeating here what I have so often written in English and American journals as well as declaimed from the lecturer's stand: I cannot and do not approve of impetuous Japanese youths travelling to the United States to serve in a menial capacity, as cooks, waiters, household servants. It is inevitable that they should do this, under the circumstances; but I hold that for the majority of the Japanese in California to be menials is equivalent to giving the American people a very poor idea of Japanese society and to accustom Westerners in general to look down upon the race. There are now over 3,000 Japanese in San Francisco alone, and examination will show that by far the majority of these hard-working men are nothing better than servants. It takes years to escape from this thralldom, and while in it there is the constant likelihood of the bread-winner becoming contaminating by the evils of the low-class people with whom his lot necessarily throws him. Surely Japanese youths do not wish to rank in American esteem on the same level with Chinamen, low Irish, and starving emigrants from the petty European States! These reflections bring us to the second point; the condition of the Japanese now actually in California. In my opinion—I trust I may be mistaken, but I base it on trustworthy information as well as personal inspection—the lot of the Japanese in that state is far from enviable. There are, I am happy to acknowledge, exceptions to the general rule; but as a class the Japanese rank low. This is not as it should be! A nation which can produce a Kitasato, an Odera, or a Yamaji, should not be confounded with money-grubbing Chinamen or place-seeking Irish! Japanese students have, in several cases, left enviable records behind them in the best American scholastic institutions; they have won name and fame under adverse circumstances, and often while struggling up through the direst poverty. Then surely it must be a blow to Japanese self-esteem to find their brethren in San Francisco striving with indigent Chinese to obtain positions as servants and scullions. To me, with my intense love for Japan and admiration for her greatness, such things have always caused a sense of bitter injustice somewhere.

Leaving the State of California, let us go a step farther south, to that strange and great peninsula known as Lower California—Mexican territory indeed, but wholly Californian in general aspects. Roughly speaking the length is about 1,600 kilometres (say 650 miles), with a breadth of 150 miles at the broadest and 50 miles at the narrowest portion. The Tropic of Cancer runs through the southernmost portion. Lying between the 22 and 32 degrees of latitude, one would naturally expect to find the peninsula one of the garden spots of the world. Moreover, this expectation is strengthened by the fact that the "Gulf of California," which lies between the Peninsula and the Mexican Mainland, is filled with delightful and luxuriantly verdant little islands, a mass of tropic floral beauty that has hardly a counterpart in any quarter of the globe. Similarly if we look at the West Coast we find about midway up and close to the coast the fine island of Cerros; somewhat farther away to the north and west lies Guadalupe Island, once a noted sea-station of those Spanish galleons, half-piratical and wholly un-

scrupulous, which were, two or three centuries ago, the undisputed naval monarch of the Pacific Ocean. Despite all these pleasing indications on either side of the Peninsula, its true inland character is amply and promptly demonstrated by two fatal phenomena just beyond the Californian border. Directly Northwest of Fort Yuma, which, as already explained, lies close to the Mexican frontier and a little to the east of the border-line of the Peninsula, is a lake known as the "Great Dry Lake," whose scanty waters fail to give life to the arid ground around it. Farther north again lies another "Dry Lake," just below the 35th parallel of latitude. Here the whole country presents a mass of burnt-out water-courses, and a sparse vegetation wherein only cacti are conspicuous—a plant ever indicative of a dry and sandy subsoil with rare rainfall. These are more than sufficient hints as to what is to be expected in the peninsula. It has, indeed, never been thoroughly explored, but we know none the less that beyond the fertile fringe of the sea-coast it is an arid land, parched for water, with a tropic temperature, and wholly unfit for human habitation under present conditions. And yet this forbidding ground was, during my last sojourn in the United States, about to fall into the hands of a syndicate desirous of causing Japanese to settle there! Indeed, I was approached on the subject and offers of a favourable nature were held out if I should join in the scheme. At first, I will frankly confess, the prospect dazzled me, for I saw that I might easily do the work required. But further inquiries showed that the land was absolutely unsuited for the purpose intended; that it might serve to kill off Japan's surplus population, but never to find them new homes. I learned, too, that several fruitless attempts had been made to colonize certain portions of the peninsula, but the reports on these attempts were of the most discouraging nature. And so I would here most forcibly dissuade all intending emigrants, both now and in future, from having aught to do with "Lower California." No place in "Darkest Africa" could, in my opinion, be more forbidding and hopeless than this Peninsula. There are, of course, some few fertile tracts, but these are far between and more than damned by the proximity of waste deserts unsuited for agricultural purposes: the home of the venomous *Crotalus horridus*, the dreaded rattlesnake whose bite is death in torments. Even the Indians fear these untrodden wilds, and where they go is often wholly unsuited to people of alien blood. It is possible, though I do not think it at all probable, that some settlements of fishers on the west coast might do well; people who depend on the sea for their food, and not on the land. But even in this case it is to be feared that the absence of good drinking water would prove a fatal drawback. At any rate I sincerely hope that the experiment will not be made on the bodies of Japanese citizens, who surely deserve a better fate than that of struggling against such obstacles in a strange land. We come finally to Mexico. Here, I know, I am treading on very delicate ground. I have been in that land, but personally know very little of it. Only a few days ago, however, I was speaking to a gentleman who had resided in the Republic for a long number of years, and was gratified to learn that his decided opinion was the counterpart of mine, in a word: Mexico is not suited for Japanese emigration! It would carry me beyond the limits of the present article were I to attempt to set forth the many and weighty reasons which have led me to form this opinion; but is none the less an opinion which, after mature consideration, I see no reason to alter. Once again, I would warn against indiscriminate emigration to this part of the world! Emigration at random is a thing which never pays. If done at all it should be done systematically, and not until the further possible inquiries have been made. Is this, then, the case with Mexico? Are the founders and supporters of that Emigration Society—and among them are gentlemen whose very names are synonymous with honesty, real patriotism, and commercial energy—quite sure that the land is all that it is represented to be? Tamuli have been found on the Mexican coast containing the bones and armour of Japanese warriors of ancient times, some adventurous spirits who had either found their way across the broad Pacific or else who had been driven thither by adverse winds and the well-known current that sweeps thither, south of the Hawaiian Archipelago. There are graves enough; no one cares to see fresh tombs of Japanese in that land! I would urge a much more thorough investigation into the subject; I would urge a much better understanding of the Mexican laws, and a definite reply as to whether Japanese citizens can live there with the same amount of freedom that they have enjoyed in their own country. And if, after all, some batches of emigrants do find their way to the Mexican shores, let us, I beg,

await the result of their sojourn, of their labours, of their experience, before the irretrievable step is taken of sending large numbers of innocent people to a land of which they know practically nothing and where they will be compelled to live under surroundings wholly different from those to which they have been accustomed in Japan. Look at the disastrous result of the emigration scheme to New Caledonia! Everything was done on the part of the promoters of the scheme, both in France and Japan, to insure the safety and welfare of the emigrants. But has not disease carried off a large percentage of those who found their way thither and is the scheme not now confessedly impracticable and a huge failure? And who, pray, is responsible for the loss of life attendant upon this mistake? Who is responsible for the misery it has entailed upon several scores of Japanese citizens? The error lay in not ascertaining beforehand whether the climate and the environment would be suitable to Japanese. Has this point been ascertained with regard to the Mexican scheme? For it does not follow that where Spaniards may live Japanese can flourish also. The two peoples are entirely different. There is a variety of fever known to the medical world as the "Mexican fever," of malarial origin and almost ineradicable from the system of the sufferer. Putting other considerations aside, who is so bold as to declare that the Japanese will prove less liable to contract this wasting disease than some of their unfortunate brethren proved in the case of the deadly dysentery of New Caledonia? Are the emigrants to go to the Republic in the capacity of coolies? If not, before they make up their mind to try their fortunes in a new world, it certainly is before all things necessary to prove beyond the possibility of error or misconception that the land will be the Paradise they expect and not a yawning grave! Mexico is a beautiful country, a wilderness of fruit and flowers—but beneath that verdant coronal lurk diseases to which only the hardened, attenuated frames of the natives—those degenerate offspring of the highly civilized Aztecs and Toltecs—refuse to succumb. No; I cannot believe that Mexico will prove a substitute even for the poorest hut in Japan. In conclusion, I would add that the question of emigration to foreign lands is no longer the burning question it was last year. Formosa is now to be colonized and brought into a new era: one of a glory far eclipsing that of her ancient, honourable past. There is still something to be done in Hokkaido, if only maladministration and unscrupulous interference with or neglect of the wishes and needs of emigrants be avoided. The Pescadores are a mere fleck on the ocean, yet they can and will give occupation to the hardy Japanese fishermen of the southern provinces. Let these places be well populated first and brought under the civilizing influences of enlightened Japan. We need not trouble ourselves about Lower California, Mexico, or Peru at present!

THE "BIRKHAL" SUNK BY COLLISION.

A SERIOUS accident happened at Woosung at 6.20 p.m. on July 10th, when the steamer *Birkhall*, at anchor between the Lighthouse and the Prince's Jetty, was waiting for troops. The Chinese man-of-war *Wantai*, when getting under way on the ebb tide, with a pilot on board, took a sheer to starboard, and Captain Yung, seeing the danger, rang his engines full speed astern, but it was too late to avoid the collision, and she rammed the *Birkhall* just abaft the mainmast on the port side, sinking her in about a quarter of an hour. Fortunately nobody was drowned, but two of the *Birkhall's* crew were injured. Nobody saved anything. The *Wantai*, directly the accident happened, lowered all her boats, despatched them to the sinking vessel, and rendered all assistance possible, and great credit is due to Captain Yung, who is a stranger in these waters, for the efficient way in which he acted. The P. & O. steamer *Khedive* also rendered prompt assistance. The *Birkhall* lies in five fathoms just abreast of the Prince's Wharf. The pilot on board the *Wantai* at the time of the collision, says the *N.-C. Daily News*, was a native employed by the Nanyang squadron to pilot their vessel in and out. When he saw that a collision was inevitable, he tried to jump overboard and drown himself, and is now under arrest on board the *Wantai*. Capt. Yung, of this vessel, has only recently joined her. He was one of the American students educated at Yale University, and at the Battle of the Min in 1884, he was a lieutenant on board one of the vessels sunk by the French. When

the Captains of the Nanyang squadron resigned during the recent war, owing to it having been rumoured that their ships were to proceed north to fight the Japanese, Captain Young volunteered, and was appointed to the command of the *Wantai*. The *Birkhall*, according to *Lloyd's Register*, is an iron vessel of 1,447 tons gross and 937 net. She was built at Aberdeen in 1878 and has five bulkheads. Her dimensions are:—Length 250ft. 6in., beam 32ft. 3in. and depth 17ft. 5in. Her engines are 140 h.p. nominal.

THE JAPANESE LEGATION IN PEKIN.

THE Pekin correspondent of the *N.-C. Daily News*, writes under date of the 5th instant:—

The Japanese Minister and suite reached Pekin on Saturday evening, the 22nd of June. They were received by Mr. Cheshire of the U.S. Legation and one other resident. They paid their visit to the Tsung-li Yamén on the 25th and were well received and the Prince (Kung) and several Ministers repaid the visit at the Japanese Legation on the 27th. After paying their visits to the Tsung-li Yamén, the Japanese called round on all the Legations and also on Sir Robert Hart. The time of the Imperial audience is fixed for Sunday the 7th in the Wén-hua-tien, when the Minister and four of his suite are to be presented. The Japanese suite consists of a naval and military attaché, a native Esculapius (who speaks German), a first secretary who speaks French; the Minister himself speaks English without the slightest accent. Japan reflects great credit upon herself by such a fortunate selection—she shows to China what she should do and knowing, foreign relations and having lived in Europe the Japanese officials cannot but impress the conservative Chinese officials favourably and lead them in the path of progress. China has not yet appointed a Minister to represent her at Tokyo. He has important duties to perform, as the treaty regarding the retrocession of Liaotung is to be negotiated at Tokyo by Count Ito and the Chinese Minister, and if China has any sense of her own dignity she will appoint a man capable of carrying through unaided these and all other negotiations. The case of the Minister to Japan is somewhat different from those sent to the West. There they are ignorant of the languages and employ legal advisers and secretaries of the countries to which they are accredited and who keep them from committing mistakes. They are the eyes, ears, and mouth, hands and feet of the Minister. The Minister to Japan speaks or at least writes the language of his own country which the Japanese understand, he is usually unaided in his official deliberations; he must necessarily be placed at a great disadvantage *vis-à-vis* the Japanese Ministers, who are all practical statesmen, and he will cut but a sorry figure among his colleagues from Western countries. Among the Japanese suite are two smart young fellows who are acting as correspondents for the three native papers, the *Kokumin*, the *Nichi Nichi*, and the *Fiji*. What a lesson for China in all this!

KOBE NEWS.

KOBE requires a new cemetery. The Cemetery Committee of the Municipal Council report that the space available in the present Burial Ground will, at the existing rate of mortality, be sufficient for the next two years. Should, however, the number of foreign residents sensibly increase or any special fatality be experienced, it is quite possible that fresh provision may be required at even an earlier period. The matter is to be referred to the Japanese Authorities.

* * *

The Municipal lock-up appears, from a discussion in the Kobe Municipal Council, to be insufficient in point of accommodation and efficiency. Mr. Enslie remarked that it was attributable to the shipping particularly that they had a greatly increased number of prisoners shut up from time to time in the Municipal cells. During the last twelve months there had been 120 prisoners, and unfortunately he, as British Consul, was the largest contributor. He had committed 86. Originally the building was simply intended as a lock-up; now he suggested that the Police Committee might report at some future meeting whether it was not possible to institute some more rigorous system of supervision. The prisoners were locked up at night and released during the day-time; from 6.30 in the morning till 6 at night in winter and 7 in summer, their movements were entirely free (within the prison precincts). Thus the penalty inflicted was reduced to a minimum under these inevitable circumstances. Mr. St. John Brown was not in favour of spending Municipal money upon the gaol, and the subject dropped.

GRADUATION AT THE GAKUSHU-IN.

THE graduation exercises of the Gakushu-In (Nobles' School for Boys) took place on the 15th instant at the Akasaka Detached Palace, which was specially arranged for the purpose. The certificates were handed to the success-

ful boys by Prince Konoye, President of the institution, who also delivered an instructive address to the graduates. He was thanked by the representatives of the Higher, Middle, and Preparatory Courses. A cold collation was then served to the guests, among whom were H.I.H. Prince Kanin Kotohito, Count Saigo, Minister, and Rear-Admiral Ito, Vice-Minister of the Navy; Vice-Admiral Ito, Chief of the Bureau of Naval Command; Lieut.-General Yamaji, Commander-in-Chief of the First Army Division; Mr. Makino, Vice-Minister of Education; Count Higashikuze, Vice-President of the Privy Council; Viscount Soga, Mr. Hanabusa, Vice-Minister of the Imperial Household; Mr. Hamao, President of the Imperial University; Mr. Kiba, Chief of the Bureau of General School Affairs; Prince Tokugawa, Marquises Daigo and Soga, and others.

DEPARTURE OF COUNT INOUE.

THE Japanese Minister to Korea and Countess Inoue left Shinagawa at 6.25 a.m. yesterday. Amongst those who assembled at the station to bid them farewell, were Viscount Enomoto, Count Matsukata, Marquis Saionji, Viscount Sugi, Mr. Hanabusa, Mr. Ito Miyoji, Mr. Suyematsu Kencho, Mr. Okuda, Chief Secretary of the House of Representatives; the Vice-Ministers of Foreign Affairs, Army, Navy, Finance, Justice, Home Affairs, Communications, and Agriculture and Commerce, and many other leading officials of various Departments. Counts Ito, Yamagata, Kuroda, and Saigo, Viscount Nomura, Lieut.-General Miura, and a few others accompanied them to Yokohama, where they went on board the M.M. steamer *Yarra*.

MR. HUBBARD.

HERE is a column from the *Nashville Banner* that may be re-published without comment:—

So eloquent and so well-known a man as ex-Minister Hubbard, lecturing on so interesting a subject as Japan, should have had a larger audience at the Tabernacle last night, but for some undefined reason the Nashville public did not exhibit its usual appreciation of such an entertainment, and those who had the pleasure and profit of listening to the distinguished Texan were few in number.

The lecturer has an exceptionally fine voice, and he bore out fully the generous reputation for command of language and a rare gift of humour that has long distinguished him in his own State, and exhibitions of which have occasionally been vouchsafed the outer world.

Ex-Gov. Hubbard presided over the Democratic National Convention which nominated Mr. Cleveland for the presidency in 1884 as its temporary Chairman, and he was afterwards remembered by the President in the bestowal of the Japan mission. In his lecture last night he described the voyage to Japan, the midnight wreck on the coast of that country which the ship conveying the Minister suffered, the prompt rescue by the very efficient Japanese life-saving-service and the cordial and hospital welcome that was accorded the rescued. He dwelt on the fact that the people of Japan have an affectionate esteem for the United States. The perennial verdure of Japan, its brilliant and multifarious flora, which the frost, strangely, does not destroy, and the happy effects produced by the artistic and beauty-loving motives of its people were well described.

Minister Hubbard's official position brought him into a close relation with the Court and the prominent men of Japan whose fame had reached the outside during the recent war with China, and he gave some interesting character sketches of these interesting personages, including the young Emperor. He made some very humorous touches in describing the earthquakes they have in Japan.

A strong plea was made for closer commercial relations with Japan and the necessity of completing the Nicaragua Canal with that end in view. Japan in the future, he said, will buy a large portion of the cotton crop produced in the South. Since Japan's conquest of China thousands of miles of railroads will be built in the latter country, and all the steel and iron for the purpose would be furnished from America if the Nicaragua Canal were in operation.

The lecturer was quite severe in his criticism of those European powers whose intervention robbed Japan of the full fruits of her conquest of China.

* * * * *

The following communication was handed to the *Banner* to-day by a missionary to Japan:—

It is most gratifying to all interested in the expansion of our trade with the Orient that ex-Gov. Hubbard, former United States Minister to Japan, is now delivering his lectures in the principal cities of our country.

His residence in the far East, his high position as the representative of our government, the friendly confidence and high respect won from the leading

statesmen of the new Japan, all qualify him to speak as an authority upon the important question of our future commercial relations with Japan and China. I would that every Chamber of Commerce and Board of Trade through this Southland could hear him upon the Nicaraguan Canal. He advocates the broad policy of international Christian comity and close commercial alliance with Japan.

He sees clearly that Japan and China must have cotton, iron, and steel, and that we are naturally in position to furnish these products. Our languishing cotton business would find an almost unlimited market if only that canal were cut through, placing all our South Atlantic and Gulf ports in direct connection with the Orient. As it now is, we are, playing second fiddle to England and other European powers. To all personally acquainted with ex-Gov. Hubbard it is no surprise that he should have made so efficient and popular a Minister of the American government at the Court of Japan, or won the universal respect of his own people.

THE "NEW YORK TRIBUNE" AND THE WAR.

THE *New York Tribune* is exceedingly complimentary to Japan, as witness the following article:—

The world learned several new lessons in warfare from the recent struggle between Japan and China, and now the settlement of peace is equally instructive. Not in the memory of man has any other conquering Power imposed such terms upon its fallen foe. The rule has been that "to the victor belong the spoils," and usually the spoils have been taken in a manner calculated to humiliate the beaten nation as much as possible. Germany insisted upon marching her victorious legions through the streets of Paris, and crowned her Emperor in the Hall of Mirrors at Versailles. France showed no generosity to Siam. Russia simply swallowed Turkestan, and would have done the same thing with Turkey had not England interfered. And as for England, a successful war means conquest and annexation every time. Japan, too, might have followed the same stern course. There was nothing to prevent her from taking Pekin and dictating terms of peace within the innermost precincts of the Forbidden City. Instead, she called a halt to her armies, and held upon her own soil the council for peace; and the whole tone of the negotiations was that of a conference between equals, instead of between victor and vanquished.

The terms of peace are, of course, favourable to Japan. But in no respect are they unduly humiliating to China; and they secure—apart, of course, from the indemnity and the cession of Formosa—no advantages for Japan which are not also freely extended to all the world. Korea must be independent; that is an international gain. China must relax some of her barbarous laws toward all foreigners as well as Japanese. China must open her harbours and rivers to the commerce not of Japan alone but of the world. China must permit the introduction of machinery, not merely from the shops of Japan, but from those of England and Germany and America as well. Japan, in brief, has simply done what for many years the European Powers have wanted to do, but have been too jealous of each other to do, she has "opened" China. But she has done so not as England or Germany or Russia would have done, for exclusive selfish gain, but for the common gain of the whole world.

In taking Formosa and some minor islands for her own she has, of course, effected some important self-aggrandizement. But she has taken lands which geographically form a natural part of her Empire, and over which China's authority has been little more than nominal. The report that she will make Formosa autonomous is, if true, exceedingly interesting. That is not the way in which a conquered province is usually disposed of. A military dictatorship or a Crown colony system would seem more in order. But in this, as well as in the rest of the case, Japan sets a new example to the world. It may be that through her extraordinary political genius she will be able to make that savage and anarchic island peacefully self-governing, as she has within a few years transformed her own ancient despotism into a free representative government. She has done so many extraordinary things that it will not do to pronounce even this impossible.

But what a spectacle it all is! A few years ago, actually down to twelve months back, the European Powers were looking patronizingly upon Japan as an inferior nation existing only upon their sufferance, to be "worked" for their profit, and one day entirely disposed of as they pleased. Now, Japan takes rank as a first-class Power, and they must form a triple or quadruple league of self-defence against her, lest she take it in hand to dispose as she pleases of their Asian interests. It is the most striking example of the revivification of dead bones the world has ever seen.

A MYSTERIOUS AFFAIR.

WHILE the *Kohai-go*, formerly the *Kwang-ping*, now at Kure, was making a trial run along the coast of Kiushu on the 1st inst. an explosion of gunpowder took place in the furnace room. Seven persons were severely burnt, of whom five died the same day, and the other two are not expected to recover. The explosion originated among the coal in which the Chinese are supposed to have concealed some powder before the ship was handed over to the Japanese.

U.S.S. "BALTIMORE" MINSTRELS.

THE enjoyable and successful entertainment given by the "Baltimore" Minstrels in the Public Hall on the 8th inst., resulted in a net profit of \$303, which has been most generously handed over by Mr. Charles Goss, the energetic Secretary of the Minstrels, to the Rev. E.

Champneys Irwine for equal distribution between the Ladies' Benevolent Association and the Yokohama Charity Organization. The Committees of the Ladies' Benevolent Association and of the Yokohama Charity Organization now desire to express their cordial thanks to the U.S.S. *Baltimore* for this handsome addition to their funds, and for the kindly and spontaneous interest evinced by the U.S. Flagship in the relief of suffering and distress in the port.

A NON-CHRISTIAN STATE.

HERE is a passage affording much matter for thought. We take it from a review of Mr. H. Norman's latest work, "Problems of the Far East," the reviewer being the Honorable Reginald Brett, and the medium of publication, the *Contemporary Review*:—

Hitherto civilisation and Christianity have been held to be synonymous terms in the political vocabulary of Western Europeans, and although the Turks were at one time a military danger to Europe, and at all times a military force of some magnitude, they have never been admitted into the inner circle of civilised Christian States. For the first time since the reign of Charlemagne the Christian nations of Europe are beholding the rise of a powerful State that is, at the same time, highly civilised and not Christian. Side by side with the decay of Christian faith in England, in France, and in Germany, it is a portent full of significance. Those who amuse themselves by finding special characteristics in the arbitrary division of time into centuries, and who have faith in Christianity as a living force, may well look forward to the twentieth century with anxiety and alarm. Possibly Christ as a civilising missionary may have fulfilled his predestined work in the history of human development. It is certain, as Mr. Norman points out, that in Asia a nation has arisen most highly civilised, powerful as a fighting force, and morally the equal of European States, with noble ideals that are not Christian ideals, and governed by sentiments and conceptions that have little in common with those of the New or even the Old Testament. In Howell's "State Trials" Lord Coke laid down as an axiom of law that, "if a king come to a Christian kingdom by conquest, he may at his pleasure alter and change the laws of that kingdom," but "if a Christian king should conquer a kingdom of an infidel, and bring them under his subjection, then *ipso facto* the laws of the infidel are abrogated, for that they be not only against Christianity, but against the law of God and of Nature contained in the Decalogue." It is useless to endeavour to imagine the state of Lord Coke's mind had he been confronted with Mr. Norman's description of this infidel race of Japanese governed by "laws which will bear comparison with any in existence."

THE MINING FATALITY.

DETAILS of the terrible accident that took place at the Komatsu coal mine at Yugetamura, Tagawa-gun, Fukuoka Prefecture, on the 9th inst., show that the mine is owned by Mr. Katayama Itsuta, of Yugeta, and from sixty to seventy workmen were daily employed in mining coal. The accident occurred shortly before noon, and out of a little over sixty men, who were then working in the mine, forty-nine were buried beneath the *débris*. The recent persistent rains are said to have been the cause of the collapse of the roof. The extent of the land that fell in was very great, and the water poured through the breach so quickly that no means were available to rescue the imprisoned miners. It is stated that it will require forty days to pump the water from the mine, and sixty days to remove the *débris*. The loss caused by the accident is estimated at yen 80,000.

THE "YEBISU BEER" COMPANY.

THE half-yearly general meeting of shareholders of the Japan Beer Brewing Co., Tokyo, took place on the 13th inst. The receipts during the first half of this year amounted to yen 141,701.121, and the expenses to yen 118,707.715, leaving a profit of yen 22,993.406, to which yen 3,048,094 brought over from the previous account was added, making a total of yen 26,041.500. Yen 5,240 was deducted for the payment of expenses defrayed in starting the company, yen 1,300 added to the reserve fund, yen 3,900 voted as remuneration to officers, and yen 13,650 distributed among the shareholders as a dividend at the rate of 13 per cent. per annum, yen 1,951.500 being carried forward to the new account. The shareholders have agreed to add yen 300,000 to the capital.

FIRST CLASS MEDAL AWARDED.

IT is gratifying to learn that a first-class medal has been awarded at the Kyoto Exhibition for an article manufactured in Yokohama, namely, "Kirin Beer." This is not the first time, however, that the local company has scored in the

matter of awards, for beside the *Fiji Shimpō* medal, one was awarded at the Tokyo Exhibition for the excellence of the "Kirin" brew.

SIR WILLIAM HARCOURT'S DEFEAT.

AT the last general elections Mr. Thomas Roe and Sir William Harcourt were returned for Derby by a majority of over 1,700 votes, and in the bye-election of August 24th, 1892, after taking office, Sir Wm. Vernon Harcourt was re-elected by a majority of nearly 5,000 votes. Mr. Balfour's majority at the last election was barely 400.

A STRANGE DISCOVERY.

IT is stated in the *Kokkai*, that a report reached the Office of Command in the First Army Division, from Shimonoseki on the 13th inst., to the effect that two men-of-war, one torpedo-boat and one transport have been discovered stranded in an unfrequented bay in the neighbourhood of Yingkow, and that the remains of over forty Chinese were on board the ships.

ARRIVAL OF PAK IN TOKYO.

THE three Korean refugees, Pak, Shin O-ki, and Li Kei-kan, arrived at Shinagawa on Thursday by a train which reached there at 4.52 p.m. The were accompanied by Messrs. Sasa Tomofusa and Shiba Shiro, who proceeded to Shimonoseki to receive the party. The Koreans put up at the residence of Mr. Fukuzawa at Mita.

LIGHTING THE COASTS.

AMONG the lighthouses to be erected during the present year, towers and machinery for Sado, Himezaki, Sakatajima in Ugo Province, and Sakawa in Hoki Province, have been completed at the Government factory in Yokohama, and will be forwarded to their respective sites at no distant date.

SCHEME OF RELIEF FOR THE DISTRESSED FAMILIES OF THOSE KILLED IN WAR.

THE following subscriptions have been received:

Mr. E. Dunn.....\$25.00	Captain Brinkley \$10.00
Mr. G. Lowther.. 20.00	Mr. J. Conder ... 5.00
Captain Munter.. 10.00	Mr. A. Macmillan 5.00
Mr. W. H. Stone 10.00	Mr. C. Giussani.. 10.00

MRS. DRAPER'S BLIND SCHOOL.

MRS. DRAPER begs to tender her thanks to those interested in the welfare of her School for the Blind for their assistance, and to inform them that the collection at its closing exercises and subsequent gifts amounted to 111.75 yen.

THE "CHISHIMA"—"RAVENNA" CASE.

THE hearing of this case in H.B.M. Court has been set down for the 14th of October next.

COUNT INOUE AT KOBE.

Count and Countess Inoue reached Kobe on the 15th instant at 9 a.m. Landing immediately, they proceeded to the villa of Mr. Fujita at Suwayama. They were met at the wharf by a large number of distinguished persons, including the new Korean Minister to Japan, Mr. Ko Eiki. Among the visitors on the 15th, may be mentioned Viscount Shinagawa, Governor Su, the Korean Minister, Governor Kinoshita, of Yamanashi, and a number of the leading merchants of Osaka. The Countess being indisposed, Dr. Yoshida of Osaka was sent for, but her case does not seem to have been at all serious, for the doctor did not think it necessary to advise her to postpone her journey to Korea. The Count and Countess left Kobe by the *Yokohama Maru* on the morning of the 16th. The party received an increment in Kobe in the persons of Baron Kikkawa, Major Watanabe, and Mr. Kamada Eikichi of the Keiwo Gijuku. Baron Kikkawa and Mr. Kamada are going to Korea in a private capacity, but Major Watanabe is charged with official business. While at Kobe, Count Inoue is stated to have been called on by Sai Chinkan, former Korean Police Chief of Ninsen, who has fled from his country in connection with the Pak incident. But the Count refused to see him. The *Yokohama* reached Shimonoseki on the morning of the 17th, and left there for Ninsen at 3 p.m. the same day.

JUSTICE AND ITS EXPONENTS.

Here is a paragraph originally published in a Kobe journal, and reproduced in Yokohama, as are all paragraphs, without exception, that tend to injure Japan's reputation:—

As the *Mail* has been pleased to place on record its confidence that their Lordships of the Privy Council have taken care "to guard against the possibility of the opinions expressed by the Judges in Shanghai being elevated hereafter to the rank of precedents," it may not be out of place to express the hope that note has been taken of the flagrant injustice of the position in which the P. and O. S. N. Company is placed by being arbitrarily precluded by Japanese law from prosecuting the Government for the loss sustained, as the Company contends, by the wrongful act of the Government's servants who were navigating the *Chishima Kan* at the time of the collision. The Government is competent to prosecute the Peninsular and Oriental Company, but it takes care by laws of its own creation to place itself beyond the reach of litigation directed against itself. It is able to strike, but it takes good care to hide itself behind its own laws when an attempt is made to strike back. This may be law—Japanese law;—it is not justice.

The writer of the above paragraph will perhaps be surprised to learn that the law against which he so vehemently inveighs is precisely the same in England as in Japan. In neither country can the Sovereign—otherwise the Government—be sued in his own Courts for the wrongful act of his subjects. Hence, if the Peninsular and Oriental Company be the victims of an injustice because they are precluded from bringing an action against the Japanese Government in Japan for the wrongful act of a Japanese man-of-war, equally would the Nippon Yusen Kaisha, for example, be the victims of a precisely similar injustice did they seek to obtain redress in an English Court for the running down of one of their steamers by a British man-of-war.

But, in point of fact, the alleged injustice is purely a figment of the paragraphist's imagination. There is in reality no injustice at all. The Peninsular and Oriental Company can not lay their action against the Japanese Government, any more than the Nippon Yusen Kaisha could lay theirs against the British Government. But each alike can sue the officer in command of the man-of-war. It is merely a question of procedure. So much for "the flagrant injustice of the position in which the Peninsular and Oriental Company is placed."

Another singular contention advanced in connection with the *Chishima-Ravenna* case is that the Peninsular and Oriental Company is placed at a great disadvantage by not being allowed to bring its counter-claim in a British Court, since the maritime law administered by Japanese tribunals, before which the counter-claim would have to be preferred, is German law. Now, inasmuch as English law and German law differ not a whit in respect of condemning a ship convicted of faulty navigation to make good the damage inflicted by it upon another ship in a collision, the critics must refer to the case where both ships are proved to be in fault. Let us, then, reduce the "disadvantage" to arithmetic. According to English law, when each ship is found to have been in fault, the damages suffered by both are lumped, and each is condemned to pay a moiety. According to German law, each ship in a similar case pays its own damages. In the present instance the Japanese Government claim \$850,000 for the loss of the *Chishima*, and the Peninsular and Oriental Company claim \$100,000 for injury suffered by the *Ravenna*. Hence, in a British Court, supposing that both ships were adjudged to have committed an error of navigation, the Peninsular and Oriental Company would have to pay \$475,000, whereas in a Japanese Court, under similar circumstances, they would not be required to pay anything at all. We do not know that the law administered by Japanese maritime Courts is German law, but supposing that it is, the disadvantage suffered by the Peninsular and Oriental Company in consequence, does not present itself very clearly.

THE *Pingsuey*, with the first Hankow teas, has arrived home after a passage of 35 days 14 hours from Woosung. The *Moyune's* best record was 35 days in 1893.

KOREAN NEWS.

The latest letters from Japanese correspondents in Sōul contain some interesting references to the condition of affairs just before the flight of Pak and his friends. It appears that Pak's position had been growing more and more isolated. The Queen is reported to have recently addressed a note to the Russian Minister asking his assistance in her project of dismissing Pak from the Cabinet and counteracting Japanese influence. The *Kokumin Shimbun's* correspondent states that Mr. Waeber one evening called at the Japanese Legation and showed the Queen's letter to Mr. Sugimura, the Japanese *Chargé d'Affaires*. This story is inherently incredible, but it is narrated by some other correspondents also. Whatever may be the truth of the report, it seems to have been widely circulated in Sōul, and was no doubt brought to the notice of Pak and his partisans. Not the Queen alone was antagonistic to Pak; he is said to have gradually lost the sympathy of many of his colleagues also. The party opposed to him is composed of various elements. Some are genuine followers of the Queen, others are hostile to him on the ground of his partiality for Japan, and others have turned against him because of being disappointed in their schemes of personal ambition. Diverse as their motives are, these opponents of Pak naturally look up to the Queen as their leader. Under such circumstances, Pak seems to have thought it necessary to take some decisive measures to recover his lost prestige and influence.

Concerning the foreign Representatives in Sōul, the Japanese correspondents state that those of England and America are on the whole neutral, but that the latter sometimes shows a tendency to coöperate with the Russian Minister, probably not because he is unfriendly to Japan, but because he is anxious to protect the interests of his nationals in Sōul.

The *Yomiuri Shimbun's* correspondent mentions the names of the Japanese in the service of the Korean Government. They are more than forty in all. They are distributed as follows:—Cabinet, Mr. Ishizuka Eizo, with three assistants; Department of Home Affairs, Messrs Saito Shuichiro and Oba Kanichi, with five assistants; the Department of Finance, Mr. Nio Koreshige, with seven assistants; Department of Education, three Instructors with three assistants; Department of Agriculture and Commerce, Messrs Yamada Yukisuke and Hasegawa Yoshinosuke, with four assistants; Department of War, Lieut.-Colonel Kusunose and Mr. Okamoto Ryunosuke with five assistants; Department of Justice, Mr. Hoshi Toru, with five assistants; Household Department, Mr. Okamoto Ryunosuke; and the Metropolitan Police Office, Mr. Takehisa Kokuzo with one assistant. It is stated that a strong desire prevails among the partisans of the Queen to dismiss the Japanese advisers and employ in their stead Europeans and Americans.

The *Yomiuri Shimbun's* correspondent states that negotiations for the opening of the ports of Chin-nam-pho, in Phýong-an-do, and Mokpho, in Chól-la-do, for foreign trade are on the point of being brought to a satisfactory issue, and that some Europeans or Americans are already taking steps to purchase land in those places. The Japanese merchants at Fusan are opposed to the opening at Mokpho, for much of the trade at present passing through their hands will be diverted to the new port. They held meetings at the Chamber of Commerce, and, in its name, invited the coöperation of their countrymen at Ninsen in making a protest against the proposed opening of the new port. But the Japanese merchants in Ninsen declined to join in the protest, on the ground that the opening of Mokpho, though it may injuriously affect individual interests, is calculated to promote the trade between Korea and their own country.

Mr. Eduard Chiossone is now at Sōul, having been invited by the Korean Government to superintend the establishment of a printing bureau, but Ministerial changes and scarcity of money are said to make it probable that the enterprise will not be undertaken for some time.

The circumstances connected with the recent Pak incident are thus narrated by the *Jiji Shimpō's* correspondent:—Sasaki Tomezo, a Japanese *soshi*, was intimate with Sai Koyeki, a dependent of the ex-Minister of Home Affairs. A few days previous to the latter's flight, Sasaki visited his friend Sai, who was then engaged with two other guests. Sasaki, thinking that these Koreans were all dependents of Pak, at once commenced with them a written conversation on all sorts of topics in the most unreserved manner. In the course of the conversation, he told the Koreans in a joking way that their chief Pak was plotting deadly treason against the Queen; that his application for the service of a company of Japanese soldiers having been peremptorily refused by Mr. Sugimura, the Japanese *Chargé d'Affaires*, he was then in the act of collecting a number of Japanese *soshi*, and that a great event was sure to happen in a few days. Sai being an indifferent student of Chinese, could not thoroughly understand what Sasaki had written down, but the two other Koreans were better educated, and not appreciating that they were deceived by the Japanese youth, the news caused them profound surprise. As soon as Sasaki had taken his leave, they asked for the scrip and hastily went away together. They showed the paper to Shin Seiki and Shin Kijin, both high functionaries of State, who ridiculed the idea of treason by Pak and paid no serious attention to the matter. But the two detectives, for such seems to have been their position, next called on Chin Shohun, and he, being a person of weak judgment at once believed the story and hastened to the Palace to represent the matter to the King and Queen. This was on the afternoon of the 6th instant. The detectives had already carried the information to Kim Koshu, ex-Minister President of State, who at once sent a note to Chin, informing him of the alleged plot. This note reached Chin during an audience with the King, and the exact coincidence of the two reports, one coming direct from the detectives and the other from Kim, was considered conclusive. A Cabinet Council was hastily summoned. It was attended by Kim Koshu, Yu Kitsuei, and a few other influential men, in addition to the ministers. The conference lasted 12 hours, from 4 p.m. on the 7th to 4 a.m. the following day. Li In-yo, Police Superintendent, was required to attend the Palace, but did not obey the mandate though it was repeated five times. Ultimately he concealed himself. An Keiju, Vice-Minister of Finance, was then sent for. He, too, hesitated to obey, evidently suspecting that something has gone wrong. But at last he took courage and attended the Court, when, contrary to his apprehensions, he was appointed by the King himself to be Police Superintendent and ordered to proceed to Pak's mansion to secure his person. On the evening of the 6th, the Palace being then in great confusion, Pak was dining with Mr. Saito Shuichiro, Adviser to the Cabinet, at the latter's residence. He went home at 10, and soon retired to bed, entirely unconscious of the danger impending. But he had not been long in bed, when news of the commotion reached him. He at once decided to fly, and hastily arranging his domestic affairs, clothed himself in a European costume and left the city on horseback. He was just in time, for soon after his departure, his house was surrounded by a strong force of constables under Police-Superintendent An. The disappointed police then went to the Japanese Legation and inquired if Pak had not come there. While these fruitless inquiries were proceeding in the capital, Pak rode to Yong-san, where he immediately took a steam-launch to Inchhōn (Ninsen). At Inchhōn, a number of Korean constables were watching on the wharf when the steam-launch carrying Pak slowly entered the port. The fugitives had no alternative but to face the danger. They boldly landed under the very noses of the police, who are said to have withdrawn to a distance and suffered them to pass.

Accepting the advice of Kim Koshu, the King issued a proclamation on the 7th instant, announcing the detection of a treasonable plot by Pak, Minister of Home Affairs, and declaring that, with the exception of the arch-traitor, no

other person should be prosecuted. The Japanese correspondents are not sure about the political situation of Kim Koshu, Yu Kitsuei, and others who have now the direction of affairs in their hands, but they believe that these officials are not in league with the Queen. On the contrary, the so-called European language party—namely those opposed to the ascendancy of Japanese influence and consequently in sympathy with the Queen—are stated to be taking steps to subvert the influence of Kum, Yu, and others. These statesmen through not on good terms with the fallen Minister of Home Affairs, are still genuinely devoted to the cause of progress and reform, and are by no means willing to become subservient to the Queen. They are said to have endeavoured to recall the Tai Wōn-kun to power with the view of restraining the Queen. The ex-Regent, however, refused to stir except on condition that his grandson, now undergoing penal sentence, were pardoned, and the Cabinet seem to have been unwilling to agree to that proposal.

Pak's family are said to be hiding in the house of a friend. The Government do not apparently contemplate recourse to the barbarous practice of punishing a whole family for the crime of one its members.

The Koreans are circulating various absurd rumours about the incident. They allege, for its example, that Japan instigated Pak to the murderous plot, and that Japanese troops protected him in his flight. In point of fact, a company of Japanese troops stationed in Sōul was marched to Yong-san on the very morning of Pak's escape from the capital. But the *Jiji's* correspondent explains that these troops marched out for the purpose of manoeuvres and that their movements had no connection whatever with Pak.

The *Kokumin Shimbun's* correspondent states that on the evening of the 6th, the Korean Government addressed a note to the Russian and American Ministers, announcing the intended arrest of Pak and asking for the landing of marines in case of emergency. The Korean Minister of Foreign Affairs is reported to have called at the Japanese Legation and requested Mr. Sugimura to afford no protection to Pak, should he apply for it.

THE WEATHER.

The present extraordinary cool weather is attracting much attention. The *Kokumin Shimbun* publishes the following figures showing the average temperatures of the four days from the 10th to 13th of July, during the past six years:—

Year.	July 10th.	July 11th.	July 12th.	July 13th.
1890	19.8	22.2	24.3	25.8
1891	23.1	25.7	27.7	28.0
1892	25.3	26.3	26.2	26.5
1893	24.9	26.9	27.3	26.1
1894	26.4	26.5	25.9	25.9
1895	22.6	21.6	19.7	19.3

According to investigations made at the Central Meteorological Observatory, the maximum and minimum temperatures for the first ten days of July during the past 18 years were from 26 to 29 degrees (C.), and from 19 to 20 degrees, respectively. The corresponding figures for this year are stated to be 18 degrees and 15.5 degrees. The highest temperature registered this year was 32.5 degrees (C.), on the 20th of June. As to the cause of the present remarkable coolness, the *Kokumin*, on the authority of the Meteorological Observatory, says that it is attributable partly to rain and partly to low atmospheric pressure in the south of Japan. The centre of low pressure shifted at one time from Kagoshima to somewhere off the coast of Wakayama, but returned to the vicinity of Kagoshima, where it now remains. It must be confessed that such an explanation conveys very little information. But with regard to abnormal natural phenomena, the most that our savants can tell us, as a rule, is that they are abnormal. We fear that each of these unseasonable days inflicts a loss of many millions on the rice-farmers of Japan.

FORMOSA NEWS.

No report has yet been published as to the movements of the Second Brigade of the Imperial Guards detailed for operations in the south of Formosa. It is known that the Brigade was at Kelung on the 26th of last month, and the inference is that it left that place without delay by transports for the south. This force, about 6,000, is not considered strong enough for the speedy subjugation of the insurgents in the south. Consequently, another mixed brigade, about 3,000 strong, formed out of the troops of the Second (Sendai) Division now stationed in the Chinchow peninsula, has been shipped for Formosa. A letter from the *Nichi Nichi Shimbun's* correspondent, dated Taipeh, June 30th, says that some transports were to leave Tamsui for the south on July 1st. We therefore conclude that the operations in the south must have been vigorously commenced by this time, and that a definite report may be looked for in a few days.

The *Nichi Nichi Shimbun's* correspondent, Mr. Ishizuka, has written a number of very interesting letters describing the movements of the Regiment sent to attack the insurgents at Sin-chuh. He makes frequent allusions to a Mr. Davidson, described as the correspondent of the *New York Herald*, who accompanied the expedition. We reproduce the gist of these letters. At 3 a.m. on June 19th a detachment, consisting of a battalion of the 2nd Regiment and two companies, Engineers and Artillery, assembled outside the north-gate of Taipeh, whence an advance was made southward, toward Sin-chuh, along the railway. Sin-chuh is a small walled town about 50 miles south of Taipeh. The first day's march was entirely uneventful, the people along the road being peaceful and well affected towards their new masters. The detachment rested that night at a place about 16 miles from Taipeh. The road lay between well cultivated rice fields and among mountains covered with bamboo groves.

The march was resumed on the 20th at 5 a.m. and the troops passed that night at Tiongleck, in a district peopled by colonists from Canton, whose customs and manners are said to differ in many respects from those of other localities in Formosa. While the principal part of the detachment halted, reconnoitering parties of cavalry were despatched in different directions. From their reports it was ascertained that a body of insurgents was stationed to the south-west.

On the 21st, the vanguard of the detachment moved out of Tiongleck along the railway at a little past 5 a.m. At several places, sleepers had been removed and large holes dug in the road by the insurgents to obstruct the progress of the Japanese. A few miles from the halting place of the preceding night, a skirmish took place between the mounted scouts and a party of insurgents, but the former being quickly supported by a company of infantry, the insurgents were put to flight after a fight of about half an hour. There was a Buddhist temple in a village near the scene of this struggle. A board over the gate showed that the temple had served as a branch office of the Chinese volunteers. All the houses in the village had been deserted by their occupants, who no doubt belonged to the volunteer corps. In many of the houses were found rifles, ammunition, and other weapons of war. At this place, the detachment was divided into three columns, one to proceed along the railway, and the two others along the table lands on the right and left. At a short distance from the village, a party of insurgents appeared on a hill in front of the advancing columns of the Japanese, and at once began to pour down showers of bullets. The Japanese troops, however, being about 1,000 metres from the enemy, did not reply but sat down to lunch behind the embankments of the railway. Meanwhile, a party of artillery planted a battery of mountain-pieces and a few well aimed shells completely dispersed the insurgents. The next village was reached at 8 p.m. It had already been deserted by the insurgents, but parties of the latter being observed in the neighbouring villages, the troops encamped in

the open air on a table-land to the left of the railway station. There a report was received that a force of the enemy was encamped in a village nearer to the sea shore, and a small detachment of some 60 men was sent to disperse them. The insurgents, however, defended themselves so stoutly that they could not be dislodged from the village until the following morning, the fighting being kept up during the whole night.

On the 22nd, the troops left their encampment at 4.40 a.m. The advance guard soon came into collision with the insurgents, who fired from behind the thick groves. Being quickly expelled from their position they again collected on the top of a hill to the south-east, where they appeared to receive constant reinforcements, and, opening fire, gave every indication of making a resolute stand. A few rounds from machine guns proved too much for them, however, and they were put to flight without much difficulty. On reaching Sin-chuh, the subjective point of the expedition, the Japanese found the gates all closed, but they were disappointed by the absence of any enemy. The walls were scaled and the gates opened with out much difficulty. Masses of stones had been collected inside of the gates to prevent their being pushed open. The houses were all closed and the inhabitants kept carefully out of sight. A thorough search of every house was afterwards made, and more than 10 soldiers hiding indoors were made prisoners. The town of Sin-chuh thus came into complete possession of the Japanese at 11.45 a.m. The greater part of the insurgents had left the place for Tainan on the preceding day, under the command of Wu. About two battalions, however, under the well known land-owner Lin, remained there till about 11 o'clock that morning, when, hearing of the approach of the Japanese, they fled in great confusion. The expedition had thus far cost the Japanese 11 men, of whom 8 were killed.

But although Sin-chuh was occupied without resistance, the insurgents made repeated attempts to recover possession of it. On the 25th at 10.50 a.m. a party of insurgents about 500 or 700 strong appeared on the heights to the south-west of the western gate, and opened fire upon an outpost. It is stated that three of the insurgent officers were on horse-back and had umbrellas. The little band of Japanese soldiers reinforced by 30 men, bravely held their ground against the enemy until a company of Infantry and a party of Artillery with guns came up to relieve them. In a short time, mountain pieces were also placed in position, and these, together with the machine guns, made things too hot for the insurgents. Instead of beating a retreat, however, they simply took up positions screened from bullets, so that a party of Infantry had to be ordered to dislodge them. The insurgents, seeing this move, boldly came down from the eminence they had hitherto occupied and took up a position in a village at its foot, where they were charged by the Japanese and soon driven off *pêle-mêle*. It was then 1.50 p.m. The engagement had lasted about three hours. Soon afterwards, the insurgents rallied, and this time appeared on a hill facing the southern gate. Mountain pieces and machine guns again put them to flight, and they were pursued by a squadron of cavalry. In the fighting that day, a large number of the insurgents were killed and wounded, but there was no loss on the Japanese side.

A Sergeant of Cavalry, who was charged with the duty of carrying a report of the expedition to head-quarters at Tai-peh-fu, was attacked by a party of insurgents at a distance of about 6,000 metres from Sin-chuh on the 24th of June. He and a private were killed, but their corpses were recovered by a company that went to their rescue. The Japanese commissariat lines were cut at several places and a number of soldiers and coolies were killed and wounded. On the 23rd, the Commissariat station at Tiongleck was attacked by a strong body of insurgents and a company of Infantry posted there for the protection of the place had a hard time of it. The insurgents were finally beaten back, after keep-

ing up the attack for more than four hours. Nothing is said about losses on either side.

A company of the 1st Regiment, charged with the protection of a provision train, was attacked by the insurgents in the vicinity of a place that we fail to identify, on the 25th. The insurgents fired from the houses, and it was found necessary to set fire to the village. The loss on the Japanese side was 2 killed and 8 wounded.

On the 28th, two companies were despatched from Sin-chuh to occupy Anping (?). That place was discovered to be held by a large body of the enemy, and after a few skirmishes, the Japanese retreated.

There appears to be some confusion in the names of the places where the above operations took place. It will be observed that the Japanese account makes Sinchuh the objective point of the force sent southward from Taipeh, and describes the capture of that place on the 22nd of June. But a telegram sent from Tamsui to Hongkong, and reproduced in these columns on the 10th instant, says that Teukchan (or Teckcham) was the place taken on the 22nd of June. The most accurate map in public possession in that recently compiled by the Japanese. According to it, Teukchan in the name of a place on the sea-coast 6 miles from Sinchuh. But both accounts agree in stating that the place captured was the capital of the province called Sinchuh (or Hsinchu), and as the names of the provinces—or divisions—in Formosa are the same as those of their chief towns, we have very little doubt that the nomenclature of the Japanese account is correct. But it is an obvious absurdity to speak of Anping's being reconnoitered from Sinchuh, the two places being about 150 miles apart.

The latest intelligence from Formosa is contained in a telegram from the Governor-General's Chief of Staff, dated at Taipeh, 8.50 p.m. on the 11th inst. It says that about 700 insurgents attacked Shinchuh on the 10th inst., and came into collision with a force of Japanese under Colonel Sakai. The insurgents were routed with a loss of about 200 killed and wounded, and 113 taken prisoners. The casualties on the Japanese side were 3 killed and 8 wounded. It is evident that the Chinese in the province of Sinchuh have more stomach for fighting than their countrymen had in Korea, Manchuria, or Shantung. But the results achieved by them are equally paltry, and their tale of casualties bears the same extravagant ratio to the losses inflicted by them on their foes.

The dates of the above telegram's despatch from Taipeh and receipt in Tokyo show that the Pescadores cable must now be open to the Japanese. It is decidedly quick work to have news in Tokyo on the 12th of an engagement fought at a place 40 miles south of Taipeh on the 10th.

The tardiness of the reduction of the southern part of Formosa has been explained. The following extract from a private letter, dated Kelung 6th instant, published in the *Nichi Nichi Shimbun*, unravels the mystery:—"There are now in port the war vessels *Matsushima*, *Naniwa*, *Takachiho*, and *Yayeyama*, and more than ten transports. The latter came here with the troops of the Second Brigade of the Guards. The original plan had been to land these forces in the vicinity of Anping, and the landing was about to be commenced when the monsoon began to blow. The monsoon will not stop till the end of September. Consequently, landing in the south had to be given up, and the transports all returned to this port, the decision being to put them ashore here and march them southward overland. It is believed that the Brigade has by this time advanced as far as Sin-chuh." The letter does not state when the troops landed at Kelung, but that defect is supplied by the *Kokkai's* correspondent, who says that the debarkation took place on the 3rd instant.

Concerning the movement of the Second Brigade, a certain personage—presumably a responsible official—who has just arrived from Taipeh, is represented as having made the following statement to a reporter of the *Nichi Nichi Shimbun*:—"The Second Brigade of

the Imperial Guards, in their march to the south, will endeavour to extirpate the insurgents. They will, consequently, advance along the mountain sides, instead of the railway line, and hunt the rebels out of the hills, where alone they can make any resistance, being utterly incapable of fighting in the open." The same authority further states:—"The Chinese forces stationed in the north where the Japanese first landed were about 30,000 strong. More than 10,000 of them have been transported in Japanese ships to China. These being raw recruits from Canton, could be easily dealt with. But the half-civilized tribes and the aborigines are more turbulent and fierce. Liu's army is reported to consist partly of the half-civilized tribes. It may, therefore, be expected that his forces will resist to the last. They are of course no match for the well disciplined and brave Guards, but they may cause much trouble." Concerning the difficulty of maintaining peace and tranquillity in Formosa, the same person says that even the so-called semi-civilized tribes inhabiting the hills to the east of Tai-peh eat human flesh, while the Chinese emigrants living in the plains below are scarcely less barbarous. The villagers have guns and ammunition, and constantly menace Japanese commissariat trains and even small parties of scouts. It is reported that a band of them recently attempted to rob a fort at Tamsui. To deprive the villagers of their weapons would be to expose them to the immense risk of being plundered and butchered by their fierce neighbours. Consequently, to maintain order necessitates the stationing of strong parties of gendarmes and police among the natives. The police and gendarmes now in Formosa are not numerous enough to meet the requirements of the case, and it therefore becomes necessary to use a large portion of the troops for that purpose. These circumstances, combined with the absence of any roads worthy of the name, account for the tardy subjugation of the island.

The *Nichi Nichi's* correspondent learns from a trustworthy source that the Chief of the Black Flags, Liu Yung-fu, has his head-quarters at Tainan, but that he is constantly coming and going between Anping, Takao, and Tainan. The force under his immediate command is about 3,000 strong.

Dysentery, cholera, *kakke*, and fever are the most prevalent diseases among the Japanese troops. The *Fiji Shimpō's* correspondent describes the condition of the contagious diseases hospital at Kelung. The buildings have been only partially completed, and are not yet floored. The patients, consequently, lie on the ground with mats and blankets under them. There were 700 of them when the correspondent visited the hospital. The doctors were complaining of the scarcity of proper food for the patients, it being almost impossible to procure eggs and fowls.

Among the many proofs of stubborn courage shown by the insurgents of Formosa, perhaps the most remarkable was the conduct of a small body, about 200 strong, who had their head-quarters at a place called Anping-chen, a short distance to the south-east of Tiong-lik, between Tai-peh and Sin-chuh. The connection between the two last places being frequently threatened by determined bands of insurgents, Major Miki was ordered to seek out their stronghold and extirpate them. As the result of reconnaissances made by him, it was discovered that the enemy's stronghold consisted of two strongly built brick houses surrounded on all sides by thick groves of bamboos, at Anping-chen. The Major attacked this position on the 28th ultimo, but the enemy defended themselves so well, firing through holes in the walls of the houses, that the Japanese officer, in view of the waste of life that must be caused by storming the stronghold, decided to retreat, and bring artillery to bear on the houses. The attack was repeated on the 2nd instant. The outer works, consisting of a circle of bamboo fences with a thick backing of fire-proof bricks, were taken without much difficulty. But the insurgents in the houses kept up a well aimed fire throughout the whole day, notwithstanding that several holes were blown open in the walls. The Japanese troops careless of the enemy's deadly fire,

approached the houses, but it would evidently have been madness to attempt an entry through the holes in the walls so long as the defenders were able to pour a rain of bullets on all the approaches. Once more the Japanese retreated, not, however, before one of the gates had been blown up, killing four of the insurgents posted in its vicinity. The next day, the Japanese again marched against the stronghold, when they found it entirely deserted by its doughty defenders. The houses contained a large number of corpses. The Japanese loss was 11 killed and 20 wounded.

Another small body of insurgents were stationed at a place a short distance from Sin-chuh. A company of troops with two mountain guns, were sent to the attack of the post on the 4th inst. The enemy fired from houses in the village, which, consequently had to be burned down. On the insurgents retreating into their barracks, a plunging fire was poured upon them from a neighbouring elevation, with the result that seventeen were shot down, and the rest took to flight.

With the reduction of these two places, the communications between Sin-chuh and Tai-peh were completely secured against interruption by the insurgents, and the railway having been repaired by the Engineering Corps, trains are said to have commenced running between the two places from the 7th instant.

The Governor-General, Viscount Kabayama, is reported to have sent a note to Liu Yung-fu advising him to surrender.

AN EXTRAORDINARY SESSION OF THE DIET.

The public taking it for granted that the Cabinet has decided upon convoking an extraordinary session of the Diet, speculations are rife as to the measures to be introduced by the Government and the probable attitude of the Houses. The Progressionists and other extreme politicians of the Opposition predict a serious collision between the Diet and the Cabinet on the question of the Liaotung Peninsula. But their hope, as we have all along maintained, seems destined to be signally disappointed. The Radicals decided to stand strictly aloof from any steps calculated to injure the harmony between the Government and the Diet, and an exactly similar line of conduct was adopted at a recent meeting of the National Unionists. A section of the Constitutional Reform Party are also understood to be in favour of the same policy, and most of the so-called Independents may safely be classed in the category of moderates. Thus the uncompromising enemies of the Government will be in a hopeless minority, scarcely one-third of the House.

Nothing is known as to the date of convocation or the duration of the session. But it is generally believed that the Houses will probably be summoned either at the end of August or in the beginning of September, and that the session will last about two weeks.

As to the financial measures to be submitted in the Extraordinary Diet, the *Fiji Shimpō* estimates that the amount of increase to be made in expenditures on account of various Military and Naval measures will be about 12 or 13 million yen. According to our contemporary's information, the Government's intention is to obtain that sum by an increase of the tax on *saké*, and by placing to the credit of the Treasury the Trade Tax that has hitherto formed part of the Local Income. Simultaneously with the increase of the tax on *saké*, the same rate of tax will be levied upon *saké* brewed for domestic use and not for sale, which has hitherto been exempted from any impost.

SURGEON-CAPTAIN M. T. YARR, now attached to the Coldstream Guards, and who was once in Hongkong, has been appointed Physician to the Crown Prince of Siam, and will be seconded in the Army for five years from the date of taking up the post.

THE NEW TARIFF CONVENTION.

The new Tariff Convention, between Great Britain and Japan, which was to have been negotiated within six months after the signature of the Revised Treaty, has been concluded and received the signatures of the Delegates on the morning of the 15th instant.

THE DOWNFALL OF PAK YONG-HO.

(FROM OUR SŌUL CORRESPONDENT.)

The fall of this celebrated Minister was to none more apparent, possibly, than to himself. The tide was setting for some days and weeks against him. He came to Korea, as the world well knows, under the protection of the Japanese. He was placed in power by them and maintained there through their influence. Naturally the Japanese expected much from him. He disappointed them in a position he took when certain concessions were under consideration. I am inclined to think his position on those points was correct, but his friends to whom he owed his position did not like it and there was a perceptible coolness between him and them. If I am correctly informed there was no open rupture, but the Home Minister not finding himself in favour, sought by various means to secure a firmer foothold in the royal palace. An "understanding" between him and Her Majesty the Queen is reported to have been effected. How true this is I do not know, and simply give it as one of the many rumours afloat this morning. The Queen however, was too shrewd for him, and the alliance did not prove satisfactory, which should not be surprising to any one. Defeated in the Palace, Pak turned again to the Japanese, who did not receive him with much demonstration of joy, it seems. He had the rashness, so Madam Rumour tells us, to make certain unwise promises (I put it very mildly as I do not know and do not care to believe he made them), and when these were repeated in the Palace, the King ordered the arrest on a charge of "conspiracy" of his Home Minister. Conspiracy is such a common word in use here that we naturally begin to suspect its use. The party not in power is apt to be the "traitorous" one.

Pak knew what was on deck. He laid aside his Korean clothing, put on his foreign suit and left—nobody at this writing knows—for parts unknown. He went out of the South Gate in the early morning of June 7th, Sunday. An attempt was made by the Korean police to arrest him, but according to Korean report they only secured the groom and the horse. Other rumours say the Japanese soldiers resisted and that there was danger of bloodshed for a little while. Towards noon it was stated that a company of Korean soldiers or policemen were sent after the fugitive, but they have not succeeded in finding his whereabouts.

The impression here is that the Home Minister managed to get away in good time not only for his country's good but for his own as well. He has failed twice; "his return to power will be attended with much difficulty," to quote a Korean's remark.

His associate, the Minister of the Law Department, while dismissed from office, is still in the city, and the opinion is general that he is not implicated in the schemes which caused the downfall of Pak Yong-ho.

The first question asked naturally is: What effect will these Cabinet changes have upon the cause of reform? I can only answer I hope it will not put back the cause of genuine reform, and I do not think it will. The men appointed to fill the vacant portfolios are men of pronounced views on reform. The policy inaugurated by Count Inouye I think will stand. There will be changes in some particulars, but it is not likely that the Government can or will go back to the old ruts from which it has been lifted during the past year.

SŌul, July 8th, 1895.

MR. OISHI ON AN ANGLO-JAPANESE ALLIANCE.

Mr. Oishi Masami, formerly Japanese Minister to Korea, has expressed to a representative of the *Kokkai* his ideas on the subject of an Anglo-Japanese Alliance. He regrets to observe that Japanese politicians usually take very narrow views of the Korean Question. They seem to think that the problem is to be solved locally; that is to say in Korea, and they concentrate their attention upon the petty incidents of party strife in Söul. Mr. Oishi denies that the problem can be solved in Söul; he is persuaded that it must be handled in Tokyo. Hence he fails to understand why a statesman of first-rate capacity like Count Inouye should be sent to the peninsula. It would be sufficient according to his ideas, to appoint to Korea a man of moderate capacity and to place him under constant telegraphic instructions from Tokyo. Whether Japan will or will not be able to maintain her position in Korea, depends upon her situation *vis-à-vis* Russia, her only real rival in that quarter. She had to yield to the "friendly warning" of the three Powers in regard to the Liaotung Peninsula, because her fighting capacity was not equal to that of the Triple Alliance. So what is wanted for the maintenance of her supremacy in Korea is a decided superiority of fighting power over Russia. To secure that end, Mr. Oishi thinks it necessary to form an alliance with England. As to the contention that Japan ought to aim at keeping aloof from any European combination, he of course considers nothing more desirable than that she should be able single-handed to defy Russia and the latter's possible allies. But he sees plainly that such a project offers very little prospect of success. If Japan increases her Navy and Army, her opponents will do the same, and the relative positions can never be radically changed. But will England entertain the idea of an alliance with Japan? Mr. Oishi is strongly inclined to answer in the affirmative. From the past policy of the Conservative party, and from the present state of affairs in Great Britain, he infers that the Salisbury Cabinet will endeavour to be on good terms with Germany and Italy, thereby maintaining the supremacy in the Mediterranean and preventing the southward advance of Russia in Europe, and that in the East attempts will be made to keep intact the friendship between Japan and China and to assist the former in opposing the aggrandizement of the great Northern Power. An alliance with Japan would be, in Mr. Oishi's opinion, at least as profitable to England as to Japan, and he is persuaded that the astute statesmen in London will not be slow to avail themselves of the present unique opportunity to establish a definite understanding between the two countries. He recently received a letter from a foreign friend in Shanghai informing him that Russia contemplates the occupation of Port Hamilton as soon as the Japanese troops shall have evacuated the Liaotung Peninsula. Although not placing any credence in this story, he reminds his countrymen that the situation may become at any moment critical, for he believes that the Russians are capable of any intrigue or scheme, however unworthy, should it suit their selfish purposes.

In an interview with a reporter of the *Chuo Shimbun*, Mr. Oishi calls the attention of the Government to the importance of protesting against the reported cession of Chinese territory to Russia and France as the price of their service in connection with the Shimonoseki Treaty. He speaks in high terms of the keenness of the new English Government, which is said to have remonstrated against the measure in question. Should the report about the cession of territory be true, both Russia and France will be proved guilty of mean and despicable trickery against Japan, since while they advised her to renounce her legitimate prize of war on the ground that its retention would be injurious to the peace of the Orient, they were exacting as the price of their advice, slices of Chinese territory for themselves. Mr. Oishi urges the Government in that case to advise Russia and France to desist from

such a high-handed proceeding, and, if the advice be unheeded, then to announce the rescission of the provision in the Shimonoseki Treaty relating to the cession of the Liaotung peninsula. While taking these steps on the one hand, the Japanese Cabinet is recommended, on the other, to warn China against the disastrous course attributed to her, and to come to a definite understanding with England for the settlement of this and other problems demanding prompt solution.

We (*Japan Mail*) attach no credence whatever to the rumour that either France or Russia has attempted to pursue the tortuous course of aggrandisement attributed to them by rumour. Great and self-respecting Powers are not to be suspected of traffic so contemptible. Moreover, their association with Germany has to be remembered. Even supposing—as we do not for a moment suppose—that the Cabinets of Paris and St. Petersburg were capable of such trickery, Germany assuredly would not lend the weight of her adhesion to a scheme materially beneficial to her allies alone and morally disgraceful to herself. We do not mean to set up any comparison whatever between the standards of international morality adopted by the three states. What we mean is simply that when three great Powers form an alliance for a specific purpose, two of the allies can not separate themselves from the third with the object of deriving special advantages from the achievement of their common purpose.

THE FRENCH NATIONAL FÊTE.

A very interesting ceremony took place at the new French Consulate on Sunday morning, when advantage was taken of the French National Fête Day to put in position a commemorative stone in the handsome pile of buildings now being erected at the foot of Camp Hill. Nearly all the members of the French community had gathered by 10.30 o'clock, when M. Klobukowski, the Consul-General for France, called for a toast in honour of the President of the Republic, M. Faure, and also for His Majesty the Emperor of Japan, accompanying each with a neat little speech. The toasts having been duly drunk in champagne, the Consul-General, in eloquent terms, referred to the anniversary which they as Frenchmen were commemorating. M. Klobukowski then went on to remark upon the change in the French Government's policy in regard to the building of suitable Consulates in the Far East, a welcome change which had led to the erection of new Consulates at Shanghai, Söul, Yokohama, and elsewhere. Prince Labanow de Rostow, H.I.R.M., Consul at Yokohama, next addressed the assembly. He said he could not lay claim to such a proficiency in the French language as the last speaker had so splendidly exhibited; he regretted his lack of polish and ease in speaking, which had lent such a charm to M. Klobukowski's glowing phrases, but he should feel it an honour if they would permit him to lay one trowel-full of cement along the setting of the stone which they were putting in place that day. This gracefully worded compliment, set in the courtly language of *la belle France*, was greeted with enthusiastic cheers, repeated again and again. The stone was then put in position, and after a few further interchanges of compliments, the ceremony terminated.

At half-past twelve o'clock the Russian gunboat *Mandjur*, one of the few ships in harbour fully dressed, fired a salute. The tricolour waved from many flagstaves and houses on the Bluff and in the Settlement; Dr. Mécre displayed a brilliant array of lanterns, all appropriated coloured and arranged; the Messageries Maritimes also hung out a festive display, and other French houses on the Bund were similarly decorated.

PERSONAL.

Towards the close of last century, a blind youth of seventeen, the son of a poor peasant in the village of Kochidani, in Echigo, made a pilgrimage to Yedo, the seat of the Shogunate Government, then in the zenith of its power and glory. When he arrived in the town, he had only 300 *momme* (about a penny), in the form of iron cash. But his heart was big with ambition. Moneyless and friendless, he wandered from street to street until, exhausted by incessant walking and benumbed by the biting cold of a winter night, he fell in the snow in front of a gentleman's mansion. Early in the morning, the master of the house, Ishizaka Soetsu, one of the Shogun's favourite physicians, setting out to visit the Court, found the lad lying senseless in the snow. He caused him to be carried in and cared for. Otani, as the wanderer was called, remained at his benefactor's house for several days, which period he turned to good account. Gambling was almost publicly practised by the servants of the *samurai* at that period, and Ishizaka's people were no exception to the rule. Hearing them thus engaged night after night, Otani conceived the idea of increasing his capital by lending it at a high rate of interest to the gamblers. Starting with only 300 *momme*, he soon found himself in possession of a *ryo* and a half. Learning of this proceeding, Ishizaka gave the youth a similar sum, and he then took leave of his benefactor with sufficient means to set up on his own account, for 3 *ryo* was a considerable sum in those days. By industry, frugality, and perseverance, he prospered so remarkably that, in the course of time, he became a millionaire. His principal business seems to have been that of money-lending. On his death-bed, he called his sons to his side, and told them to bring all the promissary notes from the strong-box. These he bundled together and committed to the flames, telling his astonished sons to think of his origin and make their fortunes for themselves. Higo, the youngest of these sons, was subsequently the father of seven sons, of whom the youngest, Sayemontaro, was adopted into the family of Katsu, a retainer of the Shogun. His son is the present Count Katsu, one of the most respected men in Japan.

Lieut.-General Viscount Miura is believed on all sides to be the most probable successor to Count Inouye, Minister to Korea. Viscount Miura is a native of Choshu, and enjoys the reputation of being a brave soldier and a profound Buddhist scholar. He is certainly a man of great ability, but he has hitherto stood almost wholly aloof from politics, having led a retired and studious life for the past six years. Pak, the fallen Korean Minister of Home Affairs, is stated to be a warm admirer of the Viscount, and is believed to have repeatedly requested him to come over and assist the King in the capacity of adviser. But the Viscount did not entertain the idea. It is reported that he will go to Söul at either the end of this month or the beginning of next.

CURRENT TOPICS.

It is now generally believed that the Cabinet has decided to convene an extraordinary session of the Diet, and that an Imperial Proclamation will be issued early in August summoning the Peers and Representatives to assemble in Tokyo within two weeks. A precedent having been established by the extraordinary session of last Autumn at Hiroshima, it is held that the provision in the Law of the Houses (Article I.) requiring the issue of the Proclamation and the meeting of the Diet to be separated by an interval of at least forty days, applies only to an ordinary session. Concerning this alleged decision of the Cabinet, various conjectures are hazarded. Some people say that the convocation of an extraordinary session was one of the three conditions upon which Count Matsukata consented to reconsider his intended resignation; the two other conditions being the appointment of Count Okuma to a Ministerial post, and the nomination of the principal politicians of the

Opposition to Local Governorships. Other persons maintain that the Government has always had the idea of convening an extraordinary session, and that nothing has deterred it from doing so except the apprehension of a collision with the Opposition on the subject of the Liaotung Peninsula. It having become plain, however, that the Liaotung question will not precipitate any serious crisis, since the Opposition's project has no chance of obtaining a majority in the Diet, the Cabinet has decided to convene an extraordinary session. We reproduce these rumours for what they may be worth.

The extreme section of the Opposition, namely, the projectors of the suppressed anti-Cabinet agitation, are to hold a grand lecture meeting at the Kinki-kan, Kanda, on the 17th instant. It is advertised that as many as forty-seven distinguished speakers will appear. Forty-seven is a striking number; a number sacred in Japanese ears as recalling the great historical drama of the Loyal Ronins. Is it by mere accident that such a number appears upon the programme of the agitators?

Concerning the question of taxation, the *Chuo Shimbun* mentions a rumour that the Cabinet Ministers are not in favour of any immediate increase, and that they propose to leave the matter untouched for some years to come, meanwhile meeting the increased demand for money by raising a loan. The rumour adds that this plan is likely to obtain the approval of the Radical Party. It has hitherto been supposed that the Government was in favour of increasing the taxes on *saké* and tobacco. Our contemporary, however, seems to believe that the Ministers have changed their minds. Whatever may be the attitude of the Government on this question, it seems certain that none of the Opposition parties is ready to take any initiatory step for the increase of taxes; they are too apprehensive of offending their constituencies.

Much anxiety is entertained about the future of the Korean students in Japan, who number more than 200. They were sent to this country at the instance of Pak, the ex-Minister of Home Affairs, and it is believed that the disgrace of that official may induce the Korean Government either to recall the students or to stop all remittances for their support. Similar incidents have happened more than once in the past. In anticipation of such a contingency, a certain Mr. Oye, a Korean refugee, who has been living in Japan for a long time, is said to be eliciting the assistance of some influential Japanese. The faculty of the *Keio Jijuku*, where most of these students are staying, have sent Mr. Kamada, a warden of that institution, to Korea to ascertain the views of the Seoul Government, and, if possible, to secure continued support for the young Koreans.

The Radicals of Kyoto, Osaka, Gifu, Aichi, and the adjacent localities recently held a conference at Nagoya and adopted a resolution, in which severe strictures were passed on the irresponsible conduct of politicians endeavouring to stir up popular excitement with reference to the Liaotung peninsula and in which was recorded their (the Radicals') opinion that public and legislative attention should be devoted to Naval, Military, and industrial questions, now of most urgent importance to the country. The resolution has been forwarded to the head-quarters of the Party in Tokyo.

The conduct of a section of the Radical Party that recently manifested a tendency to coöperate with the Progressionists, gave rise to rumours that the *Jiyu-to* was on the brink of a serious dissension. But the impetuous youths of the Party seem to have been successfully brought under control, and it is now generally understood that the Party is unanimously pledged to a policy of abstention from all anti-Cabinet agitations. A few days ago, the principal members held a conference at their head-quarters, to consider a Manifesto. The document will not be published in full till its final approval by a general meeting

of the Radicals shortly to be convened for the purpose. The general tone, however, is believed to be moderate and reasonable. According to information gathered by certain journals as to its contents, the Radicals are not completely satisfied with the manner in which the Liaotung question has been handled, but they are at the same time sensible that under the circumstances it was perhaps impossible to pursue any other course. Even if the Cabinet be blameworthy, however, the present is not, in their opinion, a time to discuss such a subject. They counsel the devotion of the Party's energy to the question of Military and Naval augmentation. The Manifesto, it is said, will be published before long.

It is said that among the measures to be submitted to the extraordinary session of the Diet, in the event of its convocation, there will be included a Bill for the establishment of an Iron Foundry. The details of the Bill are now in process of elaboration by competent experts, and the work will be placed under official control, with a capital of 6,000,000 *yen*, to be paid up in four years.

The law-suits instituted by dismissed military coolies against their contractors have all resulted in the disgraceful defeat of the latter. Unscrupulous contractors that robbed the poor hard-working coolies of a portion of their legitimate earnings deserve all the public censure they are now receiving. As to the allegation that some Army Pay-masters were implicated in the matter, no proof is forthcoming, and the public shows no inclination to credit such stories.

Viscount Takashima, ex-Minister of War, was regarded by most of the Opposition papers as the principal instigator of Count Matsukata's intended resignation. There seems to have been no truth whatever in that story, though in point of fact Viscount Takashima, being a close friend of Count Matsukata's, might have been suspected of taking such a course. It may be assumed that the Count's presence in the Cabinet will deter all opposition on the part of the soldier-politician. Whenever there is talk the Viscount is supposed to be at work. He is in short regarded as a sort of a political barometer. So long as he remains quiet, people think that the so-called non-military section of the Clan statesmen—namely those now in power—may be at ease, with regard, at any rate, to intrigues and opposition from the military section. In this context some persons seem to attach importance to a statement recently made by the Viscount to a representative of the *Hochi Shimbun*, namely, that he is on the best of terms with Count Ito, and that he always converses with the Premier in the frankest and most unreserved manner.

ECONOMICAL AND INDUSTRIAL.

It has already been mentioned that the Monetary System Investigation Council decided that the time had not yet come to introduce any change in the monetary system of the country. But a large minority was in favour of the introduction of a gold standard. It is now reported that a similar view is held by the leading members of the Radical Party. The subject has been under investigation during the past few years in the political bureau of that party. It is true that the Radicals are opposed to any immediate change, but they are reported to be of opinion that the adoption of a gold standard should be the aim of the nation's financiers. On the other hand, it is stated that Mr. Taguchi, editor of the *Keizai Zasshi*, and Prof. Wadagaki, of the Imperial University, contemplate the formation of a society for the promotion of bimetalism, and that their project is supported by a large number of bankers.

Much speculation is hazarded as to the probable crop of rice. The interval of ten days from the 11th to the 20th of July, termed *hassen*, constitutes one of the most important periods in the growth of the rice plants, and consequently the state of the weather during that interval is regarded by the farmers as a sure indication of the probable yield. Cool and rainy weather during

the *hassen* is believed to stunt the growth of the young rice plants so seriously that the injury can never be completely compensated by fine weather during the rest of the season. Considerable anxiety is, therefore, caused by the present state of the weather.

The fact that, in anticipation of keen competition in the business of marine transportation, a number of individual shipowners have organized a league, has already been mentioned in these columns. It is now reported that some of the more influential of these shipowners contemplate the establishment of a large joint stock steamship navigation company. Mr. Asano Soichiro, of Tokyo, and Mr. Hirose, of Osaka, are stated to be the principal projectors. They hope, it is said, to obtain a substantial subsidy from the State. Ship-owners are evidently puzzled what to do with the steamers that they purchased for the immediate purpose of chartering them to the Government as transports. Several of these vessels are old and unfit for use on long routes, as they consume a large quantity of coal.

The Nippon Ginko (Bank of Japan) has just lowered its rates of interest. The reason seems to be two-fold, first to stimulate the revival of trade, and secondly, to find employment for large sums of money lying unused in the vaults of the bank. A considerable portion of the money placed to the credit of the Military authorities to meet war expenses, remains unemployed and is being gradually paid back to the Bank. It is stated, for instance, that in the case of the First Division alone, the sums thus refunded to the Bank amount to over a million *yen*. The Bank's example will be followed by the other banks sooner or later, but for the present no such tendency is noticed.

Several banks and companies have just declared dividends for the past half-year. The Tokyo Stock Exchange has declared 40 per cent. per annum; the Mitsui Ginko, 8 per cent.; the Tokyo Spinning Company, 9 per cent.; the Tokyo Commercial Bank, $7\frac{1}{2}$ per cent.; the Tokyo Tramway Company, 22 per cent.; the Tokyo Rice Exchange, 30 per cent.; and the Tokyo Electric Light Company, 8 per cent.

DECISION IN THE POLITICAL CASE.

The Tokyo Local Court gave judgment in the appealed political case on the 11th instant. The decision of the Shiba District Court was partially reversed, Messrs. Suzuki Shigetou, Kudo Kokan, and Ozaki Yukio being sentenced to a fine of 20 *yen* each, while Messrs. Snyehiro Shigeyasu, Shigetaka, and Taguchi Ukichi were acquitted on the ground of insufficient evidence to substantiate the charge that they acted as originators or officials of the association. Messrs. Suzuki, Kudo, and Ozaki are reported to contemplate a further appeal to the Tokyo Court of Cassation.

TEUKCHAM AND SINCHU.

A correspondent writes:—"With reference to the account in the *Japan Mail* (13th instant) of operations in Formosa, you may be interested to know that Teukcham and Sinchu are one and the same place. Teukcham was the usual native name, dating a good way back, while Sinchu was the name bestowed by officialdom in Mandarin Chinese. In the vagaries of Chinese dialects, I believe that the native 'Teuk' or 'Tiek' and the Mandarin 'chu' are represented by the same character. Somewhat similarly associated are the native 'Toa-hung' and the Mandarin 'Taotzu-yuan'; the native 'Fiong-liek' and the Mandarin 'Chung-li'." This information dispels the confusion caused by the Hongkong telegram speaking of "Teukcham" and the Japanese speaking of "Sinchu." But on the recently published Japanese map, the capital of the province—i.e. the town taken by the Japanese—is written 新竹 (Sinchu), whereas the place mentioned in the Hongkong telegram appears as 竹塹. The latter, however, is an insignificant spot on the sea-coast.

RAILWAYS IN JAPAN.

According to statistics obtained by the *Koku-min Shimbun* from the Imperial Railway Bureau, the total mileage of railways in operation at the end of March last was 2,130 miles; that of lines under construction or projected was 1,042 miles 57 chains, and the number of railway companies was 29. The following table shows the names, capital, total mileage, and mileage open to traffic of the various lines in actual operation, State Railways being excluded:—

Name.	Capital Yen.	Total Mileage Miles.	Lines open for Traffic Miles.
Nippon Tetsudo	30,000,000	799.66	596.66
Sanyo Tetsudo	13,000,000	307.47	191.46
Kyushu Tetsudo	11,000,000	271.01	161.05
Chiku-ho Tetsudo	3,700,000	38.47	30.47
Sanuki Tetsudo	330,000	10.15	10.15
Kobu Tetsudo	1,350,000	27.17	27.17
Kansai Tetsudo	6,500,000	114.22	66.53
Osaka Tetsudo	3,000,000	45.25	38.48
Hokkaido Tanko Tetsudo	6,500,000	204.71	204.71
Ryo-mo Tetsudo	1,500,000	52.17	52.17
Han-kai Tetsudo	400,000	6.13	6.13
Iyo Tetsudo	175,200	13.02	10.19
Settsu Tetsudo	240,000	8.35	8.35
Kushiro Tetsudo	200,000	26.67	26.67
Sano Tetsudo	145,000	23.58	23.58
Sangu Tetsudo	1,100,000	9.60	9.60
So-bu Tetsudo	1,200,000	31.40	31.40
Hoshu Tetsudo	2,000,000	43.65	—
Nan-wa Tetsudo	500,000	16.40	—
Kawagoye Tetsudo	300,000	18.40	18.40
Aoume Tetsudo	100,000	13.07	11.40
Han-tan Tetsudo	1,000,000	30.57	23.00
Nara Tetsudo	1,000,000	25.53	—
Bo-so Tetsudo	350,000	11.75	—
Ota Tetsudo	170,000	12.18	—
Nan-yo Tetsudo	95,000	6.57	—
Dogo Tetsudo	38,000	3.07	—
Naniwa Tetsudo	250,000	8.13	—
Hatsuse Tetsudo	500,000	12.17	—

Total 86,643,203 2,193.12 1,549.39

With regard to State Railways, figures relating to them at the end of March last were as follow:

Line.	Capital Yen.	Total Mileage Miles.	Open for Traffic Miles.
Tokaido & Naoyetsu	38,103,252	557.49	557.49
Fukushima-Hirosaki (Owu)	12,686,126	298.26	23.20
Tsuruga-Toyama (Hokuriku)	5,764,954	123.58	—

Total 56,554,332 979.33 580.69

The grand totals for both private and State lines are as follow:—

Private Lines.	Capital Yen.	Total Mileage Miles.	Open for Traffic Miles.
Private Lines	86,643,200	2,193.12	1,549.39
State Lines	56,554,332	979.33	580.69

Total 143,197,532 3,172.45 2,130.08

THE "NIPPON."

The *Nippon* has the following note in its issue of the 17th instant:—"On Sunday (7th) we replied to the *Mail's* criticisms of our views on the subject of the Siberian Railway. Our contemporary answered us in its issue of yesterday, sacrificing nearly half a column of its space for the purpose. We could not but peruse a note which cost the *Mail* the mature consideration and serious meditation of more than a week. It simply asks us to point out how the trans-Caspian railway can serve as a trade route between Europe and Asia. It seems to us that this line could serve to bring Asia and Europe into a closer relationship and to promote the peace of the world, if England would only consent to the extension of her Indian railway so as to bring the two into direct connection. But this is, we regret to say, exactly what England is prevented from doing by her fear of Russia. How does that strike the *Mail*? We do not think it necessary to dilate much on this topic."

Neither do we (*Japan Mail*). The *Nippon* is wandering further and further into space. The whole question at issue is whether the Trans-Caspian Railway is likely to prove a great trade route between Europe and the Far East, or whether it is likely to serve rather for military pur-

poses. The *Nippon* now says that if England would connect her Indian system of railways with the Trans-Caspian Line, Asia and Europe would be brought into closer relationship and the peace of world would be promoted! It adds politely that England is afraid to make the connection. Does it amuse the *Nippon* to sneer at England? If so, it has discovered a perfectly innocuous pastime, for England has not the smallest objection to be sneered at by it. As for ourselves, we desire to explain to the *Nippon*, that if some delay occurred in noticing its previous comments, the triviality of the matter was responsible. Now that the whole discussion has been reduced by our contemporary to irrelevant persiflage, we feel justified in retiring definitely.

THE SCHOOL OF THE MORNING STAR.

The Annual Distribution of Prizes took place at the School of the Morning Star in Tokyo on the 8th instant, in the presence of a large concourse of spectators, among whom were His Grace Mgr. Osof, the Representatives of France, Great Britain, and Italy, and many Japanese of position in official and educational spheres. The various pieces on the programme were excellently rendered, all the lads giving evidence of careful preparation. The school seems to be constantly growing in size, and we cannot but regret the illiberality that withholds from such an excellent educational institution the status of a duly recognised public school. The prizes were handed to the students by the Archbishop, the French Minister, and the British *Chargé d'Affaires*. There were too many prizes, we venture to think: were the number smaller they would be more valued, and the stimulus given by them would be keener. We append the programme:—

Chœur d'Ouverture: Gloire immortelle par Gounod.
MR. JOURDAIN'S FIRST LESSONS IN USEFUL KNOWLEDGE
(Adapted from Molière.)

CHARACTERS:

Mr. Jourdain G. Nakayama.
Dancing-Master Ch. Thorn.
Music-Master H. Pitts.
Fencing-Master D. Ailion.
Philosopher B. Dithlefsen.
Lackeys.

Le Calife de Bagdad, Ouverture par Boieldieu.
Orchestre de l'Ecole.
Der Gerettete Füngling (von Herber) K. Rishow.
Die Sürtenpfeife (von Bieffel) J. Jesselsen.
T. Jesselsen.
Divertissement (à six mains) par Bach J. Mason.
K. Rishow.
D. Ailion.

LA TIRE-LIRE DE M. CHATFINET.

Comédie en 1 acte, en prose.

PERSONNAGES:

Chatfinet, rentier Y. Ogawa.
Durozoir, capitaine G. du Bousquet.
Baptiste, domestique K. von Fallot.
Greffard A. Dentici.
L'Orage par Steibelt. solo de piano J. Mason.

SHINUSUEITO.

Daimyō, Rakuōkō Sh. Tassei.
Shijin, Kwanchazan Koz. Saito.
Shinusubito, Hanawa Sh. Kobayashi.
Toritsugi H. Kofuji.

(Chœur final: La Cigale et la Fourmi) par W. Moreau.

DISTRIBUTION DES PRIX.

TELEGRAPHIC INFORMATION FROM FORMOSA.

In our last issue we referred to the rapidity with which telegraphic information of a raid made by Chinese insurgents against Sinchu had been received in Japan. The explanation is that the Foochow (Pagoda Anchorage) and Tamsui cable is employable for transmitting intelligence, the Japanese working at the Taipei end, and the Chinese at Foochow. From the latter place to Nagasaki via Shanghai there is, of course no difficulty. It is probable, also, that as the one railway in Formosa extends from Taipei to Sinchu, the line of telegraph along it has been brought into working order. When the Japanese get to Tainan the cable from that place to the Pescadores will presumably be available.

SEMI-ANNUAL RETURNS OF JAPAN-
ESE FOREIGN TRADE.

In spite of the war, Japan's foreign trade for the first half of the present year shows a marked increase over the corresponding period of last year, as may be seen from the following table:—

MERCHANDISE.			
First Half of 1895.		First Half of 1894.	
Exports	Yen.	Imports	Yen.
Exports	59,444,559...	50,103,857	
Imports	60,027,078...	56,648,449	
Total	119,471,637...	106,752,306	
Excess of Imports over Exports..	582,518...	6,544,592	

SPECIE.

Export	Yen.	Import	Yen.
Export	17,565,671...	15,220,783	
Import	2,274,937...	16,016,530	
(Excess of Export.) (Excess of Import.)			
Difference	15,290,634...	795,747	

Thus, compared with the first six months of last year, there has been, this year, an increase of 9,340,702 yen in exports, and of 3,378,620 yen in imports, or an aggregate expansion of 12,719,322 yen. Another noteworthy feature is that the excess of imports over exports, which was 6,544,592 yen in the first half of 1894, has decreased this year to 582,518 yen. As to specie, the extraordinary excess of exports over imports for this year is explained by the purchase of war material from abroad. The following tables show the comparative figures for the principal articles of export and import during the six months of 1894 and 1895:—

Exports.			
First Half, 1895.		First Half, 1894.	
Quantity.	Value. Yen.	Quantity.	Value. Yen.
Raw Silk (catties)	1,787,604	1,403,359	2,034,014

* Denotes decrease, † increase.

The *Fiji Shimpō*, from which these figures are quoted, thinks that at the present rate the total foreign trade of the country for this year will reach 250 or 260 million yen. Last year, the total for the first six months was 106,751,306, and that for the latter six months, 123,965,735 yen, amounting altogether to more than 230 yen. Taking into consideration the prosperous condition of the silk trade and the general revival of business in the country, our contemporary believes that the above mentioned aggregate sum will be probably attained.

EDUCATIONAL AND LITERARY.

Summer schools have become a fixed feature in Japanese education. The Buddhist students are about to hold their fourth Summer School at the Ko-nen temple at Misaki, in the Province of Sagami. The lecturers are the Right Rev. Shimaji Mokurai, the Right Rev. Shaku So-en, Professor Murakami Sensei, Mr. Ouchi Seiran, and a few others. Among the supporters of the school, we notice the names of H.E. Mr. Watanabe, Minister of Communications, Dr. Sato, Surgeon-General of the Army, Professor Inouye Tetsujiro, of the Imperial University, Professor Nanjo Fumio, and a lot of other distinguished persons, both lay and clerical. The expense on account of board and lodging is only 14 *sen* per diem. The Christian students held their summer school in Kyoto, during the days ending July 10th, the Assemblage Hall and Divinity buildings of the Doshisha College being placed at their disposal. The President was Mr. Kosaki Hiromichi, the respected head of the Doshisha, and among the Lecturers were Professors Onishi Shuku, Morita Kumato, Ukida Kazuto, the Reverends Uyemura Masahisa and Miyagawa Tsuneteru; and Messrs. Albricht, Gulick, and Uchimura Kanzo. Two other Summer Schools are announced in the vernacular press. They are those of the To-a Gaku-in and Meiji Gikai, both private institutions in Tokyo, one devoted to the study of Chinese and Japanese literature, and the other to the study of science and national literature.

The recent war and the change produced by it in the international position of Japan, have given a powerful stimulus to the study of foreign languages. Naturally, the languages most directly affected were Korean and Chinese. The demand for a large number of interpreters of those tongues called into existence several schools in Tokyo and other large cities. This feature was more or less temporary, however, and the cessation of the war has already resulted in the disappearance of the schools. But on the whole, the study of the two languages, especially Chinese, is more popular now than it was at any time before the war. Russian is receiving a great deal of attention. There is a private institution in the Capital where that language is taught, and we understand that a project is on foot for establishing another school on a larger scale. For some years an increasing desire has manifested itself among the Japanese to know something about Russia and the Russians. Translations of the works of Russian novelists, especially those of Tolstoi, were received with favour. A fresh and powerful impetus has been given to this tendency by the turn of events during the last few months. But the language whose status has been most extensively and permanently improved is English. A universal disposition is manifested by Japanese educational institutions, Governmental and private, high and low, to give more attention and time to instruction in English. Much of this tendency is no doubt attributable to the improved and improving state of Japanese public sentiment toward Great Britain. But the principal reason is to be sought in fuller recognition of the importance of English as a medium for conducting business transactions and international intercourse. There may be occasional fluctuations in the study of English, but its position in the national education of Japan seems to be now fixed and permanent, whatever may hereafter be the political relations between the two peoples.

Students of Japanese classical literature have just been placed under a great debt of gratitude to Mr. Mozume Takami by the publication of his "Nippon Dai Jirin" (Enlarged Dictionary of the Japanese Language). During the past ten years, three dictionaries of high merit have been produced, namely, "Gen-kai" (Ocean of Words), by Mr. Otsuki Fumihiko, "Nippon Dai-jisho," by Mr. Kamada Bimyoai, and "Kotobanashi," by Mr. Mozume. The present volume may be regarded as an enlargement of the last mentioned work by the same author. It leaves little to be desired in the field of

classical words, and is thoroughly worthy of its author's high scholarship. But, as the Editor of the *Waseda Bungaku* recently remarked, it is to be regretted that Mr. Mozume did not pay more attention to the large and valuable class of terms added to the Japanese language under the authority of such *litterateurs* as Chikamatsu, Saikaku, Ikku, Samma, and others that flourished in the golden age of literature during the Tokugawa era. It is true that these words are in many cases of vulgar origin, but having once been incorporated into the language, they are entitled to find their place in any dictionary of respectable size.

The *Tokyo Asahi Shimbun* advocates the advisability of furnishing *raconteurs* with interesting accounts of the more noteworthy deeds of bravery and heroism achieved by Japanese soldiers during the recent Chinese campaign. The *raconteur*, or *koshakushi*, is a great factor of popular education in Japan. Much of the historical knowledge possessed by the lower and uneducated classes in this country is derived from this unique class of public performers. The terms *koshakushi* is not exactly translated by either the English "story-teller" or the French "raconteur." Each of the foreign terms includes the Japanese *koshakushi* and *hanashika*, whereas the two are quite distinct in Japan, the *koshakushi* occupying himself with historical or legendary stories, while the *hanashika's* field is restricted to short fictitious tales calculated to excite only mirth and laughter. The *Asahi* asserts that the *hanashika* is generally in favour with the middle class, and that the *koshakushi* is patronized by artisans and working people. Incidents connected with the Chinese war have already been woven by some of the leading *koshakushi* into interesting stories, and are employed to entertain audiences night after night. Our contemporary seems to think that there is a room for improvement in this field.

Mr. Uchimura Kanzo, author of "Japan and the Japanese," is one of the most impassioned writers of his day. In the last number of the *Kokumin-nô-Tomo*, he answers the question why a great literary leader has not yet appeared to guide the Japanese in their new career of expansion and conquest. He tells his countrymen that a great writer, in the true sense of the term, can not be born except among people with high ideals and noble aspirations, and he asks his readers if such ideals and aspirations have been encouraged under the present educational system. He says that the system now in vogue has succeeded in turning out a generation of young men remarkably suited for the ordinary walks of life, patient, plodding, well-disciplined, and obedient, but that the rigid discipline of scholastic courses has crushed the spirit of independence and originality. He, therefore, insists that the public educational system should be placed on a more liberal and broader basis. He also deplores the absence of intensity of sentiment and breadth of sympathy among contemporary men of letters. "Think, feel, and live in deeper earnest; then and then only will it be possible to create a great and immortal literature."

We should very much like to have some clear statement as to what Mr. Uchimura means by "a more liberal and broader basis of education." Does he want the curricula of the schools and colleges extended so as to embrace a wider range of subjects, or would he leave the lads greater freedom of choice? Frankly speaking, we think that to formulate irresponsible platitudes is the curse of modern Japan. Politicians, philosophers, educationists, moralists—every one deals in sonorous generalities and no one descends to practical details. Mr. Uchimura is as vague as the vaguest. For the rest, had we been asked to name the most conspicuous defect of Japanese educational methods, we should have asserted without hesitation, want of discipline. Why, a short time ago, so many instances were recorded of school-boys' organizing resistance to unpopular teachers or unwelcome methods, that it seemed as though the control of the schools must pass altogether from the masters to the

students. And now we have Mr. Uchimura declaring that the rigid discipline of the schools tends to cramp the scholars' minds, to flatten their bumps of ideality. At least that is what he seems to mean. But what does he really mean? Can anything be more exasperating than this nebulous grandiloquence? When we read the speeches of Japanese political agitators, ethical philosophers, or religious reformers, we are sensible of one wish only, that they would descend from the clouds of rhetoric to the solid ground of reason, and that the apprehension of affording material for criticism would seem to them less terrible than the curse of being always incomprehensible. Clear statement is an infallible accompaniment of distinct conception. If the critics and politicians of journalistic Japan really knew what they wanted, they would have less difficulty, we suspect, in imparting the knowledge to others.

THE "NIPPON-JIN."

We welcome the re-appearance of the *Nippon-jin* under the joint editorship of Mr. Shiga Taka and Mr. Miyoki Fujiro. Eight years ago, in 1888, the journal was started by a small coterie of young and ardent writers who first raised the cry of "Japan for the Japanese," which principle they clothed in the picturesque garb of *Kokusui Hoson*, or the preservation of national excellencies. The *Nippon-jin* was for some years the centre and organ of the movement originated by the projectors of the journal itself. Perhaps it is not perfectly correct to say that the movement originated in that manner, for the idea was already in the air. But to the enthusiastic editors of the *Nippon-jin* belongs the credit of having given to the sentiment definite shape and aim. In the excess of their ardour and in their inexperience, these writers repeatedly gave cause for police interference, and finally the journal had to be replaced by a magazine, the now defunct *Ajiya* (Asia). In the opening article of the resuscitated periodical, we are told that, the effect of the recent war being destined to consolidate the nationalistic movement and to open new careers for the Japanese, and these facts being appreciated, the writers on the staff of the journal laid aside their pens and followed the fortune of arms in the field. The war is now over, but certain events connected with the restoration of peace, having dissatisfied these literary and military men, they think it incumbent upon them to take up their pens again in order to give a timely warning to their countrymen.

The number before us contains two other leading articles, one upon the assertion of the national rights, being a refutation of various erroneous ideas connected with the subject; and the other upon the Siberian Railway, in which our contemporary takes a position somewhat similar to that assumed by the *Nippon*. We propose to review the latter article separately and more fully.

Among the contributed articles, may be mentioned the "Eastern Question," by Mr. Takahashi Kenzo, Editor-in-Chief of the *Osaka Asahi Shimbun*; the "Age of Reform," by Mr. Inukai Ki, one of the most celebrated member of the Progressionist party; and "Cosmopolitan Japanese," by Mr. Matsumura Kaiseiki, a well known Christian writer.

There are several interesting literary articles, of which we may mention one on Poetry in Australia, by Mr. Shiga Shigetaka, and another as a New Tendency in Japanese Literature, by Mr. Taoka. Mr. Shiga's article is not completed, but from what has thus far appeared it seems to be a well thought-out review of the general characteristics of Australian poets. Mr. Taoka—which, by the way, seems to be an assumed name—points out that the most remarkable feature of current literature is an increase of tragic elements. A number of Chinese poems and Japanese verses by men and women of more or less repute, and a historical reminiscence of the Restoration days, by Mr. Miyake Yujiro, complete the contents of the present number.

CHINESE ITEMS.

Full details of the withdrawal of the guard of British blue-jackets and marines from Anping are furnished by a correspondent of the *North China Daily News*. Little, however, is added to our previous knowledge. The Black Flag leader, Liu Yung-fu, had been making himself decidedly obnoxious and had been barely reduced to order, when suddenly orders were received for the withdrawal of the guard. Naturally the greatest uneasiness resulted among the community. Both Admiral Buller and Sir N. O'Connor are acquitted of all responsibility for the step. Nobody seems to understand it, however. At all events, since we know that four British vessels were subsequently ordered to remain in the vicinity of Anping, the incident of the withdrawal need cause no further concern.

From the same correspondent's letter we quote the following:—

Making every allowance for political and military exigencies it does not seem to us that the Japanese have shown that consideration for foreign interests in Formosa which might justly have been expected of them. As far as we know, they have made no effort whatever, either by quickly terminating the crisis, or even by giving some intimation of their wishes and intentions, to enable us to prepare, to some extent at least, for coming events. By their procrastination they have undoubtedly enabled the opposition in the southern two-thirds of the island to assume proportions, the inconvenience of which they are bound sooner or later to seriously appreciate. Had they made simultaneous attacks if only on the treaty ports of the island, and occupied them, it is probable, from what we now know, that the resistance would have been at its minimum, and that as in the case of the North, possession, constituting effective *pieds à terre*, would have been secured after, at most, a struggle of a day or two. Their recent disastrous experience at the north of the Taikah river must have shown them how formidable are the obstacles which they will now have to overcome.

Liu Yung-fu, aided by the people, including all the Hakkas, has had time to organise over the whole country, a system of guerilla or "bush" warfare, which with all their resources, the Japanese must find most costly in life and time to overcome. That the latter will eventually succeed must be assumed of a nation that has done what they so recently have shown themselves capable of effecting, but when this conclusion can be arrived at, or how, is a problem on which, with the only data available, we should not like to venture a surmise.

With the typhoon season in full swing and the consequent liability to have operations abruptly interfered with, both by storms to seaward and rains on land, no doubt the difficulties are immeasurably increased.

We hear that an expedition left Port Arthur on the 13th, that is ten days ago, but we have not seen or heard anything further, and assume that the war and transport-vessels are weather-bound in the Pescadores. This inaction on the part of the Japanese, coupled with the reports of the disasters they are meeting with in the north, both at the hands of the people and of disease, has rendered popular belief in native prowess generally, and that of the Black Flags particularly, more enthusiastic than ever.

We have heard nothing of the "recent disastrous experience at the north of the Taikah river," and it is pretty certain that the Japanese have not met with any disasters in the north. Our readers are aware that the Japanese military authorities, finding it impossible to land troops in the south of Formosa during the prevalence of the S.W. monsoon, decided to march an army overland. It is an undertaking of immense difficulty, and we can scarcely suppose that any decisive blow can be struck at the Black Flags before the closing days of this month, if so soon. There will, of course, be much discontent about the delay. Apparently the Japanese Government were not prepared for the difficulties incidental to the occupation of Formosa, and, indeed, no one else was, for the matter of that. When the public learned that Viscount Kabayama was to have at his disposal a Division of the Guards, mustering some 12,000 of all ranks, the general idea was that no such force would be needed. Now people talk of the inadequacy of the preparations. The one point not to be forgotten is that Japan could not begin to carry home her large armies from Manchuria until

after the ratifications of the Shimonoseki Treaty had been exchanged, and while engaged in the former task, she must have found it exceedingly difficult to spare transports for the Formosa expedition.

Urga is a town in Mongolia thirty days' journey from Kalgan. It has a population of about ten thousand Chinese, twenty thousand Mongols, and a hundred Russians, including soldiers. A Swedish missionary proceeded thither last year for the purpose of studying Mongolian. He seems to have worn Chinese costume, and in connection with that fact the Kalgan correspondent of the *N.-C. Daily News* writes:—"Mr. Larsen naturally fraternised with the Russians and from them he learned during the winter that the Chinese government had got word of Japanese spies, dressed in Chinese garb, and living at Urga. Orders had been despatched to arrest all such, and execute them immediately. There was not a moment to lose. Mr. Larsen and his companion that night set out for Kiachta over two hundred miles away, and by making the best use of their opportunity, made it in three days. Here they secured Russian clothing and in a few days returned to Urga where they lived unmolested. As to the Japanese spies, there seems to have been only one, and he, getting wind of what was up, hastened to Kiachta, and ere long was back again, to all appearances a faithful subject of his Russian Majesty."

A foreigner "recently returned from Formosa," has stated in Shanghai that the first force of 1,000 men landed by the Japanese in Formosa were opposed by about an equal force under General Chang, and appear to have been worsted. Owing to Chang's wounds, however, the Japanese were able to push on and take Kelung. We do not think this account is trustworthy. At all events, the fact is that the Japanese actually took possession of the whole of northern Formosa without any delay suggesting a check.

The same authority is reported to have said: "However well deserved the reputation of the Japanese for cleanliness may be in their own country, they do not appear to be acting up to it in Formosa. They are disregarding the most ordinary sanitary precautions, drink the filthiest water, and in consequence are suffering acutely from disease."

We fear that this is very probably true. More than one foreign medical expert present with the Japanese armies in Formosa, stated that the sanitary arrangements made by the military authorities were lamentably defective.

A reporter of the *N.-C. Daily News* visited the "Resting House of Ambassadors" in Shanghai where H.E. Wang Chih-tsuen, Special Chinese Ambassador to the Court of St. Petersburg, was lodging on the 8th instant. Wang's ostensible mission was to congratulate the Czar on his accession, but the reporter gathered that he had also settled the Pamir question to the satisfaction of both China and Russia, "the latter being the gainer by a bit of steppe land in north-western Mongolia." Nothing could be gathered as to the rumour that Wang, while in St. Petersburg, succeeded in enlisting Russia's aid against Japan. Our readers probably remember the very portentous stories published some months ago by a Shanghai journal as to the results of Wang's mission.

A Chêngtu missionary has sent to the *N.-C. Daily News* the following translations of placards and proclamations issued before, during, and after the riots which took place on the 28th and 29th of May:—

PLACARD PUT OUT A DAY OR TWO BEFORE THE RIOTS.

"Notice is hereby given that at the present foreign barbarians, are hiring evil characters to kidnap small children that they may extract oil from them for their use. I have a female servant named Li who has personally seen this done. I therefore exhort you good people not to allow your children to go out. I hope you will act in accordance with this."

PROCLAMATION PUT OUT BY CHOU TAOTAI, A HUNAN MAN, ON MAY THE 29TH.

"At the present time we have obtained clear proof that foreigners deceive and kidnap small

children. You soldiers and people must not be disturbed and excited. When the cases are brought before us we certainly will not be lenient with them."

PROCLAMATION PUT OUT BY THE VICEROY ON MAY THE 29TH.

"I, the Viceroy, have heard that yesterday at the Tuanyang feast, according to the custom of the province, crowds of men and women assembled to witness the scattering of fruit, and that foreigners having gone to witness it, trouble was caused and the chapels were destroyed. It is certain that evil characters have been stirring up trouble in order to steal and rob. Besides clearly searching into this matter, I have also put out a proclamation for the information of you elders, wardens, soldiers, and people. You, my good people, should each follow his own vocation, and should you have any grievance you may petition the officials of the two districts, Chêngtu and Huayang, and I will justly decide without any partiality. You may by no means recklessly help forward these evil men and get yourselves caught in a net. Let the law take its course. For those who assemble evil characters let there be no leniency. This proclamation is put forth for the information of all."

PROCLAMATION BY THE VICEROY ON MAY THE 30TH.

"Evil characters having assembled in crowds and scattered abroad evil rumours, I have already memorialised the Emperor and they may be put to death without trial."

PLACARD PUT OUT ON MAY THE 30TH.

"At the present time when Japan has usurped Chinese territory, you English, French, and Americans have looked on with hands in your sleeves. If in the future you wish to preach your doctrine in China you must drive the Japanese back to their own country. Then you will be allowed to preach your Holy Gospel throughout the country without let or hindrance."

This missionary sending the above, comments on them thus:—"So open and bold an attack by an official upon foreigners has never been known in recent times. If allowed to pass without proper punishment, it goes without saying that there will be no safety in the future for foreigners resident in these parts. The intimation of the Viceroy that the people have grievances was quite enough of a hint to the rioters. To make matters worse these proclamations were both issued on the second day of the riots. On the first day the Canadian Mission's hospital and chapel had been burned. Every official had either refused help or made a mere pretence of giving assistance. The Viceroy had allowed the Catholic Bishop's place only a stone's throw away from his *yamen*, to be destroyed without lifting a finger to prevent it. This attitude would have sufficiently shown his disposition without a proclamation."

Here is a curious fact of which nothing had been publicly heard until its appearance in the *N.-C. Daily News* of the 10th instant:—

Some time ago there was circulated at this port a rumour to the effect that H.E. Wang Chih-tsuen, Chinese Special Envoy to St. Petersburg, had been shot at by a would-be assassin at Saigon while en route for Shanghai. The rumour seemed perfectly ridiculous on the face of it, it being inexplicable why any person in the French colony should entertain animosity against such a comparatively unknown mandarin as his Excellency. The *Shenpao*, however, eventually published a telegram from Hongkong purporting to confirm the news, and upon the arrival of the Envoy by the *Yarra*, a representative of this paper attempted to find out the truth of the story. It now transpires that His Excellency Wang was indeed shot at Saigon, the bullet finding a lodgment in the arm. The wound is now so inflamed that the Envoy had to send a memorial by wire to the Emperor on Monday night asking for one month's leave in order to have the benefit of good medical advice in Shanghai.

There has been an extensive inundation at Nganlu owing to the bursting of a dam on the river. About 100 lives were lost, but happily the waters receded without being swollen—as was at one time feared—by the bursting of other dams.

The *N.-C. Daily News* editorially contradicts the statement recently published by it on the authority of a foreigner just returned from Formosa, namely, that the sanitary arrangements of the Japanese troops are bad and that they are drinking dirty water. Our contemporary now says that such is not the case; that although the

soldiers, not being supplied with their summer kit, suffered severely at first from the heat, they are faring well at present, and are rapidly getting into trim for the work before them. The following interesting details are given in the same article:—

By the latest accounts a force of some 2,000 men which left Taipeifu in the middle of last month had reached Tekcham and established a provincial government there. The use of the railway was almost impossible, as sleepers had been removed, the line torn up in places, and attempts made to destroy the bridges. Strategically it would have been better to have despatched the force in two bodies to Tekcham by separate routes, but as the troops were not too numerous, it was decided to follow the railway track. They soon learned the character of the opposition they might expect. The field telegraph laid on the way was being frequently cut, and the Hakkas and bad characters harassed and cut down small parties on every opportunity. Half-way to Tekcham, between 5,000 and 6,000 Chinese troops were encountered in position on one of the low hills over which the railway runs. A few shots from a machine gun, and some mountain guns dispersed them, and they withdrew inland, seizing every opportunity to attack isolated groups of the advancing Japanese. Contrary to the preconceived plan, the Japanese decided to use the railway, with the result that a coupling broke, two or three carriages got loose and ran down a steep incline, bringing about a serious accident. About 50 or 60 were killed and wounded, and these being sent back gave rise to the rumour that the Japanese had lost heavily. Never once did the Chinese make anything like a stand, a few shells causing them to at once disperse. Though armed with serviceable weapons they lacked leadership, and in consequence could do little. Undoubtedly the chief thorn in the Japanese side is Liu Yung-fu, the Black Flag leader, but elaborate preparations are on foot which will result in his speedy discomfiture. An expeditionary corps for the south has been formed which will act in three sections. Landing either at Takao or Anping the first column will advance directly towards his stronghold. The second will act so as to cut off his retreat to the mountains, whilst the third will operate as necessary from the sea. The arrangements will be most complete, and it is confidently believed that the opposition of the Black Flags will be soon overcome. Liu Yung-fu at present has undoubted influence, but signs are not wanting to indicate that his treasury is becoming low. Only the other day some Foochow Chinese approached a foreign hong here with the request they would transmit \$200,000 to Formosa. Where the money actually came from is not known, but it was intended for Liu, and the foreign firm refused to have anything to do with it.

The question has presented itself to some minds that the Japanese may have entered on an endless trouble similar to that encountered by the Dutch in Achene, but our information points to the early overthrow of Liu Yung-fu, who is regarded as the head of the opposing elements. The Japanese evince every inclination to treat the aborigines in a generous spirit, and seem confident of conciliating them. Towards foreigners they have been particularly courteous and have done all in their power to enable business to be transacted as usual. Probably, with the speedy extinction of the existing restless spirits, Formosa under a good administration will make surprising advances towards prosperity, and there are persons who believe that within the next two or three years—so rapid will the progress be—we shall find the island attracting a not inconsiderable number of tourists and "globe-trotters."

The position just now at Anping is curious. The Customs officials have left and the only remaining foreigners are the British Consul and two clerks representing Messrs. Bain & Co. The Chinese invited the latter to manage the Customs, and hand the receipts over to the Black Flag leader, but they naturally refused, and matters there are in a chaotic state.

"One of the beneficial effect of the Japanese taking possession of Formosa," says the *Hong-kong Daily Press*, "will be an improvement in our storm warnings. Dr. Doberck has frequently complained of the inadequacy of the meteorological information received from Formosa, but this will now be altered. According to a vernacular contemporary the authorities have under consideration a scheme to establish a number of observatories in Formosa, namely at Kelung, Tamsui, Takao, and Panghu Island, the most important being at the Pescadores."

Mr. T. Hanbury, on the occasion of his visit to the East in 1893, presented a sum of Tls. 500 to be given as prizes for the best essays on

one or all of five subjects selected by himself. Full notice was given in the Chinese papers, and, as a result, 172 essays were received, of which the two best, one the longest and the other the shortest, have been translated and published in the *North China Daily News*. The long essay is "On the strengthening of friendly relations between China and the West." It does not evince any remarkable knowledge or insight, but one paragraph is worth quoting:—

With Western nations commercial intercourse and the propagation of religion go hand-in-hand, and at the present time converts are to be found in the interior of our land where foreign trade has not yet reached. To secure friendly relations with Western nations means must be found to secure harmony between people and converts. The high provincial authorities must instruct their subordinates to notify the people that the right of propagation and perfect liberty to enter the Church are secured by Treaty. But proclamations must not take the place of protective measures and these must consist in the active co-operation of the head of the gentry and the local police. Churches and congregations should be registered, protection given to all converts and security taken from all local rowdies, and in the event of such still causing trouble, the gentry and police must be held responsible.

Wan Hang, a native of Hanyang in Anpeh competed, in 1893, for the *Chüfén* degree in Pekin and was placed 25th among 360 candidates. But a censor, however, denounced him for having bribed a proxy to get his degree for him. He was re-examined, and his calligraphy proving different from that of the previous theses, he was deprived of his degree. But he contributed 50,000 Tls. to the war fund, and took the opportunity to explain that the condemned theses had really been composed by himself, but copied out by another, Wan being incapacitated by temporary indisposition. His *Chüfén* degree is restored to him, and he is also permitted to compete for the *Chinshih* degree. Everything in China to those that can pay.

Here are some interesting figures relating to the foreign population of Shanghai:—

While the total foreign population—excluding always the French Concession—has grown from 3,821 in 1890 to 4,684 in 1895, an increase of 863, the number of adult males has only grown from 1,811 in 1890 to 2,068 in 1895, an increase of 257. The number of adult females has grown in the same time from 979 to 1,227, an increase of 248, and of children, fifteen years being taken as the limit of child-hood, from 1,031 to 1,389, an increase of 358. In 1870, a quarter of a century ago, there were 1,666 foreigners altogether in Shanghai, of whom 1,281 were adult males, 218 females, and 167 children. In 1895 there are 4,684 foreigners in all, of whom 2,068 are adult males, 1,227 females, and 1,389 children. To these 4,684 have to be added the residents on the French concession say 430, and a floating population, on vessels in harbour, amounting to 1,306, making a grand total of nearly 6,500. The floating population, it must be remembered, is also a fluctuating one.

When we come to the different nationalities that compose this motley throng of foreigners, for like the Great Twin Brethren,

By many names men call us,
In many lands we dwell,

we find that the British still retain their pre-eminence by a long interval. There are 1,935 British subjects in Shanghai out of the total of 4,684; and the preponderance is even more striking if we exclude the Japanese and Portuguese, an exclusion that is not quite accurate, as under Portuguese, those of European birth are not separated from their colonial brothers. But excluding those two, and the Eurasians who are this year for the first time given a line to themselves, British subjects number 1,936 out of a total of 3,443, or considerably more than half. Portuguese come next with 731. Americans come next with 328; but the Germans are running them very close, numbering now as they do 314. Then come Eurasians 260, Japanese 250—the Japanese colony having been scattered by the war and not yet re-collected,—Spanish, chiefly from the Philippines, 154, French 138, and Indians 119; no other nationality reaching the century. It may be noted that of those under ten, there are Greeks 7, Peruvians 5, Persians 4, Egyptians 3, with one Arabian and one Korean. In all previous numberings of the people the Eurasians were included in the various nationalities of their fathers. In 1890 there were 1,514 British subjects, 564 Portuguese, 386 Japanese (of whom there were 595 in

1885), 323 Americans, 244 Germans, 229 Spanish, and 114 French, out of the total of 3,821; while in 1870, out of the total of 1,666, 894 were British subjects, 255 Americans, 158 Germans, 104 Portuguese, 46 Spanish, 16 French, and only 7 Japanese.

Under threat from Pekin of having to defray all damages out of his own pocket, being deprived of his rank and having his estates confiscated, if any more anti-foreign riots occurred in his district, Leu Ping-chang, Viceroy of Szechuen, has issued a proclamation authorizing foreigners and natives alike to kill rioters.

Another anti-Christian riot has occurred at Pingyang, a China Inland Mission Station, 33 miles south of Wenchow.

A fortnight ago, during the Dragon Boat Festival, boats belonging to two villages 30 *li* from Pingyang had a contest. One of them had to lose the day, and of course did. But what could be the cause? A Taoist priest was called in, who discovered an eyeless idol! Who could have gouged these eyes out if not a Christian? A "medium" confirmed the theory under the influence of a certain god. A band of roughs went along to the house of a prominent Christian, and threatened that if the boat failed again his house would be destroyed. That was Thursday, the 27th of June. The Magistrate was duly informed of the threat. On Saturday they began with a newly erected chapel, which was soon burnt to the ground. A literary gentleman who had been urging the mob against the Christians now fearful of the consequences, regretted the step he had taken and almost on his knees begged the rioters to desist. Their blood was up, it was too late. From one house they went to another, from that to another, until not one of the Christian houses was left standing. Everything was deliberately taken outside and bonfired; where the house adjoined others it was destroyed, where it stood alone it was given over to the devouring element. The Christians had to flee to the city of Pingyang to the care of the missionary. Next day the rioters sought out other Christians in other villages, and continued the work of destruction. On Monday the Magistrate and the Wenchow Tao-tai's *Wei-yuan*, who happened to be in Pingyang, went off with soldiers. Before reaching the spot a river had to be crossed. "Thousands" of people were waiting on the opposite bank; they had taken possession of the ferry boats. Later the two officials got across in other boats leaving the soldiers behind. They had a difficult task before them, so they soon gave it up and returned, after making the gentry responsible for order.

But order is not yet restored. Monday, Tuesday, Wednesday, saw more houses destroyed; Friday another, and Saturday another. Every Christian house that side of the river is destroyed, and the rioters are still massed together. Twenty houses are gone, twenty families driven out, and fifty-one homeless natives are residing in the missionary's house and looking to him for help. The rioters now threaten to cross the river and carry the attack further afield. Our Consul, Mr. Fox, has made strong representations to the Tao-tai, who sent off, it is said, 400 soldiers on Saturday morning. They had not reached Pingyang on Sunday evening, though it is only a 12 hours' journey, and report says they are resting part way, or according to another report, have been refused a passage across the Juan river.

The people in this city and neighbourhood extol the valour of the Pingyangites in thus boldly attacking the foreigner and his religion, and the attitude both of young and old here has during the past week become very decidedly antipathetic to every foreigner they see. The youngsters do ten times as much shouting as heretofore, and their elders are much bolder and more abusive. If the infection is not to spread prompt steps will have to be taken. Some suspect a more serious basis for the riots than mere anti-foreign prejudices.

In Szechuen the number of cities and towns where anti-foreign riots took place was 12 in all. But Chungking, the second city in the province, remained quiet. This fact is attributed to the issue of a very strongly worded proclamation by the authorities. The proclamation contains this clause:—"His Majesty has issued an edict strongly condemning the crime of burning and destroying chapels and churches belonging to foreign missionaries and we are further in the receipt of a special edict from the Emperor authorising us to summarily decapitate any person who has been arrested for the crimes mentioned above."

TWO VOICES FROM ENGLAND.

JAPAN'S sudden promotion to the front rank of Powers and the significance of the fact from a European point of view, have not failed to attract attention among English publicists. In the June number of the *Contemporary Review* we find two essays on the subject, one from the pen of the Hon. REGINALD BRETT, the other from that of Mr. FREDERICK GREENWOOD. Both writers are men of note in the literary world, and in the domain of politics Mr. FREDERICK GREENWOOD'S name will go down to posterity as the man that suggested to Lord BEACONSFIELD the idea of purchasing the KHEDIVE'S shares in the Suez Canal. Great interest, therefore, attaches to the views advanced by such essayists. Their papers in the *Contemporary* cover much ground, but we shall confine ourselves here to one point—the question of an alliance between Great Britain and Japan.

It may be affirmed, we think, that public opinion in Japan is now divided into two camps; the one consisting of men that advocate an alliance with England; the other, of men that regard Russia as Japan's natural associate. There is an immense difference between the sizes of the two groups, the pro-English enormously out-numbering the pro-Russian. Moreover, the basis of the former's political creed is the preservation of peace, whereas the latter's avowed object is territorial aggrandisement. The advocates of an alliance with England maintain that Russia's southern expansion must be checked; that the Korean peninsula must be saved from passing under her sway; that her advance from the Yalu to the Liao and thence to Peking must be arrested, that, in short, the *status quo* must be maintained as far as possible in the Far East. On the other hand, the exponents of an alliance with Russia, as represented in the columns of their sole newspaper organ, the *Nippon*, allege that Russian encroachments in the north need not seriously concern Japan; that the latter's unique aim should be to provide for her own growth along the line of least resistance, namely, in a southerly direction; that since such growth must involve intrusions upon the spheres of English, French, and Spanish sway, an alliance with Great Britain is out of the question, and that Japan's true policy should be to give Russia a free hand in the north in return for that Power's assistance in removing any obstacles that may present themselves to Japan's southern expansion. Ignorant that Japanese politicians are thus divided; ignorant that the notion of an alliance with either Russia or England has ever been gravely mooted in Japan, the Hon. REGINALD BRETT and Mr. FREDERICK GREENWOOD have discussed these very contingencies, and arrived at virtually

the same conclusion—though from totally different points of view—namely, that England's best policy is to remain neutral. Mr. BRETT, referring to Great Britain's refusal to support Germany, Russia, and France in the protest against the Shimoseki Treaty, says that "England has been fortunately saved from an act of extraordinary weakness and folly." He is a sympathetic student of Japan's modern history. "The present year," he writes, "has witnessed the climax of one of the most extraordinary dramas in the history of mankind. In the space of a generation a mighty nation has been born, grown up, and reached man's estate; has passed from barbarism to civilization, from the darkness of CANUTE to the light of the Victorian era. National development, which, according to the experience of mankind, takes centuries to accomplish, has brought Japan out of the dark ages into the forefront of civilization within the span of one man's memory." Of course it will be understood that in quoting this synthesis we do not necessarily endorse it. Our own conviction is that the astonishment produced in the West by Japan's recent achievements is due, in great part, to a very false estimate of the point from which she started in her race to overtake the Occident. But we are here recording Mr. BRETT'S views only. Our quotation shows that he certainly does not underrate Japan's capacities or her value as an ally. Yet he is averse to the notion of an alliance with her. Let us give his reasons in his own words:—

If in the future of the Far East a quarrel between Russia and Japan is inevitable, it is not a quarrel in which England need have a hand, and though amity with Russia is the basis of peace for England in Europe and Asia, an offensive and defensive alliance (*i.e.* with Russia), except in face of a great common danger, is, nevertheless, a policy which, though it may suit the exigencies of an Italian adventurer, is not worthy of English statesmen. England can not afford to hang on to the skirts of either Russia or of Japan, and in this sense a neutral England means an independent England, governed by the rule of friendly service to all neighbours, but without fear or favour. It is as a trader, and not as a land-owner, that the interests of Great Britain are supreme in the Far East. * * * In commerce, in influence, England has been hitherto without a rival in the Far East. If she has now to endure the rivalry of Japan in both these peaceful spheres, military rivalry can be left to the competing forces of Japan and Russia. Russia for years has been slowly creeping towards the Southern Pacific. * * * It would seem that, just as in Europe statesmen have been employed for a century in blocking Russia out of a sea-port in the temperate zone, so in Asia a similar policy may not impossibly be advocated. In order to choke Russia with Baltic ice, south-eastern Europe has been deluged with English blood. It is to be devoutly hoped that English politicians will not think it necessary to recommence the game in the Far East. Nor will the still feebler policy obtain, let us hope, of slaughtering Japanese in Manchuria to avert—as it may be thought—the necessity of killing Russians in the Balkan Peninsula. In point of fact, such stop-gap expedients are predestined to failure. Time is on the side of Russia, and no power or combination of Powers can permanently hinder the natural outlet of Russian energy both through the Dardanelles and into the warm Pacific Ocean. Admit this, and thus the rise of Japan redressing the balance of power in the Far East, is an unmixed good for England and for mankind. Even now, in spite of mighty recent events, England is still supreme in the Far Eastern Seas, even though, in a few years, she may find a rival in Japan. The Chinese indemnity will doubtless be largely spent on ships of war. Masses of cheap labour and the combined enterprise of her people will enable Japan in her export trade, to compete, if not to excel, the great maritime Power of the West. If England retains the carrying trade of the Pacific, it is possibly as much as she can expect to do in the face of Japanese competition.

Such is Mr. BRETT'S counsel. Briefly stated, it amounts to this:—That England should efface herself altogether as a fighting Power; that she should leave others to battle, if they please; that she should be satisfied with playing a commercial rôle, and that even in the latter, she should quietly shrink into a narrowed sphere in the face of vigorous competition. Is that the spirit that made, or can preserve, the British empire?

Let us turn now to Mr. FREDERICK GREENWOOD. He, too, appreciates, fully appreciates, Japan's potentialities. "The armed rising of Japan," he says, "the sudden conquest of China (which means its awakening too), were never mistaken for small events, or as likely to be of merely passing consequence. That they were the beginning of a great change in the tides of commerce, and would probably end in a momentous transfer of dominion, was immediately apprehended. . . . Though the war might almost have been a stage rehearsal for all the demand it made on the higher military qualities, those qualities were so splendidly displayed as to be a clear presage of greatness." In addition to this very flattering faith in Japan's capacities, Mr. GREENWOOD is a strong believer in alliances. For years he has been upbraiding England because she stood aside from the Dreibund. In this very essay now before us he declares that the union of Germany Austria-Hungary and Italy has ceased to have any practical existence because England always stood aloof from it. "It perishes, that alliance, because of the resolute abstention policy of England, who profited almost as much from it as its sworn members." An advocate, then, of alliances and a believer in Japan's title to rank high among military and commercial States, does Mr. GREENWOOD recommend an alliance between her and Great Britain? He does not. He can scarcely conceive the serious entertainment of such a notion. He calls it "unspeakably barbarous." He cordially endorses MAINE'S dictum that "any European Power allying itself in arms with the yellow races against another European nation would play traitor to the welfare of the whole human race." To him the rise of Japan means the rise of the East against the West; a Mongol inundation of the Occident. He is shocked by a vision "of what our world and its civilization would suffer at the hands of hordes of Chinese, Japanese, Malays, equipped as were the captors of Port Arthur." "As surely," he writes, "as there can be or should be, no European partnership with these exterminating peoples, so surely must Europe keep them in check." Therefore he bitterly upbraids England because she wilfully stood aloof from a coalition of European Powers having for its object the regulation and control of Japan's ambition.

All this would be very unpleasant reading to the Japanese were Mr. GREENWOOD to be regarded as a faithful representative of British opinion or British policy. But he is not. The course advocated by him for years—association with the Triple Alliance—is precisely the course that the British Government has carefully avoided with the approval of the British nation. He now blames England for not allying herself with Russia, which country he describes as "the one great Power in Europe that we were looking to for friendship." Yet hear what he writes about Russia:—

I suppose it has occurred to most of us that, if there be any one nation in Europe which can naturally, decently, successfully traffic in friendship with Japan, that nation is Russia. It is true that the two countries have hostile interests; but they extend over so vast and diverse an area that mutual accommodation would aggrandise both enormously at the smallest possible outlay. And who but the Russians in Europe are themselves Asiatics—a radically Asiatic people, ever pressing eastward, and with a way of dealing with Asiatics which our own proconsuls do not match in some most serviceable particulars. If, then, Japan is not to be held in by Europe at the beginning of her new career, but is to be admitted into the European system as a sort of probationer, it is obvious that Russia has a great advantage here. For, to all appearance, admission into the European system is one of the strongest of Japanese ambitions; there can be no complete and manifest satisfaction of it till Japan figures as a member of some European alliance; there is nothing in the subcutaneous barbarism, of that country to offend the Russians, who massacred at Geok Tepe for as many days, though not, perhaps, with as much *sang-froid* as the Japanese at Port Arthur; and, to go no further, there is the theory which we in England are so willing to blink, that nations are more disposed to make friends with those whom they fear and who can hurt them, than with those who love but do not help them. Knowing nothing about the Japanese beyond what may be gathered from books, I yet allow myself to believe that no people on the face of the earth is more likely to act upon that rule; and if so it follows from these various circumstances that a Russo-Japanese understanding is the most probable result of admitting Japan to the European system as a probationer.

Evidently he has as little genuine sympathy with Russia as with Japan. Were England to ally herself with Japan, it would be a course of treachery and wickedness against civilization; were Russia to form such an alliance, it would be natural and decent. Therefore England must try to cultivate Russia's friendship.

We reproduce these opinions without pausing to criticise them in detail, our immediate object being to show what some Englishmen are thinking, not what we think ourselves. Neither by Mr. BRETT, who counsels resignation and self-effacement, nor by Mr. GREENWOOD, who perceives no distinction between Japanese, Malays, and Chinese, can we suppose that the voice of England is echoed truly.

ART AND SCIENCE.

ALL readers of CARLYLE are familiar with the contempt with which he was in the habit of speaking of the eighteenth century. He had towards it a kind of personal grievance: he regarded it as having given birth to a gigantic, but happily unsuccessful, conspiracy to deprive man of his soul. It would be more reasonable to say that many of the philosophers of the eighteenth century, those of whom CARLYLE is especially thinking when he vents his spleen on "poorly babbling

atheistic science," tried to deprive man of his body. Looking back from the height to which the lapse of another century has enabled us to climb, it is easy to detect their error; but it does not become us to despise it. In contemplating the work of men of past generations, if we could always keep present to our minds the difficulties with which they had to contend, we should be far more inclined to admire them for the great things they actually effected, than to depise them for their omissions and their mistakes. The error of the French philosophers of the eighteenth century was a very natural one. Throwing off the trammels of mediæval superstition, by which the operations of the intellect had for centuries been confined within the narrowest limits, they burst into what may almost be called an orgy of expansive thought. Drunk with intellect as with wine, they thought that intellect comprised, or ought to comprise, the whole nature of man; and it was on this postulate, that man was, or could easily be made, an unemotional thinking machine, that they constructed their system to remodel the world. In the history of philosophic thought is recorded an earlier attempt to enthrone the intellect as supreme, an attempt similar in its essence, though differing in matters of detail. The philosophers of the Stoic school taught that the highest exercise of the reason was to suppress emotion. Still earlier, in the East, from which in the beginning all things came, we find in the philosophic aspects of Buddhism the glorification of a similar ideal; for what is Nirvana but the Apathy, Passionless, of the classical philosophers?

A century before the philosophers of France had begun to talk of the Age of Reason, England had witnessed the culmination of the Puritan movement. Widely as a movement based on religious fanaticism may appear to differ from one based on atheistic science, the two had at least this in common, that they endeavoured to starve the emotional side of man's nature. The Puritan movement was followed by a reaction towards sensualism, a reaction so gross in its character that even the most outspoken historians of modern times hesitate to sicken their readers with a faithful picture of the vices of the Restoration.

As the Puritan suppression of emotion had been practical, so the reaction against that suppression took also practical form. As on the other hand, the views of the eighteenth century materialists had been confined mainly to the sphere of thought, so the reaction against those views took a theoretical rather than a practical form. As NORDAU clearly shows in his work on "Degeneration," the Romanticist movement of Germany was one of the most remarkable manifestations of that reaction; and the Pre-Raphælite movement that later so profoundly influenced English art, was but an offshoot of German Roman-

ticism. From these have sprung the later, even more extravagant, movement of our own time, tending to exalt art and the emotions at the expense of science and the intellect. Of many of these movements but faint echoes reach us here in the distant East, but with the character of one at least, the *Æsthetic* movement, the very name of which tells us that it is an apotheosis of sensation, we are all familiar. By whatever names they are known, whatever absurdities they advocate, these various *fin-de-siècle* artistic schools have at least these doctrines in common, a hatred of science and a worship of emotion. In a clever satire published a few months ago, "The Green Carnation," the doctrines of the leaders of the *Æsthetic* school are reflected with the most perfect accuracy. We have called the work a satire, but in truth it is merely a mirror. So astounding are the views enunciated by the real individuals who in this book are presented to us under a thin disguise, that their mere record is sufficient to create the impression of satire.

Where then does the truth lie? Is it with the men who taught that emotion exists only for the purpose of being suppressed; or is it with the moderns who teach that the only function of the intellect is to seek new fields for the enjoyment of emotion? Are the training and the exercise of the judgment the sole objects of existence; or is the *æsthetic* doctrine of moods the true one, and has man become rational only to learn the great truth of the supremacy of instinct? The error of the latter doctrine is so manifest that it is hardly worth refuting. The whole history of the progress of the race has been the history of the emancipation of man from the control of his appetites, and appetites are none the less appetites because we dignify the fruit of their gratification by the name of *æsthetic* pleasures. If we had to choose definitely between the emotionalists and the intellectualists, we should have no hesitation in casting in our lot with the latter.

No such emotional suicide is, however, necessary or even possible. History shows us with perfect clearness the folly of all such attempts. Man is not, and can never be, a purely intellectual being, such as the eighteenth century philosophers conceived him; in their sense the Age of Reason can never dawn. Intellect is, indeed, destined to assume a more and more dominant place in the direction of the human will; but man must forever remain an animal, and as an animal will forever have an emotional nature, the working of which the intellect may most wisely endeavour to moderate and to guide, but will most unwisely endeavour altogether to suppress. Nor must he despise his animal nature, and, while recognizing its potency, mortify it as a thing of evil. If he treat it as a devil, it will indeed become one, and will take a terrible revenge, as the

whole history of asceticism will testify. Man is man, not because he has ceased to be an animal, but because he is an animal that has learned to reason. The wise man, then, will seek neither to suppress his emotions nor to make his emotions his guides. He will not despise even the pleasures of the lower senses which he shares most frankly with irrational animals, for he is aware that a certain quantity of pleasure is a necessary requisite of a healthy physical; and therefore of a healthy intellectual, life. He will cultivate as the higher pleasures of existence all those emotions which, peculiar to a highly developed intelligence, tend almost as strongly as his powers of reasoning to distinguish man from the brute; he will, that is to say, cultivate all those emotions to arouse which is the function of art: but he will cultivate them restrainedly, recognizing that one who abandons himself without reserve even to these higher emotions, deserves the censure and will suffer from the punishment that attach to the grosser type of voluptuousness. He will reverence the judgment as the loftiest element in his nature, and will shun all actions that may tend to free his instincts from rational control. And finally the wise man will reverence, even as he reverences the judgment, that emotion which, while it is in its essence a manifestation of his animal nature and in its purely animal indulgence degrades man far below the level of the unthinking brute, yet, when transfigured so as to become spiritual as well as physical, is in truth the crown and the glory of existence—the emotion of sexual love.

A FORMIDABLE INDICTMENT.

NORDAU'S work on "Degeneration" seems likely to attract, as indeed it serves to attract, a good deal of attention. The book is an essay in philosophical criticism, that is in criticism of an extremely rare and valuable kind. The writers and artists he selects for examination are those representing the various latter-day tendencies usually summed up under the conveniently vague term *fin-de-siècle*. The men, and the tendencies, have been criticised freely enough before; but the criticism, based as it was for the most part on outworn religious and social prejudices, served naturally rather to increase than to diminish the number of the adherents of the *fin-de-siècle* schools of thought. Our readers will doubtless remember the story of the particularly blatant anti-theist who was lecturing a sceptic of large views on the iniquities of the Christian religion, and how the sceptic, at the conclusion of the harangue, replied softly in the words used by AGRIPPA to PAUL, "Almost thou persuadest me to be a Christian." Similar was the effect produced in

many minds by the indiscriminate abuse showered by orthodox journals on men who represented themselves, and who were considered by their immediate followers, to be the inaugurators of a new era alike in morality and in art. It was remembered that journals of the same calibre, representing the comfortable middle-class Philistine to whom nothing is so repulsive as what BAGEHOT called "the agony of a new idea," had successively resisted all the reforms that we now consider the greatest advances of the century. It was natural to look for great things in a movement which merited the condemnation of the *Standard* and the *Spectator*; it was inevitable that many should come to regard as the apostle of a new truth a man whose writings were declared obscene by the *Saturday Review*. But the rule of admiration by contraries is not invariably safe to follow; and in their resistance to certain *fin-de-siècle* tendencies the champions of conservatism have for once in their lives been pointing out the path of true progress. It is true that, as we have already indicated, their injudicious and obviously partisan criticism served, as it usually does serve, to drive men over to the side they were condemning—we remember that an agnostic friend once told us that her first step in the direction of freedom of thought arose from a perusal of PALEY'S "Evidences of Christianity"—but still, they will have the rare pleasure, when they read NORDAU'S book, of saying to themselves, "Here at least is one case in which history has not proved us to be in the wrong."

As to the truth of the general proposition "Innovation is not always progress, but the new is often better than the old," we suppose both conservatives and reformers would find no difficulty in agreeing. The difference arises when they come to the practical application. With regard to every proposed change fanatical conservatives say: "In this instance innovation is undoubtedly not reform." With regard to every proposed change fanatical reformers say: "In this instance the new is undoubtedly better than the old." It is evident that no reasonable method of choice can be expected from zealots actuated either by a blind fondness for the old, or by an equally blind fondness for the new. What we need is some broad general test, some touchstone by the application of which we can determine whether any proposed social change, any reconstruction of our moral ideal, any radical upheaval of accepted views in literature and art, is likely to be beneficial or the reverse. And such a test modern science is happily in a position to supply. The greatest reform ever effected in ethical science has been the reorganization of our conception of duty which this century has witnessed, a reorganization rendered possible only by the theory of

evolution. Now, as formerly, man's duty is to be learned by a study of his history. But in former times that history was of a few thousand years duration only, and it was a history of priestcraft, of jugglery, of superstition, of supposed revelations from a supersensual world. The idea of duty to which the study of history gave rise was blind obedience to certain definite rules, laid down, it was taught, by divine command. What we now mean by man's history is an affair of aeons; and it dates back to the very dawn of life upon the earth. And the ideal of duty which this new study of history teaches us is a progressive ideal; it urges us, guided by the true light of knowledge instead of by the *ignis fatuus* of revelation, to struggle forward unceasingly towards the evolution of a higher type. The means we are to employ in the struggle are those that history shows to have been effective in the past; they are those that led man's brute ancestor from the individualist state to the tribal state; those that led prehistoric man from the tribal state to the formation of organized social polities; those that are tending now, despite our anarchic industrial system, despite our huge armaments and other relics of savagery, to the evolution of a nobler kind of social integration, and to the formation of a vast international federation. Such changes cannot be brought about in a day. But when we remember the countless ages that it took to consolidate a number of wandering tribes and thus to bring about the growth of a nation, we need not think long the two or three hundred years that may yet be needed to put an end to war and to replace industrial anarchy by industrial coöperation.

The grand ethical principle we learn from the study of human history, the touchstone by which we are to try all proposed innovations, is this:—*Anything that, without impairing man's physical or mental qualities in such a way as to unfit him as an individual in the struggle for existence, tends to help him to control his instincts by his judgment, and, further, to subordinate his individual advantage to the advantage of the race, is good: whatever tends seriously to impair the physique or the intellectual power of the individual man, whatever tends to liberate man's passions from rational control, whatever leads man to prefer his own to the general good, is evil.* There, shortly stated, is the whole doctrine of scientific ethics. It was dimly and partially seen by some of the great teachers of old, and by them, overlaid and intermixed with colossal quantities of error, was made the foundation of the leading religious systems of the world. But it was impossible of exact definition, impossible of fruitful application, before the century of DARWIN. This touchstone it is that NORDAU applies to *fin-de-siècle* literature and art, and by this he finds it condemned.

It is impossible, in the space at our

command, to give more than the briefest outline of the general plan of his work. His aim is to show that the authors and artists he selects for criticism as characteristic of *fin-de-siècle* tendencies—of whom the principal are the Pre-Raphaelites, the French Symbolists, TOLSTOI, WAGNER, the Æsthetic school, IBSEN, NIETSCHE, and ZOLA—are all sinners and apostles of sin, when judged by the principles of scientific ethics; and that, far from being innovators, they are atavistic, that they are examples of the pathological tendency to the appearance in degenerate organisms of characteristics of a remote past in the history of the species. Especially significant “stigmata” of degeneration, one or more of which he points out in all the authors and schools named, are mysticism, which betrays a want of development of the highest powers of the judgment; emotionalism, which indicates a reversion to the primitive type in which judgment as yet was not, and the reign of instinct was supreme; and ego-mania, which is a negation of all those higher tendencies of human nature that have led to social integration. From their own testimony he convicts them, in their published works NORDAU displays the stigmata that affiliate them with the inmates of our prisons and asylums. His criticism, being scientific in character, that is, being based on principles that are the result of unprejudiced observation of a wide range of anthropological data, has a convicting force that ordinary literary criticism, dependent for its authority entirely on reference to stereotyped “rules of art” or to moss-grown “principles of absolute morality,” fails utterly to convey. NORDAU’S book will succeed where the *Saturday Review* order of critic failed; it will compel all but the most infatuated admirers of these self-styled “moderns” to recognize the essentially retrogressive, degenerate, anti-social character of *fin-de-siècle* thought.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

PHALLICISM IN JAPAN.

TO THE EDITOR OF THE “JAPAN MAIL.”

SIR,—Mr. Cary is kind enough to point out a slip of the pen in my last letter, “Yamada” instead of “Kanda.” Well, I do not believe in the story of a phallic festival or ceremony witnessed by Mr. Buckley at Kanda. Perhaps he may have imagined he saw one.

It is true, as Mr. Cary says, that this nasty pamphlet was offered (as a university candidate’s thesis) to the Faculty of Arts, Literature, and Science in the university of Chicago,—which is largely, I believe, under clerical influence. I am sorry for the Faculty that such an address should have been offered to it. Possibly the Faculty, knowing nothing of existing conditions in Japan, supposed the work based upon veracious and impartial research,—and theses of a very poor kind are often accepted as a mere matter of form. Possibly there were Reverends in the Faculty who understood the work was being done in the interest of the missions. But even had the dissertation been offered to the best university in America, its acceptance would still, in my opinion, have reflected disgrace on that University. As for “circumscription in the circulation of an academic monograph,” Mr. Cary acknowledges it has been announced for sale in one paper, and also acknowledges that I “might have seen,” announcements in other papers. Well, I have. As the possibility is not denied, the names of the papers have nothing to do with the matter discussed.

Let me also point out a slip of the pen or pos-

sibly, an error of the printer, in Mr. Cary’s letter, —“pseudo-critic,” instead of “pseudo-cryptic” is a term familiar to writers on the subject; and I used it because feeling certain that most of Mr. Buckley’s collection is not phallic at all, and that both his objects and his theories are trash. I would not deny the authenticity of the objects he obtained, or says that he obtained, from brothels. Such objects may be found, and it was not necessary to go to Yamada for them;—they have nothing to do with any form of public worship; and those “old residents” Mr. Buckley talks about could probably have told Mr. Buckley as much. That he knew what they really were, is, in my opinion, the reason why they were sought for as close to Ise as possible. “Prove that these brothel-images come from the neighbourhood of Ise; then try to identify them with the Ise cult of Shinto”—these would appear to have been the instructions given. Mr. Cary said in a previous letter that the appearance of the other objects in the collection would be, in his opinion, quite sufficient to indicate their meaning. That is a very great mistake. There is, perhaps, no country—not even China—where it is so dangerous to draw conclusions from appearances as it is in Japan. I would say that either Mr. Buckley has been imposing upon himself, or has been imposed on by the Japanese employed to assist him. I notice that the pamphlet gives no Japanese interpretation of the meanings of the objects;—indeed its author impudently confesses that he does not know the meaning of some. Neither does he give the names of various places whence he obtained his articles,—though taking care to assert that some come from brothels. What is the significance of an image?—What is the name of the god or spirit it represents?—What is the use of the object? What is the religious or superstitious idea relating to it? All these are questions any veracious worker is bound to ask, and to declare. It is not by reading Payne Knight,—a book written in the last century,—nor by reading “any of the books referred to in the “bibliography” given by Mr. Buckley, that light can be thrown on such subjects in Japan. The information, to have any value, must be gained on the ground of research,—from recognized authorities, or from texts, or, in default of these, from common knowledge. That this has not even been attempted, is evidence against Mr. Buckley. He has merely paid to have obscene things collected for him, or bought articles to which he and other foolish bigots might attach imaginary obscene meaning,—an amulet with a pebble in it, two loops of grass, children’s toys, and peach-candy. Where are his Japanese authorities? He has none. No man able to make real investigations of that sort, would do it except for a scientific society.

Mr. Cary considers my use of quotation-marks disingenuous. I think my quotation-marks were quite justifiable; but,—remembering the brothel-images exhibited as “Shinto-cultus implements”—the reader can judge of the “apologetic” and “charitable” spirit of Mr. Cary’s own quotation from the cowardly pamphlet. Ironical apology is frequently made to fill up the space between two attacks on Shinto,—the author and his advisers being evidently afraid of showing their plan plainly enough for every critic to see at a glance.

Perhaps I should have been more careful, in dealing with prevarication, to use occasionally the word “cleric” or “clerical” instead of “missionary.” Some clergymen do not like to be publicly known as “Rev.” in this country; it interferes with matters they do not wish to have known. “Reverends” again, frequently deny they are missionaries,—even while doing missionaries’ converting and teaching in mission schools or other schools. Reverend or non-reverend members of sects, whether abroad or at home, unite in various movements toward the carrying out of missionary projects abroad. Some of these projects,—such as the present attack upon Shinto through an obscene pamphlet,—are despicable. They are not only that—they are likely to bring about the very reverse of the object hoped for. However, I think the missionary and clerical nature of this phallic attack on the State Religion have been sufficiently shown. Mr. Cary is a “Reverend;”—“W.E.G.” is the Reverend W. E. Griffis;—the Doshisha, where the plan was matured is a missionary concern;—and Mr. Buckley, ex-mission-teacher, the author of the pamphlet, is studying to become a great “reverend.” All reverend people do not do these things;—but they are rarely done by men of any other class today.

Mr. Cary and four professors of the Doshisha have “agreed” (after long reflection, apparently) to say that these things from brothels, &c., exhibited by Mr. Buckley were never kept in the Doshisha, though “there is no reason why they should not have been kept in the (Doshisha’s) museum of

comparative religions.” Is not this just as if a farmer were to say on being asked if he had a cow:—“There is no reason why I should not keep a cow in my cow-house; but I and all my hands have agreed to say that I never kept a cow in my bedroom?” Now, my first information about the collection being kept in the Doshisha was from the *Doshisha*. What Mr. Buckley has been “studying” was much more of an open secret than the Doshisha people imagined. The date of the “opening” of the museum, and of Mr. Buckley’s judicious going, are no answers to my question. I asked whether Mr. Cary would deny that the objects had been kept in the museum of the Doshisha, and he knew perfectly well what I meant. His reply is that they were not kept in the Doshisha, but that there is no reason why they should not have been kept in the museum—a most disingenuous reply. Whether they were kept in the Doshisha or not, he also tells us, makes “no difference.” Mr. Cary’s attempt to conceal facts makes visible one large difference. Those facts show the origin of the plan to identify the State Religion with the superstitious of houses of prostitution; they also show where the plan was matured and they show the “missionary auspices” quite sufficiently for all intents and purpose. That is another difference.

I am, Sir, very truly yours,
July 8th, 1895.

Z.

TO THE EDITOR OF THE “JAPAN MAIL.”

SIR,—With reference to a communication respecting my article “Phallicism in Japan,” and subscribed “Z.” which appeared in your issue of May 30th, I beg to state as follows:—

The article was accepted by the Faculty of the University of Chicago as a scientific monograph in candidacy for the degree of Ph.D. (doctor of philosophy) which it, together with the usual examinations, was instrumental in securing. Its topic belongs to the new science of comparative religion, and is suitable for discussion in the transactions of some learned society, not in a daily paper. But in any case the studied personal vilification, obvious in the communication, puts it out of court for respectable discussion. Only in the interests of the uninstructed or unwary can I here so much as give a flat denial to each and all of the charges made.

Yours very truly,

EDMUND BUCKLEY, Ph.D.,
Docent in the University of Chicago.

The University of Chicago,
Chicago, Ill., June 18th, 1895.

[We must ask our correspondents to let this matter rest here.—
Ed. J. M.]

ALUMINIUM TORPEDO-BOATS.

TO THE EDITOR OF THE “JAPAN MAIL.”

SIR,—We read in your issue of June 19th the following paragraph:—

“The French ministry are so pleased with the second class aluminium torpedo-boat that Messrs. Yarrow & Co. built for them last year that they have ordered five more.”

One might be induced to think that these five new torpedo-boats belong to the same model as the one spoken of and are also built by Messrs. Yarrow & Co. Far from it, these torpedo-boats are of a different type, designed by M. Guillaux, engineer of the French Navy, and are built by Messrs. Schneider & Co., Creusot Works, France.

The only particular they share with the torpedo-boat built by Messrs. Yarrow & Co. is that, in both cases, all aluminium materials employed are exclusively made in France.

Yours truly,

Tokyo, July 15th, 1895.

A. D.

KAWA BIRAKI.

TO THE EDITOR OF THE “JAPAN MAIL.”

SIR,—Could you, or any of your readers, tell me what is the origin of the annual Sumida River festival called “Kawa Biraki,” to be held this year on the 20th instant?

I am, Sir, yours obediently, ENQUIRER.
Yokohama, July 18th, 1895.

JAPANESE HISTORY.

TO THE EDITOR OF THE “JAPAN MAIL.”

SIR,—Can you tell me whether the articles of Professor Kume on Japanese history, which caused so much excitement a few years ago, have been translated into English or not? By so doing you will greatly oblige,

Your truly,

Kyoto, July 12th, 1895.

M. L. G.

[They have not been translated so far as we know.—Ed. J. M.]

HORSE-BREEDING IN JAPAN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Being attracted recently by the caption to an article in a Kobe paper, "Horse-breeding in Japan," I read it, and was intensely surprised at the statements it contained. It is such a gem that I reproduce it in full, the editorial comment as an introduction being that it "is not without interest!"

The Government decided a few weeks ago to appoint a Committee to investigate and report upon the question of horse breeding, and regulations were promulgated in the *Official Gazette*. The Committee is under the control of the Department of Agriculture and Commerce. In connection with this, the following article from the *Siam Free Press* is not without interest.

So much for the editorial knowledge. But let me introduce the artist in the *Free Press*. Here he is:—

If horse-breeding in Japan has been successful in some ways, it must be said that it has been attended with much financial disaster. And the blunder committed by the government, in not supporting the breeding farms, has been brought home to the Japanese authorities by the results of the war in the lamentable lack of horses in the Empire. The earlier breeders spared no expense in the purchase of English and American stallions with excellent pedigrees, and the blending with the Japanese equine species has produced results as highly satisfactory as could be desired both in point of beauty and the speed attained at the Yokohama races. But beyond the custom of the Nippon Race Club, which has invariably ordered about thirty horses a year, the breeders have not been able to command either a sale or a good price for their colts. The result has been that the expensive scientific method of horse farming had to be abandoned, and the horses left to the care of themselves in the wilds of Hokkaido. No more fresh stallions were imported, and the consequent inbreeding has deteriorated the race so much that the half-breed races in Japan have of late been a monotonous procession. The Shimosa farm was the first to feel the deterioration, which was at first attributed to the unsuitableness of that part of the country for horse breeding. But when the hardy Hokkaidos were also found to be going a downward course, the cause was at once seen to be due to inbreeding. However, owing to the apathy of the government, the farmers were allowed to jog along, notwithstanding the grumbling of the Nippon Race Club about the miserable mob of cattle the farmers were sending season after season for racing purposes. Now that the government has fully realised the necessity of a militant power fostering the raising of horses, no doubt the old standard of colts will again be reached very soon. With commendable alacrity the government has taken the matter in hand, and has commissioned Mr. Salter, a well known importer of Australian horses into the Straits, to attend to all necessary details in the matter. So far only the entire Bannockburn has been secured, who is now on his way to Japan. It is said that this Australian horse has an excellent pedigree and a good racing record in the Colonies, though he has not been successful on the Singapore turf. No doubt other animals will be shortly secured since the Japanese now acknowledge that in the infusion of new blood lies the whole secret of the improvement of the Japan steed. Half measures will not answer in such matters, and unless the Japanese government is fully decided to spare no expense it would be much better to leave things alone. Spasmodic efforts in the long run are more expensive than a thorough plunge, and it would be a shame to let the Hokkaido and Shimosa farms, which have produced such excellent colts in their earlier days, and which would have made the fortunes of many an English breeder, to collapse for want of support.

I trust I may be pardoned if I express myself strongly, but I should like to know from the *Siam Free Press* who is the Bedlamite responsible for the foregoing paragraph. "The blunder of the Government in not supporting the breeding farms has been brought home to the Japanese authorities in the lamentable lack of horses in the Empire." But the breeding farms belonged to the Government—every one. "The earlier breeders spared no expense" (that is the Government) "in the purchase of English and American stallions with excellent pedigrees, and the blending with the Japanese species has produced results as highly satisfactory as could be desired both in point of beauty and speed attained at the Yokohama races." Here is a writer talking of "beauty and speed at Yokohama races," and "a lamentable lack of horses in the Empire"—for military purposes—in the same breath. "But beyond the custom of the Nippon Race Club, which has invariably ordered about thirty horses a year, the breeders (the Government) have not been able to command either a sale or a good price for their colts"—he does not say what they do with their fillies. As a fact, a friend of mine in Tokyo not long ago took four half-breeds for which he paid yen 1,100—one at 400, one at 300, and two at 200 each. As a fact, also, the Nippon Race Club has never yet, either from Shimosa, Nanai, or Niicapu, had any ponies except after everybody else had taken the pick of the stock. This is obvious for two reasons—first, official influence; secondly, dollars; there are now and always have been officers who will pay double the price for horses suitable as chargers (and private gentlemen will take likely hacks at the same rate) of that offered by the Race Club, consequently the best bidders get best served, to say nothing about precedence. "The result has been that the expensive scientific method of horse farming had to be abandoned, and the horses left to the care of themselves in the wilds of Hokkaido." *Splendide mendax*. Where are the "wilds of Hokkaido?" If this writer will go to Niicapu he will find twelve hundred brood mares—a rather extensive mob of mothers, by the by, for supplying the annual string of thirty for the N.R.C. "No more fresh stallions were imported," says this Solon, "and the consequent inbreeding has deteriorated the race so much that

the half-breed races in Japan have of late been a monotonous procession." What the writer means by a "monotonous procession" I will not attempt to fathom. Then it is stated that owing to the Government "apathy" things were allowed to "jog along," notwithstanding the "grumbling of the Nippon Race Club!" Then it comes about that as the Government "has fully realised the necessity of a militant power fostering the raising of horses" [the very thing the same Government has been doing—though unsuccessfully—for twenty years] "no doubt the old standard of colts will again be reached very soon." It is to be hoped that the Japanese Government in future will raise something better than "the old standard of colts" referred to above. If they do not they had better leave horse-breeding alone. Then comes what appears to be the pick of the whole business. "With commendable alacrity the Government has taken the matter in hand and has commissioned Mr. Salter, a well-known importer of horses into the Straits, to attend to all the necessary details in the matter."

But perhaps I have made a mistake in taking this writer seriously—perhaps after all he is only a penny-a-liner employed to write up Mr. Salter and his horse Bannockburn—the "entire" Bannockburn mind—Mr. Salter is not bringing a Bannockburn that has been "added to the list." It is interesting to know that the "Japanese now acknowledge that in the infusion of new blood lies the whole secret of the improvement of the Japan steed!" The Japanese Government is also warned that unless it is "fully decided to spare no expense it would be much better to leave things alone"—that is "that the horses be left to themselves in the wilds of Hokkaido."

With the exception, perhaps, of sheep-breeding, wherein the Government has been robbed right and left, nothing that the Japanese Authorities have undertaken has been so marked by failure as horse-breeding. It has been proved beyond dispute that the native horse in Japan has not been improved during the past twenty years, and there is good reason to believe that it has deteriorated. The cause is not far to seek—I speak of a lack of improvement. From enquiries in many parts of the country, I have never been able to discover that any inducement has been held out to breeders to improve the native animal. In most cases neither the sire nor the dam is a selected animal, and when the colt is dropped, in ninety-nine cases out of a hundred it is starved, and the mare is often in poor condition from the first month to the last. It is not possible under such conditions to maintain a standard, and, slowly, it may be, but certainly deterioration must be the result. The Japanese pony has some good qualities. He is hardy, and will live on coarse food and do a long day's work upon it. He is not handsome, and frequently vicious; but the latter quality—like that in every other breed of equine—is oftener the outcome of brutal treatment than inherent vice in the beast itself. He is seldom truly formed; a great disparity presenting itself between the fore and hind quarters in many instances, to the detriment of the latter, with the result that the common shape is weak loins, straight shoulders, and a heavy forehead. The feet vary much in different districts, from the big flat foot of the lowlands to the donkey-hoof of the hills, though the latter predominates; and, like most coarse breeds, they have large, unshapely heads, and thick necks furnished with extremely coarse manes. It would be no more difficult, however, to improve the Japanese pony than any other breed of animal, but it can only be done by stringent selection and proper feeding of both dam and offspring. The authorities having found a weak spot in the cavalry and transport services in the late war, will doubtless hasten to make good the defect, and it will be interesting to watch the progress made during the next few years. Were the Government inclined to incur the cost, a sufficient number of horses could be obtained from Australia to furnish every branch of the military service right out. On the other hand, a sufficient number of suitable mares might be found in Japan, which, crossed with the proper horse—this animal has, by the way, not yet been introduced into the country, so far I know, not a single specimen—would produce a breed of sufficient strength, stamina, and speed to suit all the requirements of the military service. This, however would take several years to accomplish, though it would doubtless be the best and cheapest plan. As soon as the half-bred fillies were of proper age the Japanese mares could be discarded, and in course of time the native blood could be almost eliminated from the breeding establishments.

It is hardly worth while perhaps refuting the *Siam Free Press* statement that the mating of foreign horses and Japanese mares "has produced results as highly satisfactory as could be desired"—the thing is absurd. Many fairly good-looking

animals—showy would be nearer the mark—have been produced, but the half-bred as known on the race course is not the class of horse to serve a useful purpose. Got by thoroughbred sires, he is generally leggy and lacking in bone and substance, and frequently takes so much after the dam as to be scarcely recognised as a horse of foreign extraction. In several instances within my knowledge they have proved failures as chargers, and that without being subject to hard work or heavy weights. It remains yet for horse-breeders in Japan to import the animal to nick with the native mare for the production of a class suitable for the Cavalry, Gunners, and Military Train. That a fair amount of blood should be used goes without saying, but thoroughbred sires are not required. Strange experiments have been tried in horse-breeding in Japan. Even Clydesdales have been introduced for the purpose, and the produce may be seen at Makomanai, where many other curious crosses are to be found.

The climate of Japan is quite as suitable for successful horse-breeding as that of many other countries. There is good water everywhere, and though pasture land, as such, is rare, there are thousands of acres in Central and Northern Japan free from timber and not under cultivation that would make excellent pastures. Horses in Japan are generally fed upon barley, but there is better and cheaper food in the country, namely, Hokkaido oats, of which, if there were sufficient demand, any quantity could be obtained.

At the present moment the Authorities have doubtless many important matters on hand, but that is no reason why a commission should not be formed and a scheme determined upon which would place, in the shortest time possible, the remount department of the Japanese Army on a satisfactory footing.

Yours, &c.,
July 15th, 1895.

CHIRON.

CRICKET.

MR. EDWARDS' TEAM V. MR. WHITE'S TEAM.

Except for one or two smart bits of fielding, the cricket match on Saturday afternoon was devoid of interest. The heavy rains of the past week had left the ground very sticky, causing the ball to break in unaccountable fashion every now and again. Edwards' team opened the batting, Mr. Tennant and Mr. Garfit going out first to defend. They did not stay long. Three men were dismissed for 6, four for 12. Then a stand was made, Johnson not going under until he had scored 23. Murray made 14 and Edwards 15, but the rest of the team were content with single figures. The innings closed for 75. White's side made a much poorer showing, all being out for 42, and of this total 11 were byes. Murray took seven of the wickets at a cost of only two runs a piece. After a short interval, Edward's team went in again and knocked up 51, of which Murray 10, and Tennant 10, not out, were the highest scores. Lias secured eight wickets for 22 runs. Scores.—

BASEBALL.

YOKOHAMA VERSUS A NAVAL NINE.

A very interesting game of baseball was played on Monday afternoon between nine from the U.S.S. *Baltimore* and a team of the Y.C. & A.C., assisted by a pitcher and a catcher from the U.S.S. *Petrel*. In the first innings both sides made three runs each; the second innings produced nothing. The innings following the sailors made two runs and the local players five. In the fourth, the visitors assumed the lead and were never caught, the game concluding in seven innings, Navy 20, Yokohama 15. Edwards in the left field made two splendid catches, and White's fielding from the centre was extremely neat. Howard had wretched luck. Twice he had got as far as third base, only to be robbed of the run through the following man being caught out. Many amusing incidents occurred during the course of play, particularly when the Navy men were coaching each other and endeavouring to "rattle" the pitcher; wherein the Irishmen had considerably the advantage in the matter of phrasing ironical asides. The band of the *Baltimore* was in attendance and played a capital selection of music. The score was as follows:—

U.S. NAVY.	Pos.	Runs.	Outs.
1.—Angus	3B	4	2
2.—McKelvey	3B	1	4
3.—McCarthy	2B	4	1
4.—Nelson	2B	2	3
5.—Townsend	C	2	3
6.—Ahearn	LF	1	4
7.—Donnelly	SS	2	4
8.—Gooley	CF	2	1
9.—Poynce	P	2	0
Total		20	21

Single Limit Handicap for Silver Challenge Cup. 1st and 2nd Rounds to be played off by 1st August.

Best of 5 sets to be played in all cases, as this handicap is practically a championship competition.

Handicappers are:—
H. PINCKNEY.
W. F. PAGE.
H. V. DICKINSON.

SWIMMING AND DIVING COMPETITIONS.

The swimming races and diving competitions of the Yokohama Amateur Rowing Club took place on Tuesday evening in anything but pleasant weather. A cool breeze was blowing from the north-eastward underneath a sky of grey and slate-coloured clouds, while the water was scarcely at an agreeable temperature. Nevertheless, the competitions were all well contested. Campbell won two of the diving events, and Ross, last year's winner, again pulled off the Quarter Mile and the 100 yards open to non-winners. H. Goddard made the best time in the first 100 yards race, 1m. 35 secs., the other 100 yards taking 1m. 43 secs., but then the men had been engaged in several of the previous events. The boys' race was a gamely fought out affair, Harold Irwine winning after a splendid struggle with John Drummond. The time too, 1m. 24 secs. for 75 yards was not at all bad considering the current that was setting across the course. The officers of the day were, Mr. Rickett Captain; Dr. Wheeler, Mr. C. K. M. Martin, and Mr. J. T. Boag, Judges; Mr. F. J. Hall, Secretary. List of events:—

RUNNING HEADERS OFF TOP OF BARGE.

W. W. Campbell, 1; P. S. Bent, 2; A. L. Mottu, 3; H. S. Goddard and W. Goddard.

Points were given for take-off, entry, and recovery. Campbell obtained 45, Bent, 42; and Mottu 40, which give an indication of the closeness of the competition.

100 YARDS SWIMMING RACE.

H. Goddard, 1; A. L. Mottu, 2; H. S. Goddard.

H. Goddard lead from the beginning, and steered the best course. The other two collided soon after the start, but it made little difference in the end. H. Goddard won by 20 yards. Time, 1m. 35 secs.

RUNNING HEADERS OFF SPRING BOARD.

W. W. Campbell, 1; P. S. Bent, 2; A. L. Mottu, 3; H. Goddard; W. Goddard; P. E. Webb.

This was again a keen contest. Campbell secured 50 points, Bent 49, and Mottu 42. Campbell and Bent tied for the neatest dive, and then dived again for a special prize, which the former won easily by 58 to 53 points.

QUARTER MILE SWIMMING RACE.

R. C. Ross, scratch, 1; H. B. Poole, 25 secs, 2; H. Goddard, 25 secs.; N. J. Sargent, 25 secs.

H. Goddard was the first to touch the poutoon on the first journey out, being followed by Poole and Sargent; Ross next. Poole then took the lead, and passed the end of the Barge a little ahead of Ross. At this point Sargent dropped out. In rounding the barge at the further end Poole took the shortest curve and led away on the second outward journey, but Ross was not far behind. Goddard now dropped out, leaving the race to Poole and Ross. Coming down for home the scratch man pulled up and passed Poole, finally winning by about 9 yards. Time, 9 mins. 38 secs.

STANDING HEADERS OFF TOP OF BARGE.

P. S. Bent, 1; W. W. Campbell, 2; H. S. Goddard and A. L. Mottu, tied for third place; W. Goddard and P. E. Webb.

The winner scored 37, Campbell 36, and the third placed men 32 points.

75 YARDS, BOYS UNDER 16.

Harold Irwine, 5 secs., 1; John Drummond, 2 secs., 2; Samuel Kuhn, scratch.

The issue was undecided until almost the last ten yards, then Irwine got away and won. Time, 1m. 24 secs.

STEEPLECHASE.

G. Hood, 1; P. E. Webb, 2; N. J. Sargent; W. Goddard.

The competitors had to dive under the six-oared boat moored some distance away, then climb up on to a house-boat, and crawl through its windows, under and round some sampans, etc. Hood had the affair soon in hand and won easily. Webb was the only other man to finish the course. Time, 4m. 37 secs.

LONG DIVE.

W. W. Campbell, 1; H. S. Goddard, 2; N. J. Sargent.

A close win for Campbell, who was the last to rise.

100 YARDS, NON-WINNERS IN JAPAN.

R. C. Ross, 1; H. B. Poole, 2.

Ross won easily, though Poole gamely stuck to the work throughout.

METHODIST EPISCOPAL CHURCH.

ANNUAL CONFERENCE.

The 12th session of the Japan Annual Conference of the M.E. Church opened in Goucher Hall, Aoyama Gakuin, at 8.30 a.m. on July 11th, Bishop Walden presiding. The Missionaries present included Rev. Messrs. J. H. Carrell, J. C. Davison, J. Soper, C. Bishop, J. G. Cleveland, J. W. Wadman, H. W. Swartz, D. S. Spencer, J. Wier, B. Chappell, R. P. Alexander, H. B. Schwartz, W. S. Warden, E. R. Fulkerson, H. B. Johnson, Jennie S. Vail, S. Ogata, J. O. Spencer, G. F. Draper—with M. S. Vail and J. F. Belknap on furlough in U.S.A.

Besides these, the Conference is composed of 41 regular Japanese Pastors. The Probationers number upwards of 20 more. The Ladies Conference of the W.F.M.S. convenes at the same place and time, and a large number of them were present at the opening services.

After the usual devotional exercises, the Bishop proceeded to administer the Lord's Sacrament. His remarks were exceedingly appropriate and impressive. He was assisted in the ceremony by the Presiding Elders. These Elders afterwards occupied seats on the platform behind the presiding officer. They consist of Messrs. Carrell, Davison, Soper, Cleveland, Spencer (D.S.), Schwartz and Messrs. Ogata, Kurimura, and Matsumoto. After the administration of the Holy Communion, the Conference proceeded to organize. Mr. H. B. Johnson was re-elected English Secretary, and named H. W. Swartz as his assistant.

H. Yamaka, being elected Japanese Secretary, chose U. Bessho as his helper. Mr. G. F. Draper was honoured with the office of Statistical Secretary and C. Nakada was his assistant. Dr. Takasugi was named as Interpreter, succeeding to the place which S. Ogata has admirably filled for years. The last election, being that of E. R. Fulkerson to the office of Treasurer with E. Aibara as assistant having been accomplished, the Bishop briefly but eloquently addressed the assembly. He spoke of the growth of the Church, the prosperity of Missions, the interest of the Church at home in the youthful Church of Japan, after which he pointed out very clearly and impressively the duties and responsibilities now devolving upon the members of the Conference and indicated the true spirit with which these duties should be performed. After the usual announcements, the Conference adjourned at 12 noon.

Friday, July 12th.

The conference session opened at the usual hour, Bishop Walden in the church. For 30 minutes a prayer service was held in which a large number participated. After the reading of the minutes, the Bishop made a brief address on the nature, power, and scope of prayer, and urged upon the Pastors the necessity of maintaining the various means of grace. The Presiding Elders presented through their Secretary, J. Soper, the report on nominations.

The following Committees were raised:—

BIBLE CAUSE.—B. Chappell, R. Ushijima, S. Konosuke.

CHURCH EXTENSION.—S. Ogata, K. Nakada, T. Hasegawa, J. G. Cleveland.

CONFERENCE RELATION.—C. Nakayama, E. Aibara, M. Yamaka.

DISTRICT CONFERENCE RECORDS.—T. Takami, K. Ichiku, J. W. Wadman.

EDUCATIONAL COMMITTEE.—T. Ikeda, H. Yamaka, U. Bessho, H. B. Johnson, and E. R. Fulkerson.

EPWORTH LEAGUE.—W. Ishikawa, J. Ito, R. P. Alexander.

SABBATH OBSERVANCE.—B. Omuki, C. Nagano, M. Iinuma, W. S. Worden.

SUNDAY SCHOOLS.—H. W. Swartz, I. Honda, K. Kato.

TEMPERANCE.—K. Miyama, S. Kokita, E. Hirano, T. Soper.

TRACT.—I. Kikuchi, I. Otake, G. Tanaka.

FRATERNAL RELATION.—J. W. Wadman, Y. Honda, T. Hasegawa.

The various District Conferences, of which there are nine, were then requested to present the names of the delegates elected to confer as advisory members of the Cabinet in the work of making financial estimates for the evangelistic work of the coming year. According to what is designated the "Leonard Plan" of Self-support, a certain lump sum is given as an appropriation for the work and it is the duty of this United Board to distribute this sum as the work requires. The following delegates were named: M. Yamaka, T. Takami, C. Nakayama, H. Yamaka, T. Ikeda, K. Miyama, W. Ishikawa, E. Aibara.

The Presiding Elders were then called upon to read their reports. The conference listened with a great deal of interest to these interesting papers setting forth the results of the year's work. The statistics are not yet fully to hand, but we may safely predict that there has been a general advance all along the line.

Saturday, July 13th.

The Conference opened this morning as usual. Thirty minutes were spent in prayer and praise, at the close of which the Bishop addressed the Conference upon the subject of Church Polity and Government. His remarks were exceedingly practical and helpful. The Disciplinary Question regarding the Character and Work of the Elders being called, the Presiding Elders answered, and each one responded to the Bishop's questions. Ten young men then presented themselves as candidates for full connection into the Conference and ordination as Deacons. After the President had addressed them in a very suitable manner, one or two of the Brethren offered prayer in behalf of these young men about to assume solemn obligations. The Committee on Examination reported and the Candidates were all re-commended. Their Ordination will take place on Sabbath afternoon.

The Committee on Fraternal Communications dispatched the following telegram to the Synod of the Presbyterian Church now in session in Nagoya.

"The Japan Conference of the M.E. Church now in session to the General Synod of the Presbyterian Church in session in Nagoya, Loving Greeting. May the Divine Father sanctify you, His Sons." A suitable reply was received and read to the Conference.

Rev. Y. Yoshioka, President of the Kobe School of the M.E. Church South, and Mr. Aoyama, of the Presbyterian Church South, were introduced to the Conference.

The Presiding Elders nominated a Committee on Memorials, and also named a Conference Board of Stewards. The Treasure called for an audit committee, which was granted.

In the afternoon session the Disciplinary Question regarding the character and work of the Deacons was dealt with, and under this head two young men were continued in their former studies, having to failed fully average up to the standard of studies. It is pleasing to see how vigorously the rules in connection with these examinations are enforced.

Ten o'clock on Monday was fixed as the Order of the Day for Election of Delegates to the General Conference, which convenes next spring in U.S.A. A great deal of interest prevails in connection with this election. The church in Jagan is entitled to send two delegates—one clerical, one lay. The laymen held a meeting this afternoon but did not reach a decision: "To be or not to be that is the question."

At the close of this afternoon's Session, a social meeting was held and the members of both the Annual and Womens' Conferences very heartily participated.

The Ladies have elected Mrs. (Bishop) Walden as their President, Miss Russell and Miss Spencer, Vice-Presidents, Miss Bancus, Secretary, Miss Heaton, Treasurer. We learn that very harmonious and profitable sessions are being held in the spacious rooms of the Girls' School on the same compound. The Missionaries, male and female, all eat together on the clubbing-plan, and thus are enabled

to consult with each other freely regarding the work in general as well as to cultivate friendly and harmonious feeling.

Monday, July 15th.

The Conference opened as usual this morning. The Bishop made a brief address on the nature of Public Worship, after which Rev. Y. Yoshioka of M. E. Church, South, was introduced and spoke in a very interesting manner. The order of the day being called, the Conference proceeded to elect their Delegates to General Conference. On Saturday the Laymen had met and elected Mr. T. Ando as the Lay Delegate and Dr. E. Asada as alternate. The Conference ordered that the first ballot be simply a nominating vote.

The first ballot was as follows:—

	Votes.		Votes.
Rev. Y. Honda	33	Rev. D. S. Spencer	2
Rev. I. H. Correll	12	Rev. S. Ogata	1
Rev. J. Soper	7	Rev. H. Yamaka	1
Rev. J. C. Davison	2		

The second ballot:—

Rev. Y. Honda	36	Rev. I. H. Correll	13
Rev. J. Soper	9		

Rev. Y. Honda, D.D., was then declared elected. The Conference next proceeded to elect an alternate, and Rev. J. Soper was elected with Rev. I. H. Correll closely following.

The Bishop announced that the Book Concern of New York had sent a draft of \$477.00 gold as a dividend. The Conference ordered the amount to be deposited in favour of the Worn-out Preachers' and Widows' Funds.

Rev. H. Loomis, representing the American Bible Society, was introduced, and briefly addressed the Conference, to which the bishop responded. The Under graduates in the Third Year's Course were then called upon one by one, their examinations marks read out, their character and work examined, and were advanced to the Fourth Year. The class consisted of twelve promising young men. Rev. K. Toyama, of the Canada Methodist Church, and Mr. Y. Yamaji, editor of the "Gokyo" were introduced and briefly addressed the conference. Rev. Y. Honda replied.

The conference then adjourned with the benediction. In the afternoon the anniversary of the W.F.M.S. was held. The annual conference attended in a body. Mrs. (Bishop) Walden presided and Miss Spencer acted as interpreter. After singing and prayer and reading of the scripture by Miss Iieda, the general report of the woman's work for the year was read by Miss Ishikawa. This report was listened to with a great deal of interest by the large audience present. Miss K. Yamada then made a very earnest address—speaking of the spirit and motive which should animate the workers. Misses Ailing and Griffiths, and Messrs. Correll and D. S. Spencer and the Bishop spoke of the relation between the work of the Parent Board and the W.F.M.S. He also referred in eloquent terms to the place and privilege of Methodism in Japan. The service closed with a hymn and prayer.

The following is an outline of the Sermon preached by Bishop Walden before the Annual Conference of the M. E. Church at Aoyama, Tokyo, on Sunday July 14, 1895.

Text.—1 Cor. 1: 4th and 5th verses.

Paul's method of preaching was not in man's wisdom, but words revealed to man by God's Spirit. We should study Paul as the model Preacher of the Gospel of Jesus Christ. He could point with pride to the fact that he had been a student brought up at the feet of Gamaliel, the greatest teacher of the age, but he did not rely on the wisdom of the schools. Though learned in all the sciences and philosophies of his day, yet he depended upon the wisdom revealed to him by the Spirit. He laid aside his preparation as an Israelite in order to glory in the Cross of Christ. Every preacher called to the ministry of the truth must seek to fashion himself after this great model. He must seek as Paul did to be filled with the messages of the spirit, or he shall fail to fulfil the purpose to which he is called.

Important and powerful as truth is, it alone is not sufficient. The Holy Spirit must take the truth and apply to the heart and consciences of men; and this is what Paul means when he says that the Holy Spirit dwells within to the dividing apart, cutting asunder, of soul and spirit. We may illustrate our preaching by the facts of science and history, but only as we rely upon the presence and power of the Spirit, may we hope to see the truth go home to the hearts and consciences of men. We rejoice in the fact that the Holy Ghost has always been in the world since the Day

NOTE.—Hon. T. Ando, the lay Delegate to the General Conference in U.S.A., is the ex-Consul-General of Hawaii and at present one of the Heads of the Government emigration office in Tokyo. He is also President of the Tokyo Temperance Society.

of Pentecost, and just as far as we rely upon the promise of our Heavenly Father, may we be filled with His inspiration and power. Our Blessed Heavenly Father is more willing to give His Spirit to us than parents are to give good gifts unto their children. Let us never go into the pulpit without realizing this fact in our deepest consciousness.

What then is the object of preaching? We must so present the Gospel that the faith of the people may not rest in the power of man's wisdom but in the power of God's wisdom. Man's wisdom is mighty. The physical and intellectual achievements of the age attest this fact. We are living in an age pregnant with mighty thought issuing forth into useful invention. But man's wisdom, while it has its own place in life, society, and civilization, is not adapted to solve the problem of the human soul. When we ask "What am I?—Where am I going?" these deep questions of the human soul, man's wisdom cannot give satisfactory answers. Science spans rivers, navigates oceans, but cannot satisfy the longing of the hearts for God. We recognize the results of science and hasten to use these results, but these investigations and results can never save the soul of sinful man. I have examined the teachings of other religions, of Buddhism, &c., &c., and while I find that these teachings contain germs of truth, yet they are largely the result of man's wisdom, and hence can never satisfy our soul's longings. Man can only be saved by and through power. We see power manifested all about us. In the natural forces, physical forces, in the sweep of civilization, in the growth and development of science. This world is full of force. Nothing can be gained without power. If then our material circumstances and mental growth are conditioned upon the operation of power, does it seem strange that the salvation of the soul should be conditioned upon power? We can only be saved from sin and death by the power of God. We can easily see that force can only be applied in harmony with the laws which govern it in order to gain the desired end. We must adjust force to machinery in order to utilize it. Steam cannot turn water-wheels, water cannot drive pistons; machinery must be adapted to these forces. The world is a reservoir of force. And this force has resulted in benefits in proportion as man has adapted machinery to the same. We must apply power in harmony with laws and conditions. How have we anything to show, to prove, that spiritual power, the power of God, has been brought nigh to us? We can point to the incarnation of the Blessed Son of God—"the divine-human"—as the manifestation of God's power. We can also point to thousands of men and women whose lives have been rescued from sin and death by the power of the Gospel, which is able to save to the very uttermost all those who come with God by Christ. Our faith therefore most stand in the power of God. And we need this power of the spirit as the central force of our work, of our life, of our churches, in order that men may be led out of darkness into light and life.

Man is conscious of having violated the law of God. This is true of man at all times and in all places. When there is violation of law there must be either penalty or pardon. Sin is such a terrible thing that wherever there is sin there must be punishment or pardon. The law of God is eternal and the violation of that law must be attended with an eternal penalty. Paul realized when he cried then, "Oh wretched man that I am who shall deliver me from the body of this death?"

The question as regards the proper punishment of the violation of law has been a very important one for years and years. It is still a puzzling question. In England 100 years ago 60 crimes were punished with death. At the present time only two. If then man is so undecided as to the proper penalty for the violation of human law, how can we judge of the proper punishment for the transgression of the Divine law! God alone can fix this punishment. But in his wondrous law and mercy he has provided an atonement by His only Son, Jesus Christ, by which man may escape this penalty and obtain eternal life.

Pardon is not the mere play of sentiment. When the Emperor of Japan pardons a criminal it is not the result of sentiment. He pardons by the exercise of his authority. So when God pardons you and me, he does so because he has the authority and right to do so. Our pardon is to be obtained by and faith in and through the power of God. Salvation to not merely a manifestation of God's love but of God's power. Oh! let us never forget the great condescending love of God when he bent from his throne on high and spoke peace to our never-dying souls. When the Emperor pardons a criminal, it does not change the nature of the man but simply his relation to society. He goes out into society with

his old nature unchanged. When we receive the pardon of God it not only changes our relation but changes our nature as well. We become new creatures. And this new creation is by, and through, and in the power of God. And after this conversion, we must be day by day trained and nurtured, and developed into spiritual manhood and womanhood by the same power. Paul cried:—"Who is sufficient for these things?" and then he exclaimed, "Our sufficiency is of God;" only by his power can we be strengthened and kept. By this power, furthermore, we may expect a complete salvation, a perfect salvation. The time is coming when the whole of man's nature will be saved. Christ's resurrection and ascension is the pledge of our resurrection and glorification. These mortal bodies of ours shall be quickened by the spirit of God. When Christ appears he shall be like Him; we shall see Him as He is. We cannot explain it fully, but it shall be ours by the promise and power of God. Our faith stands in the power of God. We preach a Gospel—not of man's wisdom—but a Gospel full of the power of God. Oh! let us open our hearts to-day and pray that the Holy Ghost may fill us and that we may go forth to preach Christ in the demonstration and power of the same. Amen.

Tuesday, July 16th.

The Conference opened as usual this morning. The minutes were read and approved. The Conference Treasurer submitted his report, which showed a Balance of \$1,318.50 on Deposit in favour of the Worn-out Preachers and Widows Fund. The Bishop then made a brief address to the Conference on the Service of Song.

The class of Probationers in the 1st year were passed to the 2nd year.

T. Sunamoto and S. Ukai were announced as transferred from the California Conference to the Japan Conference.

The question as regards the place of holding the next Annual Conference being called, the following places were named:—Aoyama, Nagasaki, Nagoya, and Yokohama.

Aoyama was finally voted. The matter of Conference Entertainment Committee was deferred. Several committees were called but few were ready to report. The Presiding Elders were requested to name Fraternal Delegates to the several Methodist Bodies.

The Committee on the Bible Cause reported and their report was adopted. Likewise that of the Committee on District Conference Records.

The report of the Committee on Tracts caused considerable discussion. It was finally adopted. The Committee on Temperance reported. This afternoon the various committee are busily at work and the Bishop and the Presiding Elders are in session.

The Ladies are also engaged to-day in deciding on their appointments. Several changes are expected to take place in their work and appointments.

Wednesday, July 17th.

The Conference opened as usual with devotional exercises, the reading of the minutes, and arranging of unfinished business. The Bishop occupied 20 minutes in an address on the Business man from a Christian standpoint. He spoke of the use and power of money and the duty of Christians to give of their means for the maintenance of the Gospel.

Upon the representation of the Bishop in the case of Rev. D. Bunker, J. W. Wadman moved that he be transferred from the Ohio Conference and ordained Elder in the Korean Mission.

The order of the day being the consideration of one or two Constitutional questions, the Secretaries read those resolutions and the Conference proceeded to vote. The resolution referring to the admission of women as members of the General Conference was referred back to the General Conference for further consideration.

E. Aibara moved a vote of thanks to J. C. Davison, through whose indefatigable efforts the New Hymn Book of 430 numbers has been recently published. The resolution was passed with a rising and enthusiastic vote. Mr. Davison responded.

The president of the Kobe College of the M. E. Church South, addressed the Conference and requested the Bishop to station some preachers at posts in the south, which greatly need the Gospel.

The Treasurer then submitted his report. The monies collected during the year for the various benevolent purposes are as follows:—

For Foreign Missions	191.88
For Home Missions	456.66
Church Extension	81.32
Education	86.59
Bible and Tract Cause.....	50.66
Other Collections	110.55

Total 991.05

This amount does not include Pastoral Support,

The report on Temperance was read and adopted. H. B. Schwartz moved that this Conference pledge its support to the Tokyo Temperance Society, *Kuni-no-Hikari*. The Committee on Education also reported. The Conference adjourned.

This afternoon the Bishop has a Conference of Consultation with the Japanese Members of the Conference. At 4 p.m., the Committee on estimates will meet. It is expected that the Conference will close some time to-morrow.

JAPANESE TOPICS IN AUSTRALIA.

BY JOHN PLUMMER, M.J.S.

Sydney, June 6th.

Although the immediate interest occasioned by the recent war has naturally declined in Australia, there still exists much speculation with respect to its possible results, especially so far as the action of Russia is concerned. Judging from some extracts from the Japanese native press which have found their way into the Australian papers, it would appear that in many parts of Japan there exists an impression that public sympathy in Australia is largely on the side of the Chinese. But such is not the case. The prevalent feeling is rather one of bewilderment at the sudden and unexpected development of Japanese enterprise and energy, combined with a kind of secret hope that it may possibly lead to an effectual check being placed upon the Russian progress towards Chinese and Japanese waters, which is regarded as a menace to the security of Australia. At the same time were it not for a knowledge of the conflicting interests of Russia and Japan, the occupation of Formosa would have become regarded with distrust in Australia, where many of the colonists view it as being the first step in the Japanese advance towards their shores. The resistance offered by the Formosans has led to numerous expressions of Colonial opinion, the prevalent idea being that the island will prove a thorn in the side of Japan. The *Sydney Daily Telegraph* says:—"The Japanese, having won Formosa from China on far-of fields, are now compelled to make the treaty good by force of arms, and there is a strong probability that their effort to do so will involve them in one of those desperate 'little wars' which are not infrequently the price of new territory. The Formosans are a mixed people, 'rude in peace and rough in war,' noted in the past for piracy and turbulence, who have given the Chinese Government quite as much trouble as dominion over them was worth. They are strengthened, too, by the militant spirit of the Black Flags, men who are more or less trained to arms, and who are of a kind with the Chinese soldiers who threatened to shoot the captain of the transport *Kowshing* if he surrendered to the Japanese cruiser which subsequently sank the transport. We get flashes of patriotism like this from the Chinese soldiery occasionally, which mean that in a country of Formosa's geographical peculiarity little short of extermination will effect subjugation. Japan will conquer the island, no doubt, and having done that she will have to garrison it, to withstand the guerilla tactics of natives and Chinese, and in short to stamp out all that remains of Formosa as it has been since the Dutch were driven from it. The material has yet to be supplied for the most interesting chapter in the history of Japan's upheaval—her experiences in colonisation."

Alluding to the declaration of a republic in Formosa, the *Sydney Morning Herald* remarks that "there is something odd and highly un-Mongolian about that Republic of Formosa which was so suddenly organised as a means of resisting the occupation of the island by the Japanese. We are now told that the republic is distasteful to the Formosan people. If the people of Formosa do not want the republic the question is who does want it? All that we have been told on the matter is that the Chinese Governor on receiving orders to hand over the place to Japan promptly declared the island a republic, and himself its President. In this capacity he commands an army of 100,000 men. Formosa has doubtless for some time been more or less subject to Japanese influence, if only in the form of repulsion towards the island empire. Can it be that the people of Formosa want to show that they, too, have adopted Western ideas and a perfectly up-to-date Western civilisation? But why a republic—a form of government which is naturally distasteful to an Asiatic race? In trying to find some explanation of what is mysterious in this affair, we naturally cast about for analogies that might in some way help us. The one which most readily presents itself is that of Hawaii, which lately exchanged its state as a monarchy for that of a republic. That change is known to have been not

wholly unassisted by alien influence. Can it be that the new President of the Republic of Formosa has a Prime Minister who speaks Chinese with a strong American accent? Or does the Prime Minister's name end in 'off' or 'owski'? There must be more than fairly meets the eye in what is going on in Formosa. Our interest in the matter is that if Japan, as doubtless she will, establishes her power in that island it brings her some hundred miles nearer to Australia, and if it should be some other Power who gets there, it will be of some interest to us to know who it is to be."

Increased attention is being given in Australia to Japanese industrial capabilities, by the systematic manner in which the agents of Japanese firms are canvassing for orders for various kinds of goods hitherto obtained principally from the United Kingdom, Germany, and America. Many articles sold in Sydney and Melbourne as of British manufacture are of Japanese origin, and it is not unlikely that before the close of the century, the majority of Australian newspapers will be printed on paper made in Japan. The Japanese certainly have a fair chance of becoming the great paper-makers of the world. Even the photographic papers from Tokyo and elsewhere are fully as good as any of the same class imported from Europe and America.

Whether Australian wine will find a market or not in Japan, is a question at present engaging the attention of Australian vine-growers. Mr. A. Marks, the courteous Consular representative of His Imperial Japanese Majesty in Melbourne, in the course of an interview with a reporter of the *Sydney Daily Telegraph*, said that the Australians had a lot to learn in the manufacture of wine before they could successfully compete with other places in that industry. In other countries where they manufactured wine great care was exercised in giving it an attractive appearance, besides attending to the quality. The finest kind of bottles were used, and the capsuling was made very neat. In Victoria he (Mr. Marks) noticed that a good quality of wine was placed in an inferior bottle, and the capsules were very carelessly arranged. If attractively prepared, it was possible that a fair amount of trade might be done with Japan. Subsequent to the departure of Mr. Marks from Sydney, Mr. Innes, a Sydney wine merchant, who has had considerable experience of wine production in Europe, was interviewed by one of the staff of the *Sydney Daily Telegraph*, and remarked in reply to a question by the latter, there was a great deal of truth in the statement that made by Mr. Marks as to the unattractive appearance of some of the wine. The careless capsuling, however, was explained by the fact that many of the vine-growers who manufactured a first-class wine did not understand the art of properly capsuling it. That which was purchased by the merchants in bulk, and subsequently bottled, was equal in "get up" to French wine. In France the wine was never shipped by the vine-growers themselves, but was bought by the wine merchants, who bottled it. In reply to the question—"Dealing more particularly with the prospects of a trade with Japan, have you ever exported any wine to that country?" Mr. Innes said—"Yes; I sent about 100 gallons there some time ago. The consignment was a fairly profitable one and consisted chiefly of cheap red wines. The Japanese, however, seemed to prefer the French wines, as they were cheaper, although the quality was not equal to the Australian wines. In fact, many people who are competent to express an opinion say that our colonial wines are superior to Californian wines. The Riverina district is specially suited for the production of sweet wines, a class that would suit the Japanese, and if sufficient trade could be secured, they might be produced at a price that no part of the world could compete against. One mistake made with regard to the export trade that is done in wine is the fact of it, in many instances, being sent away just immediately after manufacture. If a few years were allowed for the wine to mature, it would be superior to any wine that can be produced in Europe. As I said before, however, the class of wine to suit Japan is a sweet wine, and in the colonies at present the demand for that particular sort exceeds the supply. Before any great stimulus can be given to the manufacture of the kind that can be profitably exported, a good market will have to be found, as vine-growers are somewhat timid at establishing vineyards for the production of a class of wine the consumption of which is likely to be limited."

While there exists a largely increased knowledge of Japanese naval and military resources and industrial capabilities, the real life and character of Japan at the present moment is as a sealed book to the great bulk of the English-speaking population, notwithstanding the numerous descriptive articles which have appeared from time to time in British and American newspapers and magazines. The

popular idea of Japan and everything Japanese is largely based on the narratives of visitors in former years or of globe-trotters who imagine that three or four days in a country is sufficient to enable them to become acquainted with everything to be learnt concerning it. In Melbourne a fine collection of Japanese coloured photographs, portraying Japanese scenery, buildings, industrial occupations, and the leading features of everyday life in Japan, has been attracting thousands of interested spectators, and the remarks made by many of these emphatically illustrates the educational value of these displays. In the Victorian capital, at least, it is beginning to be recognised that the Japanese have a right to be regarded as one of the most civilised and progressive of modern peoples.

The effects of the Australian poll-tax on Chinese immigrants is shown by the fact that of the 23,122 Chinese who arrived in Sydney Harbour during the last seven years, only 252 were landed at Sydney. These 252 were represented by 221 naturalised British subjects, four British born, 10 returned on exemption permits, 16 paid each £100, and one is in gaol. Other returns show that the Chinese population in Australia is fast diminishing.

LETTER FROM PARIS.

(FROM OUR CORRESPONDENT).

Paris, June 8th.

The diplomatic world is in a kind of flutter, due to the grave out-look of the Eastern question—the old anxiety. In the Clubs there is a good deal of head-shaking, and the incredulous, who do not put their faith in princes and potentates, assert that the Sultan would not bear the triple alliance—England, France, and Russia—if he had not very well founded doubts as to the sincerity of that union, and of its keeping together till Armenia was securely protected for the future. It is easy to bombard Jeddah—that appears to be a periodical necessity for the moral sanitation of the natives. The collective attacks on the allies in question, are too methodically strategic, display an occult organization so superior to the ordinary tactics of the Porte, as to justify suspicion. A naval demonstration in the Bosphorus? But would Russia and France join in the “firing party,” if necessary to open the Sultan’s eyes, or leave that work to England, and sail away—Alexandria like! Or, if Russia and France joined in the work, and their ships cast anchor before Constantinople, they might take into their heads to remain there till the Bulgarian and Egyptian questions were settled, and the Dardenelles made as free as the Straits of Dover or of the Sound. This time the Sick Man is really sick, and Surgeon Russia has been called in to prescribe—his processes are proverbially summary.

The International Miners’ Congress just held here demonstrates the valuable influence of Anglo-Saxon common sense. It was the sixth congress, and as compared with the first suggested order, method, and practical aim, replacing chaos. Of the 76 delegates from Miners’ Syndicates and Federations, Great Britain sent 36, the *pro rata* representation of its associated members. The others were French, Belgian, and German delegates. As a general remark, the Belgian and French delegates are deeply tinged with socialism, harmlessly wild, and undangerously impracticable. The Germans are divided more upon theories and principles than actual facts—the British stick to the latter, and aim to minimize obstacles by united efforts inspired by self-help. Their idea, their attitude, their hostility to demolish till sure of being able to reconstruct, have told, and still tell on their continental *confères*, who have a marked tendency to introduce extreme politics and national rivalry into the discussions—but less so than heretofore, because the English delegates view all that fire-works as waste of time and as alienating public sympathy from their demanded reforms.

Congresses at large commence to recognize the dawning truth that as consumers the public have a very potent, though not syndicated, voice in the programmes of social economy; a rise of two pence per bag in the price of coals comes home to every man’s bosom and business, as much as an increase of a penny in the price of the loaf. The great question at the miners’ congress was not the legal fixing of 8 hours a day work for pit men, nor yet compensation by employers for injuries sustained by their operatives while on actual duty. The French delegates added a rider, to prove their sense of justice towards the capitalist, that he was not to make compensation in case a workman committed suicide while at labour. One hardly expected a breadwinner, with a wife and children, would, in order to secure their support,

indulge in a header into a vat of boiling soap; plunge into a glass furnace, or throw himself into, or under, moving machinery. Even Jean Jacques Rousseau’s system was better; when his mistress Thérèse presented him with a little stranger, he sent the baby to the almshouse to be reared. But to the main question, the over-production of coal. Till miners had the whip hand to restrict the out-put of coal by working shorter hours, and fewer days in the week, but guaranteed the living wage to actual current wants, the miners’ condition could not be radically ameliorated. But neither colliery owners nor colliers are likely to fall into line on the plethoric extraction of coal. The German delegates object to miners forming “rings,” as they protest against mine owners organizing “trusts.” The French and Belgian representatives, oblivious that it required six days to make the world and all there in is, would regulate the over-production of coal in a few hours, by nominating an International Coal Minister to shut down too prolific pits. No statue book will ever rule that when a man’s business is prosperous he must stop to allow weaklings to creep to the front. The triple alliance applied that doctrine to Japan, and are surprised the Japanese do not honour them for that signal service by baptizing captured Chinese ironclads after the disinterested trinitarians.

So the Formosa Republic did not live the life even of the rose. Clearly the Celestials are not yet ripe for liberty, equality, &c., &c. The French must feel annoyed at the rapid and dashing capture of Kelung by the Japanese, which defied Admiral Combet. The Japanese have not allowing the grass to grow under their feet; they are already laying down keels for additions to their splendid Mercantile Marine, and have sent orders to Clyde and Newcastle firms for the construction of four transport ships, and six up-to-date swift cruisers. The belief of Westerns is next to unanimous that China will move hand-in-hand with Japan, as France does with Russia.

Parisians are more occupied in seeking a run into the country, than with any other subject. They have discovered fresh air—which costs nothing—as Dumas père discovered the Mediterranean. At Whitsuntide there was a general stampede to rail or bicycle as far as possible from the capital, and so escape the odours that infect its atmosphere with a serious persistency. The stench destroys the pleasure of strolling, during the shades of evening, along the Boulevards, or lounging in the foreground of a café to see the world pass by. There is not much fresh air to be found now in the suburbs; the regions are all built upon; St. Cloud and St. Germain are no longer the country; they must be left far behind, if green fields are to be reached. There are no more picnic parties, in the sense of bringing the “materials” with you; the excursionist seeks his ease at his inn. There are well nigh 40,000 taxed bicyclists in Paris and its suburbs; on a holiday all these are set loose, and wheeled 30 to 40 miles into the country; the riders, lunch and repose, and then spin back to dine in the city. That is the trend of outdoor pleasure now. Age has even been drawn into the vortex of bicyclism. The iron horse has killed the piano; booksellers assert it is doing the same for their wares, and the theatres hold it responsible for the emptiness of their benches. The bicycle is effecting other changes; it enables a paterfamilias to reside in the cheaper suburbs, to ride on the cycle to business or office, save tram and rail fare, and secure improved health into the bargain.

Of all the humorous expedients for evicting the English from Egypt, an expedient that of course makes them still greater a fixture, is the calling in of the aid of the Fine Arts. A native artist has executed a picture and made it a present, not to the Louvre but to the Chamber of Deputies, with the usual “high falutin” letter to the president. The subject is France, asked, “as the liberator of nations, to deliver Egypt,” not from Napoleon I. but the English. It appears that the people of Egypt are again in bondage, &c. It is an amusing skit. Imagine the House of Commons being presented with a tableau, the “Holders of Egyptian Stock, and the emancipated Fellaheen, exploring England, the mother of Nations,” not to evacuate the valley, and so cause the value of Egyptian bonds to fall 50 per cent., a crop of Arabi Pachas to rise up to sweep away the Khedive, and to bring back the old Turkish party to lash the poor cultivator, and allow the Land of Goshen to be the parade-ground for every European intrigue. “Egypt for the Egyptians,” with England for their tutor—that’s the solution.

It was in 1795 that the system of numbering houses was first adopted, and Berlin claims that honour, and will celebrate it in a few weeks by a

centennial fête. And when the anniversary for hall door knockers and door bells? Berlin is far behind American cities in numbering houses. The peculiarity about the numbers of Paris houses is the drawback of not being able to discover the figures: they are like the laws of Drace, so high as to be invisible. If you wish to find out a number, you will have to back into the middle of the roadway, to take in the façade of the house, and run the chance of being crushed by a vehicle, or, retrace your steps till the number of another mansion be found, and then count the houses till the one you seek be run down. As a rule it may be said shop sign boards in Paris exhibit no number.

If the English navy be “mistress of the seas,” that of France is “master of the dry land.” Thus the journal *Le Four* announces in fat type that the “French fleet has arrived at Madrid.” And when the British fleet at Versailles, Berlin, or Sheffield?

The French press is discussing the question, if an alliance really exists between France and Russia. Deputy Delafosse, an able man, does not believe in the existence of a treaty. So long as the two powers find it to be their interest to stable their horses together, they have no need of any parchment deeds; they run together so far, and have very few points of friction for their diplomacy. So long as the French will not invade Moscow, or Russia quarter herself in Constantinople, even with France and England, to be rejoined in time by Germany, Austria, and Italy, they can live in peace. England has no treaty with Italy, but the first shot fired in the Mediterranean, would make these powers allies. Then the French receive 240 millions of francs a year from Russia, as interest on money loaned. That alone ought to make them lovers.

A big petition has been addressed to the Chamber calling upon it to impose a tax on bachelors, equal at least to what the married man is forced to expend on dutiable articles for his establishment. The petitioners leave it to the sagacity of their Solons how to arrange the matter—which is prudence. Bachelors reply, we are willing to wed if the State secures us the means of supporting a wife and rearing a family. Others say, they have contracted a “free marriage,” that neither State nor church recognize, but which costs them very dear to maintain. There is another financial peril; the number of young women who decline to wed, and prefer to live alone, or associated in house-keeping with one of their own sex.

The journals that sell best in Paris are those devoted to horse-racing and bicycling; they accept none but technical advertisements, and refuse the best “penny awful” stories.

LATEST TELEGRAMS.

[REUTER “SPECIAL” TO “JAPAN MAIL.”]

London, July 12.

The members in 138 constituencies have been returned unopposed. During the elections the candidates were divided simply as Unionists or Liberals, a more precise sub-division of the parties being reserved. Twenty-nine Unionists, four Liberals, and three Parnellites have been elected.

London, July 15.

Further returns show that ninety-six Unionists and ten Liberals have been elected, the gains now being Unionists eight, Liberal one [a seat formerly occupied by a Unionist]. Sir William Vernon Harcourt and Mr. Thomas Roe, the former Liberal members for the Borough of Derby, have been jointly defeated there by a majority of 1,700. Mr. Arthur J. Balfour has been re-elected for East Manchester by an increased majority.

London, July 16.

The Unionists returned number 162, with a gain of 20 seats, and 17 Liberals have been elected, with a gain of two seats. There have also been one labour candidate and eight Irish members elected.

London, July 17.

There have been 221 Unionists returned, with a gain of 34 seats, and 37 Liberals have been elected with a gain of nine seats. The returns also include four Parnellites and thirteen anti-Parnellites.

London, July 18.

The Unionist gains are 52, and the Liberals ten.

(FROM THE "CHINA MAIL.")

London, July 7.

The Naval Manœuvres have been postponed for a week to enable the crews to vote at the forthcoming elections.

The *Novoe Vremya* urges the Government not to complete the delimitation of the Pamir boundary until Chinese questions are settled, and adds that it must be demonstrated to Great Britain that friendly relations with Russia depend upon mutual concessions.

(FROM TONKIN PAPERS.)

Paris, July 1.

In the Chamber of Deputies, M. Jaurès questioned the Ministers on their policy towards the Socialists. M. Ribot in replying maintained an attitude of resistance to Socialism, and the Chamber passed a vote of confidence in the Cabinet by 332 to 83 votes.

Paris, July 2.

Fire broke out at the Ateliers Godillot, and destroyed twelve large establishments, doing damage estimated at eight million francs. The fire caused a fearful panic. About a dozen persons were seriously injured, and a fireman lost his life.

General Duchesne has occupied Tsarsoatra, south of Suberbieville. There was no loss on the French side.

Prince Bismarck is seriously ill.

The vote of five million francs additional for Tonkin was passed by 275 to 157.

The *Figaro* states that M. Rousseau (present Governor of Indo-China) has applied for an investigation of the conduct of M. de Lanessan (the late Governor). M. de Lanessan has published a reply challenging inquiry, and denying the allegations made in the *Figaro*.

(FROM N.-C. DAILY NEWS.)

London, July 8.

Prior to the proroguing of Parliament Lord Salisbury delivered in the House of Lords a manifesto defending the Lords, and declaring that the Government's policy was to do their utmost to mitigate the misery of the millions of people who depended on agriculture for their living. The manifesto especially demanded deep attention to reforms in taxation, facilities for transport, and the creation of small holdings, which would do much to bring about relief. Moreover, the Poor Law required revision.

London, July 9.

The *Journal de St. Pétersbourg*, in discussing the Chinese Loan, disavows any political advantage, ascribing it to Russia's desire to maintain friendly relations with her great neighbour.

London, July 11.

The position assumed by King Menelek of Abyssinia is becoming more markedly hostile to the Italians, and he has imprisoned Engineer Capucci, on suspicion of the latter having been in communication with General Baratieri.

Pekin, July 11.

Yü Kêng, a Manchu and a protégé of the Viceroy Chang Chih-tung, was appointed Minister to Japan this morning by the Emperor. He was nominated, last month, to the Swatow Taotai but this post will now be given to Lu Yuan-ting, an expectant Taotai of Kiangsu and at one time Shanghai magistrate.

(FROM JAPANESE PAPERS.)

Kobe, July 15.

Count Inouye arrived here by the *Farra* at 9 o'clock this morning, and put up at the villa of Mr. Fujita. He will leave for Korea by the *Yokohama Maru* to-morrow. Mr. Ko Yei-ki, Korean Minister to Japan, who is on his way to Tokyo, visited the Count.

Söul, July 16.

In Yo-kyu has been appointed Minister of the Royal Household.

Kobe, July 16.

Count Inouye and party left for Korea by the *Yokohama Maru* this morning. Mr. Sufu, Governor of Hyogo; Ko Yei-ki, Korean Minister to Japan, and many other persons assembled to bid them farewell.

Viscount Shinagawa and Mr. Furusawa, Governor of Nara, arrived here yesterday, and interviewed Count Inouye.

Nagasaki, July 16.

The Russian ship *Kraysser* left here for the China Sea to-day. She will probably go to Shanghai.

Shimonoseki, July 15.

The *Fujigawa Maru*, with Pak and two other Korean officials on board, has arrived here. She was carefully guarded while in this port. The steamer has gone on to Ujina.

Shimonoseki, July 16.

Lieut.-General Nakamura and Major Saito, Imperial Chamberlains, who have been ordered to proceed to Formosa to visit the Japanese soldiers and marines there, reached here to-day on their way to the island.

The *Moji Maru* leaves here for Kure to-day.

Kyoto, July 16.

The Rt. Rev. Kokei, Superintendent of the Higashi Hongan Temple, is being sued for damages, his carriage having fatally wounded an individual.

Kyoto, July 18.

Ko Yei-ki, the Korean Minister, left for Tokyo by the 8.40 a.m. train.

Söul, July 19.

Boku Tei-yo, the Premier, has again tendered his resignation.

Osaka, July 19.

About one-third of the Drainage Scheme for this city has been completed, but some residents hold that the whole scheme is in complete, and over forty of the discontented citizens have assembled and decided to effect a more careful inspection of the work. They intend to press the commissioners to hold themselves responsible for any defects.

Söul, July 19.

Count Inouye, Japanese Minister to Korea, arrived at Ninsen to-day, and will enter the capital to-morrow.

Mitsugahama, July 19.

The captured Chinese ship *Chinhoku-go* arrived here last night. Many spectators visited her.

Nagoya, July 19.

Some military coolies have brought an action against the Aichi-gumi, demanding further payment of wages.

AUSTRALIAN PRODUCE.

The following is the report for June of Mr. J. R. Ford, of Macquarie Place, Sydney, N.S.W.:

WOOL.—This being the off season the quantity coming forward is limited indeed, and sales irregular. The regular sales will commence in September and manufacturers will do well by letting me have their orders in and with complete banking arrangements as per advertisement.

Current quotations in the Sydney market are as follow:—

	Superior.	Good.	Medium.	Inferior.
	d. d.	d. d.	d. d.	d. d.
Greasy Fleece.....	6½ to 7	5 to 6	4 to 5	3½ to 4
Greasy Lambs.....	5 to 5½	4 to 4½	3 to 3½	2 to 2½
Greasy Pieces.....	5 to 5½	3½ to 4	2½ to 3	2 to 2½
Greasy Bellies.....	3 to 4	2½ to 3	2 to 2½	1½ to 2
Greasy Crossbred.....	6 to 6½	5 to 5½	4 to 4½	3 to 3½
Washed Fleece.....	8 to 9	7 to 7½	6 to 6½	5 to 5½

Scoured Locks.....	5 to 5½	4½ to 4	3 to 4	2 to 3

SHEEPSKINS.—Full Wools, 4½d. to 5d., Medium 3½d. to 4d., short 2½d. to 3½d., Crossbreds full Wools 4½d. to 5d., Medium 3½d. to 4d., short 2d. to 3d.

TALLOW.—Prime Mutton £20.10.0 to £21, Medium £19.15.0 to £20.5.0, Prime Mixed £19.5.0 to £19.15.0, Medium Mixed £18.10.0 to £19; Prime Beef £19.0.0 to £19.10.0, Medium Beef £18.5.0 to £18.15.0, Broken small and Inferior £17.0.0 to £18.5.0 per ton.

HIDES.—Very firm. Dry 2½d. to 3½d.; Green, 3d. to 3½d.; superior 4d. per pound.

HORSE HIDES.—From 5/ to 8/ each.

SHANK BONES.—From £3.12.6 to £4.17.6 per ton.

COMMON BONES.—From £2. to £2.15.0 per ton.

HORNS.—From £10.0 to £2.7.6 per 100.

MARSUPIAL SKINS are in strong demand, with an upward tendency in prices, more especially for Kangaroo, Wallaby, Opposum, Platypus, and Bear Skins.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club is closed for the season: and re-opens on Thursday 3rd October.

The Tokyo Chess Club is now closed for the holiday season and will reopen on Friday, 4th October, 1895.

SOLUTION OF PROBLEM No. 185.

WHITE.	BLACK.
1—Q to Q B 6	1—B to K 6
2—Kt to B 4	2—K x Kt
3—Q to K B 6, mate	1—B to Q 5
2—Q to Q B 7 ch.	2—K to Q 4
3—Kt to B 4, mate	if 2—K to B 4
3—Q to K B 4, mate	1—B to Kt 8
2—K to K 7	2—Anything
3—Q to K 4, mate	1—P to B 5
2—P x P	2—Anything
3—Q to Q 5, mate.	

Other variations and continuations are obvious.

Correct solutions received from Digamma, Kr., Shogi, W.H.S., E. J. King, and J.D.

PROBLEM No. 187.

By KAREL TRAXLER.

White to play and mate in three moves.

GAME No. 295.

The following interesting game was played by correspondence between Herr Schalopp, of Steglitz, and M. Tabuntschikoff, of Gatchina, Russia. It illustrates a theoretical question which has arisen in the recent New York Tournament, when Hymes made against Steinitz what was supposed to be a new move. Herr Schalopp made it in 1893. The introduction and notes are by Mr. Hoffer, from the *Standard*.

"RUY LOPEZ."

WHITE. E. Schalopp.	BLACK. B. Tabuntschikoff.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to Kt 5	3—P to Q R 3
4—B to R 4	4—P to Q 3
5—P to Q 4	5—B to Q 2
6—Castles	6—P to Q Kt 4
7—B to Kt 3	7—Kt takes P
8—Kt takes Kt	8—P takes Kt
9—P to Q B 3 (a)	9—P takes P (b)
10—Kt takes P (c)	10—Kt to B 3 (d)
11—P to B 4	11—P to Kt 5 (e)
12—Kt to Q 5	12—P to B 3 (f)
13—Kt takes Kt ch.	13—P takes Kt (g)
14—Q to R 5	14—Q to K 2
15—B to Q 2	15—Q R to Kt sq.
16—Q R to K sq.	16—R to Kt 4
17—P to K 5	17—K to Q sq.
18—B to B 4	18—P to Q 4 (h)
19—B takes R	19—R takes B
20—P takes P	20—Q takes P
21—P to B 5 (i)	21—P to R 3
22—B to B 4	22—B to B 4 ch.
23—K to R sq.	23—B to Q 3
24—B to Kt 3	24—K to B sq.
25—Q to Kt 4	25—P to B 4
26—Q to B 4	26—Q to Q Kt 3
27—R to K 7	27—P to B 3
28—K R to K sq.	28—P to R 4 (j)
29—R takes B	29—K takes R
30—R to K 6	30—Q takes R

And White mates in four moves.

(a) Obviously if 9—Q takes P, then P to B 4; 10 Queen moves, P to B 5 would win a piece. The text move was made in the recent New York Tournament by Hymes against Steinitz, and the game resulted in a draw. It was thought generally that Hymes was the first to introduce this excellent move, but in reality it was Herr Schalopp.

(b) Best. If Kt to B 3, then 10—P takes P, and Black could not reply 10—Kt takes P because of 11—B to Q 5.
(c) Hymes played here 10—Q to Q 5, and the game was given up as drawn after a repetition of B to K 3; and 11—Q to B 6 ch. Herr Schallopp saw the draw combination well enough; but he was not satisfied with such a barren result, judging rightly that the attack should yield more.
(d) Somewhat better would have been B to K 3; but after 11—P to B 4, White would still have the better developed game.
(e) B to K 5; 12—Q to K sq., B to K 2 would not be satisfactory either.
(f) If Kt takes P, then 13—Q to B 2, Kt to B 4; 14—R to K sq. ch., B to K 3; 15—P to B 5, and wins.
(g) If Q takes Kt, then 14—P to K 5; Q to Kt 3; 15—P to B 5, B takes P; 16—Q to B 3, B to K 5; 17—B takes P ch., K to Q sq.; 18—Q to K R 3, and wins.
(h) The sacrifice of the exchange seems to be the lesser evil.
(i) A powerful move. If Q takes Kt P, then 22—B to B 4, Q to Kt 2; 23—P to B 6, Q to Kt 3; 24—Q to K 5 and wins.
(j) If B to K 4, then 20—K R takes B; P takes B; 30—Q takes K P, R to B sq.; 31—Q takes P and wins.
(k) As follows: 31—Q to B 7 ch., K to K sq.; 32—P takes Q, &c. A remarkably fine game on the part of Herr Schallopp.

GAME No. 296.

Below follows the score of a consultation game, recently played between Lipschutz and Lee and Showalter and Schnitz at the Manhattan Chess Club, with comments by J. D. Elwell.

VIENNA OPENING.

WHITE. L. and L.	BLACK. S. and S.
1—P to K 4	1—P to K 4

26—K to Q 2	26—R takes B
27—Kt takes R	27—Q to B 7 ch
28—K to B sq.	28—Q takes Kt ch
29—Resigns	

NOTES.

(a) This counter attack in defence is probably best. Black's other moves are 2 B to B 4 and 2—Kt to Q B 3, both of which seem to give White some advantage in attack over the ordinary Giuoco Piano, because his K R and K B come into early play.
(b) A favorable continuation with L. Paulsen.
(c) In the game Bardeleben v. Shiffers (Breslau, 1889), the former played at this point P to Q 3. The text move is made in order to save the B from exchange with White's Q Kt. White, however, can only capture the B by a considerable disadvantage of his queen's side pawns.
(d) A strong attack, but somewhat premature, the Q P being unmoved.
(e) Here in a game between Mieses and Dr. Tarrasch the doctor retreated his Kt to R 3.
(f) He might also have played 10 Kt takes P, Q to R 5; 11 Kt R 5, giving back the piece in order to close the rook's file, but this would hardly have been as good.
(g) Black seems to have nothing better, although it deprives him of a good attacking piece.
(h) Loss of time; B to K 3 at once should have been played.
(i) On general principles Q to Q 2 would have been better and would not later have led White astray.
(j) The obvious move, which gives White a strong position with material to the good.
(k) Kt to B 6 for the purpose of exchanging it for the adverse B was worth considering.
(l) Not so productive of results as was hoped and Black is presently forced to retreat home.
(m) Protecting the Kt at Q 5 as well as driving the R.
(n) Threatening in connection with the two bishops and knight a strong queen side attack. The queen, however, was needed for the protection of the White king.
(o) A move, the strength of which is revealed by Black's twenty-fifth move.
(p) White, being pressed for time, entirely overlooked the coming coup. Kt to Kt 6 ch., followed by B takes Kt and Q takes B, would have prevented the immediate catastrophe which follows.
(q) Immediately fatal to White. Black now threatens Q takes Kt ch.

GAME No. 297.

SALVIO-COCHRANE GAMBIT.

WHITE. Tschigorin.	BLACK. Winawer.

Dimock, de Lago, Danckuverts, Leno, Pors, T. F. Dunn, Futagaki, Kamada, Watanabe, Yamazaki, Tajima, G. Kanerollo, G. Stauveiro, Miss Naess, Messrs. Lim Kye Pang, J. Mitchell, J. Bruine, Magnan, Foy, Mr. and Mrs. Maquiera and 4 children, Mr. and Mrs. Payn, Lieut.-Colonel Chard, Mr. T. Futaki, Mr. and Mrs. de Garcia, Mrs. Andoyer and child, and Mr. P. Chiron in cabin; 15 natives in steerage.

Per British steamer *Siam*, for Hongkong via ports:—Mr. and Mrs. A. G. Diss and Mr. A. King in cabin.

CARGOES.

Per French steamer *Yarra*, for Shanghai via ports:—Raw Silk for Europe, 124 bales; Waste Silk for Europe, 68 bales.

Per British steamer *Siam*, for Hongkong via ports:—Waste Silk, 9 bales.

LATEST COMMERCIAL.

IMPORTS.

A quiet week. The annual *Bon-matsuri* monopolised the attention of Japanese dealers and consumers. Probably more trade will be apparent next week. Yarn and Grey Cloth—Nominally unchanged, but nothing doing to test the market. Fancies—A little weakness in Turkey Reds has led to some trifling sales. Woollens—Nothing done, market very dull.

COTTON PIECE GOODS.

	PER PIECE.
Grey Shirtings—84lb, 38½ yds, 39 inches	\$2.25 to 2.85
Grey Shirtings—9lb, 38½ yds, 45 inches	2.70 to 3.10
P. Cloth—7lb, 24 yards, 32 inches	1.60 to 1.90
Indigo Shirtings—12 yards, 41 inches	1.70 to 2.35
Prints—Assorted, 24 yards, 30 inches	2.00 to 3.75
Cotton—Italians and Satteens Black, 37 inches	PER YARD.
	0.16 to 0.22
Velvets—Black, 35 yards, 22 inches	7.25 to 9.50
Victoria Lawns, 12 yards, 42-3 inches	0.75 to 0.90
Turkey Reds—2.0 to 2.4lb, 24/25 yards, 30 inches	1.60 to 1.70
Turkey Reds—2.8 to 3lb, 24/25 yards, 30 inches	1.75 to 2.05
Turkey Reds—3.8 to 4lb, 24/25 yards, 32 inches	2.30 to 2.60
Turkey Reds—4.8 to 5lb, 24/25 yards, 32 inches	2.80 to 3.15

WOOLLENS.

	PER YARD.
Flannel	\$0.30 to 0.47½
Italian Cloth, 30 yards, 32 inches best	0.30 to 0.35
Medium	0.25 to 0.27½
Italian Cloth, 30 yards, 32 inches Common	0.20 to 0.22½
Mousseline de Laine—Grape, 24 yards, 51 inches	0.15 to 0.22
Cloths—Pilots, 51 @ 56 inches	0.35 to 0.50
Cloths—Presidents, 51 @ 56 inches	0.60 to 0.65
Cloths—Union, 51 @ 56 inches	0.40 to 0.70
Blankets—Scarlet and Green, 3 to 5lb, per lb	0.60 to 0.75

COTTON YARNS.

	PER PICUL.
Nos. 16/41, Ordinary	—
Nos. 16/24, Medium	\$33.00 to 33.50
Nos. 16/21, Good to Best	34.00 to 35.00
Nos. 16/24, Reverse	—
Nos. 28/32, Ordinary	—
Nos. 28/32, Medium	36.00 to 37.00
Nos. 28/32, Good to Best	37.50 to 38.50
Nos. 38/42, Medium to Best	42.00 to 44.00
No. 328, Two-fold	41.50 to 42.50
No. 428, Two-fold	47.00 to 49.50
No. 208, Bombay	—
No. 168, Bombay	—

METALS.

Nothing to report, the market seems to be quietly slumbering through the *Bon* festivities.

	PER PICUL.
Flat Bars, 4 inch	\$3.30 to 3.35
Flat Bars, 1 inch	3.35 to 3.40
Round and square up to 4 inch	3.30 to 3.40
Iron Plates, assorted	3.40 to 3.50
Sheet Iron	4.30 to 4.50
Galvanized Iron sheets	8.25 to 8.75
Wire Nails, assorted	5.60 to 6.00
Tin Plates, per box	5.25 to 5.50
Pig Iron, No. 3	1.60 to 1.65

KEROSENE.

A good deal of mystery continues to envelop this market. A sale of 20,000 cases Comet is reported at \$2.25, but it seems to require confirmation. Deliveries continue fair for the time of year.

American	\$2.30 to 2.40
Russian	2.30 to 2.40
Langkat	1.90 to 2.00

SUGAR.

Some current business passing in Manila and Canton at about previous quotations. In Formosa sorts there has been no business; the steamer *Bonnington* has brought up about 50,000 piculs, so there is now a fair stock to work upon as soon as buyers are ready to operate.

	PER PICUL.
Brown Takao	\$3.60 to 3.65
Brown Manila	4.20 to 4.30
Brown Daitong (New)	3.10 to 3.20
Brown Canton	3.10 to 3.60
White Java and Penang	6.20 to 6.50
White Refined	6.00 to 9.25

EXPORTS.

RAW SILK.

Prices have experienced the inevitable fall. Buyers operated to a fair extent as the market declined and holders are willing to go on at last prices, and perhaps would not refuse a further reduction. At closing, a large business has been done for outgoing steamers, buyers operating freely at the reduced quotations.

QUOTATIONS.—(NEW SILK.)

Filatures—No. 1, 10/13 deniers	\$850 to 860
Filatures—No. 1, 13/15, 14/16 deniers	850 to 860
Filatures—No. 14, 10/14 deniers	820 to 830
Filatures—No. 14, 13/16, 14/17 deniers	820 to 830
Filatures—No. 2, 10/15 deniers	780 to 790
Filatures—No. 2, 14/18 deniers	780 to 790
Re-reels—No. 1, 13/15, 14/16 deniers	820 to 830
Re-reels—No. 14, 13/16, 14/17 deniers	780 to 790
Re-reels—No. 2, 14/18 deniers	740 to 750

WASTE SILK.

In this market holders do not appear to realise their position. With a poor and ill-assorted stock they are surprisingly firm in their attitude, and in consequence are able to make very few sales.

TEA.

An active trade in the Medium grades, and prices are firm at last quotations, holders being strong. Settlements to date are now quite 5,000 piculs over last season. The stock is not heavy, being about 8,000 piculs, mostly average grade.

	PER PICUL.
Choicest	\$30 to \$32
Choice	27 to 28
Finest	25 to 26
Fine	23 to 24
Good Medium	21 to 22
Medium	19 to 20
Good Common	17 to 18
Common	15 to 16

EXCHANGE.

Exchange is fairly steady, with little alteration in rates.

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dinero, London.

"MONEY" is a fearless critic and exposé of all shams, frauds, and swindles.

"MONEY" is the Journal for Investors, Speculators and Business men.

"MONEY" is a thoroughly up-to-date Weekly Record of all Financial and Business Matters.

"MONEY" is not subsidised by any financial association, clique, or syndicate, but is absolutely free, independent, and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing Shipping, Trading, and Trust Companies, are fearlessly and impartially criticised in "MONEY."

THE MONTHLY FOREIGN AND COLONIAL EDITION, called "MONEY AND TRADE," is published on the last Wednesday in each month, and is forwarded direct to the Foreign Agents and Correspondents of all the leading English Merchants, and to all the large Wholesale Buyers and Storekeepers in the Colonies, India, China, Japan, South America, and other countries.

"MONEY AND TRADE" enjoys a very large circulation in all Foreign Markets where English goods are sold; and, as it goes direct into the hands of the WHOLESALE AND RETAIL BUYERS, it offers unique advantages to advertisers.

SPECIMEN COPIES POST FREE.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribes in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In 1 short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World. May 1st, 1890.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 27TH, 1895.

BIRTH.

On the 20th inst., at No. 18B, Tsukiji, Tokyo, the wife of RANSFORD S. MILLER of a daughter.

DEATH.

On the morning of Tuesday, July 23rd, at Mita, Tokyo, from failure of the heart, after diphtheria, HARRIET JANE (Janet), second daughter of Rev. Arthur Lloyd, aged eleven years.

SUMMARY OF NEWS.

THE British fleet has left Hakodate for a cruise further north.

THE Duke of Abruzzi has arrived in Sōul, on his tour through the East.

CHOLERA is still spreading, the latest returns show 5,693 deaths and 9,362 cases.

ONE hundred and sixty students graduated at the Waseda Semmon Gakko, Count Okuma's institution, this year.

THE Grace Hawthorne Dramatic Company gave two especially good performances at the Public

Hall this week, "A Woman of no Importance," and "The Second Mrs. Tanqueray." Unfortunately the support afforded was very meagre.

OVER sixty surveyors belonging to the General Staff Office left the capital on the 18th inst. to survey Formosa.

THE rainfall on Monday was something phenomenal at Yokosuka, nearly 80 millimetres falling there during twenty-four hours.

SOME of the lower lying portions of Tokyo and Yokohama were submerged on Monday evening, in consequence of the severe rainfall.

VISCOUNT MUTSU, Minister of Foreign Affairs, is making slow progress towards recovery, and will return to Tokyo in August next.

FROM the meagre news which has come to hand this week, the public gathers that the subjugation of Formosa is proceeding slowly but surely.

THE German Minister left the capital on the 20th inst. for Chuzenji, where he intends to remain until the middle of September next.

COLONEL SHIBANO YOSHIHIRO, Commander of the Third Regiment of Field Artillery, has been appointed Chairman of the Artillery Council.

THE number of soldiers and military employés returned from China up to the 22nd instant was 99,768, and horses brought back number 13,239.

THE Radical Party has appointed several deputies from among its leading members to proceed to the interior to hold public meetings.

A TERRIBLE railway accident, resulting in the killing or wounding of about a score of persons, occurred on the Sanyo railway on the 25th inst.

DURING the heavy gale on Monday, a small yacht broke away from its moorings in Yokohama harbour, and has not since been heard of.

SOME 700 police constables will shortly leave the capital for Formosa. The number is to be increased to 1,500 after the disturbances have been subdued.

MR. SANNO MIYA, of the Imperial Household Department, and Mrs. Sannomiya, visited Admiral Carpenter on board the U.S. flagship *Baltimore* on the 18th inst.

THE national heirlooms kept in the Shoso-In Temple at Nara will not be exposed to the sun this year, and consequently no persons will be allowed to inspect them.

THE railway track near Yamashina Station, Kyoto, was damaged on the 20th inst. owing to persistent rains, and a luggage train was derailed, some carriages being damaged and persons injured.

A HEAVY gale from the south-west swept through Japan on Wednesday and Thursday, doing a lot of damage. Many boats were wrecked along the coast, and much loss of life will, it is feared, be reported.

THE anti-Cabinet politicians are not experiencing much success in their meetings. Three thousand persons attended in Yokohama to hear their statement of the case, but no sympathy was extended toward them.

A MAN, aged about thirty years, and a woman aged 67, were run over and killed by a train on the night of the 18th inst. at Shimmeicho, Shiba, and Takinogawa, Oji, Tokyo, respectively. The man is said to have committed suicide.

THERE was a contest for a seat on the Board of Directors at the general meeting of shareholders

of the Grand Hotel, Limited, on Monday, and Dr. Hall, who was beaten on the show of hands, won by a large majority on a poll being taken.

THE application of the Japan Cast Iron Foundry Co., Tokyo, to be allowed to break a portion of the agreement, by which they contracted to supply iron pipes for the Tokyo Water Works, has been rejected by the Tokyo City Council.

THE heavy rains of the past few weeks caused an undermining of the Bluff overlooking the lower end of the Motomachi, and on Monday night four Japanese houses in that locality were crushed in by a landslip. One old woman was killed, and four persons injured.

MARQUIS NABESHIMA, Grand Master of Ceremonies, was released from his post at his own request on the 23rd inst., his place being given to Mr. Sannomiya, Vice-Grand Master of Ceremonies, who has been succeeded by Marquis Tokugawa, a Master of Ceremonies.

THE dispute between Messrs. Cornes & Co. and Mr. Kimura Riyemon, which at one time threatened to develop into a boycott of the foreign firm by the Japanese dealers, has been compromised, notwithstanding that the Chiho Saibansho found in favour of the foreign claim.

REUTER telegraphs:—The Marquis of Lorne has defeated Sir Henry Roscoe at South Manchester. Mr. Daly, who was returned for Limerick, is a dynamitard and is now in Portland Prison. Mr. H. M. Stanley, the explorer, has been elected member for Lambeth. The Rt. Hon. J. G. Shaw-Lefevre has been defeated at Central Bradford, Mr. W. S. Caine, at East Bradford, and Mr. Bright (? Mr. J. A. Bright) at South-West Manchester. General Metzinger defeated the Hovas near Tsaresoatra. The Hovas lost heavily. A quantity of provisions and munitions of war have fallen into the hands of the French, who had only two men killed and 15 wounded. The French have blown up the powder magazine of the Hovas at Farafate. The Russian journals are enthusiastic over the Chinese loan, holding that it opens up a new era for Russian politics in China.

THERE is but little to be said of the Import trade, and the market is generally suffering from considerable depression. Yarns and Cotton Piece-goods are extremely quiet, and Woollens are in similar case, buyers seemingly being scarce. The Metal trade has assumed its usual summer quiet, and except for a few necessities, there is no enquiry. The value of Kerosene remains unchanged, with little doing, and the stock has been further increased by the arrival of a tank steamer with a large cargo from Batoum. In Sugar, a fairly current business has been done, but there appears to be no great demand forthcoming in the immediate future. There has been a moderate business in Raw Silk, but prices have been somewhat irregular, and are now considered to be down as far as they are likely to go—at least for some time. There is nothing fresh in the Waste Silk trade, and unless holders take less money than they now ask for the undesirable parcels of old fibre now on this market, it is likely to remain where it is. In the Tea trade a fairly current business on the basis of recent quotations has been done, and the settlement and export statistics to date are both in advance of those of last season. Exchange has fluctuated but little during the week, and rates are fairly steady, though the suspension of telegraphic information has caused somewhat irregular quotations.

SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The so-called Responsibility Question, namely, the question of the Cabinet's responsibility about the return of the Liaotung Peninsula, has not yet been suffered to sink to rest. But articles discussing it read like funeral orations rather than declarations of opinion emanating from men confident in the strength and prospects of their cause. Even the most sanguine advocates of anti-Cabinet agitation on this subject can not conceal the fact that, so far as the general public is concerned, their ardent appeals and declamations have fallen on deaf ears. It is interesting to notice the manner in which the defeat of their cause is indirectly acknowledged and explained away by the Extremist organs. The *Kokumin Shimbun* writes in the following resigned strain:—"The discussion of the Responsibility Question in the Diet next session is a duty that the people's representatives owe to the country and to the world at large. The idea of duty ought to exclude all considerations of failure or success. The object is to say in the Diet what the nation has been unable to say through the press and from the platform. The Diet's duty will have been satisfactorily discharged when it gives expression, truly and distinctly, to the sentiments and ideas of the people. The Diet need not trouble itself about the probability or improbability of passing a resolution." By the Diet is evidently meant the Extreme section of the Lower House. Certainly such utterances furnish a suggestive commentary upon the present situation of the Opposition.

The *Nippon*, which ordinarily stands aloof from party contentions, but which has enthusiastically taken up the cause of the Extremists in the present case, now warns its sympathizers against the uselessness of clinging to the Responsibility Question, not because the subject is in itself unworthy of attention, but because a truly representative system of Government is not yet in operation. It declares in ironical tones that a Responsible Ministry is a thing still in the lap of the future for Japan. In another article, the same journal observes that there is a fundamental and irreconcilable difference of political standpoint between the statesmen in power and the politicians of the Opposition. The latter habitually say that the Cabinet is morally required to do so and so, and base all their arguments on the assumption that a Ministry opposed by the majority of the people is bound to bow to popular will and retire from office. In other words, moral considerations constitute the standard by which they measure all political questions. The Government, on the other hand, in the *Nippon's* opinion, rigidly exclude moral ideas from the sphere of politics. They regard administrative power by the light of prescription, and "seem to be determined never to hand over the reins of authority except in the presence of methods such as those employed to wrest them from the hands of the Tokugawa Dynasty." Under such circumstances, our contemporary sees little use in discussing the question of Ministerial Responsibility. In plain language, the *Nippon* advocates revolutionary principles, for according to its opinion the only way for the Opposition to attain its object is by recourse to violence.

There seems to be a tendency in a certain quarter of the Opposition to seek questions other than that of the return of Liaotung as a means of measuring strength with the Government in the coming session of the Diet. The more reflecting of the Extremists must be aware of the foolishness of adhering to the unpopular question of Ministerial Responsibility. Thus the *Kokkai* suggests that the most desirable substitute would be the old question of reducing administrative expenses. The Radical Party has expressed itself strongly in favour of such a course, and it seems to have struck the wary tacticians of the Opposition that by dextrous management of this weapon, they may possibly catch the Radicals in their own snare and compel them to join a

general attack against the Cabinet. At all events, such seems to be the idea of the *Kokkai*. It remarks that, in proportion as the circumstances relating to the return of Liaotung become known to the public, the interest in the Responsibility Question is destined to diminish, and that, consequently, it is not adapted for the purpose of an onset upon the Cabinet. Our contemporary then passes in review all other aggressive devices, and finally selects the much hacknied question of organizing an anti-Cabinet onslaught. Now that the nation is about to be required to bear increased burdens, it is but natural, says the *Kokkai*, that the most rigid economy should be practised by the Government. To give effect to this mode of attack, our contemporary suggests that the members of the Diet should first reduce the amount of their own yearly allowances. If they proceed in that way, the administrative economies advocated by them will seem inevitable, and the Cabinet will be placed in a serious dilemma. But here is the difficulty. The members of the Diet have always shown the keenest jealousy about their yearly allowances. Once a reduction or abolition of these allowances was proposed, but the proposal was at once rejected as being unworthy of consideration. It is not likely that the project would fare better next session. Neither is it certain that the Radicals would join any scheme of sweeping reductions advanced by the Extremists.

The question of a foreign alliance again furnishes a theme for several articles. No new feature is observable in the discussion, except, perhaps, a tendency, slight, indeed, but still perceptible, to advocate the advisability of keeping aloof from all diplomatic entanglements with European Powers. The expression of views unfavourable to an alliance with Japan by prominent writers in England seems to have stimulated a reaction from the enthusiasm with which an alliance with England was advocated in the first moments of bitter resentment against Russia, Germany, and France. This reaction is inevitable, and had been foreseen by thinking men. On the other hand, a small, yet influential, and apparently increasing, coterie of publicists had been strongly advocating an alliance with Russia, when the latter's action about the Liaotung Peninsula inspired such violent popular indignation against her that alliance could no longer be talked of. But by-and-by its supporters began to utter warnings against the danger of giving too much sway to personal feelings of resentment, and to hint that the permanent diplomatic policy of the country should not be affected by temporary causes. The present reaction, however, is but very slight, and does not seem likely to lead to any material increase in the number of those advocating a Russian alliance. The result of the reaction, so far as present indications go, appears to be limited to an increased tendency towards a policy of abstention. Moreover, the tendency does not affect the large and powerful section of educated men that urge the wisdom of close relations with England from deep and well reasoned conviction. The *Kokkai* seems to represent those in favour of a policy of abstention. It observes that, if there were any necessity for an alliance with England, it was when the three Powers gave their "friendly" warning to Japan. To cry out about the need of such alliance after the final settlement of that matter is unintelligible and even childish. The *Kokkai* appears to regard it as extremely improbable that England would ever consent to form an offensive and defensive alliance with this country. England's policy has always been to stand aloof from combinations, protecting her interests and maintaining her position by skilfully playing off one Power against another. To seek an alliance with her would only be productive of injurious results, for without securing her active friendship in time of need, it would strengthen the antagonism of certain other Powers. A better policy, in the *Kokkai's* opinion would be for Japan to pursue an independent course of action, and combine, when need arises, with any Power that may

happen to have a community of interests and be willing to coöperate for a certain object.

The *Nippon* strongly criticizes the conduct of certain papers that openly advocate an alliance with England. It evidently alludes to the *Yiji Shimpō* and possibly also the *Nichi Nichi Shimbun*. These papers, says our contemporary, enjoy the reputation of being intimately connected with the Foreign Office. They ought, therefore, to be especially careful in discussing foreign affairs. Supposing that the Cabinet were actually in favour of an alliance with England, then it would have been the duty of its organs to keep the secret and abstain from committing themselves to any definite announcement. If, however, the idea of such an alliance be not entertained by the Government, then it was all the more incumbent upon these journals to abstain from expressing views that might be mistaken for those held by their supposed patrons. Hence, from every point of view, the enthusiastic advocacy of an alliance with England by such journals is pronounced extremely reprehensible and regrettable.

The Radical party's positive declaration of opposition to the policy of the Extremists with regard to the question of Ministerial responsibility about the return of Liaotung, continues to be much discussed journalistically. The Extremist organs, as might be expected, bitterly declaim against the Radicals, whom they call by various ugly names. Some papers have even stooped to the evil practice of circulating rumours that the Radicals have been bribed by the Cabinet. But these reports are treated with contempt by the better class of metropolitan journals. All the papers of the Opposition, however, agree in saying that the Radicals and the National Unionists constitute a definite Ministerial party. This is of course a mistake; under the present system of Government there can never be a genuine Ministerial party. Here we may notice an interesting article in the *Nichi Nichi Shimbun*. "We do not know," says our contemporary, "whether or not the Radicals have become a Ministerial party. But seeing that, in their recently published Manifesto, they leave the task of elaborating financial measures to the Government, and declare it useless to discuss the question of the Liaotung Peninsula, they seem to have discovered the unwisdom of domestic dissensions at a juncture like the present, and to consider it necessary to coöperate with those in power for the promotion of the national welfare. If, on this account, they are to be called a Ministerial party, we are confident that the Radicals will not object to the term, for in serving the true interests of the country they are certainly indifferent to what outsiders may say about them." The *Nichi Nichi* goes on to observe that the statesmen now in power being responsible to the Emperor alone, are not required to, and would not be justified in, attempting to maintain their position by party support. If they happen to receive the support of any party at any particular time, it is not because they have formed a party of their own, but simply because some particular party or parties happen to sympathise with the Ministerial policy. Consequently, the Government is not partial to any party, but is willing at all times to coöperate with whatever politicians endorse its views.

The encouragement of steam navigation, the necessity of making the most of the commercial concessions obtained from China, the increase of taxation, and the situation in Korea—such are the other questions discussed in the vernacular press during the week.

The Government granted on the 25th inst. a charter to Mr. Tsukahara Shuzo and other promoters of a dock at Uraga. A charter will also be granted in a day or two to Mr. Shibusawa Eiichi and other capitalists, who propose to construct another dock in the same district. The work is to be commenced within three months from the date of the granting of permission, and must be completed in two years.

EDITORIAL NOTES.

MONDAY'S STORM.

THE rain storm experienced on Monday was of a local character. In Yokosuka up till 2 p.m. 32 millimetres of rain had fallen, in Tokyo but 9, while at Choshu 32 were recorded. The storm increased in violence during the afternoon, and at 6 p.m. the record stood, Yokosuka 79, Tokyo 44, Utsunomiya 27, Numadzu 15. At 10 p.m. the report said:—Numadzu 48, Yokosuka 98, Tokyo 39, Choshi 83; and at 6 o'clock in the morning, when the storm had died away, the rain gauges marked, Yokosuka 49, Tokyo 67, Utsunomiya 14, and Choshi 61. In Yokohama all the low-lying quarters were flooded, and a great deal of inconvenience was experienced by the denizens in and about Honmura road. A terrible accident took place at Nakadori Sanhome, Ishikawa, Yokohama, during the night. About half-past ten o'clock the Ishikawa Police Authorities received a report to the effect that an extensive landslip had occurred at Nakamachi, and upon arriving at the spot ascertained that the cliff near No. 16, Bluff, occupied by Mr. Kingdon, had given way near the centre, and a mass of land measuring twenty-four feet by eighteen feet had slipped bodily down on to some houses standing on No. 48, Nakamachi Sanhome. It was soon learnt that some of the inmates of the crushed houses were missing, and attention was specially directed to the house of Kubota Washizo, which had been completely covered. After a while the searchers found that Kubota's mother, Suya, aged 67, had been crushed to death. Kubota Washizo, his wife, and their employé, Yoshinosuke, also sustained slight injuries, although they ran before the house was struck. Another of the destroyed houses was occupied by the family of Ogawa Kinjiro. The constables and neighbours worked for over an hour before they succeeded in rescuing Ogawa Kinjiro's wife, Towa, and their second son, Matsugoro, who were both buried beneath the *débris*. Towa was very severely injured, but Matsugoro's wounds are not serious. Kinjiro also received severe injury, and the couple will take about a fortnight to recover. Two other houses, occupied by Ichikawa Iwataro and Ito Kakujiro, were partly damaged, and a few persons were slightly injured. The wounded are now receiving medical treatment in hospital. A house at No. 8, Tobe Ichome, was washed off its foundation by the heavy rain. Two landslips of small dimensions occurred at Isecho. About eighteen houses at Suyeyoshicho Nichome were submerged by water, and trouble occurred between the residents of Nichome and those of Sanhome when the former attempted to turn the current of water into another channel, but the police promptly suppressed the excitement. A small yacht owned by Mr. Shirley Mansfield broke loose from its moorings in the harbour, and has not yet been recovered.

In Tokyo, such low-lying places as Tangocho and Nakanosho, Akasaka; Sakuragawacho, Shiba, and Matsuhacho, Asakusa, were submerged. Two houses at Tanicho, Azabu, were damaged by a landslip. The stone wall at the U.S. Legation gave way for a length of about 36 feet. Some small damages were done in other parts.

The storm did a great deal of mischief at Yokosuka. About four o'clock yesterday morning an extensive landslip occurred on the cliff in the front of the Railway station, and five houses were buried beneath the *débris*. Men were promptly engaged to remove the fallen earth, and it was discovered that although the families of three houses escaped before the cliff fell, the others were caught. Two persons were slightly injured, but the rest were rescued with whole skins.

JAPANESE VERSUS CHINESE.

THE British steamship *Pallas*, formerly *Charters Towers* and later *Ariaki Maru*, recently left Hongkong with coal for Canton. She is rather large to get up to Canton, so she was only to go to Whampoa. She took on board at

Hongkong about 150 Chinese coal-coolies. Her tallymen, and in fact the whole crew, are Japanese; and as may be expected there was no love lost between the Japanese and the Chinese on the voyage. As soon as the vessel was well away from Hongkong quarrelling began, nobody knows how—probably through more or less accidental jostling on the fore deck. Captain Murray and his officers managed to maintain order until arrival at Whampoa, when the Captain had to go on to Canton. Then the war broke out. The coal coolies, being right among their kith and kin of the cargo boats, started to avenge their country's wrongs by exterminating the *wofen*; but the plucky Japanese, fifty or sixty in all, drew together in a resolute, compact body and more than held their own. In a few minutes bamboos were banging and missiles were flying all over the ship; and little by little the handful of Japanese cleared out the crowd of Chinese, until some foreigners appeared on the scene when the disturbance subsided. Half-a-dozen Chinese had to be taken away to hospital, badly bruised and smashed up; none of the Japanese confessed to having been injured at all. It is quite clear that the Japanese easily "knocked spots off" the Chinese, though numbers were very much against them. One report says that the Japanese used revolvers and killed four of the coolies, but this we believe is untrue; though as far as present information goes it appears as if it would have been justifiable enough, and the Japanese are not the sort of people to mince matters. The *Pallas* is expected here in two or three days.—*China Mail*.

FOOT-BINDING.

THE Society for putting an end to the terrible practice of foot-binding in China, seems to be working energetically. It has adopted the wise course of distributing literature designed to show the cruelty and folly of the five reasons given by the Chinese themselves in favour of foot-binding. From a letter sent by the Secretary of the Society to the leading Shanghai journal, we take this paragraph:—

The people who hail our attempt with the warmest joy are undoubtedly so far the R. C. Fathers and Sisters. "No need to tell us of the sufferings of the children," said the saintly Mother Superior of the Convent at Hankow. "If you can but do anything—anything, to relieve us of this great misery of seeing their pain! Indeed—indeed, you may count us in fullest sympathy with your movement. One in ten little girls dies of foot-binding, do you say? Oh, more than that. It may not be more in Shanghai. But here it is terrible; I have seen their feet drop off. And they suffer so!" Anyone who had seen her eyes full of tears of joy, as she recognised a compatriot's name on our Committee list—"Ah! she is a good woman," she said—and listened to the rest of her conversation, which I do not feel at liberty to repeat, would have felt that all the talk about silly girls tight-lacing is out of place beside China's great curse.

MR. DE BUNSEN IN BANGKOK.

AT the close of an article which the *Siam Free Press* indites *apropos* of Mr. de Bunsen's well deserved receipt of a C.B., the writer observes:—It would perhaps be difficult to fairly summarise Mr. de Bunsen's work in Bangkok. Outwardly at least he is following the policy of his predecessors, and maintaining that policy of "masterly inactivity" which to the ordinary resident is so difficult to understand. But if Mr. de Bunsen is accurately following out his instructions, in the broad sense of the word, he is not idle in others. He is a *Chargé d'Affaires* for whom the Siamese have a profound respect, and did we even use the word fear, in the case of the Foreign Minister, we would be nearer the mark. There is probably nothing the English Representative asks that he cannot have from the Siamese, and though there are a few who might prefer Mr. Scott, yet there are none who have not a profound respect for the very clever diplomat now watching English interests in this country. Mr. de Bunsen conveys the impression of being remarkably shrewd and far-sighted, a good judge of character, and one who guards his political hand with extreme caution. His policy since he arrived in Siam shows him to be quick in grasping the situation, and rapid in divining the true tendency of the native political current.

He is a genial, frank, and broad-minded man; a good sportsman, with a keen eye to the fine points of a horse; of fine physique and good presence, cultured and refined in manner; and is generally credited with being a great favourite of the English Foreign Office, and a diplomat with a brilliant future before him.

THE BOYCOTT AGAINST CHINESE.

THE methods employed by the Japanese dealers to enforce their boycott against the Chinese merchants in Yokohama, are discreditable. As is usual in this country, where any dirty work or cowardly intimidation is resorted to, the services of the ubiquitous *soshi* were requisitioned in force to prevent any infringement of the boycott by the weaker-minded members of the Guild, two of the notorious fraternity being stationed in front, or on the steps, of every Chinese hong to prevent the entry of goods. On Thursday afternoon a Japanese dealer went with his men to a Chinese hong near the Settlement Police Station with some goods, and a most disgraceful scene ensued. After the goods had been taken into the shop, the *soshi* actually entered and threw them into the middle of the street, and then, in the most insolent manner possible, drove out the Japanese dealer and his men also, thus effectually preventing the transaction of any business. This invasion of the Chinaman's premises by the *soshi* seems to have been witnessed by the police, but probably no appeal was made to them by the aggrieved persons, for they confined themselves simply to keeping the peace.

DEATH OF MME. VVE. DR. LUCY-FOSSARIEU.

THE *Kobe Chronicle* records the death of Mme. Vve. de Lucy-Fossarieu, mother of the French Consul for Hyogo and Osaka, the death taking place suddenly on Monday evening, of apoplexy. Up to quite recently the deceased lady was in the enjoyment of her usual health, but the trying heat of the last two or three days must have been very prejudicial at her advanced age. The late Mme. Vve. de Lucy-Fossarieu has been a resident of Kobe for some three or four years, having arrived there with her son when he last returned from France. She was 74 years old.

A CHARGE OF EMBEZZLEMENT.

A YOUNG Japanese named Yasuda Genzo, employed by Messrs. Sale & Co., has been arrested by the police on a charge of embezzling yen 898 from the firm. Yasuda, when arrested, said that he had taken the money for the purpose of gambling in stocks, and that in consequence of the market falling he was unable to refund it. The major portion of the money was, however, found to have been spent in a brothel, the Saikiro, in Kanagawa. The man was transferred to the Saibansho this morning.

DEATH OF A FORMER SWISS PRESIDENT.

THE following letter has been circulated among the Consular body by Dr. Paul Ritter, Vice-Consul for Switzerland in Yokohama:—

Yokohama, 20th July, 1895.

Dear Colleagues—I regret to have to inform you that I have received a telegram from my Government announcing the death of M. Charles Schenk, "Conseiller Federal ancien Président de la Confédération." The flag of this Consulate-General will be flown at half-mast for 3 days from to-day.

THE H. AND S. BANK.

HONGKONG papers are informed by the Chief Manager of the Hongkong and Shanghai Bank that, subject to audit, the Directors of that Corporation propose at the forthcoming meeting to declare a dividend for the half year of £1.5/- per share, place five lakhs to credit of Reserve Fund, and carry forward to next half-year about hree lakhs.

SCHEME OF RELIEF FOR THE DISTRESSED FAMILIES OF THOSE KILLED IN WAR.

WE have to acknowledge the receipt of \$20 for this fund from Count Orfini.

A MONUMENT is to be erected at Ujina to commemorate the triumph of the Japanese soldiers. It will cover an area of 250 *tsubo* (one *tsubo* = 6 ft. square.)

CURRENT TOPICS.

Concerning the report that the Cabinet has decided to advise the Emperor to convene an extraordinary session of the Diet, the *Nichi Nichi Shimbun* does not deny it, but observes that the requisite preparations cannot be completed within a brief period, and that until their completion, no definite decision can be arrived at as to the convening of the Houses. Our contemporary fails to understand how any one can believe that the convention of an extraordinary session was insisted upon by Count Matsukata and approved by Count Ito and his colleagues. It believes that the elaboration of the Military measures will require months, and that, such being the case, there is little probability of an extraordinary session of the Diet. But the rest of the metropolitan papers, including such a well-informed journal as the *Fiji Shimpō*, seem to entertain no doubt that the step has been decided upon. Some even go so far as to assert that the Imperial Proclamation convening the extraordinary session will be issued early in the month of September.

The resolution adopted by the Radicals on the 17th instant has attracted considerable attention. The point that receives special notice is the definite declaration of their attitude toward the question of the Liaotung Peninsula. That the Radicals as a Party were not in favour of embarrassing the Government in connection with that question had been known from the first. But it was also believed that a tendency existed among the younger members of the Party to revolt against the moderate policy of their leaders, and some hope was consequently entertained by the extreme sections of the Opposition that a split might occur in the Radical camp. That hope has been entirely dashed by the unanimous adoption of the resolution of abstention. Telegrams are coming from various parts of the country to the effect that the local Radical associations completely approve the policy adopted by their leaders in Tokyo.

A writer on the staff of the *Fiji Shimpō* visited Count Itagaki and asked his views on the situation. The Radical leader explained at great length the attitude of his Party toward the Liaotung question. He regretted very much that it had been necessary to abandon permanent possession of the conquered territory, but he acknowledged that, under the circumstances, no other course could be pursued. He did not think that the three Powers would have shrunk from war, had Japan declined to accept their warning. Russia was in earnest, and Germany and France would certainly have assisted her. It was plain that they had resolved to push the matter to the bitter end, and, in Count Itagaki's opinion, Japan was not then in a condition to oppose them with any hope of success. Hence she had simply to accept their advice and settle the matter with the least possible loss of prestige. As to the criticism very often advanced by the Opposition politicians, that the Japanese Cabinet ought to have taken precautions against a possible combination of the three Powers, the Radical leader thought that in all probability there were no means of foreseeing such a combination. However, he, too, declared himself not altogether satisfied with the foreign policy of the Government, but he strongly objected to the idea of sacrificing the permanent interests of the country for the sake of this comparatively unimportant question.

Concerning the treatment to be accorded to Pak, opinion is said to differ much among his Japanese friends. Some say that, if he really be guilty of high treason, he ought to be advised to go to America. But the majority, attaching little importance to the story of his treason, seem inclined to extend their support to the unfortunate fugitives. Pak and his fellow exiles arrived in Tokyo on the 18th instant, and are now staying at Mr. Fukuzawa's house.

How many adherents the Extremists will be able to command in the next session of the Diet is a subject much speculated upon. In our

opinion the number is not likely to exceed a hundred. But a certain Count—evidently the Progressionist leader—quoted by the Domestic and Foreign News Agency, puts it at 126, while the strength of the avowed Moderates is estimated at 137 (i.e. the Radicals and National Unionists). This Count, whoever he may be, further thinks that the 10 Neutrals will be equally divided between the two camps, but that the 27 members of the Industrial Association (*Fitsugyo Dantai*) will all give their support to the Cabinet, with probably two or three exceptions. According to this calculation, the Moderates will have a clear majority of about 40. After the conclusion of the next session of the Diet, one or two leading members of the Radical and National Unionists, continues the same authority, will receive portfolios, but the Extremists may console themselves for their defeat that, after all, the victory of the Moderates will lead to Government by Party. We are disposed to agree with that prediction. Without looking so far ahead, however, the Count's conjecture as to the general situation in the coming session may be accepted with tolerable confidence, though his estimate of the strength of the Extremists appears to us too large.

The Radical Party has decided to send lecturers to all the provincial districts. Among the politicians named for this mission, we notice Messrs. Kataoka Kenkichi, Suzuki Jubi, Ebara Soroku, Ishizuka Juhei, and Nakano Torajiro. To-morrow, the 23rd inst., the principal members of the party will hold a meeting at the Kinki-kan, Kanda, Tokyo. Notice has also been issued to the leaders of the different local Radical associations to come up to Tokyo without delay. It may be inferred from all this that the Radicals are taking energetic measures to complete their preparations for the coming session of the Diet.

Viscount Miura has been appointed Minister Plenipotentiary and Envoy Extraordinary. For the present he will be unattached, but it is an open secret that he will before long succeed Count Inouye in Seoul. The *Chuo Shimbun* publishes an account of an interview with him. The subjects discussed all related to Korea. There is little either novel or striking in the views attributed to him, except, perhaps, his opinion about faction struggles among Korean politicians. Most people regard these struggles as the curse of the peninsular kingdom, but Viscount Miura counts them an indication that there is yet hope for the independence of a nation imbued with energy sufficient to prompt such dissensions. As to reforms, he is opposed to all heroic measures, he insists that the work must progress slowly and steadily. The failure of Pak is attributed by the Viscount to his attempt to carry out once and without modification, the political ideas imbibed by him during his long sojourn in Japan. He considers Pak too simple and honest to be a successful politician.

Attempts are made by some of the extremist organs to discredit the Radicals by circulating various damaging rumours. It is stated, for example, that, as the price of their support, they have obtained a grant of 50,000 yen from the Government, through the medium of a certain Count; that the intercourse between the Premier and the leading members of the Party is of an intimate character, and so forth. The *Yomiuri Shimbun* even goes so far as to allege that an access of affluence is already observable in orders for new suits of clothes, redemption of articles in pawn, and payment of debts to usurers. It is also reported that the Radicals contemplate starting a new party organ, the funds necessary for the undertaking being supplied by their friends in power. The *Fiji Shimpō*, alluding to these rumours, sincerely deplores that the members of great political parties should resort to such dastardly devices in their struggles with their opponents. But the *Yomiuri* and its fellow-slanders can point to the fact that from time immemorial several local English newspapers at the open ports have never risen to a higher level of argument than to accuse their opponents of mercenary motives.

It is the old story: the influences to which a man is most susceptible himself are naturally those by which he believes others to be swayed.

All persons are agreed in believing that the Extremists will find themselves in a hopeless minority next session. But the Extremists do not seem to have entirely abandoned hope. Their organs hint that the situation may be radically changed by some unexpected turn of events. At present their only chance lies in a possible split of the Radical Party. Very probably the circulation of rumours such as those referred to in the preceding paragraph is designed to engender distrust between the simple-minded Radicals in the provinces and their leaders in the capital. The *Fiji Shimpō*, which always preaches peace and reconciliation, advises the Government to give an honest and explicit account, in the next session of the Diet, of the circumstances that led to the return of the Liaotung Peninsula, and at the same time, recommends the politicians of the Opposition to consider calmly what they intend to do in the Diet, so as to avoid the serious mistake of creating internal dissensions on account of irrevocable events. Our contemporary tells these politicians plainly that, however ardent they may be to get into office, they cannot achieve their object, for the present at least, by pulling down the Cabinet, as past experience abundantly proves. The only result of their proposed line of action will be to injure the credit of their parties. As to the Cabinet Ministers, our contemporary states that they are morally bound to give a full account of the affair to the Diet; in other words, to furnish the people's Representatives with sufficient data to form a judgment as to the policy pursued. The *Fiji* is confident that a frank and straightforward attitude on the part of the Government will have a most beneficial effect upon the House of Representatives.

The question of a foreign alliance continues to attract attention. No new feature is observable in the discussion. A small but influential section of thinkers that advocate a Russia alliance, are doing everything in their power to convince the public that England is not trustworthy as an ally. The *Kokumin-no-Tomo* is one of the organs of this school. It writes as follows in a recent issue:—"The *Mail* strongly advocates a Japanese-English alliance, and its voice is echoed by the Japanese pseudo-semi-official organ. The idea has also been taken up by a school of statesmen. (By the pseudo-semi-official organ, our contemporary evidently means the *Fiji Shimpō* in distinction from the *Nichi Nichi Shimbun*, which is usually called a semi-official organ.) It is even reported that the entertainment of Count Ito and other Ministers on board the *Centurion* points to such an alliance. But is there any foundation for the report? The Russian diplomats laugh at the notion of an alliance between the two countries. We cannot say definitely whether the idea is destined to be translated into fact. But we cannot believe that England would ever be a trustworthy ally." Our contemporary then refers to the conduct of England toward China during the recent war. Notwithstanding the fact that her support was plainly desired by China, England did not so much as move a finger in behalf of that country, but so soon as it became evident that Japan was stronger, she hastened to show goodwill to this empire. "We appreciate her goodwill," says the *Kokumin*, "but no importance cannot be attached to it, when we think that it may under similar circumstances be transferred to other quarters." To the contention that for the half-hearted and neutral policy pursued by the late British Administration a more decided line of action may be substituted by the Conservative Cabinet, our contemporary replies that Lord Salisbury, who at the time of the formation of the Franco-Russian Alliance in 1891, kept aloof from the Triple Alliance, is not likely now to pursue a different policy. The *Kokumin*, goes on to translate passages from the recent articles of the Hon. Reginald Brett and Mr. Frederick Greenwood in the *Contemporary Review*. It then observes:—"The *Mail* assures as that these views do not represent British

opinion, but we are afraid that they may prove to be a faithful expression of that opinion, since England's attitude is already defensive. It will not do for Japan to commit herself to any positive step on the strength of promises that are not likely to be fulfilled." In support of its assertion that England is no longer an aggressive Power, our contemporary turns to an article in the *Statist*, calling attention to the importance of defensive works on the eastern coast of England. "It is to be observed," remarks the *Koku-min*, "that England, which has in the past always assumed an offensive attitude, is now devoting herself to the task of defending her shores at home. The article above quoted represents a section of Englishmen led by Mr. Chamberlain, and it is also a noteworthy fact that British opinion in general is now inclined to a defensive policy. When England assumes such an attitude, how can she spare energy for action in the East?"

Nothing is more amusing than the supreme assurance underlying the writing of the *Koku-min-no-Tomo*—or the "Cokeyman at home," as it has been wittily designated. Our good contemporary is evidently quite persuaded that Great Britain's alliance can be had by Japan if she merely condescends to ask for it. We regret to be obliged to tell the ineffable *Koku-min* that the greatest Power in the World, or any combination of the greatest Powers in the World, would be proud to have England for an ally, and that it has been reserved for a Japanese periodical to discover her unworthiness to stand side by side with a little Oriental State. But truly no serious attention can be claimed by a journal so extremely short-sighted as to imagine that because Great Britain is devoting some attention to her coast-defences, her offensive capacities are no longer formidable. It would be extremely unfortunae for Japan if her leaders of thought fell into such a mood as the *Kokumin's* writings reflect.

The National Unionists contemplate holding a grand conference in Tokyo, and a circular has been issued to the leading members of the Party in the provinces, desiring their immediate presence in the capital. Some persons seem to entertain a hope that the conference may lead to results more or less in favour of the Extremists. But the general line of policy to be pursued by the Party is stated to have been settled some time since, and the general conference will simply confirm the previous decision of the leaders.

Little attention is now paid by the public to the doings of the Codes Investigation Council. But the labours of that important body are making steady progress. At the last meeting held on the 23rd instant, the Chapter on Mandates was submitted for discussion. A warm debate took place, and the Council had to rise without coming to a vote. It may be stated that the portions of the Civil and Commercial Codes not yet put into operation have undergone thorough revision at the hands of a special committee appointed by the Council from among its members, and that the revised draft is now being considered by the council in full session.

The people of Kyoto are making strenuous efforts to secure a prolongation of the period originally fixed for the Exhibition. Their cause has been enthusiastically taken up by Mr. Mayeda Masana, who came to Tokyo and visited the Premier on the 22nd instant. After listening to what Mr. Mayeda had to say in favour of the proposed step, Count Ito promised to refer the matter to the Minister of Agriculture and Commerce. The Count seems to have been as good as his word, for on the 24th inst. Mr. Mayeda was summoned to the Department of Agriculture and Commerce, but was disappointed to learn that his proposal could not be entertained by the Government. One of the most serious objections is that the purchasers of the exhibits having made their contracts on the understanding that delivery would take place at a certain date, no small inconvenience and annoyance would be caused to them should the close of the Exhibition be de-

layed until the end of November, as advocated by the Kyoto people. On the other hand, to give delivery of the purchased goods at the originally named date would be impracticable, since such a step would deprive the Exhibition of most of its attractions. In fact the exhibitors generally are believed to be strongly opposed to a prolongation.

Mr. Motoda Hajime, a prominent National Unionist member of the Diet, contemplates introducing, next session, a Bill for prohibiting the export of coals. According to the opinion of some experts, among others Mr. Wada Tsunashiro, formerly Director of the Imperial Mining Bureau, should the coal mines of Japan be worked at the present rate, the supply will be entirely exhausted in forty-six years. Such a result would be a fatal blow to the growth of Japanese industry, and hence Mr. Motoda proposes to stop the export of coals altogether. At present about 6½ million yen worth of coals are yearly exported.

COMPANIES.

The Osaka Merchant Steamship Company (Shosen Kaisha) held a general meeting at Osaka on the 20th instant. The statement of accounts for the first six months of the present year showed a gross income of 1,153,998 yen, and the net profit for the period was 387,599 yen, to which was added a sum of 101,954 yen, brought forward from the preceding period. After deducting 155,200 yen as dividend (16 per cent. per annum) and a further amount for rewards and reserves, a sum of 255,654 yen was carried over to the next period. The election of officers resulted as follows:—Mr. Tanaka Ichibei, President, Mr. Tanaka Tashichiro, Vice-President and Mr. Sugiyama Kobei, Director.

The Tokyo Fire Insurance Company (Tokyo Kasai Hoken Kabushiki Kaisha) held a general meeting of shareholders at the Imperial Hotel on the 21st instant, Mr. Sakaino Daikichi in the chair. The net profit for the first half of the present year was 52,884 yen, and a dividend was declared at the rate of 8 per cent. per annum. The election of officials resulted in the re-appointment of those now serving.

The Tokyo Bay Steam Navigation Company (Tokyo Wan Kisenkaisha) convened a general meeting of Shareholders at the Bankers' Club, Tokyo, on the 22nd instant, Mr. Mogami Goro in the chair. The net profit for the first six months of the year was 80,960 yen, and the rate of dividend declared was 8 per cent. per annum.

The Tokyo Gas Company's semi-annual general meeting took place at the Bankers' Club, on the 21st instant, Mr. Shibusawa Eiichi in the chair. The gross receipts for the half year were 80,638 yen, the net profit being 27,084 yen. A dividend of 14 per cent. per annum was declared.

The balance-sheet of the Tokyo Rice Warehouse Company for the first half of the present year, shows a gross revenue of 76,932 yen, the net profit being represented by a sum of 20,894 yen. The dividend was 10 per cent. per annum.

The project of establishing a sugar factory in Yayeyama, Okinawa Prefecture (Loo Choo Group), is receiving favourable consideration, and there appears to be every chance of its maturing. Among the originators are Count Goto and Messrs. Shibusawa Eiichi, Oye Taku, Go Junzo, Kawasaki Hachiyemon, and Kato Tokusaburo. The capital is to be 200,000 yen. Application for a charter has already been made. Messrs. Oye, Torimi, and Nakagawa have been nominated as a Committee of Organization.

Doctor—"I would advise you, dear madame, to take frequent baths, plenty of fresh air, and dress in cool gowns." Husband (an hour later)—"What did the doctor say?" Wife—"He said I ought to go to a watering place and afterwards to the mountains, and to get some new light gowns."

ECONOMICAL AND INDUSTRIAL.

The Nippon Ginko (Bank of Japan), purposes increasing its capital of 20 million yen to 30 millions. This bank originally started with a capital of ten millions, which amount was doubled a few years ago. The present proposal has to be approved by the shareholders at an extraordinary meeting which will be convened in the course of next month, but it is believed that the project finds general favour. This news has had an instantaneous effect upon the price of the Bank's shares. From a quotation of 310 yen they at once rose to 330 yen. Even at the latter price there were no sellers on the 18th instant.

Steps to increase capital are not confined to the Bank of Japan. The Kyushu Railway Company proposes to add 5½ million yen to its capital, which will thus be brought up to 16½ millions; and the San-yo Railway Company also contemplates an increase from 5 to 6 millions. These calls for funds are required for the purpose of undertaking the construction of new lines.

The banks of Tokyo and Yokohama are said to be in favour of following the example of the Nippon Ginko, that is to say, loosening their purse strings. They had been considering the probable effects of the restoration of peace upon business and finance, and had arrived at a conclusion suggesting a policy similar to that inaugurated by the Nippon Ginko, when the Minister of Agriculture and Commerce issued Instructions to the Local Governors, telling them to warn the people against any rash tendency to engage in industrial undertakings. The bankers, in deference to this warning, hesitated to take a step capable of being interpreted in a sense contrary to the Minister's views. But being convinced of the soundness of their own opinion, now confirmed by that of the Nippon Ginko, they have decided to follow the latter's example.

The output of coal in the Ho-Chiku provinces of Kyushu during the first six months of the present year shows a great increase over that for the corresponding period of last year. The figures are as follow:—

	Catties.
January	230,487,419
February	181,157,776
March	308,592,391
April	361,445,745
May	342,460,933
June	282,397,966
Total	1,706,542,300

The figures for the first half of the five years from 1890 to 1894 inclusive, are as follows:—

1890	712,048,523
1891	970,341,871
1892	937,036,693
1893	1,026,579,747
1894	1,457,678,457

According to a report from the Japanese Consul at Söul, the rate of interest is extraordinarily high there. The rate among the Japanese is stated to be 3 per cent. per mensem, or 36 per cent. per annum, for sums below 1,000 yen, on the security of land or houses. For sums above 1,000 yen, the rate is 30 per cent. per annum. On the security of personal effects, the usual rate is from 24 to 26.4 per cent. per annum. Loans without security are obtained at rates varying from 60 to 120 per cent. per annum. The rates of interest demanded from Korean borrowers by Japanese are still higher; even the pawnbroker's rate being from 60 to 120 per cent. per annum. Interest is said to be now at its maximum point, and is expected to fall more or less with the revival of business in Japan. Of the various causes that have brought about this state of affairs, the most important are the reluctance of the Japanese to lend money in view of the tightness of the money market at home, and scarcity of money in Söul, owing to the fact that the Japanese residing there make a habit of sending home their savings.

There are two schemes for the establishment of cotton spinning factories in China, one pro-

jected in Tokyo and the other in Osaka. The promoters of the Tokyo scheme have chosen Messrs. Hamaguchi Kichiyemon and Wada Toyoji, of the Kanegafuchi Spinning Company, and Hata Zenjiro, of the Mitsui Bussan Kaisha, as Commissioners to make investigations in China. They are to leave Tokyo to-day (25th). The Osaka scheme will be represented for a similar purpose by Messrs. Kanazawa Nihei, of the Settsu Spinning Company, and Yamabe Takeo, of the Osaka Spinning Company. They are expected to start on their journey in a few days.

In spite of a slow improvement in the spinning industry, the factories in Osaka and its vicinity are said to have a large stock of yarns in their godowns. The *Chugai Shogyo Shimpō* publishes the following figures showing the value of the cotton and yarns at present in the hands of these companies:—

Company.	Cotton. Yen.	Yarn. Yen.
Osaka Boseki Kaisha.....	252,938	75,036
Senshu Boseki Kaisha ...	51,258	41,227
Settsu Boseki Kaisha.....	214,160	46,983
Amagaseki Boseki Kaisha.	113,348	80,666
Naniwa Boseki Kaisha ...	465,070	27,334
Kishiwada Boseki Kaisha.	58,651	6,825
Sakai Boseki Kaisha.....	38,840	3,272
Koriyama Boseki Kaisha.	31,718	36,625

Moreover, the Meiji Boseki Kaisha has in store cotton and yarn aggregating 82,227 yen in value; the Hirano Boseki Kaisha, 234,073 yen; and the Asahi Boseki Kaisha, 24,083 yen. The total value of cotton and yarn in the hands of the above mentioned companies and the different wholesale merchants in Osaka is upwards of 2,200,000 yen.

A project is on foot in Osaka for the utilization of the celebrated fall of Nochi, in the Province of Kii, as the motive force for the production of electricity. The idea was first seriously taken up by Mr. Awaya Shinazo, M.P., and is now believed to have the support of a large number of prominent business men. According to the present programme, a current equivalent to 15,000 horse-power in Osaka is to be produced, and the distance to be traversed by it will be about 100 miles. As to the estimated expense, 3,000,000 yen will be required for poles, wires, and other articles necessary for the transmission of the current, while the works at the fall will cost 2,300,000 yen, the aggregate estimated outlay thus being 5,300,000 yen. Supposing that the electricity is supplied at the annual rate of 85 yen for one horse-power, the total income would be 1,275,000 yen. The cost of maintenance being put at 530,000 yen, the net profit would amount to 745,000 yen; in other words, 14 per cent. on the capital. Considering the rapid progress of industry in Osaka and the probability that electricity will be used in the town of Wakayama also, it is believed that the horse-power would soon have to be increased to 30,000.

AN INTERNATIONAL EXHIBITION IN JAPAN.

The promoters of a scheme for holding an international exhibition in Tokyo are said to have recently obtained some important accessions to their ranks, and to be now tolerably confident of carrying their project into practice. The site contemplated is the large area of reclaimed land on the opposite side of the Sumida estuary looking across from Tsukiji. This land has been reclaimed in the process of dredging the place intended for the new Tokyo Harbour. It measures some 300,000 *tsubo* (250 acres), and as the work of dredging has thus far involved an outlay of only 600,000 yen, the City has this large tract of land for 2 yen per *tsubo*, probably a fifth of the price that it will command in the market when it is ready for building purposes. The position would be admirably suited for an exhibition, since barges carrying heavy goods could come right alongside. According to the present idea of the projectors, the exhibition would be held in the first year of the twentieth century, and steps are being taken to expedite the work of completing the site.

PAK YONG-HO.

The following account of Pak Yong-ho's flight and the cause of his fall was given by himself at Kobe to a representative of the *Fushin Nippo*:—

"Signs of the catastrophe had not been wanting for some time. There were suspicious circumstances at Court as, for example, an evident change in the behaviour of the king toward me. In short, it was plain that something impended. Hence I was on my guard against an emergency. Having been secretly informed by one of my sympathizers that a Royal Edict had been issued, depriving me of my portfolio of Home Affairs and ordering my apprehension, I put on an old suit of European clothes and over it an ordinary Korean costume. Taking hasty leave of my family, I galloped away to the Japanese Legation, a distance of a little over a mile. One misfortune always leads to another. I was thrown from my horse on the way and injured somewhat; I still feel the pain. Remounting with great difficulty, I reached the Japanese Legation, where I was soon afterwards joined by my friends, among them being Li Keikan and Shin Oki. I also saw Tei Rankyo, Ryu Kakuro, and Li Inko come to the Legation. I divested myself entirely of Korean garments, and obtained some additional foreign clothes from the members of the Legation. Next morning at 8 o'clock, I took leave of the Legation, accompanied by Li Keikan and Shin Oki, and walked to Yongsan. The distance is only a little over two miles, but being in a great hurry, I found the way very long. *En route*, a party of constables tried to arrest us, but being afraid to lay hands on us, they cried out to the people to seize us. A mob soon pursued us, throwing stones. We were in serious danger, but heaven did not abandon us, and we reached Yongsan in safety. A steam launch, the *Masashige Maru*, being on the point of starting for Ninsen, we took passage in her and succeeded in reaching Ninsen without any molestation, under the protection of our friends. At Ninsen we concealed ourselves in a friend's house, and having cut our hair and otherwise changed our appearance, we got on board the *Fujikawa Maru*. Constables came down to Ninsen in pursuit of us, and when we were on our way to the *Fujikawa*, our boat was surrounded by theirs. We escaped from them, however, and left Ninsen on the morning of the 8th instant. The sea being rough, the steamer stayed two days in Tsushima, so that it was midnight of the 16th before we arrived at Ujina, after submitting to sanitary inspection at Ejima.

As to the causes of my impeachment, there are many, but the principal is the Queen's ambition to place Korea once more under the sway of her party, namely the Ming. That ambition has always been entertained by Her Majesty, and she was looking about for an opportunity to carry out her scheme, when she discovered serious cause for offence in the question of the relief of the Palace Guards. I regarded the measure as of the greatest importance and decided to carry it out. The present Palace Guards are troops drilled after an old system under Russian and American officers, who had access to the Court, where they secretly exercised considerable influence. I, therefore, thought it necessary to displace the Guards by troops trained under the new system. I represented this matter more than once to Count Inouye, but I had no opportunity to carry out my project during his stay in Sōul. After he had left, being convinced of the urgent necessity of the measure, I submitted it to the King and obtained His Majesty's sanction. But subsequently he ordered me to postpone the step for the present; probably he had changed his mind at the persuasion of the Queen. It was about this time that Sasaki Tomezo, who seems to have had some grudge against me, invented a tale of treason, committed it to writing, and conveyed it to my political opponents, who carried it to Court and obtained a Royal Edict ordering my arrest on a charge of treason. I do not understand Sasaki. I once met him in Kyoto while I was staying there during my former exile in

Japan. After my return home, he came to Sōul and wanted to see me several times, but I declined to meet him, partly because I did not entertain any specially high opinion of him and partly because I was very busy."

Pak is stated to have expressed his views on various other subjects. Concerning his own family and the family of Kim Ok-kyun, whom he was supporting, he felt perfectly sure of their safety. With regard to the postponement of the departure of Prince Wi-hwa as Special Ambassador to tender thanks to the Japanese Emperor for the assistance given to Korea in asserting and maintaining her independence, Pak said that His Highness's proposed journey to this country had aroused the suspicions of the Queen, who, under various pretexts, persuaded the King to stop the mission. He went on to speak of the creation of a new office, the *Tokushin-kan* (a sort of Court Councillor), in the Household Department. This step was taken without so much as mentioning it to the Cabinet Ministers, and the occupants of the new office are all members of the Ming faction. The *Tokushin-kan* constitutes a species of second Cabinet with the Queen at its head. Alluding to the Tai Wōn-kun, Pak stated that the ex-Regent is not likely to accept office even if it were offered to him by the Cabinet, as some persons report that it will be: he is no longer the strong and daring statesman of former days. With regard to his chance of returning to Korea, the ex-Minister of Home Affairs shrugged his shoulders and said he could not tell anything about it. The Queen, he said, is a most implacable enemy: when she once takes offence she does not easily forgive. The reason why he was formerly obliged to remain so long exiled from Korea was because the Queen refused to forget what he had done in 1884. She is said to entertain a feeling of intense resentment against Major-General Oshima, and Mr. Otori, former Minister to Korea, on the ground that they caused needless disturbances in the peninsula and at Court. Speaking of his life in Sōul, Pak made the following statement:—"I was exceedingly busy. That was the only reason why I was so negligent in writing to my friends in Japan. I usually rose at five o'clock in the morning, and saw visitors until about eleven, when I went to the Department of Home Affairs. Afterwards, I had to go to the Cabinet and have audience with the King, talking with His Majesty on all sorts of business. It was usually an hour or two after midnight when I returned home from the Palace. Thus I slept only about two or three hours on the average."

Pak and his fellow exiles are now guests of Mr. Fukuzawa in Tokyo. Pak is receiving treatment at Dr. Kitazato's hospital at Hirowo, for he has long been suffering from a disease of the lungs.

KIRIN BEER AT THE KYOTO EXHIBITION.

With reference to the distinction attained by the Kirin Beer at the Kyoto Exhibition, we observe that there were only three first-class awards in the Kanagawa Section, of which one fell to the Kirin. The Asahi Beer secured a first class in the Osaka City Section, and the Yebisu Beer, a second class in the Tokyo Section. This is a well-earned and well-merited success for Kirin, and should finally settle the question—hitherto undecided according to some critics—as to the superiority of the Kirin brew to the Yebisu. We learn that the Kirin Brewery is hardly able to supply the large demand for its product, and that the money it has asked for on debentures, for increasing its cellerage and plant, is already promised, if not actually subscribed. In short, the prosperity of the Yokohama Company seems assured. Not only has it an extensive business in Japan, but it also exports to Korea, Shanghai, Hongkong, Saigon, Manila, Hanoi, Queensland, and the Straits. Such enterprises redound to the credit of Japan, as well as to that of the directors charged with their management, nor must we forget to compliment the Brewer, Mr. H. Heckert.

COUNT OKUMA ON THE KOREAN QUESTION.

The *Mainichi Shimbun* publishes an account of an interview with Count Okuma. The subject discussed was Korea, and the Progressionist leader is reported to have severely criticised the policy adopted by the Government toward that kingdom. "The Government," he is represented as stating, "has long pursued a wrong policy in the peninsular kingdom, but its action in recent times has been especially disfigured by blunders. The explanation is that the Government did not decide from the outset upon a definite and well matured line of procedure, but followed an irresolute, changeable, and temporizing policy. It is to be deeply regretted that Japan has thus missed her opportunity in Korea." The most important passages of the interview having been erased, it is impossible to discover exactly the policy that Count Okuma thinks ought to have been pursued last year when, after the Chinese troops had been driven away from the peninsula, the Court in Seoul was only too willing to do as it was directed by Japan. It is not, however, difficult to form a tolerably clear idea of the line of action suggested by him. He seems to think that the Japanese Government ought to have availed itself of the opportunity to form a compact with the Korean King and to secure the persons of both the Queen and Tai Wön-kun—the two disturbing elements in the peninsula—with the object of holding them as hostages in Japan until the independence of the Peninsula should have been placed on a sound basis. Had such a bold line of action been adopted, the Count believes that Japan would now hold in Korea a position far different from that which she actually occupies. Another serious mistake with which the Japanese Government is charged is that it did not exact security for the loan of 3,000,000 yen. The Progressionist leader attaches importance to this matter, not from a business point of view, but from that of politics. Had security been obtained, it could have been used by Japan as a lever to increase her influence and expedite the work of reform in the Peninsula—"In short, the conduct of our Government towards Korea has been too lenient and magnanimous. There has been, at the same time, too much fear of other Powers. In order to effect the regeneration of Korea, the Government ought to have acted promptly and resolutely, making prisoners of * * * * * Instead of pursuing such a policy, the Government adopted the short-sighted and senseless programme of merely trying to purify the stream without removing the cause of contamination at the source. As to the possible intervention of the Powers, that contingency need not have caused alarm to the Government, for a firm front on the part of the Japanese nation would have averted any such danger. At all events, it is Japan's mission to maintain the integrity of the peninsula."

Count Okuma may be right. Boldness often succeeds where gentleness fails. But it is evident that the steps recommended by him would have been glaringly inconsistent with the theory of Korean independence. Meanwhile, we do not see that Japan has yet failed. She can not be expected to work miracles. Only in mythological times could an Augean stable loaded with centuries of refuse be cleaned out in as many months.

INDUSTRIAL REVIVAL IN JAPAN.

The *Chugai Shogyo Shimpō* rejoices to observe unmistakable signs of a revival of industry in Japan. The returning activity is most noticeable in the field of railway enterprise. Work on State lines was resumed immediately after the restoration of peace, and the Kyushu Railway Company and the Kansai Railway Company are about to extend their lines by making large additions to their capital. Similar projects are contemplated by many other companies, such, for example, as the Nippon Tetsudo, the Sanyo Tetsudo, the Hokkaido Tanko

Tetsudo, the So-Bu Tetsudo, and the Bo-So Tetsudo. To mention some of the projects in this category, there is a scheme in Tokyo for an electric tramway with a capital of 3,800,000 yen, and in the provinces adjoining the metropolis six new lines are proposed. Numerous similar projects have been formed in other parts of the country. Some of them must be expected to lead to no practical results, while a few will probably be amalgamated. How many of these proposed companies have received charters, our contemporary does not state, but it gives the number of railway companies that have obtained provisional charters since the end of 1893, namely, twenty-seven, with an aggregate capital of 38,000,000 yen. As to enterprises other than railways, the Tokyo Electric Light Company has decided to increase its capital by 1,000,000 yen, and a similar step is under consideration by the Tokyo Warehouse Company. Many of the cotton-spinning companies contemplate large additions to the number of their spindles. Commissioners are also about to be sent to China to see what opportunity offers for the establishment of cotton factories there, and in the sphere of commerce, schemes are in the air for the establishment of large companies. From all these circumstances, the *Chugai Shogyo* is convinced that Japan is now entering upon a new era of industrial and commercial development. So far as military resources are concerned, she has shown herself a great Power, but she has yet to demonstrate her ability in the field of commerce and industry. She is now at an exceedingly important stage of her career, and our contemporary hopes that her merchants and manufacturers will fully realise the heavy responsibility resting upon their shoulders and will devote their energies to the steady and orderly progress of trade and industry.

AN IMPERIAL AUDIENCE AND ITS RESULTS.

"When Herr von Hesse-Wartegg reached Japan on his last voyage round the world," says the *Neue Zürcher Zeitung*, "he heard, during the course of an audience with the Emperor, that a war with Korea was near at hand." This audience took place in June. There was then no prospect whatever of a war with Korea and as yet only a distant prospect of a war with China. Herr von Hesse-Wartegg—he is of course responsible for the statement—gives the public plainly to understand that the Emperor informed him about an impending war. We have no hesitation whatever in asserting that the Emperor never did anything of the kind. If His Majesty addressed half-a-dozen purely conventional words to Mr. Hesse-Wartegg, it was the very utmost that he did.

Having received the above information, and been warned that "it was thus advisable to hasten his intended departure for the peninsula," Herr von Hesse-Wartegg, we are told, "at once took ship and reached his destination in the midst of Japanese transports bringing over the first regiments to Korean soil." The first regiments left Japan early in June, and it follows that our traveller reached Korea before the middle of June. "War," the account proceeds, "had broken out somewhat sooner than had been expected, and so the speaker" (we quote from the preface to Herr von Hesse-Wartegg's lecture in Zurich) "had the opportunity of seeing the two hostile armies in actual combat." Where did he see that, we wonder. There was no combat until the 29th of July, when General Oshima attacked the Chinese at Yashan. Herr von Hesse-Wartegg was not there, and he returned to Japan long before the next battle, i.e., that of Ping-yang. It seems to us that the information vouchsafed to him by the Emperor and his "opportunity of seeing the two armies in actual combat," are equally apocryphal. Mistakes of that kind should be avoided by a critic undertaking to pass judgment on a nation's moral culture.

HORSE-BREEDING IN JAPAN.

Writing about the recently promulgated Regulations of the Horse Breeding Investigation Commission, the *Nogyo Zasshi* (The Agriculturist) observes that, prior to the Restoration, all the clan Governments paid special attention to the question of horse-breeding and gave encouragement and protection to enterprises of that nature. The fall of feudalism was a disastrous blow to horse-breeding, for the new Government during the first years of the present era neglected such matters, as was not unnatural in the stress of graver duties. Thus there resulted a marked deterioration in the quality of Japanese horses. In course of time the question was officially taken up, but the measures adopted have not been sufficiently consistent and thorough-going to prove practically valuable. The recent war with China, however, has brought vividly before the Government's eyes the paramount importance of the matter, and has led to the appointment of the Commission in question. Our contemporary refers briefly to what the Government of the principal countries of Europe are doing in the matter of horse-breeding, and gives some details of their breeding establishments.

As to the number of horses in Japan, the *Nogyo* publishes the following table:—

	Number of Horses.	Number of animals foaled.	Number of animals slaughtered for food.
1879	1,454,823.....	38,514.....	8,936
1880.....	1,605,543.....	67,256.....	13,211
1881.....	1,647,484.....	90,713.....	16,509
1882.....	1,640,523.....	87,354.....	15,691
1883.....	1,575,169.....	75,140.....	19,402
1884.....	1,504,993.....	128,657.....	13,187
1885.....	1,548,232.....	62,554.....	17,120
1886.....	1,537,104.....	73,107.....	73,197
1887.....	1,537,606.....	65,542.....	22,661
1888.....	1,532,799.....	83,120.....	29,689
1889.....	1,541,342.....	68,098.....	26,760
1890.....	1,546,368.....	61,118.....	25,089
1891.....	1,547,661.....	32,151.....	13,983
1892.....	1,554,667.....	—	—
1893.....	1,561,388.....	—	—

The slight increase in the four years from 1880 to 1893 is accounted for by a general appreciation of prices that stimulated the work of breeding. An exactly opposite state of things led to a steady decrease in the years 1884-1888. Since 1889, there has been a slight tendency in the direction of increase, but so slight as to justify the *Nogyo's* lament that the number of horses has remained almost stationary while the population has been increasing at the rate of 400,000 per year.

Our contemporary next publishes the following interesting table showing the number of horses reared for different purposes in the five years 1887-1891:—

	Transportation.	Agriculture.	Breeding.	Total.
1887... { M. 70,920 } { H. 104,337 } { M. 680,122 } { H. 584,921 } { M. 80,200 } { H. 27,106 } { M. 831,242 } { H. 706,364 }	175,257	1,265,043	97,306	1,537,606
1888... { M. 71,559 } { H. 104,370 } { M. 670,201 } { H. 578,568 } { M. 80,806 } { H. 27,863 } { M. 824,519 } { H. 708,180 }	175,929	1,248,769	98,069	1,532,797
1889... { M. 81,252 } { H. 112,619 } { M. 659,725 } { H. 571,477 } { M. 82,993 } { H. 27,605 } { M. 824,716 } { H. 716,626 }	193,901	1,234,202	106,588	1,534,312
1890... { M. 79,480 } { H. 116,080 } { M. 672,029 } { H. 502,662 } { M. 83,272 } { H. 29,609 } { M. 837,685 } { H. 709,683 }	195,560	1,234,691	102,941	1,536,308
1891... { M. 80,704 } { H. 119,068 } { M. 687,110 } { H. 504,110 } { M. 76,976 } { H. 19,693 } { M. 844,790 } { H. 733,871 }	199,772	1,252,220	96,069	1,547,661

Taking the figures for 1891 in the above table for the purpose of illustration, the *Nogyo* remarks that out of the total number (703,871) of horses (male) for that year, those employed for farming purposes constitute 80 per cent. of the whole, while those used for transportation and breeding are represented by 17 and 3 per cent. respectively. Thus farmsteads being the principal source from which horses for military purposes must be supplied in time of war, our contemporary calls the attention of farmers to the great importance of exerting themselves to improve the breed. At present the *Nogyo* observes with regret that, a few localities excepted, horses are looked upon by the farmers principally as instruments for converting raw material into serviceable manure and are consequently locked up in stables most of the time. Under such circumstances, it is not to be won-

dered at that horses should steadily deteriorate in Japan. The *Nogyo* suggests that encouragement should be given to the increased use of horses for actual farming purposes, and to their subsidiary employment, in the business of transportation, by means of carts and waggons.

STEAM SERVICE TO AUSTRALIA.

The *Mainichi Shimbun* strongly advocates the speedy opening of a new steamship route to Australia under State subsidy. It set out by observing that, of all the undertakings important to Japan in her career of expansion, most urgently necessary is the development of her maritime enterprise. Of the new lines that must be opened by her, the most important are those to Europe, to America, and to Australia. There are no apparent reasons to doubt that the state of the national finances warrants the opening of these three lines simultaneously, and the *Mainichi* hopes that a Bill for subsidizing them will be submitted in the Diet next session. Should it, however, be deemed inadvisable to inaugurate the three services at the same time, our contemporary would recommend the opening of the Australian line first. It regards that line as the most promising for five reasons: first, absence of competition; secondly, the expense involved is comparatively small; thirdly, it gives facilities for emigration and colonization; fourthly, it possesses industrial advantages; and fifthly, it has "an advantage peculiar to itself," which the *Mainichi* declines to explain in the present article. In respect of expense, our contemporary is informed that according to the result of investigations conducted by the Nippon Yusen Kaisha last year, the losses incurred annually by the Company in connection with the opening of these lines without State aid would be as follow, at the rate of 12 voyages per annum:—

	Yen.
European line	437,400
American line	412,700
Australian line	90,700

The Japanese population is increasing at the rate of from 500,000 to 600,000 each year, and various fields of emigration and colonization are suggested to relieve the country of its superfluous inhabitants. Of these fields, the most promising, in the *Mainichi's* opinion, are the islands in the South Sea. "Look at the groups of islands," says our contemporary "that dot the sea to the south of Formosa. Do they not complain, as it were, of the tardiness of the Japanese incoming to colonize them?" European Powers are attempting colonization in that region, but they cannot compete successfully with Japan. Moreover, the opening of the Australian line will give a fresh stimulus to the manufacture of woollen fabrics in Japan by the importation of raw material from the Southern Continent. For these reasons our contemporary insists that whatever may be said about the other lines, the Australian service must by all means be opened at the earliest possible date.

EXTENSIVE ROBBERIES IN YOKOHAMA.

A woman named Nakayi Sudzu, 33 years of age, has been arrested by the police on a charge of committing a series of systematic robberies from M. Menil's dyeing factory. The robberies must have extended over a considerable period of time to enable the woman to collect the quantity of cuttings of *merensu* found in her possession, and which had been sent in for dyeing purposes, these filling two large boxes, two *sudzuri* (reed valises), and several bundles, some floss silk, cotton, etc. The woman was employed as overseer and had charge of the other working-girls, and thus took advantage of her position to steal stray pieces or cuttings. She was arrested while attempting to dispose of the stolen property, the suspicions of the police having been aroused at the smallness of the pieces, about 3 to 5 yards long, which she offered, and her house being searched, the discovery above mentioned resulted.

THE JAPANESE MINISTER IN PEKIN.

Japanese correspondents' letters describing the audience given to H.E. Mr. Hayashi by the Chinese Emperor on the 7th instant, have just arrived. At 9.30 on the morning of that day, a large party of mounted guards were sent to the Japanese Legation to escort the Minister to the Palace. At 10a.m., Mr. Hayashi, accompanied by Secretaries Nakajima, Tei, and Kawasaki, Captain Inouye and Lieutenant-Colonel Kamio, left the Legation in Chinese palanquins, escorted by the guards. The road was lined by a crowd of spectators. Entering by the 協和 gate and passing through the 大和 gate, the party entered a waiting room where they were received by Their Imperial Highnesses Princes Kung and Ching and the four other Ministers of the Tsung-li Yamên. Prince Ching having hitherto been confined to his house by sickness, it was the first time that he had met the Japanese Minister. The audience was appointed to take place in the Wan-hwa-tien, close by where the Japanese Minister and his party were waiting. In a short time, the Emperor arrived in a palanquin painted bright yellow. Princes King and Ching were the first to be admitted to the Imperial presence, and shortly afterwards the Japanese Minister and his suite were conducted into the chamber, by the Ministers of the Tsung-li Yamên. Mr. Hayashi stood directly opposite the throne. On the right and left of the Emperor stood a number of military and civil functionaries. Advancing a few steps nearer to the throne, the Japanese Minister addressed His Majesty to the following effect:—

"His Majesty the Emperor of Japan, being sincerely rejoiced at the restoration of friendly relations between the two countries, has been pleased to accredit me to Your Majesty's Court. I crave Your Majesty's permission to express my sense of the honour done me in granting me the present audience and thus affording me an opportunity of presenting my credentials to Your Majesty. It is my earnest hope that hereafter the friendship between the two countries may become more and more close and intimate, and that I may long be permitted to enjoy Your Majesty's favour. I sincerely pray that Your Majesty may be blessed with a long life and a prosperous reign." This address, delivered in Japanese, was rendered into Chinese by Secretary Tei. The Emperor, in reply, said a few words to the following effect:—

"We are glad that peace has been re-established between the two countries, and we welcome your Excellency to Our Court. Two countries so near to each other ought to be always on the most intimate terms." Mr. Hayashi then handed his Letter of Credence to Prince Kung who, ascending the steps in front of the throne, presented it to the Emperor on bended knees. His Majesty respectfully took it, and having read it through, returned it to the brocade wrapper in which it had been folded. His Majesty, then entered his palanquin and was borne off, while the Japanese Minister and his suite were again conducted to the waiting-room, where they had a pleasant conversation with the two Princes and the Ministers of the Tsung-li-Yamên. This audience originated a new procedure. Formerly, in presenting a letter of credence on behalf of a foreign Minister, an Imperial Prince always approached the throne by the steps on one side, not from the front, the steps in front being reserved for Imperial feet only. This practice was repeatedly but fruitlessly remonstrated against by foreign Ministers, who rightly regarded it as derogatory to the Sovereign or Chief Magistrate that they represented. The Japanese Minister seems to have successfully overcome the Chinese prejudice and established a new precedent. While conversing with the Japanese Representative in the waiting-room, the Chinese Ministers are reported to have requested Mr. Hayashi to take the first opportunity of proceeding to Tientsin and opening negotiations with the Viceroy Li and Wang Wan Shao, who have been appointed plenipotentiaries to conclude the new commercial treaty. Mr. Hayashi, on his part, is said to have strongly

ly urged the necessity of speedily sending a Minister to Japan. It is stated that the Ministers of the Tsung-li Yamên seemed to believe or hope that the Liaotung question will form the subject of negotiations at Tientsin. Captain Inouye, I.J.N., and Lieut.-Colonel Kamio, as well as the Chinese Interpreters, were to leave Pekin for Tientsin on the 11th instant. At what time the Japanese Minister will follow to the same place was not known up to the time (8th and 9th instant) of despatching the Japanese letters, from which these facts have been gathered.

RAILWAY ACCIDENT.

A terrible railway accident occurred on the morning of the 25th instant. A train carrying upwards of 380 wounded and sick soldiers, destined for the military hospitals in Kyoto and elsewhere, left Hiroshima on the night of the 24th, and proceeded northward. After passing Mihara and while crossing a causeway, the train was exposed to the full force of a fierce gale then raging, and of the 25 carriages, 13 were overturned and hurled into the sea, dragging the engine with them. One hundred and thirty of the unfortunate soldiers were either killed or wounded.

It is stated that the Emperor and Empress have been pleased to grant *yen* 500 towards the relief of the wounded and sick soldiers, who met with the railway accident between Onomichi and Itozaki.

Of the 386 ill-fated soldiers, 49 were to be sent to Nagoya, 286 to Tokyo, and 51 to Sendai. Besides the medical assistance from Hiroshima, five physicians and some nurses of the Okayama Branch of the Red Cross Society have proceeded to the spot, and Surgeon Morinami and eight other persons of the First Army Division, Tokyo, left for Itozaki last night.

MESSRS. CORNES & CO. VERSUS MR. KIMURA.

The *Boyeki Shimbun* is correct in stating that through the exertions of Messrs. Mayekawa Torobei and Kakinuma Tanizo, of Tokyo, the parties in this case have agreed to compromise, under the conditions that Mr. Kimura takes delivery of 100 bales at the rate of *yen* 93.50 within the following 60 days, and that Messrs. Cornes & Co. pay the recent legal expenses.

THE ANTI-CABINET POLITICIANS AT THE KINKI-KAN.

The "forty-seven" politicians again attempted to address a meeting at the Kinki-kan, Kanda, on Sunday last. The principal speakers on the occasion were Messrs. Ozaki Yukio, M.P., Taguchi Ukichi, M.P., Shiga Shigetaka, Takata Sanaye, M.P., Koizuka Ryu, M.P., Tsunoda Shimpei, M.P., Tanaka Shozo, M.P., Kudo Kokan, M.P., and so forth, the majority being members of the Progressionist Party. The number "forty-seven" was of course nominal. As many as nineteen, however, appeared on the platform, though none occupied it more than five or ten minutes, for nearly all alluded at the outset to a topic that they well knew to be interdicted, namely the question of the return of Liaotung. A few, however, were suffered to complete their discourse without any police interference. The object of the Opposition politicians in holding these lecture meetings is not to make converts to their political views, but to excite the sympathy of the public by inviting rigorous measures of repression on the part of the police. They are now about to rehearse the same drama in various parts of the country. What their success may be, we can not predict. But so far as the metropolitan population is concerned, their plan has been a complete failure. Indeed it may safely be asserted that their performances are viewed with supreme indifference by the citizens of the capital.

AN ADDRESS BY HERR VON HESSE-WARTEGG ON KOREA AND THE RESULT OF THE JAPANESE-CHINESE WAR.

(TRANSLATED FOR THE "JAPAN MAIL" FROM THE "NEUE ZÜRCHER ZEITUNG.")

On Monday evening (May 6th) the well-known traveller, Herr von Hesse-Wartegg, gave an address in the rooms of the Commercial Association, in the presence of a select and very numerous audience. A large number of merchants belonging to the younger generation were present, besides representatives of several wholesale houses. Herr von Hesse is not an orator, as indeed he himself modestly affirmed at the outset; yet he is a conversationalist of unusual merit, his method of presenting things being in the highest degree interesting and entertaining, while he possesses moreover in a marked degree the gift of vividly impressing his audience with the word-pictures of all that he has seen. When Herr von Hesse reached Japan on his last voyage round the world, he heard, during the course of an audience with the Emperor, that a war with Korea was near at hand, and that it was thus advisable to hasten his intended departure for the peninsula. The traveller at once took ship and reached his destination in the midst of Japanese transports bringing over the first regiments to Korean soil. War had broken out somewhat sooner than had been expected, and so the speaker had the opportunity of seeing the two hostile armies in actual combat. The authorities refused to grant him a passport to travel throughout the whole kingdom, from North to South; the passport which he finally obtained permitted his visiting only some of the larger towns.

At the present day Korea is still in a most deplorable condition of barbarism. It has not always been thus, however, for Korea had once a civilization, or at all events a semi-civilization. The speaker here gave a rapid historical sketch of the Manchu raids in China and the founding of the present Manchu dynasty. These freebooters would have carried their victorious arms into Korea as well as the Middle Kingdom. The palisade-barrier, protecting Northern Korea from hostile approach is now-a-days found on the map only; in reality it no longer exists. In order to protect his land from the Manchurian raiders, the then Korean King laid waste the whole territory between the palisades and the Yalu River; just as to-day the Japanese have done with all those portions of the Korean littoral which they have occupied, where there is no longer a tree, a house, or the least trace of former human habitation. Owing to this rapid seclusion of the Peninsula from the outer world as well as to the hideous rule of the mandarins, Korea was doomed to ruin. At the present day the King is surrounded with a wall of pages and mandarins, and encircled by scores of concubines. Noblemen alone are eligible for official preferment; manual labour is considered disgraceful; industrial and mercantile occupations rank about equal with that of the hangman. Officials were formerly elected for a period of three years, during which time they had to steal enough to pay for their natural existences. But since 1890 all officials are chosen for one year only, *i.e.*, they have now to make as much booty in one year as they used to do in three; and so Korea may well be called the saddest of all lands at the present day. There are no proper highroads in the Peninsula; one meets with no thoroughfares, only bridle-paths. With all this, Korea has many natural attractions; the soil is fertile and produces very much the same kind of cereals and fruits as one finds in Europe. With regard to mineral wealth, the Peninsula is peculiarly fortunate; the very rivers carry gold with them, but gold-washing is forbidden to the people. The local language resembles Chinese. A good idea of the condition of the country may be obtained from a visit to Söul, the capital, which lies about eighty kilometres east of the Yellow Sea behind a ridge of high hills, down whose precipitous sides rapid currents flow. These rivers are, at

the same time, the principal thoroughfares of Söul. The first houses were built close to the river's brink, and as the population increased a second or even third house was fastened to the first, after the fashion of a swallow's nest, of course without providing for side streets or courtyards. For instance, one who lives in house No. 3 must pass through Nos. 2 and 1 before he can reach his own quarters. Seen from a distance, Söul looks like a huge graveyard filled with mounds. The whole city in nothing but a conglomeration of mud-huts. In Söul there are no churches or temples; no palaces; no theatres; no coffee-houses; no large stores. Each hut can boast of one room only. When a house gets too small for the inmates, a second is built up alongside, *à la nid d'hirondelle*. The windows are pasted over with paper, for glass is unknown to the Koreans. The inhabitants are not fond of work. Stones and beams such as are used everywhere in the construction of the native huts, are not hewn. The round stones found along a river's course are roughly placed one above the other and then bound and kept together by means of straw-ropes and mortar. The flooring is made of boughs daubed with mortar and then covered with oil-paper. Altogether, oil-paper plays a very important rôle in Korea. During the recent war the Japanese troops made extensive use of this material, especially in lining their garments. Rough, unhewn tree-trunks serve as pillars for the houses, whose roofs are made of rice-straw and daub. Every morning and evening the streets of Söul are filled with such a dense volume of smoke that it is almost impossible to see anything. Behind each house is the hearth, which has, however, no chimney; the smoke is carried off under the floor. Fire is kept up on the hearth both summer and winter, for the superstitious Koreans believe that if the fire is permitted to go out the luck and wealth of the house will depart.

It is therefore by no means pleasant to pass the summer months in a Korean dwelling; indeed, during this season of the year the natives generally sleep out of doors, wrapped in robes, so that the sleeping city gives one the impression of a vast plain of corpses. What we call "furniture" is not to be found in the Peninsula; the dwellings have nothing more than mats and a few simple stands. Pipe-stands are to be found everywhere, for the Koreans of both sexes are ardent smokers. Pillows are unknown. Like the women of Japan, the Koreans sleep on a wooden block, in order to keep from disarranging their coiffure, which is not the work of every day but is made only a few times during the course of the year. In every Korean city one meets with vast swamps, while every path or road is filled with mud-holes, so that the Kingdom should perhaps be called the dirtiest of all nations. Despite this the Koreans without exception dress in white, in a style not far different from our nightshirts. The clothes are tied together, as buttons are unknown. The stockings are sewed not knit, for the pretty art of knitting has not yet been introduced into the Peninsula; moreover these stockings are of double thickness, the space between the inner and outer stocking being filled with cotton wool. In place of shoes the natives wear a kind of wooden slipper, with high heels or cross bits of wood, which enable the wearer to labour through the innumerable mudholes without soiling his or her feet. On their heads the Koreans wear hats of enormous size, which are, however, by no means intended to act as a protection against the summer heat but are woven of a light, transparent material and serve principally to indicate the rank or dignity of the wearer. The women wear cotton jackets. Korean women do not expose their faces to the other sex; when a woman goes out she conceals her features in a kind of shawl or mantilla. All Korean women are kept on a low level; they are nothing more than the slaves of the men. Wives, mothers, and sisters are relegated to the inner apartments of the house and have very little to say to the men: daughters, for example, are never permitted to talk with their brothers. So long as a man remains a

bachelor he must not cut his hair; on the whole an unmarried man is to some extent considered as irresponsible, and can not be called to account for anything he has done; and it is for these reasons that every one desires to marry as early as possible. Marriages are determined upon by the parents of the bride and bridegroom; the would-be Benedick sees his wife for the first time after the nuptials. So soon as the marriage contract is drawn up the astrologers are requested to select a lucky day for the ceremony. For the Koreans believe in ghosts and hobgoblins, in the sun, moon, and stars, and in gruesome river-gods. The former Buddhistic belief has been replaced by most nonsensical superstition. Before the marriage ceremony can take place, all the spirits have to be exorcised, and so the attendant astrologer makes the greatest possible noise and confusion in order to render all evil-disposed spirits harmless. A very curious ceremony is observed on the day preceding the marriage: the long queue is tied up in a bunch, and this is earnest of the matrimonial union. The bride's face is heavily powdered and her eyelids stuck together. For three days the bride is forbidden to speak, nor may she make any use of her eyes; she is thus handed over to the groom as an instrument without volition. On the day of the marriage the bride puts on every article of clothing that she owns or that is included in her dowry, so that she looks considerably broader than she is tall; and in this quaint condition she goes to the house of her husband. A goose is also brought hither, for this bird is the symbol of marital fidelity in Korea.¹ A ceremonial and very intricate system of mutual greeting now takes place, during the course of which much rice-wine is consumed. For three days the husband must be true to his wife; after this period he can do what and as he pleases; he can, if he chooses, take several other wives. But if the wife is untrue to her lord she is punished with horrible cruelty, for she is whipped with a kind of wooden paddle until, in many cases, the skin is torn away from the bones.

The principal food of the Koreans is boiled rice, which is consumed in enormous quantities, for the natives are great eaters. The meat which appears to be most popular is dog-flesh. The dogs intended for eating are strangled with cords, and afterwards served up either raw or boiled; moreover, the Koreans eat every part of the animal, including the intestines. Fowls are simply dipped in rice-water, then torn apart and devoured. Fish are eaten raw only, sometimes perhaps with a taste of soy, which is the favourite condiment in Japan as well. The Koreans do not eat ripe fruits; when in this condition they are considered unpalatable and thrown away, just as we do with spoiled fruits. A great delicacy is a rotten egg, something after the manner in which we prize strong-smelling cheese. The principal drink is rice-water (*sic*), milk not being liked. It is indeed only the King who drinks milk, and the solemn act of the royal milk-drinking is always officially announced in the *Official Gazette* some days beforehand. Two large bowls of milk are brought with great parade to the royal palace, and there solemnly partaken of by the King and Queen in the presence of the Court and all other dignitaries. Criminal sacrifice is still practised in the Peninsula; goats and sheep are burned as offerings to the gods.

The Koreans are extraordinarily cruel. In order to make a criminal confess they employ fearful tortures. This legalized system of torture is a grand source of revenue for the judges, as many people are willing to pay heavily for the privilege of escaping it. The corpses of those who have been executed are often cut in pieces, and the dismembered limbs of the criminal carried about the land by the executioners as a wholesome warning to all evilly-inclined persons. A favourite punishment and species of torture is the breaking of the shin-bones. Herr von Hesse-Wartegg was present on one occasion when a certain magistrate, who had defrauded the Government of millions,

¹ An idea evidently borrowed from China, where the goose is popularly believed to be monogamous.—Translator.

was about to be tortured in this manner. The executioner hit with a heavy wooden mallet at the shin-bones of the delinquent but interposed his own hand between his hammer and his *protégé's* legs, so that the worthy gentleman came out scatheless after all. On the next day another man was convicted of having stolen a dog; he was punished by having his shins crushed. We see thus that even in Korea the old saying is in force, "Little thieves are hanged, while big thieves are let escape."

A peculiar kind of torture consists in hanging up the criminal or suspected person by his thumbs or big toes. We find also a method of sawing with cords, which often results in the tearing off of large pieces of flesh. But though we may with justice be horrified by a recital of these fearful tortures, still practised in Korea, we must remember that it is not so many centuries ago that just such horrors were of common occurrence in Europe, while we can gaze without any special feeling of revulsion at the instruments of torture preserved to this day in many old palaces and castles. A journey to Korea is, strictly speaking, nothing more than a retrogression into the Europe of some hundreds of years ago.

The Koreans are a tall people, of robust physique. It is not considered good form for mandarins to have a physically strong appearance, and it is thus often quite ridiculous to see how many servants are necessary to wait upon a dignitary when he appears in public. No mandarin may walk in the streets; he must either ride on horseback or be borne in a palanquin, surrounded in both cases by a small army of attendants. One servant carries his enormous visiting-cards, which are red in colour and as large as an ordinary pocket-handkerchief; this functionary is followed by pole-bearers, a placard on each pole commanding the common people to humbly yield the road to the great man. A mandarin never holds the reins of the horse he rides: they are held by running horse-boys who have to keep up with every pace of the steed, walk, trot, or gallop. One can form a fair idea, from this description, of how a cavalry attack, with the general in front, would look in Korea. Another servant carries the enormous umbrella of his lord, the insignia of his rank; others again his campaign-boots, his camp-stool, pipe, paper, rain-coat, and portmanteau. Finally, one more attendant follows with an unmentionable receptacle. The oil-paper rain-coat is an indispensable article of clothing in Korea, for the various garments are not sewed but simply stuck or glued together in several pieces; and so without the rain-coat the wearer's clothes would simply fall apart and a catastrophe ensue. Paper is not only used in the making of clothing but serves also as a medium of payment. The Korean money is extraordinarily ponderous. Silver coins are altogether unknown. The current coins have a hole in the centre and are strung on cords. Twelve francs' worth of these coins weighs about fourteen pounds, and so when Korean housewives go to market intending to spend say about fifty francs, they have to engage the services of a baggage-ass to carry their money.

At the outset of the recent Chinese-Japanese war, the sympathy of Europeans was almost entirely with the victorious Japanese. These were considered as the pioneers of civilization in Eastern Asia, and the opening up of China was expected of them. As usual, men's sympathies were with the victors. But on speaking with foreign residents of the Far East one soon learns that all European merchants are in favour of China. This is unanimously proved by not only those merchants who have resided in China but also by all those who know Japan; every man who really knows the Japanese is opposed to them. The origin of the recent war had no connection with the question of Korean independence but is to be found in Japan's desire to reach the eminence of a great political and commercial power in Eastern Asia: the desire to absorb China's commerce for her own benefit and to the injury of Europe. We can only imagine true pioneers of civilization in connection with Christianity and a certain degree of moral culture. Japan has neither. The Christian religion

has made no progress in Japan, while more than a million communicants are to be found in China. Moreover, the Japanese have absolutely no morality. Their civilization is a foreign adaptation, a superficial varnish, so to speak: it is stolen from Europe. But in Eastern Asia we cannot follow a sentimental policy; our interest is determined by our commercial profits. In Europe there are whole armies of labourers who have to earn their bread in order to live; it is our duty to find a market for the output of their industry, and China is an enormous consumer of European exports. The cunning Japanese came to Europe hat in hand, visited our factories, studied our machinery, learned our arts and industries. We good-humouredly gave them access to the industrial triumphs resulting from centuries of thought and work, and in a few decades the Japanese grew as skilful as ourselves. Since this time European exports to Japan have been steadily on the decrease and have partly ceased altogether. European workmen have gone in crowds to Japan in order to teach the Japanese all our arts; after doing this, these experts were simply sent back again. Nowadays there are in Japan great industrial cities, with scores of smoking chimnies and millions of whirring spindles, with extensive spinning and weaving factories. The people are now able to imitate our most important industrial products and at one-fifth of the cost-price here. They thus undersell us by two-thirds. The low rate of labour enable them to compete successfully in every single department of the world's market. It can only cause astonishment to learn that, in Japan, female labour commands an average daily wage of from 12 to 15 centimes, and male labour a wage of 25 to 40 centimes. Our best machines and inventions have gone over to Japan, where all European industrial products are now imitated. The civilization which we find in that Empire does not proceed from the inner parts but is only an ape-like copy. All our industries are copied, and some can no longer find a market in Japan. Railway carriages, rails, locomotive engines, cannon, guns, dress materials, and, above all, silk, can be imitated in Japan for one-third of the cost-price in Europe. The Japanese even imitate and forge our trade-marks and sell their spurious goods under the name of European manufactures. The people of Japan are on the point of taking the trade of Germany and Switzerland with China out of our hands; they will shortly drive European commerce out of the Eastern Asiatic market. For their recent victories they are indebted to Germany. Their military system is German, as is also their drill. The war-plan of the Japanese was made for them by one of the chiefs of the German General Staff, who is now in command of an army corps in the vicinity of the Swiss frontier. The arsenals of Japan are constructed on the European model; experts speak of them in terms of the highest praise. In these establishments guns and other warlike munitions are now imitated, with all their most modern perfections. But the Japanese are not only faithful imitators of European industry; they do not only threaten European trade with Asia and America; they threaten our commerce even here in Europe. They can only take, and never give. They are advancing against us armed with our own weapons. Even now it is almost impossible to find any larger European city in which there are not stores for the sale of Japanese manufactures, bronzes, fans, and a thousand other little things, which are sold at surprisingly cheap prices and are thus favourites with all on account of their cheapness. The same thing will soon happen with silk. Up to the present the silk trade of China has been almost entirely in the hands of Swiss merchants; but to-day the Japanese threaten to oust them from the trade. Why, for the last three years they have actually had an establishment in Lyons, thus declaring open war with the silk industry of Europe! If the Japanese succeed in their aims, the Swiss merchants will be expelled from Eastern Asia to the last man.

This yellow invasion threatens us westwards by way of New York as well as eastwards. Our export trade to America must suffer

because of Japanese competition; indeed it has already received heavy injury. Why should we therefore have any feeling of sympathy for the Japanese? - The Chinaman is a straightforward merchant and honest, whereas the Japanese are the most thoroughpaced ——. ^a This is the testimony of all men of business who have had the opportunity of personally inspecting the condition of affairs in Eastern Asia. And when the Chinese come to be an industrial people they will be formidable opponents and competitors, against whom we shall be unable to make any headway.

At the close of his entertaining address, which was listened to with breathless interest, Herr von Hesse-Wartegg advised that many young and intelligent men of business should go to Eastern Asia in order to observe the condition of affairs with open eyes, so that our industries might find new markets and Switzerland receive sometimes some indemnification for the injury already inflicted upon her by Japan. Loud applause rewarded the speaker for his most interesting communications, given in a light conversational style, which the audience would have gladly listened to for a longer time.

[Editorial Note from a later issue of the same Journal].

Almost simultaneously with the recent address on China (*sic*) and Japan, given in the rooms of the Commercial Union last week, a letter reached this city (Zürich) from a "merchant, now staying in Yokohama, who is highly esteemed." This letter, whose contents show a remarkable similarity to the sentiments expressed by Herr von Hesse-Wartegg, has been placed at our disposal by its addressee—a large firm in this city. We reproduce the following passages word for word: "Things here in Yokohama are going steadily from bad to worse; if affairs really are as they are supposed to be in Europe, there is no longer any reason to stay in Eastern Asia. All that we know is that the final result of this haughty war will certainly be unfavourable to us. The whole world will have to feel this. Nobody here can understand how the people at home (*i.e.* in Europe) can so admire and make such idols of the Japanese. But when these Japanese once begin to export our own manufactures to Europe, this admiration will die a natural death. All our inventions and successes are promptly and readily reproduced by these rascals, ^b and nothing hinders them from imitating what they please. There is no protection for the rights of Europeans. They either refuse to take delivery of or pay for their purchases; but when a European protests against the bad quality of goods delivered to him by Japanese, he is boycotted at once. The Japanese hate us; they only want to profit by us in order to rise above us. They don't care a rap for civilization. . . . Chinese merchants are the best kind of fellows, their simple word is better than a written contract. Japanese traders are the most foresworn liars ^c in the whole world; they promise everything and keep to nothing. In making purchases if one does not make a personal inspection of every single article, one is sure to be deceived; that's the reason why the Japanese are such adepts in bowing and scraping, to the astonishment of Europe. All our diplomacy out here is simple humbug, and our diplomats are made fools of by the Japanese."

THE RADICAL PARTY.

The Radical members of the Diet held a conference at their head-quarters in Tokyo on the 17th instant. Mr. Hayashi Yuzo was in the chair. There were present Count Itagaki, Mr. Kono Hironaka, Mr. Matsuda Masahisa, and about thirty other members of the party. The following resolution was unanimously adopted:—

In conformity with the manifesto recently made public, the following policy has been decided upon: First, our country's position both at home and abroad is not what it was in former days. The

^c L.... in the original. Read *Lugner*.—Translator.

present prosperity of the country and the vigorous growth of the people are the results, on the one hand, of the profound wisdom with which His Imperial Majesty directs the policy of the Empire, and, on the other, of the perfect system of Constitutional Government in force. To offer constant support to the Imperial policy, and to promote the further improvement of Constitutional Government, must be a sure means to consolidate the foundations of the State and to secure the prosperity and strength of the country. Our Party, therefore, in obedience to the Imperial motives in establishing a constitutional system of Government, will endeavour to remove all obstacles from the path of perfecting that system of Government.

Secondly, the situation has of late greatly changed in Asia and Europe, and it has become impossible to maintain the peace of the East without creating some sort of relations with Europe. Our country ought, therefore, no longer to be satisfied with being a great Oriental Power; we must seek to rank among the great world Powers and must take part in maintaining the peace of the world. Our Party will make it its aim to consider the measures necessary for the attainment of the object in view.

Thirdly, the geographical position of the country urgently calls for an increase of the Navy. Moreover, all the countries of the world are devoting their energies to the augmentation of their navies, and it is incumbent upon this country to bring its Navy to a proper degree of strength. With regard to the Army, too, various measures of urgent importance invite action, such for instance, as the increase of *corps d'armée*, the construction of forts, the improvement of arms and weapons, and so forth. Our Party, consequently, makes it its object to secure the simultaneous reform and extension of the Navy and the increase and perfection of the Army.

Fourthly, it has long been the purpose of our Party to encourage industry and promote the wealth of the country, and the importance of such a policy has been increased by the existing state of things. A victorious nation ought not only to obtain honour but at the same time to secure real advantages. Our country, by its treaty with China, has obtained certain trade advantages, but as they are to be equally enjoyed by other countries having treaty relations with China, the actual enjoyment of them by Japan entirely depends upon her own energetic exertions, without which the benefit will be wholly secured by other nations. In consequence of the recent victories achieved by Japan, she now commands the increasing respect of European and American countries, and taking advantage of this circumstance, it is important for her to adopt such measures at home as well as abroad as may contribute to the increase of the national welfare. Our Party will, therefore, pay attention to the encouragement and development of navigation, commerce, emigration, agriculture, manufactures, and so forth.

Fifthly, the increase of the country's fighting capacity and the encouragement of industry require a large amount of expenditure, which will necessitate an increase of the people's burdens. But such a result is unavoidable in developing the strength and wealth of the country. Our Party has definite views on the question as to how to obtain the required resources. But, since the matter lies within the responsibility of the Cabinet, we shall have to wait for the announcement of its proposals on the subject, when, after mature deliberation, we shall declare our opinions respecting their suitability.

Sixthly, while it is unavoidable that the expenditure of the State should be increased by the necessity for the extension of the Navy and the encouragement of industry, it is at the same time necessary that, in view of the increased burden on the people, the utmost economy should be exercised in the matter of expenditure. Our Party, therefore, aims at the curtailment of all superfluous expenses.

Seventhly, in proportion as the diplomatic relations of the country increase with other Powers, dangers and risks surrounding the country must also multiply. In times of extraordinary difficulties, an extraordinary degree of resolution must be brought to bear upon the world of internal reform, so that no precautionary measure may be neglected to provide against future contingencies. As for the return of Liaoting, it was a most regretful affair. But it being now necessary above all things to devote our attention to the measures that are to be hereafter carried out, our party is positively opposed to any step that may be calculated to create domestic dissensions and thwart the great object now kept in view by the nation. We invite all that agree with our Party on these general lines of action, to coöperate with us in all domestic and foreign questions, it being our intention to deal with all questions in accordance with the dictates of pure patriotism and disinterested public spirit.

Eighthly, the object of Japan in the war with China was to maintain the independence of Korea. The task of consolidating Korean independence is beset with serious difficulties which necessitate an unflinching and resolute policy on the part of this country.

The points thus far mentioned constitute a general outline of the policy to be pursued by our Party. As to other questions, it has not been deemed necessary to touch upon them in this place.

Commenting on this resolution, the *Nichi Nichi Shimbun* on the whole approves of the line of action adopted by the Radical Party. Especially is our contemporary satisfied with that party's attitude on the question of foreign policy. "The Radicals," says the *Nichi Nichi*, "recognize the necessity of increasing the burdens of the people and disapprove of domestic dissension on account of foreign policy. They advocate the completion of Military and Naval preparations, and eschew all despicable conduct, not devoting their attention to past measures of foreign policy. In these respects, they have certainly proved themselves far superior to the rest of the party politicians." Our contemporary then goes on to say that if they progress in this fashion, they may ere long prove themselves a practical political machine. As to the curtailment of superfluous expenditures, our contemporary states that no exception can be taken to the proposal, but it fears that the object of the Radical Party may probably be to repeat the policy of indiscriminate reduction that caused so much trouble in past sessions of the Diet. Should such be the case, the Radicals are asked to consider twice before entering upon such a disastrous career.

CHINESE ITEMS.

The Viceroy Chang has issued at Nanking a remarkable proclamation, containing a distinct recognition of the value of Christian missionary work:—

Missionary chapels have been established in China for a number of years and the schools and hospitals open in their connection have performed what they profess to do. In fact, as charity institutions, they are far superior to our own Chinese establishments of the same nature. If, therefore, there be any ignorant persons who should dare to collect a crowd for the purpose of creating a riot against missionary institutions, they will be instantly arrested and severely punished. This is not a mere threat, but we command all to pay earnest heed to this proclamation.

The temporary *entente* between Germany, Russia, and France in the Far East seems to have completely broken down. It is now alleged that the principal business of the German Representative in Peking is to protest against the Diplomatic doings of his French and Russian colleagues. But his protests receive little attention. The net results of the triple alliance in Germany's case seem to be that she has thrown France and Russia into closer union than ever, that she has lost prestige in China, and that she has alienated Japanese goodwill. The last consequence, however, is not likely to be of long duration.

The demand for shares in the Shanghai cotton spinning factory, about to be started in Shanghai under the auspices of Messrs Jardine, Matheson and Co., has proved so keen that it has been decided not to reserve any of the shares; to call up the whole capital within nine months, and to increase the number of spindles to forty thousand. Meanwhile two committees of investigation have been despatched to China by manufacturers of Tokyo and Osaka, for the purpose of examining whether circumstances suggest the advisability of establishing other factories with Japanese capital and under Japanese control.

Mr. Yü Kêng, the newly appointed Chinese Representative to the Court of Japan, was Taotai-designate of an intendency in Kwangtung. The Emperor would have nominated Huang, Taotai of Shanghai, but desisted on being reminded that Huang having a mother 90 years of age, might at any moment be obliged to retire from official life for a long period of mourning. The appointment has special importance, not merely in connection with the

restoration of amicable relations between the two empires, but also because there will devolve upon the new Minister the task of conducting negotiations for the restoration of the Liaoting Peninsula. China has treated this re-opening of her Legation in Tokyo with characteristic leisureliness. Had she been left to herself, she would have proceeded with still greater deliberation. For when Japan, immediately after the conclusion of peace, intimated her intention of sending a Representative to Peking, the Tsung-li Yamên urged the advisability of waiting until all outstanding questions between the two empires had been settled. Japan naturally replied that unless Ministers were appointed, there would be nobody to settle any question at all, and China, awakening to the truth of that fact, set about choosing a Representative, a process to which she devoted six weeks' thought.

Cholera prevails in Nanking. Thirty deaths are reported to have occurred in one short alley. There is no doubt that this terrible disease is endemic in China. Somewhere throughout the huge empire it rages every year, thence spreading abroad if any vehicle for its transportation offers. The bubonic plague is another disease that has now to be dreaded by all nations having intercourse with the Chinese. The wonder is that amid the inexpressible grime and putrescence of Chinese cities a host of fell maladies are not perpetually engendered.

Considering the methods adopted to work upon the passions of Chinese mobs, it is surprising that the outrages committed are not even more terrible than they are. On Wednesday night, May 29th, twenty American, British, and French missionaries, with eleven children, took refuge in the magistrate's Yamên in Chêngtu, their homes and churches having been looted and destroyed. They had to remain there ten days, and during that time a human head and hand were nailed to the ruined gateway of a Roman Catholic compound; fresh blood was splashed on the walls of a Protestant mission above an inscription declaring that at this spot the foreigners had murdered their victims; the bones of a French Bishop, murdered 50 years ago and buried under one of the chapels, were exhumed and exposed as the remains of some unhappy Chinese sufferer at the hands of the foreign devils; human heads and limbs obtained from paupers' graves outside the city, were paraded through the streets as further evidences of butchery, soldiers being the carriers, and a dumb child imprisoned in a tin box was cleverly found under the floor of the Canadian Mission chapel, where, so the crowds were told, it had been placed by the foreigners after being drugged into dumbness. Chinese crowds must be slow to move to murderous anger or the twenty missionaries and their eleven children could never have escaped from the city alive.

During the days immediately succeeding the Szechuan outrages, it was widely bruited abroad that the French Government had taken up the matter most vigorously, giving *carte blanche* to its Representative in Peking; that the latter had preferred sweeping claims, including the public trial of the Viceroy of Szechuan; and that a French squadron had been sent up the Yangtze to demonstrate the mood of the Cabinet in Paris. But all these statements appear to have been baseless. A squadron did indeed proceed as far as Nanking, only, however, that its commander and the officials there might exchange friendly visits, and M. Gérard in Peking, so far from pressing inconvenient claims, left that duty to his British colleague. France, apparently, had no intention that the weightier problems of high policy then under discussion between herself and Russia on one side and China on the other, should be over-ridden by occurrences now too familiar to be exciting. Those problems were the arrangement of the Franco-Russian loan to China, and the negotiation of a convention transferring to French ownership the buffer State originally intended to remain under Chinese control for the purpose of separating British and French territory on the Upper Meikong.

THE FAMILIES OF THOSE KILLED IN THE WAR.

IT seems advisable to say a word with respect to the Prospectus now appearing in our advertisement columns. The object of the ladies by whom the subscription has been started is to assist the distressed families of soldiers killed in action. There are already laws by which provision for such a purpose is made, but the pensions granted are not sufficient. Undoubtedly steps will be taken to amend the law, but however generous the spirit of the amendment, it is inevitable that suffering must be felt in many cases. At present the family of a deceased soldier receives a sum representing about 8 *sen* a day, and if the law be amended so as to increase that amount by 50 per cent.—which would certainly be a most liberal amendment—there would still assuredly be many instances of want. In no country do the provisions of law suffice to guard people against starvation. Ordinary instances of penury, such as exist everywhere, and seem destined to exist so long as society retains its present constitution, belong to a different category. Their claim upon charity, though recognition is never withheld from it by benevolent men, is limited by the established principle that generosity must not be perverted into a premium upon indolence and thriftlessness. No such principle applies, however, to the case of a family deprived of its bread-earner by the fate of war. There we have often to deal with distress as unmerited as it is sudden, and if ever an appeal to public sympathy be justifiable it is justified in such instances. That the duty of providing for the indigent wives or children of men killed fighting for their country, devolves primarily upon the Government, is a proposition that no one can think of denying. But a moment's reflection will show that official aid can not possibly be adapted to all the varying conditions of suffering due to such a cause. The provisions of a pension law are not elastic. They indicate a uniform scale of aid for all cases of a general character, and the succour they furnish must necessarily fall short of extreme needs. It is to assist the latter that the ladies of Tokyo are now exerting themselves. They know that under no system of laws can private charity be relieved of all responsibility, and their investigations have revealed many cases which neither the present regulations nor the amended regulations—assuming that a most liberal amendment does take place—can adequately meet. They do not, we are persuaded, address themselves to persons who have studied social conditions so imperfectly as to imagine that the law can be trusted to do everything required; and most assuredly they do not address themselves to persons who take an extravagant view of the

Government's functions in order to dispense with any irksome effort on their own part. Need we say that no duty devolves upon foreigners in a matter of this kind? The Japanese Authorities and the Japanese nation may be left to take care of their own poor. But many noble experiences prove that the great majority of the foreign residents have a genuine sympathy with the sufferings and needs of the people among whom they live, and to hide from these kind-hearted folk an occasion like the present would be to show but poor appreciation of the spirit that animates them.

THE YOKOHAMA GUILD & MESSRS CORNES AND COMPANY.

THERE can be no second opinion, of course, about the matter referred to in the letter of Mr. W. W. TILL, published in our correspondence columns. Without the confirmation given by him, we could not have credited the story told by the *Mainichi Shimbun*. Messrs. CORNES AND COMPANY imported a certain quantity of goods to the order of Mr. KIMURA. On the arrival of the goods Mr. KIMURA declined to take delivery. His reasons for refusing to implement his contract not seeming valid, legal proceedings were instituted by Messrs. CORNES AND COMPANY. Thereupon the Standing Committee of the Yokohama Guild of Dealers in Yarns and Textile Fabrics, called on Messrs. CORNES AND COMPANY, told them that, according to Mr. KIMURA's statement, the Guild unanimously endorsed the justice of his cause, and declared that unless Messrs. CORNES AND COMPANY agreed to compromise for considerably less than one-third of their claim, they should be boycotted. Messrs. CORNES AND COMPANY, to avoid further trouble and litigation, offered to be content with a moiety of their claim, but that offer not being accepted, the lawsuit proceeded, and the Court gave judgment against Mr. KIMURA on every count, ordering him to take delivery of the whole of the goods and to pay the charges demanded by Messrs. CORNES AND COMPANY. Then ensued the extraordinary and incredible issue described by the *Mainichi Shimbun*, and confirmed by Mr. TILL's letter: the Guild decided that Messrs. CORNES & COMPANY should be boycotted. It is scarcely conceivable that any comment on these facts could be stronger than their bare statement. The action of the Yokohama Guild amounts to a distinct declaration that they have no respect for the laws of the land; that they intend to arrogate to themselves the functions of the legislature and the judiciary, and that any foreign firm declining to bow to their decisions shall be boycotted. Not a single circumstance presents itself in extenuation of the conduct of the Guild. They can not allege that any want of

liberality was shown by the foreign firm. Messrs. CORNES AND COMPANY, with all the right on their side, as was subsequently established by the decision of a Japanese Court, nevertheless offered to compromise the matter for one half of their claim. The Guild, however, declined to abate one jot of their resolve—a resolved based, so far as we can see, entirely on *ex-parte* evidence. Evidently, as Mr. TILL observes, codes of law and courts to administer them become mere superfluities under such circumstances. The foreign merchant is absolutely without protection. Whether there is any ground to hope that the Japanese Guild, an association of sober business-men, will recover their senses and refrain from translating into action a vertigo so destructive of their our reputation and so insulting to the Judiciary of their country, we cannot tell. But it is evident that the foreign merchants cannot submit to such an unendurable state of affairs: they must combine for their own protection. It would be most unhappy were that course forced upon them, yet it appears inevitable. Have the Guild considered, we wonder, what they would themselves think did a body of British merchants unite to set at naught the judgment pronounced by a British law Court in favour of a Japanese plaintiff, and to boycott the successful suitor unless he consented to abandon the claims declared by the Court to be his due? The contingency is totally inconceivable to us, but the Yokohama Guild must be capable of conceiving it, since that is precisely what they are now doing themselves, *mutatis mutandis*. Have they considered, also, how foreigners can be expected to place confidence in Japanese tribunals of justice whose decisions command no sort of respect at the hands of the Japanese themselves? But truly to discuss such a matter at all is to raise it from the disgraceful depths to which it belongs.

THE CENTRAL NEWS AND ITS EXPANDERS.

WE have received from the *Shanghai Mercury* a copy of a letter addressed by it to the *China Mail* for the purpose of rebutting charges brought by the latter against the former in connection with telegraphic information during the recent war. The dispute, in so far as these two journals are concerned, presents no features of special interest. It was alleged by the *China Mail*—originally by the *Kobe Chronicle*, we think—that the Central News' telegrams to London from Japan were sent *via* Shanghai for the purpose of taking advantage of the press rate from that place, and that they were tapped in transit by the *Shanghai Mercury*, which acted as agent for the Central News in Shanghai. No suggestion seems to have been overtly made that this practice was

in any sense clandestine or improper. If the *Shanghai Mercury* did obtain its telegrams in that manner, not the slightest blame attaches to it. The arrangement was perfectly above board and entirely consistent with the ordinary business of journalism. There is consequently no reason to discredit the *Shanghai Mercury* on account of its share in a strictly legitimate transaction, nor do we see that any occasion existed for the denial now made by it:—"The telegrams published in the *Mercury* were received from our correspondent in Japan by special arrangement, and were not in any case re-transmitted to London." Both the *Shanghai Mercury* and the *China Mail* deserve to be congratulated for the exceptionally full and accurate information contained in their columns throughout the war, and it appears to us that if the former profited telegraphically by its editor's connection with the Central News Agency, the latter derived a cognate advantage from its correspondent's relations with a great London newspaper. But these are matters of journalistic mechanism that do not concern the public. Readers of newspapers have to look simply for full and early intelligence, and must be content to know that it has been honestly obtained. If skilful business arrangements are made for securing good telegraphic or corresponding services at a minimum expense, the public have no more right to scrutinize the methods resorted to than a buyer of beer has to inquire how many cellermen are employed at the brewery.

The fact is, however, that there lies behind this dispute between the Shanghai and the Hongkong journals, a matter of far greater moment, namely, the apparently disgraceful conduct of the Central News Agency in London. When the war commenced, the Agency was able to organize a service that secured the speedy despatch to London of all military or naval intelligence reaching Tokyo from trustworthy sources. No exceptional arrangement was necessary, if, indeed, any were possible. An active and intelligent agent, availing himself of the facilities enjoyed by newspapers generally in Japan, could obtain and forward to London all telegrams wired to Japanese Head-Quarters by the commanding or staff officers at the front; that is to say, all telegrams describing events that had actually occurred in the campaign. This work seems to have been performed with great discernment and expedition on behalf of the Central News, so that, not only was London kept in as close touch with the progress of the fight as were the vernacular journals in Tokyo, but also the facts were collated and marshalled in such a manner as to convey an accurate and intelligible idea of the course of the war. It may be asserted, we think, with confidence that only one erroneous statement of any consequence found its way into this series of tele-

grams from first to last, and the circumstances under which the blunder was committed largely condone it. Had the Central News conveyed these telegrams to the British press exactly as they were transmitted, it would have outpaced all its competitive purveyors of intelligence, would have established a high reputation for accuracy and comprehensiveness, and would now stand far ahead of all rivals, secure in the confidence and patronage of the public. But it completely overreached itself. The telegrams, on arrival in London and before being handed to the press, were expanded so recklessly and ignorantly that not only was their length doubled, trebled, or even quadrupled, but also they were perverted into erroneous, and sometimes burlesque, representations of the events described. One of these telegrams, relating to the later operations at Weihaiwei, has been exposed in the columns of *The Times* in a most effective manner. Another, consisting of over a thousand words manufactured probably out of something like three hundred, perverted the attack on the eastern forts at Weihaiwei into a regular siege, spoke of Japanese batteries being erected, and talked of big guns placed in position for breaching purposes; whereas the whole affair consisted of a field movement, without any attempt whatever to construct batteries or employ siege artillery. In this, as in other cases, the expander had not even taken the precaution to post himself in commonly familiar facts before proceeding to construct his graphic romances. Nor was this haphazard expansion the only dishonest measure adopted: the telegrams were phrased so as to convey the impression that they came from correspondents actually present at the scenes described. It is true, of course, that the telegrams did originally emanate from the field, and in forwarding them from Tokyo, their *provenance* would of course be indicated. But there is all the difference in the world between an item of intelligence commencing "Marshal NODZU telegraphs from Haicheng, under date of so and so, that, etc.," and a telegram which, under the heading "Haicheng, such and such a date," elaborates Marshal NODZU's message and imparts to it the form of construction that would naturally be used by a news agency's correspondent. The inevitable result of such practices is that the Central News Agency is ruined. Its telegrams are henceforth excluded from all journals claiming any title to public confidence. Never was a brilliant opportunity more successfully marred by blundering unscrupulousness. But we have to note that all these things were done in London. The agents of the Central News in the Far East are absolutely free from blame. It does not appear that more accurate and carefully collected information could possibly have been furnished than

was furnished from Tokyo, and certainly neither the agent in that city nor the transmitter in Shanghai is responsible for the mutilations that the telegrams subsequently underwent in London.

AN INDELIBLE STAIN.

IT looks as though the so-called "Port Arthur Atrocities" were destined to retain, for the present at all events, the exaggerated proportions given to them by sensational correspondents. Port Arthur runs through the whole of Mr. FREDERICK GREENWOOD'S essay on "the wilful isolation of England." It makes him regard the Japanese as an "exterminating people," and denounce an alliance with them as "an intolerable thought." Professor T. S. HOLLAND, again, whose impartial review of Japan's conduct throughout the war is worthy of such an eminent authority on international law, says:—"At Port Arthur, for once, there is no doubt that the behaviour of the Japanese was detestible. Much may be pardoned of what occurred when the stronghold was first entered by its assailants. If a certain number of non-uniformed coolies, or of soldiers who had thrown off their uniforms, received short shrift, when found with rifles in their hands, what was done was not without the sanction of recent European precedent. But unfortunately the Japanese, officers and men alike, were carried far beyond what could be excused even by their finding the mutilated remains of their tortured friends exposed on the gateway of the town. For four days, after the first, the massacre of non-combatants, of women, of children, was continued in cold blood, while European military *attachés* and special correspondents sickened at the wholesale murders and mutilations, which they could do nothing to prevent. It is said that at last but 36 Chinamen were left alive in the city. They had been spared only to be employed in burying their dead countrymen, and each was protected by a slip of paper fastened in his cap, with the inscription:—"This man is not to be killed." Professor HOLLAND takes these "facts" from the *North American Review*. In other words, Mr. JAMES CREELMAN is his authority. Everyone acquainted with the contradictions, corrections, and *exposés* that have transpired since Mr. CREELMAN undertook his extraordinary campaign, knows how completely untrustworthy were his letters. Without going into details, however, it is essential to protest against one of the errors into which Professor HOLLAND has been misled, namely, his assertion that "for four days the massacre of women and children was continued in cold blood while European military *attachés* sickened at the wholesale murders and mutilations, which they could do nothing to prevent." Now it is positively known that there was no-

thing like a "massacre of women and children." Mr. COWEN, *The Times'* correspondent, though his original account of the affair seemed to him subsequently so exaggerated as to require large modification, nevertheless maintained from the very first his belief that the Japanese did everything they could to protect the lives of women and children, and we have it on incontrovertible evidence that a number of women were walking about the streets, unmolested and without apparent fear of molestation, on the second day after the capture of the town. In no trustworthy account is it stated that the corpses of women and children found in Port Arthur numbered more than six of the former and two of the latter—excluding those that were drowned or shot when attempting to escape by junks in company with soldiers—and there is no evidence whatever to show how these unhappy people met their deaths. Not one foreign witness can testify to having seen a woman or a child deliberately killed by a Japanese soldier after the capture of the town. Mr. COWEN tells of a trooper, apparently frenzied, who rode at two children and an old man and cut them down, but that—savage an act as it was—took place during the assault, and was, after all, the deed of one man only. There are in every army men in whom the sight of blood rouses the elementary passions beyond all restraint of discipline or humanity. Thus there is manifestly no justification whatever for the charge that "for four days after the first the massacre of women, and children was continued in cold blood." With regard, again, to the military *attachés* who are supposed to have been "sickened at the wholesale murders and mutilations," fuller investigation reveals a very different story. There were five foreign military *attachés* with the army. Of these three have publicly declared that they saw nothing of any excesses committed after the capture of the town, although they could not have failed to be cognisant of such things had they occurred on anything like the scale represented by certain newspaper correspondents. The other two have not made any public statement—or, to speak more correctly, their Government has not yet published their accounts—but we have ourselves heard them emphatically endorse the testimony of their three colleagues. Not one of them saw a woman or a child massacred, and the whole weight of their evidence goes to show that if atrocities were perpetrated on the days immediately succeeding the capture, they must have been isolated acts of insufficient magnitude to attract the attention of persons not specially seeking for sensational details. We are very thoroughly persuaded that, yielding to the fury provoked by Chinese brutalities, the Japanese soldiers gave no quarter during the afternoon and night of the attack, and that many lament-

able atrocities were then perpetrated. But we are not less fully persuaded that the spirit of slaughter ceased to be practically effective, at all events to any considerable extent, during the days succeeding the capture of the town, and that at no time did any deliberate massacre of women or children take place. The subject is hack-nied, but in view of the overshadowing importance attached to it by public men in England and elsewhere, we shall not fail to re-state the truth whenever occasion arises. It is certainly worthy of note that the local foreign journals by which Mr. JAS. CREELMAN'S exaggerations were most eagerly circulated and supported, have carefully refrained from publishing the evidence adduced on the other side. Nothing could exceed the violence of their invectives against every one venturing to doubt Mr. CREELMAN'S accuracy or to say a word in defence of the Japanese troops, yet now, when the American Military Attaché whom Mr. CREELMAN falsely quoted as endorsing his inventions and hyperbole, has recorded his official dissent from such views, and when the United States Representative in Tokyo has written to his Government that "the horrors reported by Mr. CREELMAN as having taken place subsequent to the 21st of November are not true," and that "the impression Mr. CREELMAN'S reports are prone to create is a gross exaggeration of the truth," those journals maintain absolute silence, and carefully conceal from their readers every fact calculated to expose their own prejudice and credulity. It would seem that to make the truth known weighs little in their eyes compared with the satisfaction of fixing a stain upon Japan's escutcheon.

THE "KOWSHING" AFFAIR.

THERE is a rumour that the *Kowshing* incident has been closed by the British Government's conveying an intimation to the Japanese Authorities in the sense that Great Britain does not see occasion to advance any claim or assert any violation of international law in connection with the affair, and, at the same time, informing the owners of the steamer that they have no recourse except to seek indemnification from the Chinese. On inquiry we learn that this story is incorrect, so far as concerns any official intimation from the British Government to the Japanese, but there seems to be no doubt that the owners of the ship—the Indo-China Steam Navigation Company—have been instructed to prefer their claim against China, not against Japan, and it may consequently be inferred that the action of the *Naniwa Kan* in sinking the *Kowshing* is held to be consistent with the principles of international law. In discussing this question, journalists in the East have, for the most part, shown a tendency to confuse two fundamentally distinct issues, namely, the question of humanity and the

question of right. It can not be denied that from a humane point of view the fate meted out to the *Kowshing* was very terrible, and that the destruction of life seems to have greatly exceeded the absolute requirements of the case. But with regard to that, there was not, and could not be, any question between the British Government and the Japanese Government. No foreign Power is endowed with competence to call a State to account for the quantity of blood shed by it in fighting with another State. The only issue calling for discussion was whether Japan acted within her rights in firing upon the *Kowshing*. For our own part, we never entertained any doubt upon the subject, and it is of course a satisfaction to find that the correctness of our view is now established by the high authority of the Law Officers of the British Crown. The *Kowshing* was engaged carrying to Korea Chinese troops unquestionably destined to fight against Japan. No one has ever ventured to pretend that their transport had any other object. Japan, fully alive to the fact, and being confronted by a situation that seemed to offer no exit save an appeal to the sword, had formally warned the Peking Government that any attempt to strengthen the Chinese forces in Korea, would be considered an act of war. China had disregarded the warning, and despatched re-inforcements. From that moment a state of war virtually existed, and Japan, by the fundamental motive of national conduct, namely, self-defence, was justified in intercepting the Chinese transports and seizing or sinking them wherever she found them. It has been urged that China had as much right as Japan to send troops to Korea. Such a contention is quite irrelevant. Suppose that England and France, for example, engaged in a dispute about the status of a certain portion of African territory to which each had free access in time of peace, and suppose that, an amicable settlement of the dispute having become apparently impossible, England warned France that any attempt on the latter's part to pour troops into the territory must be regarded as an act of war, can it be pretended for an instant that Great Britain would not have a perfect right to intercept any French troops sent to Africa subsequently to the warning, or that the peaceful accessibility of the territory prior to these complications must continue to exist after they had arisen? All this is so plain that no unprejudiced critic can deny it. China, of course, would have been equally within her rights had she conveyed a similar notice to Japan and followed it up by similar steps. Such being the case, and it being further a universally acknowledged principle of international law that the troops of a belligerent are not protected by a neutral flag, we have never been able to perceive how Great Britain could hold

Japan responsible for the sinking of the *Kowshing*. The Chinese Authorities chartered the ship for a purpose that exposed her, as they well knew, to all the risks of war, whether capture or destruction, and on them devolves the responsibility for her loss. That England will support the claim of the Indo-China S. N. Company against the Chinese Government, in pursuance of the ruling of the Law Officers of the Crown, seems to us quite as proper and quite as logical as would have been her support of the same claim against the Japanese Government had the Law Officers decided that the latter was responsible.

THE LIAOTUNG PENINSULA.

FROM a remark incidentally made by the St. Petersburg correspondent of *The Times* in connection with the Russo-Chinese loan, it seems to be inferred in some quarters that the loan is destined to redeem the Liaotung Peninsula from Japanese occupation. A rumour is also circulated in Yokohama to the effect that a sum of $7\frac{1}{2}$ millions sterling has been fixed as compensation for the return of the Peninsula. The former inference and the latter story are equally erroneous. We stated, some time ago, that the terms upon which the Peninsula is to be restored to China had not yet been negotiated, and the statement holds good to-day. Whether a monetary payment by China will be among the conditions, we can not tell, but of course Japan is entitled to demand compensation in that form if she pleases. The indemnity to be paid by China can not be separated from the other terms imposed on her. It can not be treated as a thing apart. The amount was fixed not merely with reference to the expenses incurred by the victor, but also with reference to the territorial concessions made by the vanquished. Had not the cession of the Liaotung Peninsula formed part of the Treaty of Shimonoseki, the Japanese Plenipotentiaries would certainly have declined to reduce their monetary demand from 300 million taels to 200 millions. Hence it is evident that, if China recovers the Peninsula, the gains she made in other directions by her previous surrender of it must be re-considered. This principle was so fully appreciated by Germany, Russia, and France when they urged upon the Japanese Government the advisability of not holding the Peninsula, that they are understood to have proposed their own intervention with the object of securing due compensation for Japan. The offer was not accepted, however, doubtless because Japan preferred to deal direct with China, and to avoid foreign interference as far as possible. It remains to be seen what form of agreement will be elaborated by the plenipotentiaries of the two empires, who, we may note, are not yet appointed. So far as we can learn, the negotiation will take place in Tokyo after the arrival of the new Chinese Representative.

THE KIMURA-CORNES CASE.

THE pressure brought to bear upon Messrs. CORNES & CO. by the Yokohama Guild of Dealers in Yarns and Textile Fabrics has been so far successful that the British firm, rather than face the inconvenience and loss of a boycott in all the principal trading centres of Japan, have agreed to an arrangement of a somewhat one-sided character, by which they bear more than double of the loss incurred by Mr. KIMURA. This is a most unfortunate affair. As to the surrender made by Messrs. CORNES & CO., we must assume, of course, that they know their own business, and that they adopted the wisest course from the point of view of their firm's immediate convenience. But the incident has a public aspect to which it would be folly to shut our eyes. We are confronted by the fact that there exists among the Japanese merchants trading with foreigners a combination powerful enough to set at naught the decisions of a law Court, and to compel a successful foreign litigant to accept the dictates of the combination in lieu of the judgment of a legal tribunal. That, in itself, is serious enough, and it becomes much more so if we are to regard it—as appears inevitable—in the light of a result to which events have been steadily tending for several years. There is no doubt that in the early days of foreign trade with Japan, Western merchants found themselves compelled, partly by the ignorance of foreign commerce and partly by the untrustworthiness prevailing among the native traders at the open ports, to adopt business methods that must sooner or later become irksome to the Japanese. The first powerful revolt against this state of things was made in 1881, in connection with the organization of the celebrated *Ki-ito Ni-azukari-jo*, when the Japanese, by establishing a kind of silk-conditioning warehouse of their own, sought to put an end to the necessity of entrusting their silk to foreign merchants for minute examination prior to purchase. This effort failed owing to combined resistance on the part of foreigners. But the Japanese, though defeated, were not conquered. Thenceforth they went to work in a more subtle manner. They formed Guilds one after another, the avowed purpose in every case being to place trade relations on a sounder footing, and to promote a spirit of strict probity. No exception could be taken to such a programme, but, on the other hand, any one looking below the surface, and recalling the history of the past, could scarcely fail to see that these Guilds must ultimately become instruments for utilizing the potentialities of Japanese combination to coerce the foreign merchant. That is precisely what happened. In no one instance has a Japanese Guild interfered in favour of a foreigner. Uniformly the action of the

Guilds has been devoted to supporting Japanese claims, and that, too, in many cases where justice seemed to be on the foreigner's side. There is nothing surprising in such an issue. Where a fellow-national is concerned, the tendency to take his side is likely to over-ride considerations of abstract morality. But the existence of these associations and the power they wield have been rudely illustrated by the KIMURA-CORNES case, and it would be an excess of optimism to imagine that the victory won by the Guild in this instance will not inspire its members with confidence dangerous to the smooth conduct of business. As usual, the Japanese Authorities are made the objects of criticism by foreign journalists, and the incident is also employed to emphasize the unwisdom of revising the treaties. But unfortunately the boycott is a modern device that has not yet been brought within the control of the law in any country. The Government is necessarily powerless to compel a Japanese merchant, or a combination of Japanese merchants, to deal with this or that foreign firm. An attempt on the part of the Guild to obstruct the execution of the law would be a different matter. But there has been no such attempt. Messrs. CORNES and COMPANY could have recovered the full amount of their claim against Mr. KIMURA RYEMON had they insisted upon the execution of the Court's verdict and braved the boycott threatened by the Guild. Need we point out, also, that to drag this affair into the context of treaty revision is the acme of irrelevancy. The proceedings of Japanese commercial guilds have no more connection with treaty revision than has the growth of a bamboo with the phases of the moon. Treaty revision will bring us under the jurisdiction of tribunals such as that by which the present case was decided in favour of Messrs. CORNES and COMPANY. It will not bring us under the control of guilds such as that by which the tribunal's verdict has been nullified. Evidently there is only one way to meet the situation, namely, combination on the foreign side. If that be not possible, the victory must rest permanently with the Japanese Guilds. Neither futile appeals for official aid nor silly diatribes against treaty revision will avail anything.

AN AUSTRIAN CRITIC OF JAPAN.

WE publish elsewhere a translation of a lecture delivered by HERR VON HESSE-WARTEGG in Zurich. This gentleman, whose work on Canada attracted some attention, visited Japan for a few days last summer, accompanied by his wife, the well known Madame MINNIE HAUKE, whose singing has delighted so many audiences. Mr. HESSE-WARTEGG, during his brief stay in the Far East, devoted most of his time to Korea, and the lecture to which we refer is composed chiefly of his observations in that country. We shall not discuss his

description of Korean men and things, though it invites criticism in many respects. What he says about Japan has more concern for us, since it professes to be, not the result of his own experiences—which, being altogether ephemeral, could have little value—but an echo of the sentiments entertained by “all European merchants in the Far East.”

Many of the assertions made by Mr. HESSE-WARTEGG are too general to be dealt with in a newspaper article. When a man accuses an entire nation of thorough-paced rascality, there is obviously no room for discussion. One or two facts may be noted, however, even in this context. It is not to be denied that in respect of commercial morality Japanese merchants used to be, and probably those in the Treaty Ports still are, inferior to the Chinese. But nothing could be more unjust than to infer the character of the Japanese nation from that of the trading class. Commerce—how often must this hacknied fact be repeated?—was formerly the most despised of all occupations in Japan. Its votaries were universally looked down upon. They were not expected to live up to any high standard of morality, and they naturally made no effort to rise above the level assigned to them by public opinion. The artisan who supported himself by manual toil ranked higher than the wealthiest merchant, and the farmer who tilled his own fields stood above either. During the past twenty-five years all this has been changed. In proportion as the vital importance of commerce has come to be recognised, the status of the merchant has improved, and there are now to be found among the traders of Japan men that formerly held leading official positions; men universally regarded with respect; men whose word is as trustworthy as that of the best of their Western *confrères*. That there has been a marked improvement, no one conversant with Japan will deny, but it is chiefly apparent in mercantile circles outside the Treaty Ports where the old traditions of distrust and the old methods of distrustful days still prevail to a great extent. On the other hand, there is no questioning the fact that the probity of the lowest classes in Japan will bear comparison with that of any nation in the world. Which of us has not again and again dropped money in our houses or overpaid our accounts only to find the former picked up and restored and the error in the latter corrected as a matter of course? So, too, we hear, time after time, of purses or articles of value that have been forgotten in *jirikisha* and carried at once to the nearest police station, without any thought of recompense on the part of the finder. But after all, any comparison of Japan and China based on the conduct of a few merchants can scarcely be regarded in any light save that of a jest. If there is any belief universally entertained by foreigners in the East it is that the

whole public service of China is honey-combed with corruption and improbity from head to foot. The money of the State is stolen to enrich individuals; the funds that should be spent on the national defences are diverted into the pockets of Governors and Viceroys; in the moment of its greatest need the country is found powerless to repel invasion because its officials everywhere sacrifice patriotism to pilfering. Can any such charges be laid at Japan's door? Do not the management of her public finances, the conduct of her public affairs, the expenditures on account of her coast defences and military and naval preparations, constitute as clean a record as that of any Western country? These are solid, incontrovertible facts, not to be weighed for a moment against petty catalogues of individual experiences. Commercial morality in the Occident itself can lay no claim to the rigidity that Mr. HESSE-WARTEGG's informants find so conspicuously absent in Japan.

Passing to this critic's specific accusations, we find him alleging that “the origin of the recent war had no connection with the question of Korean independence, but is to be found in Japan's desire to reach the eminence of a great political and commercial Power in Eastern Asia: the desire to absorb China's commerce for her own benefit and to the injury of Europe.” Accusations of this kind have been preferred, and are still preferred, by local foreign journals that seem to have only one aim, the traducing of Japan. What are the facts, as clearly shown by official documents laid before the Japanese Diet in Hiroshima? That no question was ever mooted save the question of Korean independence; that Japan, in the most amicable manner, proposed to China joint intervention to lead Korea into the paths of progress and to correct the infamous corruption and abuses sapping her national energy and converting her into an easy prey for foreign aggression; that the preservation of peace or recourse to war depended solely upon China's acquiescence in, or rejection of, this moderate proposal; that she rejected it, preferring to leave Korea in the mire of stagnation rather than to coöperate with Japan in the civilized task of raising her from it, and believing that Japan was altogether beneath contempt as a fighting Power; that war ensued, and that, in the sequel of signal victories, Japan is devoting her best statesmanship and spending large sums to effect the regeneration of Korea. Yet Mr. HESSE-WARTEGG asks people to believe that the Korean question had no connection with the war, and that it was dictated solely by Japanese ambition! What ambition? The ambition “to absorb China's commerce for her own benefit and to the injury of Europe.” If Mr. HESSE-WARTEGG had deliberately sought to make a display of ignorance and injustice, he could not have succeeded better. He is evidently

unaware that no possibility exists of Japan's obtaining exclusive trade concessions from China; that every commercial privilege granted by the Middle Kingdom to Japan, becomes immediately enjoyable by all Western Powers as a necessary consequence of the most favoured nation clause in the latter's treaties with China. Among the demands preferred by Japan to conquered China were these:—that several new ports and markets in the Middle Kingdom should be opened to commerce; that the *likin*—that perennial bugbear of trade—should be placed on a satisfactory basis; that the Woosung Bar should be dredged; that all restrictions upon the inauguration of manufacturing enterprises by foreigners in China should be removed, and so forth. Every one of these demands was calculated to promote the interests of European Powers far more than the interests of Japan. In short, Japan utilized her victories for the purpose of opening China to the trade of Europe. Yet Mr. HESSE-WARTEGG pretends that she sought to “absorb China's commerce for her own benefit and to the injury of Europe.” It would be impossible to be more unjust and more careless of the truth. We have neither space nor inclination to follow such a critic through his labyrinth of prejudices and blunders. He actually pretends that China is more Christian than Japan: China that murders missionaries, burns their houses, and tears down their churches; Japan that treats them with as much consideration as though they were her own subjects. He even seems to reproach Japan because she has adopted the material features of Western civilization; after two or three weeks residence in the country he has the insolent audacity to declare that the nation has no moral culture nor any civilization except a stolen skin. We venture to assure Mr. HESSE-WARTEGG that among this people whom he vehemently denounces for utter lack of moral culture, there is not an educated man so deficient in that quality as to stand forth and publicly traduce a nation of which he knows nothing and concerning which he has not taken the trouble to learn anything.

But, after all, the whole point of the Austrian traveller's indictment lies in the fact that Japan is beginning not only to manufacture for herself articles hitherto purchased by her from Europe, but also to manufacture them so cheaply as to threaten successful competition with Europe in Chinese, and even European, markets. Well, it is true. For many years we have watched the coming of that result, and have urged, in the face of continued contradiction and vilification, that the only hope for England—in so far as her commercial relations with Japan were concerned—was to seek a market for her capital in a manufacturing country where she had hitherto found a market for her manufactured goods. Politics, however,

stood in the way, and nearly five years must still elapse before this new departure can be made on any considerable scale. We begin to doubt now whether it will ever be made. Every year that passes makes the Japanese more competent to dispense with foreign capital and foreign experience. Be that as it may, however, what fault can be justly found with the Japanese if they have been shrewd enough to acquire the ability that Mr. HESSE-WARTEGG accuses them of now possessing? He deprecates the idea of "sentiment" in matters of international policy, and then proceeds to draw up a long sentimental indictment against the Japanese because they have been so ungrateful as to learn, and profit by, the lessons offered for their instruction. Perhaps, in discussing the statements of a critic so inconsistent and inaccurate, it is scarcely worth while to point out that Japan's imports which he declares to have been "steadily on the decrease" during recent years, have, on the contrary, grown from 29½ million yen in 1884 to 117 millions in 1894. That is a flagrant enough error, but what is of more concern is the question, how is this industrial development of Japan to be checked, and in what respect is it a sin on her part to develop industrially? The Austrian critic appears to be aggrieved because "it is almost impossible to find any large European city in which there are not stores where Japanese manufactures, bronzes, fans, and a thousand other little things are sold at surprisingly cheap prices." Who are they that sell these things? Who are they that export them from Japan? Why, the very Europeans on whose behalf Mr. HESSE-WARTEGG utters his thoughtless warnings. They find their account in the business, and they will continue it so long as it puts money into their pockets and brings cheap and pretty articles within reach of European consumers. Germany seem to be regarded as a subject for special commiseration in view of the so-called invasion of the yellow race. By a curious process of reasoning the Japanese are proved to owe their recent victories to Germany. "Their military system is German, as is also their drill, and their war plan was made for them by one of the chiefs of the German General Staff, who is now in command of an army corps in the vicinity of the Swiss frontier." This last statement we have no hesitation in contradicting emphatically, and we do not suppose that Germany will be particularly pleased to find herself charged with such a gross breach of neutrality. But suppose that it were all true, what shall be said of China? Her fortresses were built by Germans, her forces were drilled by Germans, and throughout the war she received conspicuous assistance from Germans. Strange that if "Japan is indebted to Germany for her victories," China, which received a much larger measure of Ger-

man aid, did not achieve a single success from the beginning to the end of the war. Let it be granted, however, that Germany counted for so much from a military point of view, what conceivable title does she thereby acquire to shackle Japan's industrial development? The *Gazette de Lausanne*, interpreting Mr. HESSE-WARTEGG, says:—"L'Europe, l'Allemagne partout, ne se laissera pas faire." What is Germany going to do about it then, we should like to know, or Europe either, for the matter of that? Neither the rhetoric of Mr. HESSE-WARTEGG nor the ugly names that he and the other writer quoted in our translation call the Japanese will effect the commercial situation one jot. The people of this country may be "thorough-paced —," they may be "rascals," and they may be "foresworn liars," as Mr. HESSE-WARTEGG and a "highly esteemed merchant of Yokohama" allege, but their capacities and their circumstances fit them for a manufacturing career, and not all the civilized invectives of refined critics will alter the natural course of events. As for the "young and intelligent men of business" that Mr. HESSE-WARTEGG recommends to come to the East, we advise them to keep away. They will find old and more intelligent men here already, who eyes are wide open to "the condition of affairs," and who are quite able "to find new markets," if any such offer, without adventitious aid. Truly, we must apologise to our readers for devoting so much space to Mr. HESSE-WARTEGG, but it appears to us that some interest attaches to these first outcries against Japanese industrial competition. The whole secret lies there. Mr. HESSE-WARTEGG and his informants prefer the Chinese to the Japanese, not because the former have any title to such preference on moral or ethical grounds, but because, while the Japanese are rapidly becoming active rivals of Western countries in industrial and military capacity, the Chinese remain precisely the same passive Orientals that they were a century ago.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

CORNES AND COMPANY V. KIMURA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your issue of this date I notice the translation of a paragraph from the *Mainichi Shimbun*, with reference to the trouble between Mr. Kimura Riyemon and Messrs. Cornes & Co. The information is absolutely correct, and I have much pleasure in confirming every word published by the paper in question.

My only regret is that, the information imparted being so concise, it is a pity the readers of your paper and the *Mainichi Shimbun* should be deprived of further details, so I beg, with your permission, to add a few additional facts.

The Standing Committee of the Guild called upon me during the afternoon of 6th instant. They opened proceedings with the statement that they had heard from Mr. Kimura the facts of the case and had unanimously decided I was wrong!

Under the circumstances, discussion was useless.

The gentlemen, however, were kind enough "to attempt to settle the matter amicably" by informing me, that unless I agreed to Mr. Kimura's taking delivery of 35 bales at contract price and waive all charges, *no dealer would be allowed to call at my office.* My claim being for delivery of 100 bales, plus interest, fire insurance, and godown rent, I "declined to accept their advice." The following day (7th) I offered to withdraw the suit provided Kimura took delivery of 50 bales at contract price and paid me half interest and fire insurance; this offer was declined. Judgment was given in the Chihō Saibansho on Tuesday, 9th instant, viz.:—

"Defendant to take delivery of the 100 bales and to pay the sum of \$29,528.59, insurance, interest, and godown rent, minus ninety days usually allowed pending delivery."

This is what led to the meeting of "the Yokohama Guild of Yarns and Woven-goods Dealers" on the 18th inst., as per paragraph above referred to. Now, Mr. Editor, presuming you know what a "Boycott" means to a firm like that I represent in Japan, I ask you, of what use are New Codes, skilled judges, &c., &c., in this country, so far as commercial transactions are concerned?

Yours faithfully, W. W. TILL,
Yokohama, July 22nd, 1895.

PHONO-IDEOGRAMS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I noticed, in a late number of the *Weekly Mail*, a reference to the revival of discussion, among Japanese scholars, of the subject of improving the national system of writing.

With your leave, I desire to present for the consideration of all who feel a genuine interest in this matter—especially of those whose nationality and other circumstances may give them influence in deciding it—a few suggestions that may possibly be of some little service in the cause of a really much-needed reform. To say nothing of the considerable aggregate saving in time and labour to the Japanese people that would be effected by the introduction of a simple system of language-characters, it appears very desirable that Japanese literature should be brought into touch with that of the remainder of the civilized world in a manner and to a degree that is really impossible, so long as the sway of the Chinese ideogram remains unbroken. Japanese may and do learn to read Western languages; but until the literature of Japan becomes equally open to Western scholars of average leisure, mutual acquaintance and confidence must be held in check.

I apprehend that the seeming collapse of the Romajikwai, after doing so much really good work, does not indicate that the problem attacked by that society is really an unsolvable one, but only that it did not happen to find the proper solution of it. Its failure may be ascribed to the neglect of certain cardinal principles, continued neglect of which will just as surely bring to naught present or future attempts in the same line. The principles in question are two in number, and their application to the present subject may be stated concretely as follows:—

- 1.—The new system, whatever it may be, must be intimately connected with that now in use.
- 2.—The word-characters used in it must be so constructed that homonyms shall in all circumstances be distinguishable from each other.

Of the above propositions, the first needs little explanation or argument. To expect a whole nation, or even a numerically important part of it, to drop what all its people have been born and bred to, and to take up suddenly a system of writing that thoroughly sets aside, in principle as well as in appearance, all that has previously been known on the subject, is to expect a miracle.

The second principle, which has been so obviously disregarded by the Romajikwai, requires more than a passing word. The neglect of it hitherto by would-be reformers has not been due to mere oversight. Rather has it been deliberately rejected, partly because of the prevalence of a mistaken theory which contradicts it, and partly, perhaps, because what it requires has been regarded as impracticable. The fact is that what, for want of a better term, may be called the philosophy of spelling, does not seem to have been properly comprehended by spelling-reformers generally speaking; and this is true not of Japan alone, but of England and America. All attempts made in the West to introduce merely phonetic spelling, have failed, and all such attempts must fail. The practice of ascribing this failure solely to public inertia affords pretty clear proof that those who take such a view of the matter have not gone to the bottom of their subject; for usage does not successfully resist innovations that are, on the

whole, meritorious—at least, not in progressive countries.

A few definitions may at this point be useful: "A word is a significant sound, or combination of sounds." A character is a mark or group of marks, designed to represent something to the mind, through the medium of the eye. Word-characters are characters which represent words. Sound-characters are characters which represent sounds of which words are composed.

Much needless confusion in the science of orthography arises from the practice of attaching too much importance to what has been, with consequent neglect of what is. For example, because Chinese characters are derived ultimately from pictures, and constructed of graphic elements, it is easy to partially forget the important fact that they do, after they have once been learned, represent words as well as ideas. In the same way, because English word-characters can be traced back to the days when there were no dividing spaces between them—when, in fact, they did not exist as word-characters at all—and are constructed of sound-characters, it seems to be often forgotten that they are quite as truly units as are Chinese ideograms, and that to the ordinary reader they appear on the page as units, and represent ideas, and not words merely. This fact, it is true, has been recognized by Prof. Webb, and other followers of Jactotet, in the "Look-and-Say" method of teaching children to read; but it may be doubted whether all that it involves has been generally perceived by orthographers.

Word-characters may be divided into two great classes: (1) Those that represent primarily things and ideas, and secondarily words; (2) those that represent primarily words, and secondarily things and ideas. The first class includes, of course, Chinese ideograms, and such symbols as the Arabic numerals; the second includes alphabetic word-characters.

The function, then, of alphabetic word-characters, is to represent more than mere sound. This is not to say that they were originally intended to represent anything else than the sounds of their corresponding words, for of course they were not; yet, as a matter of present fact, the sight of an isolated English word-character of known significance suggests to the mind the idea just as surely as it does the word. We do not have to hear the word "knight," for example, in connection with other words, in order to know within definite limits what it means, if only we see, or are told, that it is "k-n-i-g-h-t." Nothing is more disagreeable to the mind than uncertainty. Conversely, the information as to significance that is often afforded by the presence, in a word-character, of letters that have nothing to do with its sound as the word is now pronounced, gives such satisfaction to the reader that we cling to our awkward ways of spelling, rather than accept alleged reforms that would give us "nit" for both night and knight, and "noz" for both nose and knows. The mind is so constituted that when a word-character suggests sound, without at the same time giving a clue to the significance of the sound, it is (except, possibly, when seen in very clear connection with other word-characters) distinctly a source of mental irritation. The clues given in some existing word-characters may be quite accidental, and perhaps always are so, but they are gratefully accepted and persistently retained. It may indeed be alleged that spoken words themselves are intelligible only when their connection is understood, and that therefore the characters used to represent them ought to lie under the same limitation. This sounds plausible, but it is, after all, a *non-sequitur*, and facts are against it.

Every one understands that neither phonograms (as Canon Taylor has called alphabetic word-characters) nor ideograms, have always existed in their present forms, but have been developed from much older symbols. What does not appear to be always taken account of is the fact that, so far as "phonograms" are concerned, the process of development is incomplete, it having been arrested by the influence of dictionaries. Roman letters, and sound characters in general, are known to be derived ultimately from ideograms, and the earliest alphabetic writing aimed at nothing more than indicating a succession of syllables which, when pronounced, would be found to resemble speech, the reader and hearer being left to make what words they could out of these sounds. Afterwards came the segregation of letters into groups, corresponding to separate words. This was more than a mere change of fashion in writing. It was a distinct step in the evolution of the ideal word-character. But here, as so often in the historical development of ideas, the actual goal of the movement was not in the thoughts of those who were actors in it. This grouping of letters into word characters which were doubtless intended to be simply phonographic, led gradually, after spelling ceased to be a matter of individual caprice, to the mental association of

words with certain groups of letters, each group being recognized as a unit, and being closely inspected as to its component letters only for the purpose of distinguishing it from other word-characters bearing a general resemblance to it.

If pronunciation and spelling were uniform, and if language were free from homonyms, it is pretty clear that strictly phonographic word-characters would become, by the law of association, ideographic also; because every character would differ from every other, and these peculiar forms would become associated in all minds with whatever concepts might belong to their respective words.

The perfect word character, then, is neither the dumb ideogram nor the mere phonogram, but a combination of the two, which may be called the *phono ideogram*. This is the ideal, a blind and clumsy striving toward which may be seen in the use of "side-kana" with Chinese characters (and, for that matter, in the structure of most Chinese characters themselves), and equally in certain forms of English spelling that are often laughed at by those who, nevertheless, continue to use them.

Whenever the knowledge of writing is conceived of as a practical thing, a popular means of communicating thought, rather than a scholarly accomplishment, the insufficiency of the bare ideogram becomes apparent. But when homonyms exist—especially when they are abundant—the mere phonogram is as liable to offend and confuse the reader as the ideogram is to baffle him. When a word-character, though not strictly phonetic, does contain marks of sound that serve to suggest the word if not to indicate it with precision, and at the same time differs from all characters belonging to other words of like sound, it comes much nearer to meeting the requirements of every possible reader—nearer to the ideal word-character—than any other kind of word-character actually existing and in use at the present time. Hence the firm hold possessed by anomalous forms of spelling.

Is it maintained, then, that irregularity in spelling is desirable? No, not for a moment; but it may be better than regularity when the regulations ignore matters that are just as important as those that they provide for.

Why should not Japan add to her achievements by being the first country to possess perfect word-characters? The materials for making such are at hand; the principles on which they can be made have been indicated. The practical application of these principles might be, in outline, somewhat as follows: A complete list of all the words in the language (in particular, of all Chinese monosyllables) should be prepared, the words being spelled with kana, and arranged in "iroha" order; except that all homonyms, of course, would in such a list have to be found together. Opposite each word should appear the appropriate ideogram; and by the side of the ideogram an Arabic numeral, "1" for the first word of any given group of homonyms, "2" for the next, and so on. Meanwhile, a satisfactory phonetic alphabet should be adopted; it is difficult to see how anything could be simpler than Roman letters, and the latest results of the labours of the Romajikwai might perhaps be adopted, with little or no alteration; but these are matters of detail. Supposing the Roman alphabet to be satisfactory from a purely phonetic standpoint, the new phono-ideograms, which should of course also appear in the standard list of words, would be constructed simply by combining the Arabic numerals with the Roman letters—the numerals playing the part of "silent letters" in conventional spelling of English, but differing from them in being incapable of causing doubt as to the pronunciation of the word, and in indicating, not by accident nor at haphazard, but with certainty and precision, the meaning to be attached thereto.

The following imaginary extracts from such a standard word-list will illustrate the meaning of the above:—

カウ 高 kō1	シ 思 shi1	Words compounded of these monosyllables would be written kōshiz, kōzshiz, kōzshiz, kōzshiz, kōzshiz.
コウ 孝 kō2	シ 師 shi2	
カウ 公 kō3	シ 士 shi3	
コウ 工 kō4	シ 子 shi4	
コウ 巧 kō5	シ 私 shi5	

To distinguish non-separable from separable polysyllables, some particular character, without phonetic value in Japanese words, could be used before the numeral attached to the former; as, mushirox1, mushirox2.

If the possession and constant use, by every reader of literature printed in such phono-ideograms, of the standard list with its Chinese characters, were necessary, it might indeed be thought that no such device as has been described could meet with public favour. But a moment's reflection will show that nothing like a laborious use of the list would be imposed upon any one, excepting the writers who should assume the duty

of introducing the new characters. The collocation of the characters would so frequently indicate to the scholarly reader what the Chinese character symbolized by the Arabic figures must be, that reference to the list would be superfluous, and so most of the phono-ideograms would be learned without effort; yet, in case of doubt, reference to the list would quickly give the desired information.

Perhaps the authoritative appointment of a company to decide upon the detailed plan of the standard list, and to prepare it, together with a moderate amount of Governmental recognition of the new characters, in the schools and elsewhere, would counterbalance the opposing weight of mere conservatism; while the merits of the new system ought to do the rest in securing its general acceptance. Such phono-ideograms as are here proposed would be so easy to learn that they would meet the needs of every reader; while their precision might be made in some cases even greater than that of the ideograms now in use, so that they would neither produce confusion nor offend scholarly tastes. Prepared by competent hands, and introduced under proper auspices, they might find a favourable reception at the hands of all except the small class that oppose every new thing. If once received into general use, they would fill the place in the public mind now held by Chinese characters; and the reference list would thus become, in course of time, like the *Mi Hashi* at Nikko—interesting but unnecessary. X.

Tokyo, July 23rd.

THE GRAND HOTEL, LIMITED.

The semi-annual general meeting of shareholders in the Grand Hotel, Limited, was held on the premises of the Company on Monday afternoon. There were present Mr. J. F. Lowder, in the chair, Messrs. J. Rickett, E. V. Thorn, P. Dourille, M. Engert, G. Goudreau, C. K. M. Martin, R. Howie, B. C. Howard, S. D. Hepburn, Jas. Walter, Dr. Hall, and J. Tornoe, Secretary.

The CHAIRMAN said the meeting was called to receive the Directors' report and accounts for the half-year ending June 30th, 1895, to pass those accounts, if approved, to declare the dividend, to elect officers, and to transact any other business that might arise. This was their 12th semi-annual general meeting, but before proceeding to the business before them he would read the list of proxies held by various shareholders present, so that if any shareholder should wish to challenge any ruling of the Chair, or demand a poll, they would have an opportunity of doing so. The list of proxies held by Dr. Hall was then read and passed; Mr. E. V. Thorn's proxies were passed, and Mr. Howard's also, with the exception of one, which was given him by an attorney, and not direct, but which the Chairman disallowed on the ground that the date of the proxy was too old. A proxy to be admissible must be signed within a twelvemonth of the date on which it is used. Mr. S. Hepburn's proxies were passed unchallenged. The Chairman then presented the annual report, to which he had nothing to add. He could only say that he saw no reason why the Company should not enjoy in the future the prosperity it had achieved hitherto. He would now proceed to put the various items of business before them to the vote, premising each with the information that first a show of hands would be taken, and then if the vote was challenged a poll would take place there and then, and not after adjournment. The first business was to adopt the Directors' report and accounts for the half-year ending June 30th, 1895. He would be pleased to receive any remarks or motion upon them from any shareholder present.

Mr. ENGERT proposed, and Mr. DOURILLE seconded, that the report and accounts be adopted and passed.—Carried unanimously.

REPORT.

The Profit and Loss Account, and Statement of Assets and Liabilities for the half-year ended the 30th June, 1895, accompany this Report.

The net profit for the half-year, including balance brought forward from the 31st December, 1894, and after providing for general expenses, Directors' and Auditors' fees, bonus to Manager, interest, and depreciation, and after writing off bad debts, amounts to\$ 40,000 which it is proposed to apply as follows: In payment of a dividend of 10 per cent. for the half-year 25,000 Reduction of debt 5,000 Balance to be carried to new account 10,000

\$ 40,000 In view of the large sums written off for depreciation for the half-year ended the 31st December, 1894, and of recent improvements and additions to buildings and furniture, the Directors do not consider it necessary to debit the Profit and Loss Account otherwise

than with a nominal amount for depreciation during the half-year just ended.

They do not recommend a larger dividend, though the figures would justify such recommendation, because they think it advisable to make provision, out of the profits of the past six months, for the payment of various sums falling due during the current half-year.

Messrs. Rickett and Hall retire from the Board by rotation, but offer themselves for re-election.

Mr. Keil retires from the office of Auditor, and the Directors have much pleasure in recommending his re-election to that office for the current year.

According to Article 86 of the Articles of Association, the amount of the Director's fees for the current year will have to be decided at this Meeting.

It is proposed that the dividend shall be payable on the 23rd day of July, when the warrants will be issued.

J. F. LOWDER, }
JAMES WALTER, } Directors.

Yokohama, 9th July, 1895.

E. & O. E.

Yokohama, June 30th, 1895.

J. F. LOWDER, }
JAMES WALTER, } Directors.

I have examined the foregoing accounts and compared them with the vouchers of the Company, and certify them to be correct.

Yokohama, July 6th, 1895.

The CHAIRMAN—The next business is the election of two Directors. The report says that Messrs. Rickett and Hall retire from the Board by rotation but offer themselves for re-election. I have also received a letter from Mr. Howard, who, in accordance with our bye-laws and Articles of Association, intimates that he desires to propose Mr. J. R. Morse as a Director of the Company for the ensuing year. Therefore, there are three names before you for the positions vacant on the Board; two retiring Directors, who offer themselves for re-election, and one other proposed by a shareholder.

Mr. HOWIE—I propose that Mr. Rickett be re-elected as a Director of this company.

Mr. THORN—I propose that Dr. Hall be re-elected a Director.

Mr. HOWARD—I propose the election of Mr. J. R. Morse.

The CHAIRMAN put the first proposition to the meeting, and Mr. Rickett was re-elected unanimously. When the names of Mr. Hall and Mr. Morse were about to be submitted to the meeting,

Mr. THORN rose and asked whether the Chairman could inform him how long the term of service of a Director lasted; and if a Director was re-elected and then resigned, for how long would his successor serve; and further, who elected the successor of a Director who retired after a few months' service? He had no objection to Mr. Morse personally, but he had been given to understand that Mr. Morse was only going to remain in the country for a few months; could the Chairman afford him information on this point.

The CHAIRMAN said in the regard to the last question he could give no information, being with-

out it himself; possibly Mr. Howard could tell them. In regard to the other question, the election of a Director to fill a vacancy caused by a Director resigning after a few months of election, or otherwise,—as a successor or the *locum tenens* of a Director, such election lay with the Board of Directors themselves, and was not held over to the next general meeting of shareholders.

Mr. HOWARD said that if Mr. Morse left Japan within the next few months, it would only be for a visit to China. He would not be leaving this part of the world.

Mr. RICKETT thought that if a Director went to China he would leave the Board.

Dr. HALL said a Director was elected for three years, and anyone was elected to fill the place of a Director who retired within a few months of his election, was elected for the remainder of the three years.

The CHAIRMAN said the matter was entirely in the hands of the shareholders. Mr. Morse had been on the Board before, and would doubtless if elected, make a very good director. Dr. Hall had been on the Board for many years, and had conscientiously discharged the duties of the office. He (the Chairman) did not wish to influence the meeting either way.

Mr. THORN asked if, in the event of a Director resigning the position within a few months of being elected, his successor would be elected by the Board to serve the remainder of the year, or for the balance of the whole term?

The CHAIRMAN, after referring to the rules, said Rule 96 was explicit on the point; he would be elected to serve the whole balance of the term.

The CHAIRMAN then called for a show of hands on the vote for Dr. Hall or Mr. Morse as a Director of the company.

The vote was as follows:—Mr. Morse, 6; Dr. Hall, 5.

Dr. HALL called for a poll.

Upon the poll being taken, the result was declared as follows:—Dr. Hall 376; Mr. Morse 182. Dr. Hall was then declared re-elected.

The CHAIRMAN announced that the Board recommended the re-appointment of Mr. Kiel as auditor.—Carried.

Mr. HOWARD next proposed that the amount of Directors' Fees for the coming year be the same as in previous years—\$300.

Mr. THORN seconded.—Carried.

The CHAIRMAN—That concludes our business to-day, and I thank you for your attendance, gentlemen.

Mr. HOWARD moved a vote of thanks all round.

Mr. THORN, in seconding, said that any shareholder who was dissatisfied with the work of the present Board or the prosperity of the company would be very hard to please.

The meeting then separated.

METHODIST EPISCOPAL CHURCH.

ANNUAL CONFERENCE.

July 18th, 1895.

The Conference opened as usual. The Bishop spoke for 15 minutes on the state of Christian Work in Hawaii, which he had recently seen, and the opportunities for similar work in Japan.

Mr. Sasamori presented a plan for a Board of Managers in connection with the Nagasaki school. C. Nakada presented the report on Church Extension. The case of K. Ike was referred to Committee on Conference Relations. Dr. Worden and C. Nagano were appointed a Committee on Conference incidental expenses. The report on the Epworth League was adopted. D. S. Spencer moved that all Young People's Societies connected with the Church be requested to take the name of the Epworth League. The case of J. Miyakoshi was called, and the Conference voted to discontinue him as a Probationer.

The undergraduates who had failed to pass in their studies were called to the front and addressed by the Bishop in regard to faithfulness in their study and work.

Y. Honda reported on the matter of a Conference Library. Y. Aibara moved that the privileges of the Library be extended to Probationers.

The Board of Stewards presented their report and the various sums to be paid to Worn-out Preachers and Preachers' Widows were ordered to be paid. D. S. Spencer moved that the English printed minutes be the official record of the Conference.

An invitation was received from the Y.M.C.A. of Tokyo to visit their buildings this afternoon at 4 p.m., and the thanks of the Conference were extended for the same. J. C. Davison was, upon motion, excused in order to take the outgoing steamer for U.S.A. Conference adjourned.

July 19th.

The Conference opened with prayer. The Bishop briefly addressed the Conference. Minutes read and approved.

The Presiding Elders nominated the following Fraternal Delegates:—

M. E. Church South.....J. Wadman.
Canada MethodistJ. G. Cleveland.
Evangelical AssociationC. Bishop.
Protestant MethodistD. S. Spencer.

Eleven young men presented themselves as Candidates to be received on trial. The Committee on their examination reported and the case of each one was carefully examined. The Conference voted on these young men one by one.

Rev. S. Hiranuma, Pastor of the Church of Christ in Kumamoto, was introduced to the Conference. The Conference adjourned.

A 2.30 p.m. the Conference met in special session to consider the question of dividing the Conference.

The proposal to divide comes from Kyushu. Then are two District Conferences in the South, and these District Meetings have decided that a division would conduce to the interests of the work in the South. The proposal was in the form of a memorial to the next General Conference. This question was ably discussed. K. Miyama, J. Soper, D. S. Spencer, S. Ogata, W. Ishikawa, E. Aibara speaking against division; J. Wier, J. H. Correll, and others speaking in favour. The vote resulted in 34 against division and 15 in favour. This vote will not hinder the memorial forwarded to the General Conference in U.S.A. to be finally decided.

It is thought the Bishop will read the appointments in a night session this evening.

July 19th, Night Session.

The Bishop took the Chair at 8.30 p.m. The report of the Methodist Publishing House was submitted by Dr. Honda and was adopted. The Conference upon motion requested the Bishop to appoint J. W. Wadman, Publishing Agent, and C. Bishop, Treasurer of the Mission and assistant Publishing Agent.

The Conference also requested the appointment of Y. Takasugi and T. Haseyawa, Professors of So O-Gijiku, Hirotsaki, J. O. Spencer, Supt. of Industrial Dept. of Aoyama Gakuin, Jennie S. Vail, Instructor in the College.

The Committee on Memorials to the General Conference presented their report. It was decided to petition the General Conference:—

I.—To provide for the admission of Laymen into the membership of the annual conference.

II.—To provide for a resident Bishop for Eastern Asia, with residence in Japan.

Rev. B. Franklin, Presbyterian Missionary of China, was introduced.

It was resolved to add two laymen to the Committee on Salaries, and request the same Committee to act as Committee on Estimates.

The pastor of Kanda Church was elected President of the Japan Epworth League, J. W. Wadman English Secretary, J. Yamada, Japanese Secretary.

The Conference proceeded to elect a Publishing House Committee for the year. The following were appointed:—J. W. Wadman, J. C. Davison, C. Bishop, J. O. Spencer, Y. Honda, W. Ishikawa, and E. Aibara.

The Conference resolved to request J. Soper to act as an Interpreter for the Delegates at the coming General Conference.

An advisory Committee on Education was raised as follows:—Y. Honda, H. Yamaka, K. Nakada, E. Aibara, and J. W. Wadman.

Conference adjourned at 11 p.m.

July 20th.

The session opened at 9 a.m. Several items of unfinished business were transacted. This being the last session of the Conference, a large number of visitors as well as all the members of the W.F.M.S. Conference were present. The Presiding Elders presented, through S. Ogata, the financial scheme by which the pastors' salaries for the coming year are determined. This scheme is fixed according to the nature of the place, the expenses of living, the amount of house-rent, the size of the pastor's family, &c. The Conference looks forward with a great deal of interest to the presentation of this scheme. Its main purpose is to develop self-support as well as to render as much help as possible in cases of need. A communication was received from the W.F.M.S. Conference referring to the matter of a course of study for Pastors' wives in order to qualify them to cooperate with the regular Bible Women in this work.

The Presiding Elders presented a Scheme and Calendar for the taking of the Benevolent Collections. The same body nominated. J. W. Wadman to preach the Annual Missionary Sermon at

the Session of the next Annual Conference, and T. Hasegawa as the alternate.

The Committee on Resolutions presented the usual complimentary resolutions.

The minutes in English and Japanese were read and approved, the Bishop made a very earnest address, a hymn was sung, prayer offered, Benediction pronounced, the appointments read and the Conference adjourned *sine die*.

The missionaries were appointed as follows:—

G. F. Draper, P.E. Hakodate District.	
H. B. Schwartz, P.E. Aomori District.	
H. W. Swartz, Missionary in Sendai.	
J. G. Cleveland, P.E. Yokohama District.	
W. S. Worden, Missionary in Yokohama.	
J. C. Davison, P.E. Tokyo West District.	
C. Bishop, Treasurer of Mission.	
J. W. Wadman, Publishing Agent.	
H. B. Johnson, Dean,	} Aoyama Gakuin.
R. P. Alexander,	
Jennie S. Vail,	
J. O. Spencer,	} Theological School.
J. Wier, Dean,	
B. Chappell,	
D. S. Spencer, P.E. Nagoya District.	
I. H. Correll, P.E. Nagasaki District.	
E. R. Fulkerson,	} Nagasaki School.
M. S. Vail,	
J. Soper, absent on furlough.	

LETTER FROM ST. LOUIS.

(FROM OUR CORRESPONDENT).

St. Louis, U.S.A., June 30th.

The all-absorbing question of the day in the United States is silver. The West is probably more interested in the issue than the East, and great enthusiasm prevails. There can be no doubt that this will be the issue in the next presidential campaign. Able men are arrayed on both the silver and gold sides of the issue. The Democratic party is sure to gain much by the agitation, as it will divert public attention from the apparent failures of the present administration. Up to twelve years ago what is known as the "Bloody Shirt" was made the issue in all national campaigns. The sectional prejudices following the Civil War were appealed to, and everything else was lost sight of. Then the Tariff was brought into politics and Cleveland won on that line. Now the tables are turned, and the Tariff is lost sight of in the silver fight. Just what will be the outcome remains to be seen.

St. Louis, the great city gateway to the West, is out in a new rôle. The "American Protective Association" has come to the front in a very formidable shape. Only a few days ago the New Police Judge, Thomas Peabody, was serenaded and openly avowed a member of the A.P.A. This bench has been filled for years by an Irish Catholic. The new manager of the House of Refuge has issued an order prohibiting Catholic priests from celebrating mass in that institution. This was a thunder-clap from a clear sky, as heretofore the religious influences exerted in city institutions has been almost exclusively Catholic. Many other city officers have been filled by A.P.A.s, and a great change is on. This influence is exerted through the Republican party, which was the victor at the last election.

A. S. Ishida, a Japanese ministerial student of the M.E. Church, South, from Osaka, was in the city this week. He graduated with honours at the St. Louis Conference School at Caledonia, Mo., a few days ago. He has been in this country three years and has made many friends. He is to go on a lecturing tour through the East this summer, and hopes to be able to enter the Theological Department of Vanderbilt University next fall.

T. J. Nishikawa, another student of the same Church, and also from Osaka, finished the junior year at Central College, Fayette, Mo., and carried off the gold medal for the best essay. His subject was "The Result of the Norman Conquest over the English Language." He will return to Japan after one more year, to engage in Evangelistic work.

There are only three Japanese in this city, two of whom are bamboo workers, and the other an acrobat at a summer garden in the suburbs. Bannum and Bailey's Circus which showed here a short time ago had a number of Japanese showmen, whose performances gave much satisfaction to the thousands who witnessed the performances.

Bishop E. R. Hendrit of Kansas City, will leave for Japan on August 5th, to make a tour of the Methodist Churches in the Orient. He will be accompanied by Miss Ida Worth, of this city, who has been in training for missionary work for several years. Bishop Hendrit has been in Japan before, having accompanied Bishop Marvin around the

world several years ago. He is author of a book of travels entitled, "To The East by way of the West."

The trial of the famous double murderer and millionaire, Dr. Arthur Dustrow, is set for July at Union, Mo. He was declared sane at the last trial, and will now be put on trial for his life. He killed his two-year-old child and wife two years ago in a most brutal manner.

The Roman Catholic Church in the St. Louis Archdiocese has been greatly agitated of late over the physical condition of Archbishop Kenrick, whose mind has so declined that he has become unfit to occupy that high position. Church property amounting to many million dollars was vested in him, and at one time it was said that the venerable Archbishop had made no will leaving the property to the Church. It was feared that at his death all the property would go to his personal heirs. To avoid this Pope Leo XIII. made Archbishop Kain, Archbishop of St. Louis, and vested him with the superior title of "pallium." This gives Kain all the powers taken from Archbishop Kenrick, who has been translated to a nominal see called "Marcanapolis." The venerable prelate, Kenrick, does not know of the change and will probably never be informed of it. He is very aged and will be suffered to live in the Archbishop's residence until his demise.

Bicycle riding has become a great "fad" among the ladies of this country, and it is now a common sight to see young women in "bloomers" riding on our streets at breakneck speed on wheels. It is said that dealers are unable to supply the demand for wheels, which sell for \$75 to \$150. Baseball, while still a drawing card, does not attract as large crowds as a few years ago.

This city has a roof garden, which is a favourite resort. It is on top of the sixteenth story of the Union Trust Building at 7th and Olive Streets. Our parks are crowded on all holidays with multitudes who are entertained by various amusements or permitted to enjoy serene parts of the woodland.

All our great factories are running, and business is progressing, but it will take a long time before the dire disasters of the late panic are entirely swept away and the country is back to its normal pulse. The settlement of the silver issue, or what Cleveland calls his "Sound Money Policy," will no doubt do much to restore better days.

JAPANESE AFFAIRS IN AUSTRALIA.

BY JOHN PLUMMER, M.J.S.

Sydney, May 19th.

A mild sensation was lately created in Sydney by the appearance of the following advertisement in one of the city papers:—

TO FARMERS, GRAZIERS, FRUIT, CANE, RICE, COTTON, and TOBACCO GROWERS.—To meet the times, we have made a treaty for a constant supply of skilled agricultural labourers from Japan. Engagements, 3 to 5 years; wages 2s. per week. Indents now taken. Particulars, T. Blencowe and Co., 19, Macquarie-place.

Subsequently enquiry resulted in its being ascertained that Mr. Blencowe professed to be acting on behalf of a Japanese firm, whose name or whereabouts he refused to mention. Being taxed with the possibility of the advertisement being a hoax, he is reported to have said—"Oh, no! There's no hoax about it. It's correct enough. You'll find it out soon. Farmers can't do anything with this free-trade tariff of Reid's. If there's to be free trade, then there must be cheap labour. The farmers can't get on without it. It's what you must expect. I've been in this country a good bit. I know all about the farmers, and what they want they can't get under this tariff of Reid's. It will ruin them." Consequently, he proposed to supply them with the cheap labour required. The matter was referred to in the New South Wales Legislative Assembly, but the Premier, Mr. G. H. Reid, declared it his opinion that the whole thing was a political ruse, intended to discredit his free trade policy. It has, however, had the effect of awakening a feeling of alarm among the labouring classes of the colony, although the matter has been ignored by the metropolitan and country press, and one of the immediate results has been that the General Council of the "Australasian Labour Federation," sitting in Sydney, has passed the following resolution, "That this general council of A.L.F. enters its strong protest against the introduction into Australia of alien coloured labour; calls upon all Australian Governments to legislate against the introduction of Japanese or other Asiatic races; is opposed to the acceptance by the Australian colonies of that portion of the treaty between Great Britain and Japan which gives the natives of the latter country the right of residence in Australia; and urges the workers in each colony to make this a test question at every Parliamentary election."

Mr. Crick, a member of the New South Wales Legislative Assembly, has introduced into that Chamber, a bill for amending and extending the Chinese Restriction and Regulation Act of 1888, by causing its provisions to include "Japanese, Javanese, and Kanakas." It is to be read a second time this week, and should it pass, a poll tax of £100 will be levied on every Japanese landing in the colony, and captains will not be allowed to bring more than one passenger for every 200 tons burden of each vessel. But it is more than probable that the measure will be rejected by the New South Wales Legislative Council.

But the attempt to cause a Japanese scare in Australia has not been allowed to escape some few earnest words of protest. A correspondent, writing to one of the Sydney papers, says that the idea of a Japanese industrial invasion of Australia is neither possible nor probable. The population of Japan may be roughly estimated at 40,000,000. Her emigrant population, at a very liberal estimate, may be set down at 10,000,000. But she has recently won a great victory, and acquired a war indemnity, which, after paying the national debt, will leave many millions in the Treasury. She has also acquired new territory, and new spheres of influence as practically a most favoured nation. Is it not reasonable to suppose that with the new prosperity of success she will find room at home and in her extended territories and spheres for at least three-fourths of her floating ten millions of people, who are now compelled to live away from home? Thus, only 2,500,000 would be left for distribution throughout the world of a class of labour regarded everywhere as more desirable than Indian coolies, Kanakas, or Chinamen. If the whole of these 2,500,000 came to Australia, the influx might be felt; but, as a matter of fact, the process of absorption would be so eager elsewhere that very few would be left for Australia. It is more than probable that the advertiser of Japanese labour has rushed into print before he has made inquiries of the Japanese authorities. Let us not legislate on a scare, or be frightened by a will-o'-the-wisp. We are on the eve of profitable trade with Japan, and it would be a pity if the silliness of scared legislators and dodge-working protectionists ruined the chances of a splendid market." To these remarks no reply has been vouchsafed as yet.

Mr. Walter Griffiths, a member of the South Australian House of Assembly, lately returned to that colony from a visit to Japan. He does not seem to be much impressed with the prospects of trade between Australia and Japanese ports. He says—"Japan is most conservative in a way. I had a passport from the South Australian Government signed by the Governor. I showed that at the Japanese Office, but they compelled me to take out one of their own passports, for which I had to pay a couple of dollars. They don't recognise foreign passports of any description in Japan. Their conservatism is also strongly pronounced in trade operations. Japan will, when the treaty with England and other Powers comes into force, throw open her ports and indeed the whole country to foreign commerce and trade. That to my mind will be no great advantage to European Powers, inasmuch as the Japanese manufacture any article that can be possibly made. And should there be any article of manufacture they do not make at the present time they employ Europeans to educate them in this particular branch, and when they acquire sufficient knowledge they dispense with the services of the European instructors, and conduct the manufacturing of these goods absolutely under their own management." He also remarked:—"I believe there is more fear to be considered in reference to the manufacturing competition of the Japanese than that of the Chinese or any other race under the sun. For instance, the boots I have on cost me 7s., and the clothes I am wearing 25s., and everything else is made and is to be had at as proportionally low a figure. A schoolmaster at Kobe told me that they could print the books for use in the schools—standard works, of course—at 75 per cent. lower than they could obtain them from England. The price for manufacturing goods in Japan may be computed at the price of the material alone, with say 5d. per day for skilled labour. The workman is looked upon as an outside consideration. I think it would be a most advisable thing for the Government of the various Australian Colonies to send one or two representatives to enquire into the labour conditions, the price of labour, and the prospects of competition between Japan and the European manufacturing countries. The expense, which would probably be small, would be nothing in comparison with the benefits to be derived. These opinions I have formed not altogether from going East for the first time on a trip, and being amazed and astounded at what I saw, but are mainly the

opinions expressed by others, such as Consuls, business people, and others in a position in the East to know the trend and the effect of the development of Japan as a manufacturing country. In reference to the position of Australia to Japan from a commercial point of view, the former is essentially a producing country, and I think there is an opening in Japan for our wool, and also in the East for limited quantities of butter, cheese, and dairy produce. I find by careful enquiry we cannot send our wines to compete against the price at which they are forwarded by European and other firms."

The fear of Japanese industrial competition is rapidly extending throughout Australasia, and it is not unlikely that the New Zealand Governments will be asked to impose on Japanese immigrants restrictions similar to those to which emigrants from China are subjected. The uneasy feeling is increased by the frequent publication of extracts from Anglo-Japanese papers to the effect that Japan covets the possession of Australia, and that the occupation of Formosa is the first step towards the accomplishment of that object. The mischief effected by such loose statements is incalculable.

Discussing the question as to whether great Britain is getting the worst of it in diplomatic matters in which France and Russia are concerned, the *Melbourne Age* says "that the value of the Chinese trade blinded English diplomatists to the inevitable rise of Japan. The sympathy of the English commercial classes with China during the late struggle has naturally incensed the Japanese, and England has failed to secure Chinese sympathy by declining to aid in the recent struggle. Meanwhile, the Russians and the French come in with their special treaties with both of the Eastern nations, and threaten, in conjunction with the Japanese, to squeeze England out of her Indian possessions. It may be that Lord Rosebery has some secret and as yet undivulged scheme to frustrate the designs of the enemies of England. Present appearances, however, are against this supposition. Our fleet in the Mediterranean, in point of number and of weight of metal, is alarmingly inferior to that which France can mobilise in a week; and in the Chinese Seas our squadron is surpassed by the Japanese and the France-Russian fleets separately. The open enmity of France, as displayed in its Legislative Chambers, the irritating collisions which have taken place in Africa, and the perpetual girding at the occupation of Egypt, are so many challenges to the English Government, and it will shortly become a question whether the French should not be taken at their word, and the international matters in suspense be referred to the arbitration of battle." The gloomy views of the Victorian journal do not seem to be shared by other leading Australian papers, several of which appear to regard Japan as the power which will eventually check the advance of Russia southwards.

With respect to the Chinese loan, the *Melbourne Argus* says—"When writing some weeks ago upon the indemnity to be paid by China to Japan, we remarked that any great borrowing like £180,000,000 in all by China would only be possible under the condition that the finances of the country should be administered or controlled by the lending countries. Already it would appear that this view has also been adopted in Europe, for according to our cable advices, the first installment of the total required is to be guaranteed by Russia, which implies that Russia will gain some kind of footing in the control of Chinese affairs. China will gain by the guarantee to the extent of saving 2 to 3 per cent. per annum in interest, and Russia will gain by laying the foundation of a protectorate. Not that a protectorate is necessarily near at hand, for in the meantime the amount to be floated in Paris is not large enough to justify the concession of anything but a kind of mortgage over territory or facilities for Russian railway construction through Siberia to the Pacific. And certainly there is no reason to expect that any attempt will be made to remove the administration of Chinese Customs from British hands. The most important development, as we have before pointed out, will probably be the opening of China to Western influence, notwithstanding that its population is at present an almost inert mass of humanity. The payment of the indemnity, it is understood, is to be extended over five years, so that China has plenty of time to make necessary arrangements." The *Sydney Daily Telegraph*, alluding to the same subject, observes that—"The statement that Russia will either guarantee a Chinese loan for £17,000,000, or will borrow the amount direct and then subsidise China to that extent, is very significant. It is perfectly certain that such an operation, which would yield probably 110,000,000 taels, would only be effected in compensation for

a large slice of territory to the southward of Siberia, giving Russia access to the Pacific at a permanently open port. The amount will represent but a comparatively small portion of the Chinese indemnity, according to the latest statement, but Russia has a good stock of silver, and she may possibly use these means to effect its reduction, thus taking a lesson from a recent American proposal. Whichever side in the late war had been the victors, Russia would equally have required compensation, and intends to be reckoned with in the northern Pacific. That such a transaction will involve political complications with England is very unlikely. If China chooses to sell a portion of her territory to her northern neighbour, or permits its occupation, a third party can hardly intervene, especially when she owns no possessions in contiguity with the territory transferred. Unhappily, in Russian hands, any portion of China will be as closed against trade as it has hitherto been. Australia has some trade with China, but none at all with Russia."

THE RUSSIAN LOAN.

The *Times* of the 12th of June contains the following information about the Franco-Russian loan to China:—

St. Petersburg, June 11.

The news of a Chinese loan guaranteed by the Russian Government first became known here from the newspapers of Paris and London. The first information about it in the London Press was privately telegraphed to St. Petersburg in cipher. Not a word on the subject appeared in the despatches from abroad published by the Russian newspapers. The latter, of course, knowing nothing whatever about it, have simply reproduced the news on the arrival of the foreign journals, and in their surprise have thus far abstained from all comment and criticism. Ever since M. Rothstein, the bank director and trusted adviser of the Minister of Finance, went to Paris a fortnight ago, it was felt that negotiations of some kind were proceeding, and the communications which were known to be going on between the Chinese Embassy and the Finance Ministry here gave support to the supposition that such negotiations were on the subject of a Chinese loan, in which it was well-known that M. Witte was anxious for Russia to take part. Nobody, however, was in the least degree aware that Russia was negotiating the loan on her own account by means of a guarantee apart from other Powers, and, in fact, M. Witte himself, when sounded on the matter, denied that the Russian Government had anything to do with it. These facts will give some idea of the secrecy observed in St. Petersburg.

Although there is naturally no official confirmation, the best-informed financial circles here, now that the secret is out, have been able to ascertain that the loan is a fact and that the Russian Government will give its guarantee. In some quarters there is still some hesitation in calling it an accomplished fact before the final ratification of the arrangement. The loan will probably be issued at the very favourable figure of 98½, the total amount being, as already stated, £16,000,000 sterling, and the rate of interest 4 per cent. It is expected that when this amount is paid over to Japan, the latter will withdraw the last of her troops from the Liao-tung Peninsula.

It is considered on all sides certain that Russia does not guarantee this Chinese loan for nothing. Either a part of Manchuria for the Siberian railway or the unconditional surrender of the Chinese Pamir to Russia may be the possible equivalent. If it turns out to be a new railway route through Manchuria or a new port for the Russian fleet, Russia herself will be disturbing the *status quo ante bellum* on the Chinese mainland which she has made Japan promise to restore. In any case, this Russo-Chinese loan is regarded at St. Petersburg as the greatest stroke of political finance since Lord Beaconsfield surprised the world by the purchase of the Suez Canal shares.

June 12.

The *Novoe Vremya*, the only newspaper that as yet ventures to comment independently on the Chinese loan, says:—

"The foreign Press is very near to the truth in its remarks on the Russian guarantee of the Chinese loan, the question of which was raised soon after Japan's surrender of the Liao-tung Peninsula. The discussion abroad as to whether or not Russia has acted disinterestedly is vain and useless. It is, of course, the effect of vexation and chagrin."

As soon as the Russian Press feels free to express itself on this subject we may expect an outburst of jubilant satisfaction. Port Lazareff con-

tinues to be referred to here as the most probable aim of Russia's policy.—*Our Own Correspondent.*

Paris, June 12.

Nothing was definitely known on the Paris Bourse to-day regarding the new Chinese loan guaranteed by Russia, but it was generally reported that it was to be a Four per Cent. Gold loan to the amount of 375,000,000 fr. or 400,000,000 fr. The price of issue, it was stated, would be about 98.—*Reuter.*

Paris, June 13.

I have received the following details in regard to the Russo-Chinese loan, which supplement the information given in *The Times* of to-day. The loan is for £16,000,000, of which the Russian National Bank takes £6,000,000. A sum of £9,200,000 is to be taken by six different parties under the direction of MM. Hottinguer et Cie. The first idea was to hand over the direction of this operation to M. Stern, chairman of the Banque de Paris, but the antagonism seemingly existing between him and a financial power which there is a wish not to alienate led to the choice of M. Hottinguer, who has no enemies. The five banking and finance houses associated with MM. Hottinguer et Cie. in the loan are the Banque de Paris, the Comptoir d'Escompte, the Société Générale, the Crédit Lyonnais, and the Crédit Industriel.

From what is being said to-night at an hour too late for me to insure absolute accuracy in the figures given, although I am certainly not far from the exact truth, the Russian National Bank is to take £6,000,000; MM. Hottinguer et Cie., with the Banque Ottomane, £2,000,000; the Banque de Paris, £2,000,000; the Comptoir d'Escompte, £1,500,000; the Société Générale, £1,200,000; the Crédit Lyonnais, £2,000,000, and the Crédit Industriel, £500,000; making altogether £15,200,000. Besides this, £700,000 or £800,000 are reserved for eventual participants, and, indeed, in case such participants should demand a larger share, 16 per cent. of the £9,200,000 subscribed by the Hottinguer syndicate is to be assigned them, making in round numbers £2,000,000. This reserve is to allow of the participation of MM. Rothschild or of Germany or of England. But the Rothschilds, who seem to be husbanding themselves for the big loan for the war indemnity, have apparently declared that they will have nothing to do with the present loan. As for the Disconto Gesellschaft of Berlin, which has an understanding with the Comptoir d'Escompte, and has been sounded by the latter, it has declined to participate in this loan, so that it remains to be seen whether England will wish to participate in it or not. But it does not seem probable that the Russian National Bank, which takes £6,000,000, is likely to abandon 15 per cent. of it, or £900,000, to outsiders, which would make the share reserved for eventual participants £3,000,000. It is thus evident that French financiers, considering this loan as a Russian loan at a favourable rate, believe that it will be readily taken up by the public, for they accept the contingent abandonment of the 15 per cent. as a sacrifice.

As to the price of issue, the first idea was, I believe, a 3 per cent. loan at 75, thus yielding 4 per cent., with repayment at par. It was, however, considered difficult to float a Chinese 3 per cent. loan even at 75, besides which this would have excluded the possibility of conversion hereafter. The next idea was a 3½ per cent. loan at a price to be fixed upon; but this was too much like the last French conversion, and was not adopted. A 4 per cent. loan was then resolved on, which the syndicate will obtain at 94 and which they will dispose of at 98½. One per cent., however, on the selling price will be assigned to the Russian National Bank or its syndicate for expenses, particularly for stamp duty, so that the Hottinguer syndicate will make a profit of £720,000. The loan is really for £15,000,000, but £16,000,000 are issued to meet the 7 per cent. below par, at which it is sold to the syndicate.—*Our Own Correspondent.*

Berlin, June 13th.

Judging from the utterances of the semi-official Press, influential circles here are not inclined to attach any great political importance to the conclusion of the Russo-Chinese loan. It is argued that the loan is a private transaction between Russia and China, and that Germany would scarcely have gained any advantages, commercial or otherwise, by her participation. The organs of the financial world, however, are by no means satisfied by such arguments, and maintain that the operation took German diplomacy by surprise, and thereby inflicted upon it a defeat. Little credence also is given to the statement that by means of the loan Russia is to receive back money she advanced to China during the war. "The German financial world," says the *Börsen Courier*, "no less than German diplomacy, has been taken unawares by the conclusion of the loan, and we

may add, in a very unpleasant manner. It is possible that German finance was subsequently offered a share in the business, but it was certainly not consulted during the preliminary negotiations."

—Our Correspondent.

With reference to the above, *The Times* of June, 13th writes:—

The Russo-Chinese loan, arrangements for which have just been concluded in Paris, is for £16,000,000, or 400,000,000 francs. The rate of interest is to be 4 per cent., and the security is, first, the Customs revenue of the treaty ports, and secondly, the absolute guarantee of Russia. The loan is to be redeemable in 35 years and inconvertible for 15 years. It has been taken by banks and financial houses in Paris and St. Petersburg of a position which, in the ordinary course of things, must insure its success in the market. It will be issued to the public probably towards the end of the month in the capitals named and in Amsterdam. Our St. Petersburg Correspondent names 98½ as the probable price of issue, while in Paris 98 per cent. has been mentioned. At all events this financial operation has been practically carried through by Russia in spite of some apparent difficulties of no inconsiderable kind, and the Tsar and his advisers must be complimented on the way in which the business has been managed. Whether any of the other parties either to the transaction itself, to the diplomatic operations from which it sprang, or to the war which first set the diplomatists in motion are to be congratulated equally with Russia on the ultimate issue may be perhaps more doubtful. . . . It will be seen from our St. Petersburg despatches that different territorial acquisitions are mentioned in that city as the possible fruits of this marked victory of Russian diplomacy. . . . Without questioning that Russia may possibly look for some such immediate reward for her successful exertions on behalf of China, we are inclined to fancy that the real return which she expects is larger, more remote, and less tangible than any of those discussed by the gossips of St. Petersburg. . . . The solid advantage which Prince Lobanof and M. de Witte have secured for their country is, as we have already pointed out, in the hold which the position of creditor will give Russia over China. The exact purposes for which Russia may hereafter choose to exert pressure over her debtor are probably as yet quite unknown to her own statesmen. They foresaw, however, that a lever by which to extort future concessions from her would in all likelihood be most valuable to them in the future. They saw their chance of grasping such a lever, and they have seized it with the insight and the promptitude of statesmen. It is quite as likely as not that they will be in no immediate hurry to employ it. They will let China flounder on, or give her further help in her financial embarrassments, which may be aggravated by this hypothecation of her best securities, as they think best. Meanwhile, they will go on with the Siberian railway and make fresh additions to their fleet. The greatness of the policy lies in the fact that it is continuous and deliberate. It has its ends clearly fixed. It moves forward towards them steadily. It does not greatly concern itself whether it attains them a generation sooner or later. Our own statesmen might well take a lesson. Our policy is too often deficient in those qualities by which Russian policy is distinguished.

INTERNATIONAL LAW IN THE WAR BETWEEN JAPAN AND CHINA.

The great war in the extreme East has lasted not quite ten months.¹ It has destroyed the reputation of one Empire, and made that of another. In endless ways it has been full of instruction, but I propose to deal with it only in so far as it has illustrated the rules of International law. To the student of this science an outbreak of hostilities is always interesting. He knows that in war-time the questions with which he is concerned come thicker and faster than in time of peace, and that he can turn for their solution, either directly or by analogy, not merely to the often ill-defined practice of nations, or the frequently uncertain results of diplomatic discussions, but, in many cases, to clear and authoritative decisions of Courts of Prize.

The law of war, as is well-known, consists of two great chapters, dealing respectively with the relations of one belligerent to the other, and with the relations of each belligerent to neutrals.

The former topic has been under discussion for

at least six centuries; for, not to mention classical antiquity, the literature of it may be traced from the canonists and casuists, through the dreamers of a law of Nature, down to the positive systems of the present day. The latter topic is comparatively modern, dating, as a clearly defined subject of separate inquiry, only from the eighteenth century; though it has already come far to surpass in complexity and importance the law of Belligerency.

I propose to call attention to some points in which each of these departments of International law has been illustrated by the war which has just been brought to a close. But, first of all, a word or two upon the applicability of International law to the nations which have been engaged in this combat; a question upon which some very random observations have appeared in the public press.² Are China and Japan, with reference either to one another or to other Powers, subject to the duties which are recognised as subsisting between the States of Europe? We come here upon a large question, no less than the essential character of International law, and the sphere of its operation. According to the older theory, no doubt, the law of Nations was the law of Christendom; as little applicable to infidels as was the "common law" of the Greek cities (*τὰ κοινὰ τῶν Ἑλλήνων πόλεις*) to societies of barbarians. The Reformation, by breaking up the religious unity of Europe, obliged the jurists of those days to look less and less to religion as the test of subjection to what was later described as the "public law of Europe," and of membership of the "Family of Nations." It came to be understood that the members of this "Family" are the States of Western Europe and their derivatives in North and South America, as sharers not so much in a common religion as in a common civilisation and stock of moral ideas. That any other States possess these qualifications is not to be presumed, but needs to be established from the special circumstances of each case. The accession of the Oriental races to the law or "concert" of Europe may be taken to have begun by the formal admission into it of the Ottoman Empire by the Treaty of Paris of 1856. Since that date, the maintenance of permanent diplomatic intercourse between the European Courts and several Powers of the remoter East, together with the increasingly large number of Treaties made with such Powers, and well observed by them, have accustomed us to regard these new-comers as belonging to the claimed circle; though, perhaps, as admitted to it only on probation. Such might seem to be the position of Japan; but such could hardly be said to be the position of China; for China is far behind Japan in readiness to assimilate the ethical ideas of the West, or to enter into the network of Treaties which so much facilitates the social life of the world.³ In particular, she has neglected to accede to the Geneva Convention for the treatment of the wounded, to which Japan long ago became a party; nor have her courts and codes any pretension so to satisfy European requirements as to justify the Western Powers in resigning, as they are about to do in the case of Japan,⁴ the extra-territorial privileges enjoyed in the Empire by foreigners. Antecedently to the war, therefore, we should have said that Japan was admitted on probation, while China was only a candidate for admission, to the "Family of Nations." Let us now see what further light has been thrown upon the respective qualifications of the two Empires by subsequent events; and first with reference to the law of Belligerency, where we have to consider: I.—The declaration of war. II.—The conduct of warfare. III.—The *commercium belli*, i.e., such quasi-friendly transactions as occur between enemies.

I.—War was formally declared by Japan on 31st August, 1894, and the challenge was accepted in a counter-declaration issued by China on the following day. But hostilities were already in progress. On 25th July, a Japanese squadron had been engaged with Chinese men-of-war which had been conveying transports carrying reinforcements for Asan, in Korea; and Japanese troops had captured Asan itself on the 29th. A state of war existed therefore between the two countries as early as 25th July; and there is nothing irregular in a war thus commenced. It has long been a settled doctrine of International law that a declaration, though laudable and for several purposes convenient, is not an essential preliminary to legi-

¹ E.g. in the *Saturday Review*, 11th August, 1894: "There was no legal war." The code of International law does not apply to barbarians, who have nothing of civilisation beyond a chatter of words and a supply of deadly weapons." Cf. even the *Law Journal*, 1894, pp. 478, 513, 516.

² E.g. the "universal conventions" as to weights and measures, posts, and telegraphs.

³ Great Britain, by Treaty with Japan of 16th July, 1894, provides for the cessation of such privileges after five years from that date. The United States and Italy have already followed suit.

itimate warfare, and that, even when issued, it may be followed by acts of hostility without an interval.⁵ For proof that practice has been in accordance with theory, it will be enough to refer to the historical sketch of the subject which was prepared for the War Office by Colonel Maurice, when the possibility of this country being invaded without notice by means of a Channel Tunnel was under discussion.

II.—With reference to the conduct of warfare, China has not accepted the customs, nor has she bound herself by the express conventions, which prevail among civilised nations. The signal made by Admiral Ting, before the battle off the Yalu, "If the enemy shows the white flag, or hoists the Chinese ensign, give no quarter, but continue firing at her till she is sunk,"⁶ need, therefore, occasion no surprise. Sung, the Imperial Commissioner, is stated to have posted notices in Northern Manchuria, offering 10,000 taels for the decapitation of three Japanese generals;⁷ and it seems to be established that the Chinese commanders habitually offered and paid rewards for the heads of prisoners,⁸ who might indeed be accounted fortunate if they escaped a fate far worse than instantly inflicted death. It was the torture and mutilation of those Japanese who happened to be made prisoners during the operations against Port Arthur which stung their fellow-countrymen into madness, and explains, though nothing can excuse, the massacres which were carried on by them for four days after the place was taken.

With the lamentable exception just mentioned, the conduct of the operations of war by the Japanese seems to have been in accordance with the best European practice, and with the Proclamation addressed to the army on 22nd April, 1894, by Count Oyama, the Minister for War. This remarkable document lays down that "belligerent operations being properly confined to the military and naval forces actually engaged, and there being no reason whatever for enmity between individuals, because their countries are at war, the common principles of humanity dictate the succour and rescue should be extended even to those of the enemy's forces who are disabled either by wounds or disease." It goes on to state that Japan became a party to the Geneva Convention ("more commonly called the Red Cross Association") in June 1886, and that "her soldiers had already been instructed that they are bound to treat with kindness and helpfulness such of their enemies as may be disabled by wounds or disease." China, not having joined the Convention, may behave badly, "but nevertheless her disabled must be succoured, and her captured kindly and considerately treated."⁹

It may be worth while to mention *seriatim* the points in which the Japanese conduct of warfare may be tested by the rules of International law.

1. There seems to have been no employment of privateers. As against China, a non-signatory of the Declaration of Paris, this would have been lawful for Japan, though herself a signatory since 1886.¹⁰

2. There has been no complaint of any violation of the St. Petersburg Declaration on the part of the Japanese. The Chinese are, however, accused of firing explosive bullets.

3. The Japanese Government seems to have taken some precautions against the employment of savage auxiliaries, by prohibiting the enlistment of those two-handed swordmen the "Samurai." Some of these people, however, accompanied the troops in the guise of coolies, and have been guilty of a certain amount of wanton cruelty.¹¹

4. The bombardment of Tung-chow by a Japanese squadron, as a feat, in January last, was complained of by the missionaries, on the ground that it is an open town. But there seems to be no doubt that it is defended by forts, which replied to the enemy's fire.¹²

5. The treatment of peaceful inhabitants and foreigners in places occupied by the Japanese seems to have been praiseworthy. Thus, when Kinchow was taken, an officer was stationed in every store to protect the proprietor from soldiers

¹¹ See an article in the *North American Review* for March, 1895, by P. Villiers, special correspondent of the *Standard*.

¹² *Times*, 19th March, 1895.

and coolies, and the Japanese governor of the town fed hundreds of Chinese daily.¹³ A special guard was posted over a British missionary found in one of the houses during the street fighting at old Newchwang;¹⁴ and after the taking of Yingkow, on 6th March, 1895, protection was assured to all law-abiding citizens, and six hundred soldiers were detailed to safeguard the foreign residents.

6. Quarter seems, as a rule, to have been freely granted to non-resisting combatants. It is not established that the *Naniwa* continued to fire, as was alleged, upon the sinking *Kowshing*, and upon the troops and sailors who had taken to the boats or had leapt into the water to avoid sharing her fate. At Port Arthur, for once, there is no doubt that the behaviour of the Japanese was detestable. Much may be pardoned of what occurred when the stronghold was first entered by its assailants. If a certain number of non-uniformed coolies, or of soldiers who had thrown off their uniforms, received short shrift, when found with rifles in their hands, what was done was not without the sanction of recent European precedent. But unfortunately the Japanese, officers and men alike, were carried far beyond what could be excused even by their finding the mutilated remains of their tortured friends exposed on the gateway of the town.

For four days, after the first, the massacre of non-combatants, of women, of children, was continued in cold blood, while European military *attachés* and special correspondents sickened at the wholesale murders and mutilations, which they could do nothing to prevent.¹⁵ It is said that at last but thirty-six Chinamen were left alive in the city. They had been spared only to be employed in burying their dead fellow-countrymen, and each was protected by a slip of paper fastened in his cap, with the inscription: "This man is not to be killed."¹⁶

In pleasing contrast to all this, is what occurred upon the capture of the sister naval arsenal at Port Arthur, Wei-hai-wei. The Chinese troops found in the fortress were dismissed in safety, as were the foreigners who had been assisting in the defence of the place, with the exception only of an American who had been arrested undersuspicious circumstances at Kobe, but released on giving his parole to return forthwith to the United States.

So, after the capture of Makung in the Pescadores, the Chinese officers were sent to Japan as prisoners of war, but the rank and file were despatched in junks to the mainland, there to be set at liberty.

7. In 1886, Japan gave in her adhesion to the Geneva Convention for the treatment of the wounded,¹⁷ and in the same year a society which had been founded in 1877, on the occasion of the Satsuma rebellion, for the better relief of the sick and wounded, enemies as well as friends, was reorganized under the patronage of the Mikado, and formally enrolled in a list of Red Cross Societies, whose head-quarters is at Geneva. Many ladies of high rank have qualified in it as nurses, it has thousands of subscribers, and it possesses fine hospitals at Hiroshima, Osaka, and Tokio, where such of the Chinese wounded as could be moved so far have received every kindness and the best medical attendance.¹⁸

The Japanese had no opportunity of conforming to the prescriptions of the Geneva Convention which relate to the surgeons and field hospitals of the enemy, since no such functionaries or institutions seem to be known to the Chinese army.

III.—The most rudimentary, and therefore the longest and most generally accepted, principles of International law, are those which teach the sanctity of ambassadors, the respect due to a flag of truce, and the good faith which is required in the performance of such agreements as may be entered into between enemies. "Etiam hosti fides servanda."

Little fault is to be found with either belligerent with reference to these principles, except that the Chinese are said to have fired on a flag of truce sent to inform them of the conclusion of the armistice. When, at the outbreak of the war, the departing Japanese minister was insulted by offensive cries and pelted with mud, by a disorderly mob of soldiers, while embarking with his suite at Taku, the Chinese authorities lost no time in expressing their regret, and in punishing the offenders.

The Japanese Government, though it refused, and very properly, to treat with Mr. Detring, and subsequently with two Chinese envoys, as being imperfectly accredited, received the plenipotentiary, Li Hung-chang, with every mark of friendly deference, and at once opened negotia-

tions with him, at the little town of Shimonoseki, which had been selected for the purpose on account of its peaceful character. Greater precautions should, as the event proved, have been taken for his safety, but, when, on the 25th March, an attempt was made on the life of Li Hung-chang, by a fanatic or lunatic who fired at him in the street, the would-be assassin was promptly tried, and sentenced to penal servitude for life; the police officials who had failed to make the outrage impossible were dismissed; and the Mikado, not content with tendering the fullest apology to Li Hung-chang, and sending his own medical attendants to see to the wound, proceeded to grant to China, what had previously been refused except on prohibitively severe terms, an unconditional armistice, extending over the greater part of the scene of military operations.

The armistice was scrupulously observed, and the peace negotiations, down to the signature of the Treaty of Peace on 17th April, and its ratification on 8th May last, proceeded as correctly on both sides as could have been the case in Europe.

The questions raised by the relations of belligerents one to another are less complex and delicate than those which arise between belligerents and neutrals. Great Britain announced her neutrality in the late war by a proclamation issued on 7th August, 1894, and her example was promptly followed by the other maritime Powers of the West. The presumption is, of course, in favour of neutrals being entitled to carry on their trade, or otherwise pursue their ordinary avocations, as if the war, to which they are no parties, were not being waged. This attitude of aloofness, has however, become subject to numerous modifications, most of which are indeed inevitable. The ordinary rights of states need, in many cases, to be specially re-defined when those states, by the outbreak of war between their neighbours, come to occupy the position of "neutrals;" and states which are so placed become *ipso facto* subject to a set of duties which have no existence in time of peace.

A few words upon such of the rights of neutrals as have made themselves felt during the late war. The sovereignty of the neutral over territory including its territorial waters, implies the right to prohibit hostilities taking place there. No attempt was made to infringe the British right over Hong-kong, or to commit acts of war within its waters. An engagement seems even to have been given by the Japanese that they would not attack, and by the Chinese that they would not by torpedos obstruct the access to, a port in which all foreigners are so interested as Shanghai. The persons and property of neutrals in China have been respected alike by the Chinese and by the invaders. It is true that a few days after the outbreak of the war, a British vessel, the *Chung King*, while lying at T'ong Ku, was boarded by a number of Chinese soldiers, who seriously maltreated sixty Japanese, men, women, and children, who happened to be on the ship; but an ample apology for the occurrence was made by the Viceroy to the British Consul.¹⁹ The arrest, on a French mail steamer in Japanese waters at Kobe, of two American citizens, whose papers showed that they were proceeding to China to assist the Government there with certain military inventions, though a novel proceeding, was probably justifiable. The neutral right to continue diplomatic intercourse with both belligerents was not interfered with on either side during the war.

But the duties of neutrals are far more prominent than their rights. In the first place, a state by becoming neutral is precluded from certain courses of action which would ordinarily be open to it. Secondly, a neutral state is obliged to prevent certain classes of acts with which, but for the war, it would have nothing to do. Thirdly, a neutral state is obliged to acquiesce in penalties being inflicted by the belligerents upon its subjects, for acts which, apart from the war, would be perfectly innocent. Let us see how far these several heads of duty have been illustrated by what has lately occurred.

I.—(1) A neutral state is, *ex vi termini*, precluded from following its armed forces, in any way, to take part in the hostilities. A salute fired by Admiral Fremantle in honour of a Japanese man-of-war is alleged to have given notice to the Chinese of what was intended to have been the secret approach of a Japanese squadron to the harbour of Wei hai-wei. This was unfortunate, and caused much irritation in Japan till the accidental character of the occurrence became thoroughly understood. (2) A neutral state, though it may not furnish troops to either belligerent, is not compromised by assistance rendered by individuals not belonging to its own army or navy, to one or the other combatant. A good many Europeans seem to have been serving China during the late war, but Germany was not re-

possible for Major von Hanneken, nor we for Admiral Maclure.²⁰ (3) A neutral state is bound to abstain from selling its ships of war to either belligerent. If, therefore, as was alleged, the Chilean cruiser, *Esmeralda*, was sold to Japan in November last, or if, as was also alleged, half of the Chilean fleet was sold to China, a gross violation of neutral duty occurred.

II.—A neutral state is bound to prevent certain acts by persons, or within territory, subject to its control. It is, for instance, bound to prevent its territory from being used as a base of hostile operations. So the British proclamation of neutrality brought into force the two "twenty-four hours" rules in all ports of the Queen's dominions. Under these, no Chinese or Japanese war-ship could, under ordinary circumstance, remain in such ports for a longer time than that mentioned, nor could she leave such a port within a shorter time after the departure from it of a warship or merchant vessel belonging to the other belligerent. Again, although a neutral government is not bound to prevent the export by its subjects of munitions of war, to be used by the belligerents, it is bound, according to modern views, to prevent the export of ships of war to be thus used. As to the limits of this duty, so much discussed with reference to the *Alabama*, there is still much doubt; but, in order to be on the safe side, neutral governments are in the habit of taking, under "Foreign Enlistment Acts" or similar pieces of legislation, powers considerably in excess of their International obligations, against a trade which so closely approximates to the sending forth from their shores of a hostile expedition against a friendly Power. An armed vessel, the *Tatsuta*, built in the Tyne for Japan, got clear away before the war was declared; but during the war so close a watch was kept by our customs authorities upon all building yards, that no accession to the naval strength of either China or Japan was possible from that quarter. So, for instance, when a vessel called the *Diogenes*, built at Blackwall, and evidently fitted for war service, was about to proceed to the mouth of the Thames for her speed trial, the Foreign Office, which had been kept informed of the progress of the ship, communicated with the Admiralty, which sent a detachment of thirty blue-jackets and marines to go on board of her, and she did not leave British waters.

III.—The duty of a neutral power to acquiesce in belligerent interference with the trade of its subjects relates to three main topics, viz., blockade, contraband, and belligerent service. The neutral power is under no obligation to prevent its subjects from engaging in the running of blockades, in shipping or carrying contraband, or in carrying troops or despatches for one of the belligerents; but, on the other hand, neutral subjects, so engaged, can expect no protection from their own Government against such customary penalties as may be imposed upon their conduct by the belligerent who is aggrieved by it. With a view to the infliction of such penalties, a belligerent is armed with the right of "visit and search," i.e. his cruisers may stop and overhaul any merchant vessel reasonably suspected of any of the offences in question, may arrest her, and may bring her in with a view to obtaining her condemnation by a Prize Court.

No blockade seems to have been established during the late war, but the question of contraband from time to time became prominent. There are many objects, such as rifles and gunpowder, as to the contraband character of which there can be no doubt; but it is not unusual for a belligerent to announce, in a proclamation issued at the outbreak of the war, what other objects he intends to include in the prohibited list. Japan seems to have made such a proclamation with reference to lead and coal, but to have promised not to interfere with the carriage of rice. No similar announcement was made by China, although, early in September, a British ship bound for Japan, on touching at Shanghai, was not allowed to proceed on her voyage till she had discharged a quantity of chlorate of potash which was part of her cargo.²¹ On the 21st of the same month a Chinese cruiser stopped the British steamer *Pathan*, in Formosa Channel, on suspicion of carrying munitions of war, and took her into Keelung for further examination.²² Subsequent searches for contraband have, of course, been more usually made by the cruisers of Japan. In the course of March last several steamers, under the British and the German flags, were stopped and searched by Japanese fast cruisers in the Gulf of Pe-chi-li. These proceedings were, in some quarters, described as "high-handed," but were perfectly legitimate. On 10th April the British steamer *Yiksang*, with 220,000 cartridges on board, shipped

²⁰ Lieutenant Bouchier, R.N., who had been lent to the Chinese Government lent its service, under instructions from Admiral Fremantle.

at Shanghai, as was alleged, in good faith as "bamboo steel," was seized at Taku and carried to Japan, where her case was speedily brought before a Prize Court, sitting at Sasebo, which ultimately released her. It must be noticed that, quite early in the war, a system of Prize Courts, of first instance and of appeal, was duly called into existence in Japan, and a body of rules of procedure, worthy of the best days of Doctors' Commons, was promulgated for their guidance.²³ I have asked a friend, who is a member of the Japanese Government, to send me any available reports of Prize cases. The cases have probably not been numerous, and can have hardly afforded an opportunity for the appearance of a Japanese Lord Stowell.

The remaining ground for the arrest of a neutral vessel by a belligerent, that she is engaged in the service of the enemy, by carrying troops, officers, or despatches, was illustrated by a case which occurred at the very beginning of the war. On July 25th 1894, the relations between China and Japan with reference to Korea being very strained, and several transports conveyed by men-of-war having already landed reinforcements for the Chinese forces at Asan, in that country, a Japanese squadron, cruising off the island of Shō-pai-ou, on the Korean coast, was attacked about 7 a.m. by Chinese warships returning from Asan. About 9 a.m. the *Kowshing*, a British vessel, carrying further Chinese reinforcements for Asan, appeared on the scene, whereupon the *Naniwa*, one of the Japanese cruisers, turned back from pursuing the Chinese men-of-war and signalled to her to stop. A boat from the *Naniwa* then boarded the *Kowshing*, and finding that she was carrying 1,200 Chinese troops, with several generals, including the German Major von Hanneken, inquired of the captain whether he would peaceably follow the *Naniwa* to Japan. The Captain said, "Yes. I am powerless to refuse, as you are a man-of-war." The Chinese officers, however, declined to allow this to be done, and made preparations for shooting Captain Galsworthy and his English officers should any attempt be made to take the ship to Japan. After some more parleying, and a final signal from the Japanese to "quit the ship immediately," the *Naniwa*, between 12 and 1 p.m. fired a torpedo and then a broadside at the *Kowshing*, exploding her boilers, and eventually sending her to the bottom. All on board who were able to do so took to the boats or leapt into the water, and most of the Europeans were picked up by the boats of the *Naniwa*. The first arrival of this news in England produced a certain amount of excitement. Leading articles were freely garnished with such phrases as "insult to the British flag," "ample apology to be exacted from Japan," "wanton outrage in time of peace," "full compensation for the owners and for the relations of such of the English officers and engineers as may have perished." It was some time before the facts of the case were clearly ascertained,²⁴ and still longer before the public was educated in the legal principles applicable to the occurrence. It is, however, now, I believe, pretty well understood that the views asserted from the first by Professor Westlake and myself were correct.²⁵ As early as August 8th, I maintained, in a letter to *The Times*, that a state of war may well exist without declaration; that a neutral vessel, after notice of a war so existing, is liable, if engaged in a forbidden traffic, such as the carriage of troops for a belligerent, to be arrested and carried in for condemnation by a Prize Court, and that, if she refuses to allow herself so to be carried in, her submission may be compelled by the use of so much force as may be necessary. Applying these principles to the case in question, I went on to say:

The *Kowshing*, therefore, before the first torpedo was fired, was, and knew that she was, a neutral ship engaged in the transport service of a belligerent. (Her flying the British flag, whether, as a *ruse de guerre* or otherwise, is wholly immaterial.) Her liabilities, as such ship, were twofold:—

1. Regarded as an isolated vessel, she was liable to be stopped, visited, and taken in for adjudication by a Japanese Prize Court. If, as was the fact, it was practically impossible for a Japanese prize crew to be placed on board of her, the Japanese commander was within his rights in using any amount of force necessary to compel her to obey his orders.

2. As one of a fleet of transports and men-of-war engaged in carrying reinforcements to the Chinese troops on the mainland, the *Kowshing* was clearly part of a hostile expedition, or one which might be treated as hostile,

which the Japanese were entitled, by the use of all needful force, to prevent from reaching its destination.

The force employed seems not to have been in excess of what might lawfully be used, either for the arrest of an enemy's neutral transport or for barring the progress of a hostile expedition. The rescued officers also having been set at liberty in due course, I am unable to see that any violation of the rights of neutrals has occurred. No apology is due to our Government, nor have the owners of the *Kowshing*, or the relatives of any of her European officers who may have been lost, any claim for compensation.

Our review of the course of recent events would seem to lead to the following conclusions. Japan, apart from the lamentable outburst of savagery at Port Arthur, has conformed to the laws of war, both in her treatment of the enemy, and in her relations to neutrals, in a manner worthy of the most civilised nations of Western Europe. China, on the other hand, has given no indication of her acceptance of the usages of civilised warfare; and, although she was prepared to exercise the rights conceded to belligerents against neutral commerce, took no steps, by establishing prize courts, to secure vessels engaged in it from improper molestation. This is the more to be regretted, because for more than thirty years past International law has been studied at Peking. The works of Wheaton, G. F. de Martens, Woolsey, and Bluntschli, as well as the *Manuel des Lois de la Guerre* of the "Institut de Droit International," have been translated into Chinese; and the translator, Dr. Martin, is Professor of the Law of Nations at the Imperial College of Tung-wen. But the Chinese have adopted only what I have already described as the rudimentary and inevitable conceptions of international law. They have shown themselves to be well versed in the ceremonial of embassy and the conduct of diplomacy. To a respect for the laws of war they have not yet attained,

T. E. HOLLAND,
Chichele Professor of International Law and
Diplomacy in the University of Oxford.

LATEST TELEGRAMS.

["SPECIAL" TELEGRAM TO "JAPAN MAIL."]

Hakodate, July 23.

Her Majesty's ships *Centurion*, *Edgar*, *Undaunted*, *Spartan*, *Leander*, *Alacrity*, and *Porpoise* left this port to-day for Ishikari Bay.

(FROM N.-C. DAILY NEWS.)

London, July 17.

A Parsee, Mr. Bhowmagri (U.) has been elected for Bethnal Green, and Mr. Naoroji (L.) has been unseated for Central Finsbury. Mr. James Keir Hardie (Lab.) has been unseated at West Ham, and the Rt. Hon. Sir John T. Hibbert, (L.) at Oldham.

Three assassins stopped the carriage of M. Stambuloff, formerly Premier of Bulgaria, at Sofia, and shot and stabbed him, almost severing both his hands which had to be amputated afterwards. M. Stambuloff's condition is very grave.—*Daily News*.

(FROM JAPANESE PAPERS.)

Osaka, July 24.

The Minister of War has instructed the Acting Commander-in-Chief of the Fourth Army Division to appoint three officers and six soldiers, who will join the company of ten officers and twenty-one men, who are to be dispatched to Taku to return the Chinese prisoners to the Chinese Government.

Kobe, July 24.

The captured war-ship *Chen-yuen* put into this at 4 p.m. yesterday, and leaves for Yokosuka at 11 a.m. to-morrow. As this is an infected port no spectators were allowed to visit the ship.

Shimonoseki, July 24.

A severe gale has been blowing since last night, and many boats were wrecked at Moji.

Matsuyama, July 24.

Five cases of cholera have been reported among the soldiers just returned from China.

Fenghwang, July 23.

Over 130 gendarmes, in command of Sub-Lieutenant Arakawa, arrived here from Chinchow to-day.

Sōul, July 23.

The Duke of Abruzzi has arrived here, and the Ministers of State and Foreign Representatives have visited his hotel.

The departure for home of Mr. Ishizuka, a Japanese adviser to the Korean Government, has been postponed for some time.

Toyama, July 4.

Members of the Prefectural Assembly have met to confer upon the alleged defective civil engineering works on the Joganji river, and their deputies have started to visit the district.

Kuchinotsu, July 24.

A severe gale accompanied by heavy rain prevails here to-day.

Osaka, July 25.

Heavy rain commenced to fall here at 10 o'clock last night, and continued for an hour. The wind increased to a gale, and at 8 o'clock was blowing furiously. The wind continued all the afternoon. The quantity of rain that fell was 23.3 millimètres at 7.10 a.m., and the velocity of wind was 218.3 mètres at 8 a.m.

Takamatsu, July 25.

A violent storm occurred here last night, and some amount of damage was done.

Matsuyae, July 25.

A heavy rain and strong winds visited this last night, and various rivers are very full.

Okayama, July 25.

A strong gale passed over this last night, roofs being blown away and fences overthrown. Damage was also done to crops.

Nagoya, July 25.

A serious storm occurred here last night, and more or less severe damage was done to crops.

Gifu, July 25.

A violent gale swept over this last night. The weather is very unfavourable, and great anxiety is being entertained by the farmers.

Osaka, July 25.

Ninety-one cases of cholera were reported here yesterday.

Okayama, July 25.

Owing to high waves which came up with the storm, several boats were lost and other damage was done on the beaches of Oda and Asaguchi Districts. A constable of the water police was injured and a seaman drowned. No serious damage is expected to have been done to the embankments.

Hiroshima, July 25.

The storm began here at 1 p.m. yesterday, and at 7 p.m. the wind had risen considerably; at 11 p.m. it reached its highest. High waves broke on the shore, and several rivers overflowed, some houses being submerged and others damaged or destroyed. The storm had abated somewhat at midnight. Many bridges were ruined. Much damage is expected to have been done in the rural divisions.

Surgeon-General Sato and 56 other surgeons and nurses left here this morning for Itozaki, to render assistance to the disabled soldiers, who were in the railway accident in that district.

Hiroshima, July 24.

Six buildings attached to the Third Detached Military Hospital were destroyed, and a patient slightly injured through the storm, but all the others were removed in safety to the other buildings.

Kobe, July 25.

Ten vessels were wrecked in this port last night.

Ujina, July 25.

The military store-house, wharf, railway station, and some houses near the beach were greatly damaged last night.

Itozaki, July 25.

A special train has been dispatched from this station to bring in the unfortunate soldiers. Some 140 men were first brought up to this town, and 70 more were conveyed by the second train. Buildings are being prepared at Matsuhama to house them. Eight remains have been recovered. The total number of soldiers brought here by the 1st and 2nd trains was 334, and a third train was sent out just now (2.45 p.m.).

Some 347 soldiers are now (3.25 p.m.) staying here, of whom 11 are badly, and 7 slightly injured. Six soldiers were drowned, and 10 others are missing. Surgeon-General Sato and others have arrived from Hiroshima.

Onomichi, July 25.

The remains of Ono, the engine-driver, and four others were discovered to-day.

²¹ *Times*, 13th September, 1894.

²² Reuter's telegram, Shanghai, 26th September, 1891.

²³ Set out in the *Japan Weekly Mail*, 25th August, 1894.

²⁴ For a good account of them by Captain S. Eardley Wilmot, R.N., see the *Fortnightly Review* for January, 1895.

²⁵ We were, however, described, in a paper called *Concord*, October, 1894, as "recrudent doctors of law," "backsliding jurists," who "have brought on their own reputations, or on their profession, a scandal and reproach which public opinion will insist on having removed."

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club is closed for the season: and re-opens on Thursday 3rd October.

The Tokyo Chess Club is now closed for the holiday season and will reopen on Friday, 4th October, 1895.

SOLUTION OF PROBLEM No. 186.

WHITE.	BLACK.
1—Q to K B sq.	1—K x Kt (dis. ch.)
2—Q to B 5, mate	1—Q to K 6 (ch.)
2—R x Q, mate	1—Q x R
2—Q x Q, mate	1—R x B
2—Q to B 4, mate.	

Correct answer from Digamma, W.H.S., Shogi, J.D., and E. J. King.
Correct solution of No. 184 received from E.D.

PROBLEM No. 188.

By T. E. EWING.

BLACK.

WHITE.

White to play and mate in two moves.

Mr. Henry Norman, the author of *The Peoples and Politics of the Far East*, writes of the relief which, as a traveller, he found in chess after a severe attack of dysentery. For days subsequently he says, "I travelled propped up on my elephant, passing the time with a book of chess problems and a little travelling chess-board. I cannot too strongly recommend this method to other travellers on monotonous journeys, for often the simplest problem will render one oblivious to the ennui of a whole day."

THE HASTINGS INTERNATIONAL MEETING.

The full programme of this event is a welcome and interesting document. The rules in brief are these:—

1. Play begins August 5th at the Brassey Institute, Hastings, proceeds daily (Sundays excepted) from 1 to 5 and from 7 till 10 p.m., and concludes during the month. Thursday is an off day or for unfinished games to be fought out.
2. There will be one round only, draws counting half.
3. The prizes are fixed at £150, £115, £85, £60, £40, £30, and £20—the first three being already guaranteed, the last four being to some extent dependent upon subscriptions yet to come.
4. The time limit is to be 15 moves per hour; provided, however, that during the first two hours each player makes 30 moves, the terms are complied with. (A wholesome rule, allowing no claim for expiration of time until a player has exhausted two hours, thus giving ample time in the Opening, &c.)
5. Consolation money. An otherwise unsuccessful competitor who may win of first, second, or third prize-winners gets £2 for any such game, or £1 each for any games won of the others.
6. Ties for first prize to be played off; others, if any, to divide. Three won games to decide in case two players tie for first place.

The last mentioned is perhaps the only rule that may give rise to serious questionings; all the rest seem excellent and the great body of chess players throughout the world will hail with satisfaction the fact that one of the most promising events of recent years—the most notable tournament since 1883—is to be held on British soil.

The *Leeds Mercury Supplement* reports that Mr. Steinitz is anxious that the games of the Hastings International Chess Congress should be published in book form at a subscription price of five dollars per copy. He expressed himself as ready to annotate the games, either in England or in America.

He has also said that if sufficient inducements should be offered, he will have no objection to enrol himself as one of the competitors.

Herbert E. Dobell, the secretary of the international tournament, which will begin on August 5th in Hastings, England, writes to *The Tribune* that Lasker, Blackburne, Bird, Gunsberg, Mason, Teichmann, and Tinsley, of England; Tarrasch, Mieses, and Walbrodt, of Germany; Tschigorin, of Russia, and Marco, of Austria, have already entered, and that in all probability Max Weiss and Julius Makovetz, of Austria, will also be found in the ring. As Steinitz is a certain and Pillsbury a probable player, the tournament promises to be the most important ever held.

CHESS IN MELBOURNE.

We (*Weekly Times*) publish a game recently played against Mr. Baynes by Mr. Younkman, one of the country players selected to represent the colony in the forthcoming intercolonial contest. From the manner in which the latter portion of the game is conducted, it is evident that Mr. Younkman is a player of great strength.

GAME No. 301.

WHITE. Mr. G. W. Baynes.	BLACK. Mr. I. L. Younkman.
1—Kt to K B 3	1—Kt to K B 3
2—P to Q 4	2—P to Q 4
3—P to Q B 4	3—P to K 3
4—P to K 3	4—P to Q Kt 3
5—P to Q R 3	5—K B to K 2
6—Q Kt to Q 2	6—Q Kt to Q 2
7—K B to Q 3	7—B to Q Kt 2
8—Q to Q B 2	8—P to Q B 4
9—Castles	9—Q R to Q B sq.
10—P to Q Kt 3	10—Q to Q B 2
11—B to Q Kt 2	11—P to K R 3
12—Kt to K 5	12—Kt takes Kt (a)
13—P takes Kt	13—Kt to Kt 5 (b)
14—B P takes P	14—P takes P (c)
15—B to Kt 5 (d)	15—K to B sq.
16—Q to K B 5 (e)	16—P to K R 4
17—P to K R 3	17—P to K Kt 3
18—Q to K B 4	18—P to K Kt 4
19—Q to Kt 3	19—Kt to R 3
20—B to Q 3 (f)	20—P to K R 5
21—Q to K R 2	21—R to K Kt sq.
22—P to K B 3	22—P to K B 4 (g)
23—P takes Pen pass. (h)	23—B to Q 3
24—P to K B 4	24—P to Q 5
25—P to K 4	25—P takes P
26—Kt to K B 3	26—Q to K R 2 (j)
27—P to K 5 (k)	27—Q takes B (l)
28—Q takes P	28—Q to K Kt 3
29—Kt takes R P	29—Q takes P ch. (m)
30—Kt takes Q	30—R takes Kt
31—K to R sq.	31—K B takes P (n)
32—Q to K B 3	32—B takes Q
33—R takes B	33—R takes B
34—R to K Kt sq. (o)	34—R to K R 7, mate.

(a) This capture appear to be an unpleasant necessity. White has much the better position, and has obtained an excellent game.

(b) This move costs Black at least the privilege of castling. Kt to Q 2 is the correct move.

(c) Leaving open the loss of the exchange.

(d) We are of opinion that this line of play is better than B to B 5, the obvious move, e.g.:—

15.—B to B 5	15.—Kt takes K P
16.—B takes R	16.—B takes B
17.—B takes Kt	17.—Q takes B
18.—Kt to B 3	18.—Q to R 4

And although the exchange ahead, White's advantage is very problematical.

(e) We consider the following line of play wins for White, e.g.:—

16.—Kt to K B 3	16.—P to K R 4
17.—P to R 3	17.—Kt to R 3
18.—P to K 6	18.—P takes P (best)
19.—Q to Kt 6	

And will win in all variations.

(f) P to K 6 is probably best at this point.

(g) An excellent move.

(h) A most imprudent capture.

(i) Premature, R to Kt 6 is much better.

(j) If White had here played Q R to Q sq. followed by R to Q 2, we think the tide would turn in his favour.

(k) From this point Black's play is faultless.

(l) Excellent play.

(m) Following upon his 29th move this beautiful coup is not unworthy of the great Morphy himself. Of course if Q takes Kt ch. mate in two follows.

(n) A blunder. But his game is hopeless.

GAME No. 302.

The following is a pretty little game recently won by Mr. Esling. It was one of a set of nine games which Mr. Esling played simultaneously:—

THE EVANS GAMBIT (IRREGULAR).

WHITE. Mr. Esling.	BLACK. A Bendigo Amateur.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to B 4	3—B to B 4

28—Q to K 3	28—B to K 5
29—R to B 3 (n)	29—K R takes R
30—Kt takes R	30—B takes P ch.
31—K to Kt sq.	31—Q to K 3
32—Q to Kt 3	32—Q to Kt 3 ch.
33—Q to K 3	33—P to Q 5

Resigns (o).

(a) Although Bird is partial to 1—P to K B 4, it is not a good opening, as it leaves the Q P weak.

(b) From's gambit may be here offered, viz.:—1 P to K 4, 2—P takes P—P to Q 3, 3—P takes P—B takes P, with an attacking position for the deficient Pawn.

(c) Changing the opening into a variation of the French; bad for White. 2—Kt to K B 3 is usual.

(d) Very injudicious. 2—P to Q 4, and presently P to Q B 4, is the right course.

(e) Here also P to Q 4 is the move.

(f) Having his forces so well disposed for a King's side attack, he should not have castled K R. In many similar positions the K Kt goes to Kt 5, and if Black try to shift it by P to K R 3, then the effective reply is P to K R 4.

(g) We like Kt to Kt 5 at once.

(h) Shutting the diagonal to the Q, which should now go to K R 5.

(i) This B was to well posted to exchange for an inactive Kt. He should have played 12—R to R 3; if then 12—P takes Kt, 13—Q to R 5—R to K sq., 14—P to B 5—P takes P best, 15—Q B takes Kt P (threatening B takes Kt, Q to R 7, &c.), 15—K to B sq., 16—B to B 6 and wins. *Or, 13—P to B 4—14—P takes P c. p.—R takes P, 15—P takes P with a winning attack.

(j) Owing to White's remissness, the second player now begins and sustains the attack.

(k) Loosening still further his broken P position; 21—Kt to Kt sq., followed by K Kt to K 2, looks all right.

(l) A slip which Black promptly punishes. The R should go to Q B sq.

(m) Well played.

(n) This move quickly loses, but White had no valid defence.

(o) The improved form shown by Mr. T aylour in this game suggests renewed intimacy on his part with the calumet.

GAME No. 304.

The following interesting game was played recently at Board No. 1, in a match between Metropolitan and Sussex:—

PETROFF'S DEFENCE.

WHITE. F. W. Lord (Metropol.).	BLACK. H. W. Butler (Sussex).
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to K B 3 (a)
3—Kt takes P	3—P to Q 3
4—Kt to K B 2 (b)	4—Kt takes P
5—P to Q 4	5—P to Q 4
6—B to Q 3	6—B to K 2
7—Castles	7—Castles
8—P to B 4	8—Kt to K B 3
9—P to K R 3 (c)	9—P to Q Kt 3
10—Kt to B 3	10—P takes P
11—B takes B P	11—B to Kt 2
12—R to K sq.	12—B to Q 3 (d)
13—B to K Kt 5	13—Q Kt to Q 2
14—Kt to K 5	14—P to Q R 4
15—Kt to Q 5 (e)	15—Q to B sq. (f)
16—K takes Kt ch.	16—Kt takes Kt
17—B takes Kt	17—P takes B
18—Kt to Kt 4	18—K to Kt 2 (g)
19—Q to Q 2	19—Q to B 4
20—Q to R 6 ch.	20—K to R sq.
21—B to Q 3 (h)	21—Resigns.

(a) A counter-attack dating from the Gottingen MS. of 1490. The Russian players, Petroff and Jaenisch, revised it; hence its association with the name of the former. The defence is scarcely satisfactory, and few masters of the modern school now resort to it. Mr. Mason, however, is an exception in this respect. He has played it frequently in important matches, and is thoroughly conversant with the whole of its intricacies.

(b) 4 Kt takes B P, K takes Kt; 5 B to B 4 ch. lead to a smart attack, and an interesting game, but it is not sound.

(c) 9 P takes P is frequently played at this stage, but the text move seems quite as strong.

(d) Black has conducted the opening very well, and has now at least an even game. The text move, however, is objectionable, as it allows the Knight to be pinned, which leads to subsequent difficulties. P to K R 3, Q Kt to Q 2, R to K sq., or even P to B 4, were better. In the latter case, if White replies with 13 P to Q 5, the advanced and isolated Pawn might ultimately become difficult to defend.

(e) All this is very skillfully played by Mr. Lord.
(f) Perhaps P to K R 3 or B takes Q Kt were lesser evils.
(g) If P to K B 4; 19—Kt to R 6 ch., K to Kt a best; 20—Q to R 5, &c., winning.
(h) An elegant finishing stroke. If Q takes B; 22—Q takes B P ch., K to Kt sq.; 23—Kt to R 6 mate.

GAME No. 305.

Played in Australia (Charlick Gambit) :—

WHITE. Apperley.	BLACK. Charlick.
1—P to Q 4	1—P to K 4
2—P takes P	2—P to Q 3
3—B to B 4	3—Kt to Q B 3
4—P takes P	4—Q to B 3
5—B to B sq.	5—B takes P
6—P to Q B 3	6—B to K B 4
7—P to K 3	7—Castles Q R
8—Kt to Q 2	8—Q to Kt 3
9—P to K R 3	9—Kt to B 3
10—K Kt to B 3	10—K R to K sq.
11—Q to R 4	11—B to B 7
12—Kt to Kt 3	12—Kt to K 5
13—Kt to R 4	13—Q to Kt 6
14—P takes Q and Black mates in two moves.	

GAME No. 306.

SCOTCH GAMBIT—Q to R 5 DEFENCE.

WHITE. Burille.	BLACK. Amateur.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—P to Q 4	3—P takes P
4—Kt takes P	4—Q to R 5
5—Kt to Q Kt 5	5—B to Kt 5 ch.
6—P to B 3	6—Q takes K P ch.
7—B to K 3	7—B to Q R 4
8—Q Kt to Q 2	8—Q to K 2
9—Kt to B 4	9—P to Q R 3
10—K Kt to Q 6 oh.	10—P takes Kt
11—Kt takes P ch.	11—K to Q sq.
12—Q to Q 5	12—Kt to K R 3
13—Castles Q R	13—R to B sq.

White mates in two moves.

GAME No. 307.

A PARISIAN BRILLIANCY.

The following game, says *La Stratégie*, was played recently at the Café de la Régence by M. Janowski giving Kt odds :—

REMOVE WHITE'S Q Kt—MUZIO-POLERIO GAMBIT.

WHITE. Janowski.	BLACK. Amateur.
1—P to K 4	1—P to K 4
2—P to K B 4	2—P takes P
3—Kt to K B 3	3—P to K Kt 4
4—B to B 4	4—P to Kt 5
5—Castles	5—P takes Kt
6—Q takes P	6—Q to B 3
7—P to K 5	7—Q takes P
8—P to Q 3	8—B to K R 3
9—B to Q 2	9—Kt to K 2
10—B to Q B 3	10—Q to B 4 ch.
11—K to R sq.	11—Castles
12—Q R to K sq.	12—P to Q 4
13—Q to R 5	13—P to K B 3
14—R takes Kt	14—Q takes R
15—B takes P ch.	15—K to Kt 2
16—R to K sq.	16—Q to B 4
17—R to K 5	17—Q to K B 7

White mates in four moves (a).

(a) 1—R to Kt 5 ch., B takes R; 2—Q to B ch., K to R sq; 3—Q takes P ch., R takes Q; 4—B mates.

LASKER ON THE EVANS.

With reference to the Evans Gambit, Champion Lasker believes :—(1) That the compromised defence is favourable to the second player; (2) that the normal form of the Evans yields to White a lasting and very dangerous attack on the King's side; and (3) that Black has a simple and safe way of evading all difficulty if he will immediately give back his material advantage. His way of treating the Evans Gambit is as follows :—

WHITE.	BLACK
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to Q B 4	3—B to Q B 4
4—P to Q Kt 4	4—B takes P
5—P to B 3	5—B to R 4 (a)
6—Castles (b)	6—B to Kt 3
7—P to Q 4	7—P to Q 3 (c)
8—P takes P	8—P takes P
9—Q takes Q	9—Kt takes Q
10—Kt takes P	10—Kt to K B 3 (d)

NOTES.

(a) Better than the usual 5..... B to B 4, which gives White more chances for attack.
(b) If White plays 6—P to Q 4, Black has the option of bringing about the "Compromised Defence," which is favourable to the second player.
(c) Black gives up the Pawn previously gained for the purpose of simplification.
(d) White's Queen's side is disarranged for the end-game, and Black has a better-disposed position for the ending. The White

Queen's Bishop's Pawn is weak. It is also an obstacle to White's effective development.

In the course of a recent interview Mr. Steinitz remarked that the secret of chess might be described as a "just balance of mind," besides which there must be "power of analysis, imagination, and many other qualifications." He added that "All great thinkers have been great chess players more or less. Buckle, the great English historian, was, perhaps, as fine a chess-player as England ever knew, although he never played in public. So were Voltaire and Diderot in France, and Frederick the Great in Germany. Both Von Moltke and Bismarck were fine players, although the Emperor William could give them Pawns and beat them. Curiously enough, Napoleon did not understand the game, and was very much chagrined at his inability to play at all. This suggests the reflection that great conquerors are madmen; that they have not well-balanced minds. Chess may be described as mental athletics; it is the gymnasium of the mind. I believe that the mind can be trained as easily and perfectly as the body, and I know of no better exercise than chess; it develops, strengthens, and clarifies the brain."

The *Daily News* cites Mr. Gladstone as an authority for the statement that the literature of chess exceeds 1,000 volumes.

Lasker has declined the invitation of the St. Petersburg Chess Club to play a match with Tschigorin.

MAIL STEAMERS.

THE NEXT MAIL IS DUE			
From America	per P. M. Co.	Tuesday, July 30th.*	
From Canada, &c.	per C. P. R. Co.	Monday, July 29th.

METALS.

No great stir in this market. There is the usual summer quiet in Iron, and Sundries are taken only to fill absolute necessities.

	PER PIECE.
Flat Bars, 1 inch	\$3.30 to 3.35
Flat Bars, 1 1/2 inch	3.35 to 3.40
Round and square up to 1 inch	3.30 to 3.40
Iron Plates, assorted	3.40 to 3.50
Sheet Iron	4.30 to 4.50
Galvanized Iron sheets	8.25 to 8.75
Wire Nails, assorted	5.50 to 6.00
Fin Plates, per box	5.25 to 5.50
Pig Iron, No. 1	1.60 to 1.65

KEROSENE.

Quotations unchanged, with but a feeble trade. The *Spondilus* has arrived with Tank oil from Batoum.

American	\$2.30 to 2.40
Russian	2.30 to 2.40
Langkat	1.90 to 2.00

SUGAR.

A fair current business but without any great life in the trade. Supplies appear to be ample for all prospective requirements.

	PER PIECE.
Brown Takao	\$3.60 to 3.65
Brown Manila	4.20 to 4.30
Brown Daitong (New)	3.10 to 3.20
Brown Canton	3.10 to 3.60
White Java and Penang	6.20 to 6.05
White Refined	6.00 to 9.25

EXPORTS.

RAW SILK.

There has been a fairly current business at or near our quotations. Prices have been somewhat irregular at various times, buyers according to their idiosyncracies paying the same price for Re-reels which others do for good Koshi Filatures. The general opinion is that values are now on a safe basis as compared with those ruling a fortnight ago.

QUOTATIONS.—(NEW SILK.)

Filatures—No. 1, 10/13 deniers	\$850 to 860
Filatures—No. 1, 13/15, 14/16 deniers	850 to 860
Filatures—No. 1, 10/14 deniers	820 to 830
Filatures—No. 1, 13/16, 14/17 deniers	820 to 830
Filatures—No. 2, 10/15 deniers	780 to 790
Filatures—No. 2, 11/16 deniers	780 to 790
Re-reels—No. 1, 13/15, 14/16 deniers	820 to 830
Re-reels—No. 1, 13/16, 14/17 deniers	780 to 790
Re-reels—No. 2, 14/18 deniers	740 to 750

WASTE SILK.

No change to report. Holders will have to take less money if they wish to clear off their stocks of undesirable old fibre.

TEA.

A fair current business on the basis of quota-

tions. Export and settlement figures both keep ahead of last season.

	PER PICUL.
Choicest	\$30 to \$32
(choice)	27 to 28
Finest	25 to 26
Fine	23 to 24
Good Medium	21 to 22
Medium	19 to 20
Good Common	17 to 18
Common	15 to 16

PROSPECTUS

OF A SCHEME FOR RELIEVING THE DISTRESSED FAMILIES OF THOSE KILLED IN THE WAR.

WAR was declared against China on August the 1st of last year, and on the 10th of last May—that is say after the lapse of 283 days—peace was again restored. We cannot but lament the deaths of our countrymen either in battle or from disease contracted while discharging duties incidental to the War, among the deceased being H.I.H. Prince ARISUGAWA, Chief of the Central Staff; Major-General ODERA, Commander SAKAMOTO, and many others. There are special Provisions in the Law of Pensions for Soldiers and Marines that die in the discharge of their duty, and their survivors are, therefore, entitled to a certain fixed allowance. Those with the Colours being, in accordance with the Law of Conscriptions, from 20 to 23 years of age (Marines are 24 years old), are mostly sons or brothers of the heads of families, and their loss may not, therefore, affect the subsistence of their families. The case of those on the list of the First or Second Reserve require, however, immediate attention. The age of these Men is between 24 or 32 (Marines are 25 years old) and many of them are already charged with the duty of supporting families. According to the latest census, the average number of members in a family is 5.3. The Pension due to the Survivors of a soldier is, in accordance with the Pension Law, 30 yen per annum (in the Navy the sum varies from 24 to 38 yen), or a little over 8.3 sen per diem. It is extremely difficult to support a family of more than five members on about 8 sen a day, and it is conceivable, therefore, that the Authorities may take special steps in the matter sooner or later. Among the survivors of those that died on the field in the First

and Second Reserves, not a few are already reduced to the verge of starvation. Rescue to all of them cannot easily be undertaken by the projectors of this scheme, who are, therefore, constrained to appeal for help to the philanthropic public.

The projectors and supporters are as follows:—

PROJECTORS.—Mrs. HANAWA, Viscountess TODA, Mrs. KOKAJIMA, Miss TSUDA, Mrs. UGAI, Mrs. YANAGIYA, Mrs. FUJII, and Miss KIMURA.

SUPPORTERS.—Madame ITO, Madame HAYAKAWA, Countesses OKUMA and KAWAMURA, Marchionesses NABESHIMA and MAYEDA, Princesses KONOYE, MORI, and 18 others.

The following Newspaper Offices have consented to receive Subscriptions for the projectors:—

Niri Shimbun, No. 1, Sanchoe, Sanjik-kenburi, Kyobashi.

Choya Shimbun, No. 4, Shichome, Ginza, Kyobashi.

Kokumin Shimbun, No. 4, Hiyoshicho, Kyobashi.

Mainichi Shimbun, No. 7, Owaricho, Kyobashi.

Mezamashi Shimbun, No. 18, Yamashitacho, Kyobashi.

Jogaku Zasshi, No. 6, Shimorokubancho, Kojimachi.

Japan Mail, No. 51, Yokohama.

Subscriptions of over 10 sen will be gratefully received. The period for paying in the 1st Subscription will be till the 10th of July, while the periods for the 2nd and successive Subscriptions will be determined at some future date. As to the mode of distributing the money, the Projectors will fix this on consultation with the supporters, and the Subscriptions will be suitably divided through the medium of the Army and Navy, and the local District, Town, and Village Offices. For Subscriptions forwarded to Newspaper Offices, no receipts will be given, but a list of Donors will appear from time to time in the columns of the papers.

June 20th, 1895.

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY MORNING.

Annual Subscription, post free, 15s., in the United
Kingdom. Ditto, 17s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

Cable Address: Dineio, London.

"MONEY" is a fearless critic and exposé of all shams, frauds,
and swindles.

"MONEY" is the Journal for Investors, Speculators and
Business men.

"MONEY" is a thoroughly up-to-date Weekly Record of all
Financial and Business Matters.

"MONEY" is not subsidised by any financial association,
clique, or syndicate, but is absolutely free, independent,
and honest.

BALANCE SHEETS of Assurance, Banking, Manufacturing
Shipping, Trading, and Trust Companies, are fearlessly and
impartially criticised in "MONEY."

THE MONTHLY FOREIGN AND COLONIAL EDITION, called
"MONEY AND TRADE," is published on the last Wednes-
day in each month, and is forwarded direct to the Foreign
agents and Correspondents of all the leading English Mer-
chants, and to all the large Wholesale Buyers and Store-
keepers in the Colonies, India, China, Japan, South America,
and other countries.

"MONEY AND TRADE" enjoys a very large circulation in all
Foreign Markets where English goods are sold; and, as it
goes direct into the hands of the WHOLESALE AND RETAIL
BUYERS, it offers unique advantages to advertisers.

SPECIMEN COPIES POST FREE.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health
for all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribu-
aries in Abyssinia," says—"I ordered the dragoman Mahomet
to inform the Fakir that I was a Doctor, and I had the best
medicines at the service of the sick, with advice gratis. In a
short time I had many applicants, to whom I served out a
quantity of Holloway's Pills. These are most useful to an ex-
plorer, as, possessing unmistakable purgative properties, they
create an undeniable effect upon the patient, which satisfies
them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations
of all kinds. It acts miraculously in healing ulcerations, curing
skin diseases, and in arresting and subduing all inflammations.
MR. J. T. COOPER, in his account of his extraordinary travels
in China, published in 1871, says—"I had with me a quantity of
Holloway's Ointment. I gave some to the people, and nothing
could exceed their gratitude; and, in consequence, milk, fowls
butter, and horse feed poured in upon us, until at last a tea-
spoonful of Ointment was worth a fowl and any quantity of peas-
and the demand became so great that I was obliged to lock up
the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughout
World. May 1st, 1890.

THE NEW TREATY

COPIES of the NEW JAPANESE TREATY
with the UNITED STATES, in Pamphlet
Form, can be obtained at this Office,

PRICE 50 CENTS.

YOKOHAMA: SATURDAY, AUG. 3RD, 1895.

BIRTH.

On the 29th July, at the Club Hotel, the wife of D. PERCEBOIS (Imperial Maritime Customs, Shanghai), of a Daughter.

SUMMARY OF NEWS.

THE Kyoto Industrial Exhibition was formally closed on Wednesday.

DYSENTERY is again prevalent in Kagoshima, Okayama, and Osaka.

A SQUADRON of five German men-of-war is visiting Yokohama this week.

THE captured battle-ship *Chen-yuen* has arrived at Yokosuka for repairs.

THE cholera returns up to the 1st inst., are 11,331 cases and 7,629 deaths.

AN Opera Company, comprising 36 performers, opens at the Public Hall next week.

SIGNORINA ESTRELA BELINFANTE gave a second concert in Yokohama on Thursday evening. She

was assisted by, among others, Professor Koeber of Tokyo.

MR. LAFFIN's 39-rater *Mary* won the Ice-works Cup on Saturday after a splendid race.

REAR-ADMIRALS TAKINO, Sugi, Matsumura, Sato, and Yoshijima have been placed on the Reserve.

THE town of Ogaki is completely under water, and railway communication with Kobe is interrupted.

DISASTROUS floods have occurred in the Central provinces, causing loss of life and immense damage to property.

IT is stated that the Yokohama Specie Bank proposes to increase its capital by about yen 5,000,000.

THE baseball match on Saturday was very one-sided, the Club team beating the scratch nine by 30 runs to 6.

THE Sanyo Railway Co. is said to have lost yen 200,000 by the recent accident between Onomichi and Itozaki.

SEVERAL of the Imperial Princes and Princesses have left the capital for the hills, some going to Nikko, others to Miyanoshita.

THE death is announced of Mr. Iikemura Itsuga, proprietor of the *Kaika Shimbu* Office, Tokyo, which took place on the 25th inst.

ANOTHER newspaper to be called the *Giron Nippo* will be started in the capital. Its first issue will appear on the 9th inst.

CAPTAINS TAKINO NAOTOSHI, Sugi Morimichi, Matsumura Seimei, Sato Shizuo, and Yoshijima Shinnei are promoted to be Rear-Admirals.

QUARANTINE regulations are enforced at all the open ports now, and ships coming from China and Korea will be especially looked after.

MESSRS. LANGFELDT AND COMPANY again declare an extraordinary dividend—20 per cent. for the half-year, making 45 per cent. for the year.

THE benefit tendered Miss Marie Brian at the Public Hall on Wednesday evening, was very enthusiastic, the building being filled to overflowing.

A JAPANESE tiler fell from the roof of a bungalow in Main Street, on Monday, and striking his head on a curb-stone died within a few minutes.

RUMOUR has it that Mr. Yoshikawa, President of the Nippon Yusen Kaisha, will resign through bad health, and Mr. Kondo, Vice-President, will succeed him.

A SMALL fire broke out on Tuesday in the servants' quarters of a Chinese exchange shop in Main Street, but the damage was confined within a small area.

THE Japan Cement Co. has declared a dividend of 8 per cent. per annum for the half-year, and the Japan Life Insurance Co. a dividend of 6 per cent. per annum.

OWING to the great storm, the telegraph wires have been down in many places, and telegraphic communication with Europe was only partially restored by Wednesday.

ONE hundred and two thousand eight hundred and sixty-two soldiers and military coolies had returned from China up to the 27th July; the horses brought back numbered 13,282.

THE Yokohama Engine and Ironworks, Limited, declared a dividend of 8 per cent. for the half-year, besides wiping-off a debt to the bank,

and turning a debit balance on the profit and loss account into a credit balance of far larger amount.

KATO KICHITARO, of Ashigara-kami District, Kanagawa Prefecture, was relieved of money to the amount of yen 499 by a pickpocket at Yokohama Railway Station on the 27th instant.

THE total number of foreigners now staying at Nikko is 253, including 141 males and 112 females. The Foreign Ministers and their families are not included in the above total.

SIR ERNEST MASON SATOW, K.C.M.G., the new British Minister, arrived in Yokohama on Sunday. He was received by a large number of his nationals, who tendered him an address of welcome couched in terms of warmest friendship.

REUTER telegraphs:—The final result of the British general elections is as follows:—Conservatives, 340; Unionists, 70; Liberals, 173; Parnellites, 12; Anti-Parnellites 68; and Labour Members 2. A Canadian, Mr. Heayhurst, has won the Queen's Prize at Bisley. Two Italian steamers have collided in the Gulf of Spezzia and one hundred and forty-five passengers and three of the crew have been drowned. The French troubles in Madagascar are increasing, owing to the prevalence of sickness amongst the troops, and the difficulties attending transport. The Franco-Chinese Convention opens to French commerce several southern Ports and permits the establishment in them of Consular agents. It also concedes to France mining rights in the three Southern provinces (Kuangtung, Kuangsi, and Yunnan), and permission to navigate the rivers Lo Ho (Lo So), and Mekong. The prospect of war with the Emperor Menelek of Abyssinia is being openly discussed in Rome. The revolt in Cuba is spreading, and the fighting is constant and serious. The Spanish losses have been heavy, and twenty-three thousand further troops will be despatched by Spain to Cuba in August. Sir William Vernon Harcourt has been elected for West Monmouth by a majority of five thousand. *The Times* urges the re-election of Mr. Gully as Speaker of the House of Commons.

THE Import trade is very dull, in sympathy with the grey dour weather. Yarns are very quiet, and Shirtings, 8½lb., are dull, though 9½lb. are enquired after at late quotations. In Cotton Italians, T.-Reds, and Woollens a retail trade is doing, but other sorts are comatose. There has been a smart movement in Formosa and Manila Sugars, the season now being in full swing, and quotations display a strong tendency to rise. Metals, with the exception of Pig Iron, are dull, though the slight enquiry for Plates and Wire Nails caused rates to move upwards. A drooping trade also prevails in Kerosene, though something must soon begin to move, as supplies up-country are now very short. At present there are more than ten millions of gallons in stock, and buyers consequently count on lower prices ere coming into market. Raw Silk is in good demand for Europe and America at steady prices. Arrivals are ample and dealers current. The export for July was close upon 4,000 piculs, a record for that month. Waste Silk is still stagnant, holders refusing to budge in their rates for the few parcels of good quality (old) still remaining. At present there is no new fibre of any consequence offering. Tea is still brisk, and settlements to date are 7,000 piculs ahead of last season, export keeping well abreast of figures at same date last year. Exchange has not fluctuated much this week, though the breakdown in cable communication caused bankers to be very wary.

SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

With the exception of local ripples in the Prefecture of Niigata, were some excitement has been caused by the Radicals, Progressionists, and National Unionists on the question of Liaotung, the political sea is at rest for the time being. The improbability of an extraordinary session of the Diet and the manifest unpopularity of their movement, have combined to induce the Extremists to abandon for the present all attempts to foment popular agitation against the Cabinet. They have settled down to the more reasonable task of investigating the questions likely to come up for discussion in the coming session. Their outcry about Ministerial Responsibility seems destined to cause them trouble. They are in a painful dilemma. Having made so much noise about this question, they can not chuse but stand to their guns in the approaching session of the Diet. But, on the other hand, they are confronted by the necessity of either flatly rejecting the Government's Military and Naval measures or approving them on condition of the resignation of the Ministry, either of which courses is certain to expose them not only to a humiliating defeat in the House, but also to strong popular indignation. Thus far two suggestions have been offered by the press for extricating the Extremists from their awkward dilemma. One is to give up the Liaotung Question, and substitute the problem of Administrative Expenditure. But such a plan must seem unsatisfactory to the Extremists who have so definitely and solemnly committed themselves to the Liaotung business. The other and more recent proposal is to vote the Military and Naval Bills and then to introduce the Liaotung problem. Such a course would be highly inconsistent, but the *Yomiuri Shimbun* undertakes to defend it in a peculiar way. It states that, although the Opposition is against the foreign policy of the Government, it does not condemn the Cabinet's Military and financial policy, and that, consequently, it can consistently pass the Military and Naval measures and censure the step taken about the Liaotung Peninsula. In other words, the *Yomiuri* maintains that the Liaotung responsibility should be borne, not by all the Ministers jointly, but by those only that were specially connected with this question; and that since, in its opinion, the Ministers charged with the Military, Naval, and Financial Affairs, were not immediately responsible for the matter, they may be safely trusted to carry out measures falling within their respective spheres. Our contemporary, being perfectly well aware of the absurdity of the theory of individual responsibility with regard to such questions as the return of Liaotung, is compelled to resort to the pretext that the practice of constitutional government in this country has not yet sufficiently progressed to make it possible to apply the principle of joint responsibility.

* * *

The *Nippon* suggests a more intelligent, though hardly less impractical, resource for the bewildered politicians of the Opposition. It appears to think that the schemes contemplated by the Government and the *Jiyu-to* and *Kokumin Kyokai*, for increasing the country's fighting capacity, are out of proportion to the actual resources of the nation, and it ridicules the indiscreet and misguided enthusiasm of the Cabinet as well as of the Radicals and the National Unionists. The necessity of increasing the Army and the Navy, it says, has been evident from the days of the elder Saigo and Omura: to attempt the attainment of that object at once would be madness. It cannot bring itself to acknowledge that the problem of Military and Naval development is so important as to exclude discussion of the question of Ministerial responsibility about the return of Liaotung. In short, the Extremists are urged to give precedence to the question of responsibility. But that is precisely the course they fear to pursue.

* * *

An interesting controversy is going on be-

tween the *Nichi Nichi Shimbun* and the *Nippon* on the subject of the return of Liaotung. The contest of words is maintained on both sides with great ability and with remarkable mutual decorum. Space does not permit us to reproduce the line of argument employed on either side. Neither is it necessary to do so. The cardinal point at issue is whether or not the probability of European intervention was sufficiently apparent to make the Japanese Plenipotentiaries desist from demanding the cession of the Peninsula. The *Nippon* maintains that there was at that time strong probability of such a contingency and that the Government is blameworthy for having sought to obtain territory that must afterwards be given up under humiliating circumstances. The *Nichi Nichi*, on the other hand, is equally positive in declaring that, apart from some journalistic threats, there was nothing to justify the Ministry in abandoning the legitimate prize of victories won by the country's arms, and that there was nothing censurable in the Government's subsequent conduct when, after mature consideration of the warning offered by the three Powers, it advised His Majesty to accept that warning. The *Nippon's* position is intelligible enough, as is freely acknowledged by its antagonist, but the point at issue being largely one of opinion, there is little hope of either journal's convincing the other. It may be interesting to notice one or two special facts brought out by the controversy. First, it has been made clear that the *Nippon* and its patron, Viscount Tani, were from the outset opposed to the permanent possession of Liaotung, not only because its tenure would lead to diplomatic complications, but also and primarily because, in their opinion, the expansion of the country in the north of Asia is not advantageous to its best interests. Japan's destiny, they think, is to extend towards the south. It is hinted by our contemporary that the Government ought to have endeavoured to obtain some territorial concession on the mainland in the south, instead of in the north. Secondly, the *Nichi Nichi* makes it clear that Japan will not give up Liaotung for nothing. Her right to demand the cession of the peninsula as a prize of victory has never been questioned by anybody, least of all by the three Powers. That these Powers explicitly avowed their unwillingness to prevent her from enjoying her rights as a victor, is a sign, in the *Nichi Nichi's* opinion, that they desired her to content herself with some other form of prize. Her title to demand Liaotung is admitted on all sides and still remains intact, and in virtue of that title she intends to effect a proper settlement of the question with China. "The declaration that Japan would renounce the permanent occupation of Liaotung was an expression of intention on her part and the carrying out of that intention is plainly conditional upon China's agreement to our demands in connection with the return of the peninsula. Japan's promise of renunciation can never be regarded as an absolute and unconditional abandonment of her legitimate right."

* * *

The *Nichi Nichi's* article, which gave rise to this controversy, remains unanswered so far as its original purpose is concerned. It was primarily directed against the Extremist politicians. They were strongly criticised for want of any clear idea. But their organs studiously refrain from accepting the challenge. Instead of replying to the *Nichi Nichi's* strong indictment, they take refuge behind the pretext that they are not allowed by the press censors to write on such a subject. Unfortunately there is some show of justice in their plea. But the Opposition papers ought to know that it is quite possible to express their views, if they have any, without transgressing lawful limits. For example, the subject is being handled by the *Nippon* very boldly. It says decidedly strong things against the Government with perfect impunity. It is true that the editor of the *Nippon* is decidedly skilled in transgressing the spirit of the law while evading its letter. But in that kind of journalism, the Progressionist writers are at least his equals. It is a mere subterfuge to

decline the *Nichi Nichi's* challenge on the ground of press censorship.

The 1st of the present month being the anniversary of the declaration of war by Japan, opportunity has been taken by the metropolitan journals to dwell on the question of Korean independence, which formed the most important feature in the Imperial Proclamation announcing a state of hostilities. These papers once more emphasize the importance of attaining the original object of the war in spite of all difficulties and dangers. Now and then a rumour is circulated that the evacuation of the Peninsular Kingdom has been demanded by Russia and her allies. Recently it was added that the demand had been accepted by the Japanese Government. Apparently little importance is attached to these stories, but some journals cannot dismiss them without urging the necessity of stationing Japanese troops in Korea. It is a noteworthy circumstance that, so far as Korea is concerned, even the papers that advocate a defensive policy only in the north, insist that Japan ought never to retreat a step from the position she now holds in that country.

THE STORM AT KUCHINOTSU.

An officer on board the steamship *Bentala* has kindly placed at our disposal a short account of that ship's experiences of the disastrous storm that swept over Japan on the 24th and 25th July. He says:—The typhoon began at Kuchinotsu about ten a.m. with a strong wind from about E.N.E. with dull cloudy weather and rapidly falling barometer. The wind quickly increased in force, until at about noon it was blowing its hardest. The wind at this time must have been moving at the rate of a hundred miles an hour. Then it veered round from E.N.E. to South and finally to S.W. It was while the wind was from the south that we experienced the heaviest of the blow. The barometer fell to 28.33. All the foreign ships in the harbour were blown on shore—four inside the harbour and one outside. Large as they were they were blown about as if they had been mere sampans. The town fared very badly. Half the houses in the place were blown down or partially wrecked, and now it seems half deserted, and the people one meets in the streets look as if they had had a terrible scare. All business was stopped for three days. The native craft in and about the harbour suffered most severely. About thirty-six of these vessels became total wrecks. For about two hours the crews of these vessels could be seen all over the harbour clinging to wreckage, or in the last stages of drowning. Some of the poor people waved their arms frantically towards us, as if imploring us to save them, but the force of the wind was so great that we could do but little for them. It was a terrible sight to see so many people at once struggling for life, and eventually a party of our men, working on the after end of the ship under the direction of Mr. David Maguire, 2nd officer, succeeded in rescuing eight men and two boys. They were also nearly successful in rescuing a woman. Twice they caught the poor creature, but she was so exhausted that she could not assist her rescuers in the least, and in the end she was carried away and crushed among some wreckage not far from the ship's stern, sinking out of sight. As another poor woman floated past the stern Mr. Maguire threw a life buoy, with a line attached, right over her head. The woman put her arms around it, but when the officer began to haul on the line she could not maintain her hold, and she also was drowned.

There was a rumour in Kobe on Thursday, which afterwards proved correct, that the *Helene Rickmers* and a sailing vessel, the *Marechal Suckel*, had gone ashore in the neighbourhood of Kuchinotsu. The *Marechal Suckel* was floated, but the *Helene Rickmers* was still aground at date of last advices. Assistance has been sent to her from Nagasaki.

EDITORIAL NOTES.

THE KAWA-BIRAKI.

A CORRESPONDENT recently inquired the origin of the *Kawa-biraki* fête. The following particulars may therefore prove of interest. During the Tokugawa régime the residents of Edo (now Tokyo) were accustomed to enjoy a respite from the trying heat of summer by taking up their residence in house-boats on the Sumida river, the facilities now afforded of getting away to the summer resorts in the hills being then entirely lacking. This custom became most popular during the summers of the Keicho era (1596-1614), when, it is said, the temperature in Edo was exceedingly high, and residents accordingly went up and down the Asakusa-gawa for the purpose of enjoying a cool breeze. Soon the *Daimyo* followed suit, and as a feudal lords' retinue consisted of a great number of attendants, large vessels made their appearance on the river, and grew more luxurious in appointments and size year after year. Some were lavishly adorned with ornaments of gold and silver. In the Tenwa era (1681-1683) the Tokugawa Government issued a notification limiting the dimensions of these pleasure boats. The boating season continued from May 28th to the last day of August (old calendar) every year, and the first day (or May 28th) was called *Kawa-biraki*, or the day of opening the river—(*Kawa*=river, *biraki* or *hiraki*=open). It seems that no particular ceremony took place on that day. A large number of boats assembled on the Sumida during this part of the year, and their owners engaged in selling *saké*, *mochi*, *manju*, boiled fish, cold water, etc. Fireworks were sold in the ancient days by merchants who went out in boats for that purpose, and fireworks were displayed by individual excursionists. This is greatly different from the *Kawa-biraki* as it now prevails.

AN AMERICAN GUN-BOAT AND A JAPANESE REGIMENT.

THE *Choya Shimbu* states that the Captain and officers of the United States gun-boat *Petrel* were entertained by Colonel Oki and other officers of the 1st Regiment at the Koyokan (Maple Club) Shiba, Tokyo, on the 24th instant. The *Petrel* happened to be at Yingkow when that place was taken by a Japanese detachment—the 1st Regiment—and her people showed much kindness and courtesy to the victors. The Japanese officers appreciated this highly, and after their return to Tokyo, were anxious to have an opportunity to repay the attention they had received from their American friends. Hearing of the arrival of the *Petrel* in Yokohama on the 23rd instant, they invited her Captain and officers to pay a visit to their Regiment. The American officers arrived at Shimbashi at 1.50 p.m. on the 24th, and from thence were conducted to the quarters of the Regiment, where they were taken first to the officers' mess, and then to that of the non-commissioned officers. In the latter room, speeches were delivered by the American Captain and Colonel Oki, and the guests were presented each with a memorial cup of victory. They were then shown over the barracks and saw the Regiment on parade. Afterwards they were conducted to the Koyokan and entertained in Japanese fashion. Triumphant dances, now very popular in the capital, were performed by the *danses* of the establishment. The Captain had to leave early, but the rest of the guests stayed until about 9 in the evening, and seemed to thoroughly enjoy the entertainment.

NIPPON RACE CLUB.

THE Committee of the Club propose to import a batch of Australian horses (geldings or mares), and if a sufficient number of subscribers can be obtained to give at least five races for them at the ensuing Autumn Meeting. The animals could be brought here in September, and would be laid down at a cost of \$300. The contract would be made with Mr. Salter, who is at present in Japan, and who, having supplied the Singapore Race Club with horses from the Australian colonies, could probably be relied upon

to select a fairly level lot suited to the purpose for which they were wanted. Mr. Salter has engaged to bring up twenty horses for the Hongkong Jockey Club. The experiment was tried in the Crown Colony nearly 20 years ago, but was a failure, chiefly owing to great disparity in the size and breeding of the animals. The climate did not suit them either, and in about a year very few of the horses were alive. The conditions in Japan are more favourable, however, and the experiment is worth a trial. Members who wish to subscribe should notify the Secretary at once, as if the order is not given soon the horses cannot arrive in time to be trained for the Autumn Meeting.

CUSTOMS RETURNS.

THE following is a summary of the Customs Returns for June, showing the foreign trade of the empire for the month:—

	1894.	1895.
	SILVER YEN.	SILVER YEN.
Exports	8,798,572.400	10,129,046.910
Imports	10,276,486.500	10,989,848.710
Total exports and imports	21,118,895.620	
Excess of imports		860,801.800
CUSTOMS DUTIES.		
Exports	200,060.277	
Imports	371,398.622	
Miscellaneous	14,513.407	
Total	585,972.306	

TOTAL VALUE OF EXPORTS TO AND IMPORTS FROM VARIOUS FOREIGN COUNTRIES.			
	Exports.	Imports.	Total.
	Silver Yen.	Silver Yen.	Silver Yen.
China	964,057.350	1,351,376.620	2,315,433.970

"JOHN OLIVER HOBBS."

MRS. CRAIGIE, whose pseudonym, "John Oliver Hobbs," is so well-known, recently sued for divorce in London, basing her action on the alleged misconduct and infidelities of her husband, a clerk in the Bank of England. Their married lives must have been far from pleasant, if Mrs. Craigie's novels reflect her domestic views, for in one of them she says of a bank clerk, "the intelligence he displayed in the

discharge of his duties was that of a learned poodle who, having been taught certain tricks, performs them, he knows not why nor to what end." "John Oliver Hobbs'" style was cleverly described in the *St. James's Gazette* some time ago in a verse of rhymes for novelists. It ran:—

John Oliver Hobbs, with your spasms and throbs,
How does your novel grow?
With cynical sneers at young Love and his tears,
And epigrams all in a row.

Mrs. Craigie is only 27 years of age, and by birth an American. Her petition was granted by Mr. Justice Jeune.

"GANJU-YAKI."

THE *Hongkong Daily Press* reproduces a curious paragraph from a Yokohama journal:—

The *Kokumin* calls attention to a new porcelain ware called *ganshu* or jewel-inlaid ware, specimens of which may be seen among the exhibits in the 4th Domestic Industrial Exhibition now open at Kyoto. This *fin-de-siècle* departure in ceramics was invented by Mr. Higuchi Harubane, a *shizoku* of Saga Prefecture. His family have been porcelain manufacturers for generations past. After fifteen years of experimenting Mr. Higuchi succeeded in turning out the new ware, which is semi-transparent and inlaid with jewels. He made it first in 1886 and patented it next year.

It is not unnatural that in attempting to obtain an idea of a special kind of porcelain by translating a Japanese account of it, the translator should fall into errors unless he has knowledge of his own to guide him. In order, however, to save some eager collector from cruel disappointment, we may explain that Mr. Higuchi's *Ganju-yaki* is not a "semi-transparent porcelain inlaid with jewels." Semi-transparent it certainly is: all porcelain has that property. But the inlaying with jewels is a pure fancy of the translator. The ware in question is nothing more than an imitation of the well-known "grains-of-rice" porcelain of the Chinese kilns; that it is to say, porcelain having portions of the *pâte* cut out and filled in with glazing material only. It is a very beautiful method of decoration, and Mr. Higuchi deserves high credit for the success he has achieved. But there are no "jewels inlaid" in the ware.

DARING ROBBERY IN KOBE.

ONE of the buildings in the occupation of Messrs. H. E. Reynell & Co., of Kobe, was the scene of what is probably one of the most daring robberies that has been committed there for a very long time. Shortly after 5 o'clock on Monday morning some carts were noticed outside the godown on Lot No. 23, opposite the offices of Messrs. Greppi and Company. The policeman on watch suspecting something amiss approached to make enquiries. Thereupon the coolies in charge of the carts ran off in the direction of the Bund, and unfortunately succeeded in making good their escape. Before the police appeared, however, the thieves had managed to load and remove three cartloads of empty bottles. The fourth and fifth carts were intercepted in time.—*Kobe Herald*.

A HONGKONG AERIAL FLIGHT.

A RECENT visitor to Hongkong writes:—"Not only can Hongkong show the visitor a cable tramway running up the Victoria Peak, an altitude of some 1,400 feet, with a gradient varying from 1 in 2 to 1 in 25; but at Taikoo, about five miles from Victoria, there is an aerial flight the like of which can seldom be seen. There is one at Gibraltar, going to the top of the Rock, but the ride there bears no comparison to the sensational transition from the base to the top of Mount Parker at Hongkong. It would be a misnomer to call it a railway, because the open car does not run on rails, but is suspended; and as you soar upward, now crossing over the top of a minor peak, next looking down on a lake some hundred feet below, or into a gorge, spying, perhaps, now and then a wild deer or other smaller animal, the first ride up and down is an experience not soon to be forgotten. This aerial flight was constructed evidently at very considerable cost by Messrs. Butterfield and Swire, of the Taikoo Sugar Refinery, to convey their European employes, to the dormitories on

the top of the Mount in the height of the summer, when the nights are so oppressively hot that sleep is almost out of question in the houses below. Before the aerial flight was constructed the employes referred to were taken up the mountain in chairs by a small regiment of coolies, the expense being borne by the firm. Then it took them an hour to reach the cool atmosphere of the top; now they can go up in five minutes. As the car is ascending a man in the engine house watches it as far as he can through a telescope, and at the point where his view is obscured by the top of a peak, another man, half way up, continues the watch. Should anything wrong be observed, the car can be instantly stopped."

IS TRADE ABOUT TO REVIVE?

THE following Circular seems to have much interest:—

In 1870 and 1871, in 1879, and again in 1888 and 1889, we had those brief periods of intense trade activity, and consequently prosperity, which stand out sharply from the lean and lengthy periods intervening, during which the fat kine were devoured by their famished relatives.

Hardly another lustrum has since passed with all its attributes of excessive competition and suffering, and its stern economic teachings, and now there are signs, which it is not possible to disregard, that the dawn of brighter days is possibly, if not probably, at hand.

The first condition invariably precedent to improvement is that prices should have come down to the lowest point. That this touching of rock bottom has been arrived at is not, of course, certain, but it is noteworthy that, despite the intensity of competition during the last year or two, prices have scarcely fluctuated in those barometers of commerce, the Steel and Iron Trades.

No. 3 Cleveland Pig Iron in January 1894, was	£1 16 6
To-day it is	1 15 3
G.M.B. Scotch Pig Iron in January, 1895, was	2 4 9
To-day it is	2 4 3
Steel Rails in January, 1894, were	3 15 0
To-day are	3 12 6
Steel Plates in January, 1894, were	5 5 0
To-day are	5 0 0
Crown Iron Bars in January, 1894, were	5 12 6
To-day are	5 7 6

We seem to see, then, that the bottom of the curve has been reached, and that the gradient should soon commence to ascend.

Next we find that Stocks are everywhere depleted, and that, as well pointed out in their last "Trade Review" by our genial competitors of Laurence Pountney Hill, business has for long been limited to a mere "necessity trade."

Not only, therefore, must warehouses abroad be refilled and worn out plant be replaced, but new enterprises must spring into birth.

That the time has arrived for this last we may fairly judge from the numerous new Companies which, during the past six months, have been successfully floated.

Moreover, that long locked-up capital has commenced to be again employed is evidenced by the activity of the Stock Exchanges and Foreign Bourses, which so emphatically reflect any signs of returning financial confidence.

But no doubt the most significant symptom of the approach of golden days is to be found in the constantly increasing output and storage of the standard metal.

About half a century ago men were galvanized by the discovery of the Californian Gold Field, the greatest that the Modern World had seen.

The rapid development of these "placers," or alluvial deposits, soon led to the most remarkable and universal outburst of commercial and manufacturing activity ever known, and a period of abnormal prosperity supervened.

Following on that period, the supply of gold gradually became less and less adequate for the requirements of the vastly increased trade of the nations, and has culminated during the last decade in absolute insufficiency, thus producing instability of rates of exchange between the gold standard countries and those using a less precious metal.

But during the same period the discovery has been made of another Gold Field, to which that of California even is not comparable.

In 1892, Mr. Hamilton Smith, the well-known Mining Engineer, after a visit to the Witwatersrand district of South Africa, pronounced the remarkable opinion which he was forced to arrive at, viz., that taking only into consideration the existing mines, all working at depths near, or comparatively near, to the surface, and entirely excluding from the field of view the possibilities of the deeper levels which are now being developed, there was in sight a mass of gold ore which would before long overtop the enormous Californian production of some 300 millions of English sovereigns. And he further stated that some years before the close of this century the Witwatersrand Fields alone would increase the yearly gold output of the entire world by over 50 per cent.

How far that opinion is being justified will be seen by the following figures, showing the output of the Witwatersrand, viz.:—

	ounces.		ounces.
In 1887	34,897	In 1891	729,213
In 1888	230,917	In 1892	1,210,993
In 1889	379,733	In 1893	1,478,473
In 1890	494,801	In 1894	2,094,159

and during the first four months of the current year it has been 718,026 ounces.

But the tale does not end there, for in India, in Tasmania, in New Zealand, in Western Australia, in British Guiana, as also in the newer districts of South Africa, such as Matabeleland, Mashonaland, and Zululand, other fields have been discovered, and are being, or are to be, vigorously worked.

Just before the discovery of the Californian Field, the World's output was about £6,000,000, which, in the short space of a few years, was increased to £30,000,000 per annum, after which it decreased gradually until about twelve years ago it dropped to under £20,000,000. Since the Randt Fields were opened, some eight years ago, the amount has steadily increased, until last year it amounted to about £36,000,000. Up to the present, this increase has been absorbed in making up the deficiency in bare working requirements of specie which existed; but now it is certain that the vast annual sum, which is yearly being increased, and which will continue to increase during a far longer period in the future than was the case in the fifties, will have a much greater effect than that of merely filling up the deficiencies of the past.

Who can doubt then, that between now and the end of the century, this total enormous increase in the power of purchase will lead to its employment, with results which it is impossible to forecast, but which it may safely be said cannot fail to be prodigious.

It is true that the century approaches its close in a perfect ferment of confused opinions. Everything seems to have been cast into the melting pot; all the old social, religious, and economical principles and traditions are being re-melted, and into what forms they will crystallize again we know not.

Such a period of unrest possesses many dangers, and when we add the racial antagonisms, which have become once more so keen and rancorous, it cannot be foreseen what resulting wars and social convulsions may occur, such as must baffle all calculations as to the spread of prosperity and the development of commerce, requiring, as these do, a state of peace for their fulfilment.

At the present moment, however, it is rather a case of "I dare not waiting on I would, like the poor cat in the adage. And the nations do but murmur, snarling at each other's heels."

One menace to peace has just been removed in the close of the War in the East, and, as the Sovereigns of Europe appear to be sincerely desirous of maintaining the *status quo*, we do not know that we have to seriously apprehend any unfavourable change at present—though the danger, when it does come, may be expected from the more democratic forms of Government, which are so susceptible to the influence of popular opinion and its passions.

While on the subject of politics it may not be inopportune to remark on the fact that the people of this country have now thoroughly realised that it is an absolutely vital necessity for England to be supreme on the seas, and there is probably no factor making for the peace of the world more important and more conducive to its maintenance than this one.

But an effect perhaps more germane to the drift of our argument is that as in 1887-8 the very large number of vessels ordered to be constructed by our Government under the last Naval Defence Act, contributed materially towards the improvement in the iron and steel trades which then took place, so now also the vast sums authorised by Parliament for construction of war vessels, for building new docks and harbours, and for fortifying coaling stations must have a similar effect.

We think, then, that it is shown that there is more reason on the whole to expect that an improvement will take place in trade ere long than the reverse.

But we are far from thinking that the progress will be unduly rapid, nor would such be at all desirable.

An impression prevails very widely that the remarkable and complete success attending the Japanese arms will have the effect of causing China to awake from her lethargy and to rapidly adopt the civilised methods which have so greatly contributed to the victory of Japan, and that consequently an era of immense enterprise will forthwith commence in China to the great advantage of European manufacturers.

All things are possible, of course; nevertheless, the above assumption is based on a strange ignorance of the difficulties attending the leavening of a huge and inchoate Empire of diverse races and tongues, as compared with the waking up of the race which inhabits the small, compact, and homogeneous islands of Japan.

Yet further, people forget that even Japan has not come to her present position at a bound, as Pallas Athene sprung fully armed from the brain of Zeus.

It is going on for half a century since European civilisation began to make its first impressions on Japan, and though since then her progress has been marvellous, even as compared with that of the nations of Europe, yet two-thirds of the allotted span of man's existence is by no means a brief period.

For our part we anticipate far more from the trade point of view from the rapid opening out of Africa by the Caucasian race than from the march of China on a new and distasteful path, from which at first the makers of arms and warlike appliances have most to gain.

And in the rich territories of South America, at

present under a cloud, must arise a far greater demand than China can furnish forth.

Turning to the share which this country may expect in the general good times we trust are approaching, it cannot be other than a large one.

Trade follows the flag, and commerce belongs largely to that power which commands the high seas.

While this country maintains that military supremacy of the ocean which is its life's blood, and is able to command all trade routes with its fleets and cruisers, so long will the bulk of the carrying trade of the world fall to its merchant service.

Nor do we believe that our manufacturers and our artisans have been slow to recognise the lessons of competition, and, while showing far more adaptability than before to the special requirements of their customers, will still maintain their unrivalled powers of doing high-class work, and of producing more in a given time than any others.

England opens her doors wide to the free entry of the products of other countries, consequently her sons buy their wants and live more cheaply than any other race in Europe—and cheap living means cheap producing.

By means of bounties and other Governmental assistance, by specially reduced railway rates, and by countervailing duties, German manufacturers have wrested during past years some of our trade from us; but the nation pays for the privilege of the few, and in Germany the burden of taxation is more intolerable even than in France, as evidenced by the steady flow of emigration.

And the result is that English manufacturers, enjoying all the advantages of geographical position, of cheap coal and iron ore, of short railway carriage to numerous ports, of the finest class of labour in the world, of free imports of raw material, and of a powerful finance, have been put on their mettle, and are even now re-securing the trades they had partially lost.

Trade between countries is, after all, only a form of barter, and no country can long stand any drain of its specie, therefore England must pay for her imports with her exports, and it stands to reason that distant countries must naturally purchase the products of a country which is the best and largest buyer of the exports from their own, and which, moreover, can ensure them the most rapid, regular, and economical transport.

To sum up—while thinking that there is room for all, and while denying to no other land those advantages which accrue to it from its own special circumstances or are conferred on it by nature, and only demanding for ourselves a fair field and no favour, we see no reason to fear that in the better days now dawning before us we shall not partake in the common weal.

JOHN BIRCH & Co., Limited.

THE YOKOHAMA TOWAGE CO., LTD.

ANOTHER ill-starred local limited liability company has been quietly snuffed out. On Wednesday an adjourned meeting of the Yokohama Towage Company, Ltd., was convened to receive the report and accounts of the Directors from April 1st, 1893, to June 30th, 1895, and further to pass, if thought fit, a resolution winding up the Company voluntarily. No quorum was present, and the matter is adjourned *sine die*.

MARINERS' NOTICE.

THE following notice to Mariners, No. 295, of the Yangtze River, Kiukiang District, China Sea, has just been issued by Mr. A. M. Bisbee:—Fitzroy Island Beacon Light—Notice is hereby given that the Fitzroy Island Beacon Light has been shifted 100 yards N. 2° W. from its last position, in consequence of the washing away of the river bank.

A SAD DEATH.

ON Wednesday afternoon Mr. G. H. Scidmore, of the U.S. Consulate-General, conducted the office for the burial of the dead over the remains of Cornelius Lee, an American citizen who lately expired in the General Hospital. The deceased escaped from the Hospital a few nights ago, while in a state of frenzy, and the exposure, added to his precarious state of health, proved too much for his debilitated system, and he gradually but quickly sank.

FRACAS IN KOBE.

THE impudence and aggressiveness of the coolies employed in the loading or unloading of vessels in Kobe culminated on the 29th instant in a free fight on the decks of the M.M. steamer *Caledonien*, while moored alongside the pier. The disturbance originated though some impertinence on the part of a coolie offered to a Japanese woman. A

Frenchman remonstrated and was struck by the coolie. The coolies then rose and attacked the ship's crew in a body. The Captain was finally obliged to clear the decks, in the course of which a number of coolies were injured. The *Caledonien* was detained for several hours in consequence.

REV. R. S. McARTHUR, D.D.

THIS eminent Baptist divine of New York City is improving his annual vacation by making a trip around the world. The vacation this year is a special one, in view of the fact that he has just completed his twenty-fifth year in his only pastorate—that of the Calvary Baptist Church. During this period he has welcomed over 3,000 converts into the Church. He came to Japan via Hawaii, and leaves for China on Sunday by the *Verona*. He is a hard-worker even during vacation, which to him means simply a change, not a cessation, of activity. He is correspondent for the *New York Tribune*, *Independent*, and several Baptist papers. In Hawaii, during a very short stay, he delivered several sermons, addresses, and lectures. In Japan, at this season of the year when the foreigners are scattered among the summer resorts, opportunities to hear him have unfortunately been few; but he has nevertheless addressed audiences in Yokohama, Karuizawa, and Tsukiji, Tokyo. He is an eloquent speaker, a trenchant and thoughtful writer, and an inspiring preacher.

SILK IMPORTS TO THE UNITED STATES.

THE following were the imports of Raw Silk at the ports of New York and San Francisco during June, 1893:—

	Lbs.	Lbs.	Value;
New York	891.....	192,627.....	\$ 704,050
San Francisco.....	—	—	—

The imports of waste, noils, and cocoons in the same period were:—

	Lbs.	Lbs.	Value.
New York	86.....	25,800.....	\$ 10,144
San Francisco.....	—	—	—

The imports of Japanese piece goods and handkerchiefs from January 1st to May 27th were:—

Silk Piece Goods	272,172 pcs.
Silk Handkerchiefs	249,132 doz.

HONGKONG AND THE GENERAL ELECTION.

HONGKONG has gone solidly Unionist again in the miniature general election which it held to ascertain the parliamentary and political prejudices of its British residents. The poll was announced as follows:—

Unionists.....	185
Liberals	49

CHOLERA IN YOKOHAMA.

A YOUTH residing at No. 27, Ishikawa, Nakamachi Ichome, and a Japanese woman at No. 81, Foreign Settlement, Yokohama, were attacked by cholera on the 1st inst.

THE NEW SECRETARY OF THE GERMAN LEGATION. ACCORDING to the *Official Gazette*, the successor of Count Quadt as Secretary of the German Legation in Tokyo is Captain von Treutler, a cavalry officer.

THE WILLARD OPERA COMPANY.

THE Willard Opera company open with "The Gaiety Girl" on Wednesday next, being unable to reach Yokohama in time to play on Tuesday, as originally arranged.

THE "CHEN-YUEN."

THE *Chuo Shimbun* says that the captured iron-clad *Chen-yuen*, now at Yokosuka, will be open to public inspection during five days, commencing the 5th inst.

DEATH OF A CONSTABLE WHILE ON DUTY.

CONSTABLE Kawasaki Natsugiro (aged 25), of Fujisawa Mura, Iruma District, Saitama Prefecture, was killed while endeavouring to arrest a thief on the 31st.

DEPARTURE OF THE KOREAN REFUGEES.

PRINCE PAK YONG-HO, ex-Home Minister of Korea, and Li, who have been staying at the

Nishimura Hotel, Yokohama, these last few days, left by the *Empress of Japan* yesterday. Messrs. Tanaka Kendo, Shiba Shiro, and Fukuzawa Sutejiro came down from Tokyo to see them off.

REV. HENRY M. SCUDDER, D.D.

THIS eminent preacher and veteran missionary, well-known in America, India, and Japan by his faithful service in those lands, died on June 4, in Boston, Mass. His many friends in Japan will sincerely lament his loss.

CURRENT TOPICS.

Various reports are circulated about alleged schemes of the Government for increasing the Army and Navy. Some news-mongers go so far as to point out the exact amount of the additional expenditure involved, and the number of troops to be added. But the *Nichi Nichi Shimbun* states that these reports are mere suppositions, entirely untrustworthy. According to that journal's information, obtained from a trustworthy source, the investigations about the increase of the Navy and the Army are going on at three different places. The financial side of the question is in charge of the department of Finance, and the researches there conducted have nearly been brought to a conclusion. But the elaboration of the Military and Naval schemes now in progress at the General Staff Office and the Naval Command Office respectively, is as yet far from complete. At present, therefore, it is impossible to say when these measures will be ready for introduction into the Diet. It is not surprising that much time should be devoted to preparation when we consider how many difficult and grave problems have to be solved by the Military and Naval authorities.

The much talked-of procession of the "forty-seven" politicians of the Opposition throughout the country seems to have been abandoned. It is rumoured that these politicians have decided to stay in the capital and devote themselves to investigating questions to be discussed in the next session of the Diet. They seem at last to have discovered what has always been evident to outsiders, namely that the agitation proposed by them is entirely out of touch with public feeling. It must not, however, be inferred from this fact, that the project of attacking the Cabinet on the question of the Liaotung Peninsula has been abandoned by the Extremists. Such a result, though not improbable, remains still in the future. As stated in our last weekly summary, they may perhaps abandon this unpopular question in favour of the old one, reduction of administrative expenditures. At all events, it has become necessary for them to reconstruct their political programme before the coming session of the Diet.

The *Doshi-kai*, an association recently organized by projectors of the anti-Cabinet agitation having no connection with existing parties, is beginning to attract attention. It has been joined by a number of politicians belonging to different sections of the Opposition, as for example Messrs. Ozaki Yukio, Koizuka Ryu, and Tataka Sanaye, of the *Kaishin-to*; Messrs. Suzuki Shigetoo and Kudo Kokan, of the *Kakushin-to*; Messrs. Inukai Ki and Moriga Konosuke, of the *Chugoku Shimpoto*; Mr. Sato Tadamochi, of the *Ota Club*; and Mr. Taguchi Ukichi, of the *Zatsei Kakushin-kai*. It must not be understood that these persons have really severed their connection with their respective parties. The *Doshi-kai* is to serve as a common meeting-ground for the different sections of the Opposition, and its recent affiliates may be regarded as delegates of their respective political bodies. In other words, the *Doshi-kai* is a device to evade the provisions of the Law of Political Associations, which forbids the combination of two or more parties.

The Progressionist organs are making a fuss about the simultaneous suspension of five or six newspapers in the Prefecture of Niigata, representing the Progressionists, Radicals, and National Unionists of the locality. According

to the *Mainichi Shimbun*, the local members of these hostile parties have agreed upon a common plan of action on the question of the Liaotung Peninsula, or in other words, have combined to carry on, through their respective organs, a strong journalistic attack upon the Cabinet. Their papers, the *Niigata Shimbun*, the *Tohoku Nippo*, the *Fuyu Shimpoto*, the *Takata Shimbun*, and so forth, having commenced the attack were suspended on the 26th and 27th instant. This incident, in itself of no great importance, has been eagerly seized upon by the Progressionist organs. They adduce it as a proof of the popularity of their cause, and also as an indication of a split in the ranks of the Radical Party.

The leading members of the National Unionist Party held a conference on Sunday. After mature deliberation, they came to the conclusion that there was no necessity to issue a fresh manifesto, as the attitude and views of the Party on current questions were definitely set forth in its Report, published on the 24th of May last. According to that Report, the National Unionists are committed to a policy essentially similar to that recently adopted by the Radicals. Like the latter, they indicate faint disapproval of the conduct of the Government with respect to the Liaotung Peninsula, but declare that it would be positively unwise and impolitic under the circumstances to raise a dispute between the Cabinet and the Diet on this subject, impeding the completion of vitally important measures that demand the attention of the nation. The document further states that, instead of wasting energy in fruitless political contentions, the people should turn their whole energy in the direction plainly indicated by the Emperor, when His Majesty enjoined the necessity of patience and perseverance in order to attain the grand object of the Imperial Policy.

On the same day, the representatives of the various Extremist parties met at the Atago-kan, Shiba, to exchange views on various political and financial topics with a view to their discussion in the next session of the Diet. There were present Messrs. Ozaki Yukio (Progressionist), Kawashima Jun (Constitutional Reformist), Suyehiro Shigeyasu (*Doshi-kai*), Kanao Ryogan (*Chugoku Shimpoto*), Taguchi Ukichi (Financial Reformist), and Sato Tadamochi (Ota Club). Among the subjects brought forward at the meeting was a document compiled by Mr. Kawashima, containing the views of his Party about the disposal of the war indemnity and the increase of old taxes or imposition of new. As to the war indemnity, it is proposed by the document that, after devoting a part of it to procuring arms and ammunition, increasing the Army and Navy, redeeming the War Loan and so forth, the remainder shall be kept in the Treasury as a special reserve, to be employed, as necessity arises, on public undertakings calculated to promote the development of the national resources. With regard to the question of taxation, it is suggested that whether the present rates be increased or new taxes imposed, the method of collection shall be simplified so as to realize a maximum of net revenue; that care shall be taken not to weaken the financial position of the local autonomous communes in order to augment the income of the Treasury; that taxes borne by the people at large, as the Land Tax, the Income Tax, the Trade Tax, and so forth, shall be gradually lowered with the object of promoting the growth of financial strength in local communes; that sources of national income shall be sought principally in taxes destined to increase with the increasing prosperity of the country, without directly affecting local finances; such taxes being, for example, Customs Dues, taxes on *Sake*, Tobacco, Sugar, Oil, and Soy, Stamp Duties, and so forth; and that re-assessment of the taxable value of land, reduction of the Land Tax, and abolition of export duties shall be carried out in so far as the condition of the Treasury permits. To what extent these proposals will be adopted by the various parties represented at Sunday's conference, remains to be seen.

That the Extremists, or at least a section of

them, are thinking of adopting the question of administrative expenditure as a handle for attacking the Cabinet, has already been mentioned in these columns. It is now reported that another scheme is under contemplation. The Radicals and the National Unionists have placed on record some faint disapproval of the Cabinet's foreign policy with respect to Liaotung, but refuse to attack the Government on this score since such a course would seriously interfere with the far more important question of Military and Naval development. Hence it may be assumed that the Radicals and the National Unionists would not be unwilling to attack the Cabinet's foreign policy did any way offer for pursuing such a course without impeding military and naval measures. Some Extremists consequently propose to vote these measures in common with the Radicals and the National Unionists, and then, at the final stage, to bring up the question of the Liaotung Peninsula, so that the two Parties will be compelled to join the attack upon the Cabinet. In other words, they propose, on the one hand, virtually to vote confidence in the Cabinet by passing important military and naval measures introduced by it, and on the other to demand its retirement. It is probable that the inconsistency of such procedure will make itself apparent even to the most uncompromising politicians of the Opposition.

On the Liaotung question, the *Nichi Nichi Shimbun* has an interesting article. It first refutes the contention advanced by Viscount Tani through his organ, the *Nippon*, that the Cabinet is to be blamed for having demanded the cession of Liaotung from China, since there must have been reason to foresee that such a step would invite European intervention. The *Nichi Nichi* states that, until about the 20th of March last, even the European states that ultimately combined against Japan did not themselves know what course if any they were about to pursue on the matter. Under such circumstances, the Japanese Government could not justly be expected to foresee the trend of events. "It may be said that the Government was perfectly right in demanding the peninsula and that, having done so, never to have given it up. Well, that contention is intelligible enough. But then those advancing it ought to remember that the Liaotung problem is not yet fully solved. The return of the peninsula remains to be accomplished. At present, under the provisions of the Treaty, Liaotung forms part of the Japanese dominions. It is a fact that our Government has promised the three Powers that the tenure of the district shall be renounced after due arrangements shall have been made with China; but the right of possession has not yet been given up, such arrangements having still to be negotiated. If the Opposition statesmen think that the return of the peninsula is an unbearable disgrace to this Empire, they ought, first, to take the place of the Ministers that gave the above mentioned pledge to the three Powers, and then either to disavow the pledge, or to make such arrangements with China as shall amount to its virtual disavowal. The problem being still undecided, it is not too late to adopt such a course of action. If the objectors really believe that the country has been subjected to unendurable humiliation, the mere dismissal of the present Ministers cannot wipe away the disgrace. They must further take the decided step of completely reversing the policy pursued by the statesmen now in office. Should representations in that sense be approved by the Emperor, the present Ministers would have no recourse but to resign their posts. If the Opposition politicians are convinced of the justice of their views, why do they not proceed to remedy effectually the mistake committed by the Government? They would be perfectly justified in saying that Liaotung must not be returned; nay, they are bound to say so if they have the least confidence in their opinions. Liaotung is still Japanese territory." Of course the Opposition are not prepared to go to that length, as everybody knows. Liaotung, in their eyes, is merely a stick wherewith to beat the Government.

The *Kokkai* mentions an alleged conversation

between Count Ito and a certain aged statesman—probably Count Soyejima—relating to the desirability of a coalition between the Premier and the Leader of the Progressionist Party. The venerable visitor, after alluding to the serious difficulties attending the safe pilotage of the ship of State subsequently to a great war, urged the importance of a union between Counts Ito and Okuma, the two statesmen who, in his opinion, are alone capable of conducting public affairs at a critical juncture of the country's history. Count Ito is represented to have answered as follows:—"I have never been averse to co-operate with politicians out of power. Still less averse am I at a time like the present, when measures of far reaching consequence, involving the dearest interests of the people, are pressing for solution. Between Okuma and myself, there are countless recollections of former friendship and cordiality, and if once we meet and speak our minds freely to each other, it may probably be found that we can easily agree. But here is the difficulty. I am now a member of the Cabinet, while Okuma is the leader of an Opposition party. Suppose he visits me at my house, the Opposition parties will at once say that he has at last surrendered to the Government. If, on the other hand, I call on him at his residence, I shall be denounced as having capitulated to him. Thus an imaginary fence separates us." Assuming this account to be fairly accurate, it confirms what has been pointed out more than once in these columns, namely, that the elder statesmen are separated less by their own differences of opinion than by the antipathy between their respective followers.

An attempt has been made by a section of the Extremists to foment discord between Sa'shu and Choshu statesmen by circulating rumours that the latter have secretly formed an alliance with the Tosa politicians, or, in other words, with the leaders of the Radical Party, and that all dissensions among the Choshu statesmen themselves have been successfully adjusted. In proof of the latter allegation, reference is made to the sympathetic attitude of the National Unionists towards the Government. But it is manifestly incredible that a matter of such importance as an alliance with any political party could have been decided without previous reference to the opinions of the Satsuma statesmen, who constitute an influential section of the Cabinet. Still more extravagant is it to suppose that the National Unionists are exclusively under the control of Choshu statesmen. The Party owes its origin to the personal influence of Count Saigo and Viscount Takashima as well as to that of Viscount Shinagawa. A certain Extremist organ recently went so far as to declare that Count Matsukata's consent to remain in the Cabinet explains the friendly attitude of the National Unionists towards the Government. Thus it follows that an alliance between the Government and the above mentioned parties would indicate union rather than disunion in the Cabinet.

With regard to the hope entertained by a section of the Extremists, that the National Unionists and possibly the Radicals might support an attack upon the Cabinet, if the question of Ministerial responsibility about the return of Liaotung were introduced after the Military and Naval measures had passed both Houses of the Diet, the *Fiji Shimpō* says that the influential members of the National Unionist Party have positively declared their determination to oppose the introduction of the so-called Responsibility question at any and every stage of the session, if it be intended as a weapon for dislodging the Ministry. As to the strength of the National Unionist Party in the Diet, opinions differ. Commonly it is put at 31, but the Party's organ, the *Chuo Shimbun*, declares that the number is over 40. The same journal announces that the Party will devote its entire energies to the military and industrial development of the country.

Concerning the degree to which the fighting capacity of the country should be increased, there seems to be a general disinclination to

express any opinion, not because people are indifferent, but because full confidence is reposed in the ability and integrity of the Military and Naval authorities. Vernacular journals concern themselves chiefly to reproduce alleged decisions of the Authorities on this matter. The question being still under consideration at the War and Naval Departments, no definite statement can yet be made. But as an example of the kind of rumours circulated, it may be interesting to notice information that the *Yomiuri Shimbun* pretends to have obtained from a trustworthy source. The Government's determination, we are told, is to make the Army twice as strong as it now is, so that 200,000 troops may be available for service at a moment's notice. As to the Navy, 120,000 or 130,000 tons are to be added in the course of the next five or six years. We do not vouch for the correctness of these figures.

The simultaneous suspension of five newspapers in Niigata Prefecture in connection with the Liaotung question has been already noticed. The Extremist organs write as though a really formidable popular agitation were going on in that locality. The rigorous measures of repression adopted in the capital appear to have been employed by the local police authorities also. Originators of the agitation in Tokyo, pleased to find that some provincial politicians are simple enough to become their instruments, are said to be making efforts to raise subscriptions in Tokyo by way of solatium for the unfortunate papers of Niigata.

THE FOREIGN TRADE OF KOREA FOR 1894.

The *Kokkai's* Sōul correspondent has obtained some figures relating to the foreign trade of Korea during the year 1894. The total sums were as follow:—

Imports. yen.	Exports. yen.	Aggregate. yen.
5,416,603.....	3,196,421.....	8,613,200

Divided according to the different treaty ports, the figures appear thus:—

	Imports. yen.	Exports. yen.	Total. yen.
Nin-sen (In-chhōn).....	3,258,615	1,607,015	4,859,330
Gen-san (Won-san).....	1,146,603	911,477	2,053,309
Fu-san (Phu-san).....	1,016,156	684,229	1,700,385

Of the exports, the principal articles were rice, 939,662 yen; beans, 417,711 yen; ox-hides, 335,738 yen; marine products, 27,997 yen; gold, 540,004 yen; cereals of various kinds, 400,162 yen; other articles, 366,176 yen. The Imports were:—Clothing stuffs, 3,803,833 yen; copper iron, &c., 163,009 yen; kerosene, 236,929 yen; fancy goods, 245,549 yen; rice 842,921 yen; salt, 60,987 yen; other articles 759,422 yen.

LATEST CENSUS.

The population of the principal cities on the 31st of December, 1894, was as follows:—

Tokyo	1,303,876	Akita	26,912
Kyoto	328,403	Fukui	43,083
Osaka	484,409	Kanagawa ..	89,593
Sakai.....	47,138	Toyama	58,645
Yokohama ..	160,866	Takaoka	30,724
Kobe.....	159,243	Tottori	27,953
Himeji	27,103	Matsuyae	35,026
Nagasaki	67,035	Okayama	51,693
Niigata.....	49,475	Hiroshima ..	84,720
Mayebashi ..	34,947	Akamagaseki ..	33,500
Mito	29,410	Wakayama ..	55,423
Tsu	30,097	Tokushima ..	60,232
Nagoya.....	200,720	Takamatsu ..	33,975
Shizuoka	37,210	Matsuyama ..	33,326
Kofu	33,947	Kochi	35,992
Gifu	31,736	Fukuoka	56,371
Sendai	61,204	Kurume	26,697
Morioka	32,285	Saga	28,685
Hirosaki	31,019	Kumamoto ..	58,862
Yamagata ..	28,379	Kagoshima ..	55,925
Yonezawa.....	28,851		

The following men-of-war were lately placed on the reserve:—*Takachiho Kan*, *Tenryu Kan*, *Kongo Kan*, *Tsukushi Kan*, *Takao Kan*, and *Yamashiro Maru*.

ECONOMICAL AND INDUSTRIAL.

As already stated in these columns, the Nippon Ginko recently reduced its rate of interest on advances from $2\frac{1}{2}$ sen per diem per 100 yen to 2 sen, the object being to stimulate the revival of business and industry. But the benefits of this step on the part of the Bank of Japan have been monopolized by other banks, which have sought and obtained advances at the new rate, still continuing, however, to levy the old rates from their own commercial and manufacturing clients. This state of affairs will be better understood if we explain that the Bank of Japan is not in the habit of making advances to individual applicants, with the exception of a very few men of business in Tokyo and Yokohama, and the other banks are consequently in a position to earn large profits by acting as media between it and their own customers. They charge a daily interest of from 2.5 to 2.8 sen for money obtained from the Bank of Japan at 2 sen. Loud complaints are naturally heard in business circles, and efforts are being made to induce the Bank of Japan to open its doors to individual merchants and manufacturers. The Bank's charter does not explicitly prohibit such transactions, and in point of fact advances are actually made to a few persons in Tokyo and Yokohama. But, in the main, the Bank has hitherto restricted its loans to banking establishments, apparently because it saw some valid objections to engaging in competition with these banks, and also because its principal mission is to preserve the general economical balance. But, if the bankers continue to extort unduly high rates, the Nippon Ginko is not unlikely to give favourable consideration to the representations of private borrowers.

The *Chugat Shogyo Shimpō* states that the Government has under contemplation the establishment of an Industrial Bank. The scheme was once taken up enthusiastically by Count Matsukata, and a draft of the bank's charter was prepared, but his subsequent resignation led to the temporary abandonment of the matter. It is reported that since the Count's re-appointment to the post of Minister of Finance, the scheme has been revived, and that a Bill on the subject will probably be introduced in the next session of the Diet.

The members of the Tokyo and Yokohama branches of the *Boyeki Kyokai* (Trade Association) held a meeting at the Seiyoken Restaurant, T'sukiji, Tokyo, on the 18th ultimo. The Yokohama contingent consisted of Messrs. Otani Kahei, Otani Kobei, Nishikino Kichiji, Muramatsu Takeichiro, Hattori Arata, Miyakawa Kosan and nine others. Tokyo was represented by Messrs. Ikeda Kenzo, Ohashi Sahei, Okada Ninichi, Namikawa Sosuke, and so forth. The company numbered in all more than fifty. Mr. Ikeda Kenzo opened the meeting with a short address, in which he explained the importance of making thorough investigations into the existing condition of the foreign trade of the country, with a view to carrying out necessary reforms and improvements. After a debate in which several persons warmly took part, it was finally decided to appoint a Commission to report on the following eight topics:—(1) Methods of extending the market for Japanese exports; (2) increased facilities for the import trade; (3) the formation of guilds for conducting and regulating transactions in the four staple articles of export; (4) State encouragement of foreign trade; (5) training of men for foreign trade; (6) co-operation between capitalists and men engaged in foreign trade; (7) methods of effecting improvements in articles of export; and (8) lessons to be learned from the experience of other countries as to the effect of war upon trade.

The continued cool and wet weather is causing considerable uneasiness about the rice crop, as is clearly indicated by a steady rise in the quotations at the Rice Exchanges throughout the country. All reports from the interior agree in saying that the yield of the earlier varieties will show more or less decrease as compared with that of average years. But opinions differ

about the later varieties. Some people maintain that the injury thus far done to the growth of the plants of later varieties can never be remedied, however fine the weather may be for the rest of the season. But many seem to think that, should the weather prove good during the month of August, the later varieties will produce an average crop. This second view is said to be shared by the experts in charge of the Government Experimental Farm at Nishigahara, Tokyo.

The *Jiji Shimpō* observes that a marked increase has taken place in the import of alcohol during the twelve months ending June last, and this, despite the imposition of the new duty since July of last year. The following figures speak for themselves:—

Casks (raab.).	Casks (azob.).
July, 1894..... 900	January, 1895... 909
August, 1894..... 1,025	February, 1895... 1,000
September, 1894... 3,173	March, 1895..... 802
October, 1894..... 1,550	April, 1895..... 2,079
November, 1894... 574	May, 1895..... 3,094
December, 1894... 925	June, 1895..... 9,708
Total 8,147	Total 17,592

The *Chugat Shogyo Shimpō* states that the general tendency among the bankers of the capital is to follow the example of the Bank of Japan and lower their rates of interest. But much hesitation and reluctance seem to be shown by the bankers to carry out that intention, if they really entertain it. The rate charged by them still ranges between 2 sen 5 rin and 2 sen 8 rin per diem for 100 yen.

The Japanese silk dealers of Yokohama are said to be complaining because the Bank of Japan has lowered its rate of interest. On various pretexts they had demanded a high rate—3 sen 3 rin per diem for 100 yen or over 12 per cent. per annum—on advances made to silk-producers in the interior. But as soon as it was known that the Nippon Ginko had lowered its rate to 2 sen per diem, the producers began to demand a corresponding reduction on the part of their creditors here, and the latter now find it impossible to make as much profit by their loans as they had hoped. Hence their tears.

The project of establishing an Industrial Bank, says the *Chugat Shogyo*, is making favourable progress in Government circles. Whether the bank will receive a State guarantee of profit, or whether the State will be its principal shareholder, is a point yet to be settled. The capital will be at least 10,000,000 yen. Our contemporary seems to entertain no doubt that a Bill on the subject will be introduced in the next regular session of the Diet. An increasing tendency among foreign merchants to project industrial undertakings in co-operation with Japanese, is said to have been one of the causes that have led the authorities to take up the present scheme in earnest.

The kerosene oil obtained in Echigo is reported to be coming into general use in the provinces of the Hokuriku-do and in Shinshu, and even in the provinces of the Kwanto. The oil produced at Kashiwazaki is said to be especially good, some people asserting that it is even superior to the Russian import. The completion of the Gan-etsu line, connecting Echigo with the provinces of the north-east, will still more extend the market for the Echigo oil. It is also stated that there is a prospect of the article's finding its way into Hokkaido.

A panic is reported to have been caused at Mayebashi by the discovery of a large fraud on the part of some officials of the local Cocoon Market Company. The company's capital is only 20,625 yen, but its connection with the 39th National Bank of Mayebashi kept its credit very high in local business circles, and it had been in the habit of carrying on transactions entirely out of proportion to its capital. Various suspicious circumstances having gradually come to light, one of the accomplices in the fraud, Matsui Rinkichi, a manager of the company, attempted to drown himself on the 11th instant. He was rescued and induced to confess the whole truth. For some years he and another

official of the company, Sugi Tomokichi, in concert with a rascal, named Fukuda Gosaburo, of Oyama, had been in the habit of drawing large sums of money from the bank to the account of the company on the security of cocoons, and appropriating the money for their private purposes. The bales of alleged cocoons given by way of security have been found to contain a mass of straw and bricks covered with a thin layer of cocoons. The two also robbed the company of a large quantity of cocoons. The revelation led to widespread consternation in the place as well as among the customers of the company in other localities. Matsui and Sugi were at once arrested, but Fukuda managed to escape and his whereabouts is still unknown. In consequence of the collapse of this company, all transactions in cocoons are said to be at a standstill in Mayebashi. The creditors of the company are trying to get their claims satisfied by Mr. Katsu, President, and Mr. Ohara, assessor of the company, both of whom are known to be among the most wealthy men of the place.

There is a project among the principal bankers of Tokyo and Yokohama to establish a credit agency. This will be the second agency of the kind in Japan, the other and older one in Osaka having been established some years ago. For the first few years the Credit Agency of Osaka experienced various difficulties. Its receipts did not cover its expenses, and the work of ascertaining the actual state of the credit of the principal local commercial houses was impeded by almost insurmountable obstacles. As an illustration of the embarrassments encountered by it in the latter direction, it is stated that fully twelve months were needed to make a fairly accurate estimate of the wealth of Mr. Sumitomo. Taught by the experience of the Osaka establishment, the projectors of the present scheme are prepared to incur a considerable amount of expense for the first few years. According to their plan, a sum of 12,000 yen is to be contributed yearly by the projectors for the maintenance of the agency. They represent the Nippon Ginko, the Yokohama Specie Bank, the Mitsui Bank, the Mitsu Bishi Bank, and several other banks of high standing.

The exportation of *habutaye* from Yokohama during the first six months of the present year shows a remarkable increase over that for the corresponding period of last year. The following table shows the figures for the two periods:—

	Quantity, Tan.	Value, Yen.
First half of 1894.....	325,830.....	5,237,959.87
First half of 1895.....	171,205.....	2,872,546.86
Increase.....	154,625.....	2,365,412.92

The opening of branch offices by the Bank of Japan at Shimonoseki and Hakodate has been attended with complete success, especially in the case of the branch at the former place. The great facilities given by these branches to business transactions in the respective localities, have led merchants of other commercial centres to apply to the Bank for the establishment of other branches. It is believed that agencies will probably be opened at Nagoya and Niigata.

The wheat crop in Kyushu, according to the *Nichi Nichi Shimbun*, is reported to have been slightly inferior to that of an average year. The price of the ordinary Hizen grain is quoted at 4 yen 50 sen per koku. The produce of beans in Kyushu is expected to be good.

Some influential Japanese financiers maintain that the reviving prosperity of industry and commerce in this empire ought to be checked, rather than stimulated. They point to the disastrous experiences of Germany after her war with France, and express a fear that, unless extreme caution be exercised, similar economical disturbances may be witnessed in this country. Viscount Enomoto's recent instructions to the Governors of Cities and Prefectures were based on that apprehension. But a more numerous and influential section of financiers take different views. The Bank of Japan was the first to disregard the warning uttered by the Minister of

Agriculture and Commerce: it undertook to cheapen money, so as to promote industrial and commercial activity. The *Fiji Shimpō* now raises its powerful voice in support of the Bank's attitude. It contends that any comparison between the Japan of to-day and the Germany of twenty-five years ago is unjustifiable. The economic disturbance in Germany was caused by the absorption of an enormous sum of 5,000 million francs in the short space of a few years. In Japan's case, the indemnity amounts to only 200 million taels, and is to be paid in eight years. Moreover, it will be used principally for Military and Naval purposes, so that the greater portion will have to be spent in Europe and America. Hence the revival of industry and trade may be safely allowed to take its own course, and should even receive every legitimate encouragement from bankers and capitalists. Some folk may be duped by speculation, but that has always been, and will always remain, inevitable.

When the numerous steamships now employed as transports are set free, the great question will be how to repair them. The Dockyards at Yokosuka and Nagasaki are taken up by war-vessels. It is stated that the Nippon Yusen Kaisha will repair its ships at Shanghai and Hongkong. Dockyards in the Far East have a fine time in prospect. The above mentioned company alone is expected to spend more than half a million *yen* on repairing its vessels.

The *Chugai Shogyō Shimpō* states that a scarcity of subsidiary coins is now keenly felt in Tokyo. When the war broke out quantities of these pieces were continually sent over to Korea and China. The Mint at Osaka, with all its industry, being unable to supply the demand, the Bank of Japan was compelled to bring from its vaults notes of 20 and 50 *sen* denominations that had been lying there for some years, and put them into circulation. But since this state of things was corrected when the soldiers and coolies began to return, the present scarcity is attributed to an exodus of small coins to Formosa.

Mr. Awaya Shinazo's project of utilizing the Fall of Nachi for supplying electricity to Osaka is confronted by formidable rival schemes. Thus Mr. Takagi Bumpei and other citizens of Kyoto propose to establish an electric factory on the upper stream of the Muko in Hyogo Prefecture for the use of Osaka, Kyoto, and Kobe, and an exactly similar project has been formed by some inhabitants of Nada. Applications for licences having been made by the projectors of all the schemes to the Prefectural Government of Hyogo, the Governor tried to bring about a union, but his efforts failed. The question has now been taken up in Kyoto, and it is expected that an amalgamation will be effected.

Mr. Ikeda Kenzo, of the 100th National Bank, is reported by the *Kokkai* to have expressed himself very strongly upon the question of direct trade with foreign countries. The foreign trade of Japan has made rapid progress, but is almost entirely conducted by the foreign merchants in the Settlements. Mr. Ikeda urges the importance of putting an end to that state of affairs. The country's foreign trade cannot progress genuinely, he says, so long as it remains in the hands of foreign merchants incapable of thoroughly studying the tastes and wants of the Japanese and out of touch with the condition of things in their own countries. The time has come, he thinks, for the Japanese to carry on their own foreign commerce. The abolition of Consular Jurisdiction will soon deprive the foreign merchants of their favourable position, while, in consequence of the recent war, the position of the Japanese will steadily improve abroad. If, under such circumstances, the Japanese can not get their foreign trade into their own hands, they must be a hopeless race, entirely unfit to struggle for existence with civilized nations.

KOREAN NEWS.

No news has been received from Korea since the return of Count Inouye to Sōul. The *Kokumin Shimbun's* correspondent writes from Sōul under date of the 20th instant, namely, the day on which the Japanese Minister was expected there. He says that the Korean capital was full of wild rumours; as for instance, that Count Inouye was coming with Pak Yong-ho, who had been hiding at Ninsan; that he (the Count) would enter Sōul at the head of 20,000 troops; that the capital would soon become a scene of fighting between Russian and Japanese forces; that the Japanese Minister intended to proceed to the Court on the 22nd, accompanied by an armed escort, to demand the restoration of Pak to his former Ministerial post, and so on. It appears that the Koreans, even those in high official positions, believed that Pak would come back with Count Inouye, and that men of all parties suspended proceedings when it became known that Count Inouye was returning. Evidently the Count is regarded with great respect and fear by Koreans of all classes.

An occasional correspondent of the *Nichi Nichi Shimbun* states that the crime of which Pak is accused is that of plotting against the life of the Queen. But no definite evidence is forthcoming, and the accusation rests upon mere hearsay. The man that gave information about the issue of a warrant for Pak's arrest is said to have been Li In-yo, the former Police Chief, who lived next door to Pak. The writer also alleges that An Keiju, who was charged with the execution of the warrant, was in no hurry about the business, and that the pursuit of the flying Minister was not at all energetic.

The *Fiji Shimpō's* Sōul correspondent states that the Queen is taking active steps to bring the army under her personal influence. So far as the Palace Guards are concerned, she successfully defeated the Cabinet's attempt to replace them by troops trained under the new system. The officers in command of the Guards are all her own favourites and dependants, so that this corps, about 1,000 strong, will be faithful to her in every contingency. But the Guards are inferior in efficiency to the newly trained troops, and the Queen being well aware of the fact, is endeavouring to get the regular troops also under her sway. As a first step toward achieving that end, she is stated to have recommended for the post of the Commander-in-Chief of the little army, an officer named Ko Keikun, who at the time of the *émeute* of 1832 showed great devotion to Her Majesty, devotion that extended to carrying her on his back as far as Chon-ju. Whether this very loyal individual has received the appointment we are not told, but the Queen's efforts on his behalf seem very natural.

Recently a certain dissatisfied and ambitious Korean waited on the Tai Wōn-kun at the latter's country villa in Kotokuri. After explaining the confused state of affairs in the Capital, the visitor lowered his tone and sought to persuade the ex-Regent to emerge once more from retirement and rescue his king and country from their oppressors. The old statesman, having patiently listened to the suggestions of his visitor, called a police official who was attending in the adjoining room and ordered him to arrest the astonished instigator of treason. The unfortunate adventurer is now in jail.

General Le Gendre is said to have been appointed Adviser to the Household Department on the 16th instant, at an annual salary of 3,600 *yen*. Formerly he used to draw from the Korean Government a salary of 9,600 *yen* per annum, and the Japanese correspondents mention a rumour that his new stipend of 3,600 *yen* is merely nominal, his real income being 9,600 *yen* as formerly. He is alleged to be on the best of terms with Mr. Waeber, and his appointment to the Household Department is regarded by the Japanese as an indication of the increased influence of the Russian Minister at Court. It is also stated that the Korean Government has engaged three Americans as Legal Advisers, and that they are expected to arrive before long.

The Japanese settlement in Sōul is reported

to be rapidly increasing, both in size and prosperity. All the hotels are full of guests, and the restaurants are driving a roaring trade. Erection of new buildings and repair of the old are going on everywhere, so that carpenters, of whom there are over a hundred in the place, are in great demand, receiving on the average a dollar per day. The settlement now extends almost as far as the Southern Gate. Prices are stated to be exceedingly high.

According to a telegram said to have been received at the Japanese Legation from Wiju on the 18th instant, the number of cholera cases in that place and neighbourhood during the five days ending on the 18th, was 740, the aggregate number from the first appearance of the disease being 3,661.

The Korean Government is said to have opened two lines of coasting trade. They both start from Ninsan, one going along the south-eastern and northern coasts, and the other along the south-western. On the former line has been placed the steamship *Kairyū*, and on latter the *Ken-yeki*. Both boats are of small size.

A Japanese just returned from Fusan is quoted in the *Fiji Shimpō* to the effect that Mok-pho, a port in Chōlla-do, which is to be shortly opened to Japanese trade, has a fine harbour, easily affording safe anchorage for thirty or forty large steamships. As the maritime outlet of a province called the granary of Korea, Mok-pho seems destined to become a very prosperous commercial centre. Japanese merchants at Fusan, as already stated in these columns, offer strong protests to the opening of this port on the selfish ground that the measure would injure their business. The Japanese colony at Fusan being more than three centuries old, the residents regard the place as their home and are, consequently, extremely jealous about the rise of other prosperous colonies in their neighbourhood.

In the localities adjoining Fusan, the barley and wheat crop appear to have been exceptionally good, and the farmers are reported to be in high spirits. The Nak-dong-gang overflowed recently, and did some damage to the Japanese Commissariat Stations along its banks. Predictions of a plentiful rice crop this autumn are freely ventilated, the overflowing of this river in midsummer being traditionally connected with a good harvest.

The Korean Government having abolished the law requiring people to wear white clothes, Japanese striped goods are said to be slowly coming into use as garments, and thus a large market may soon offer for the importation of Japanese cotton fabrics.

REASONS AND RESULTS.

We have been strongly indisposed to believe the rumour that France had obtained concessions of territory in south-western China as a result of her action with respect to the Liaotung Peninsula. The story, however, is most circumstantially published in Bangkok, the newly rectified French boundary being defined thus:—

Leaving Laichon the boundary line runs abruptly north, enclosing the valley and sources of the Nam Na, and passing north of the head waters of the Nam Oo, or Hou, follows the mountainous sources of the Nam Ban and Nam Touh in a series of erratic curves, and finally impinges on the Meikong a little north of Muang Vang. . . . From a glance at the map it will thus appear clear that M. Sing, reported to be garrisoned by Indian troops, is entirely within the new French territory, and that part of Chien Keng, which State straddles the Meikong, Chieng Sen, and Chieng Kong is also included in French territory. In other words, all territories on the left bank of the Upper Meikong over which Siam exercised any sort of suzerain rights, have been included by the new boundary convention into French territory. France, England, and China are now neighbours on the Upper Meikong.

In a word, China has been induced to cede to France the buffer state that the former was to have held for the purposes of separating French and British territory. But the rumour remains to be proved.

PAK YONG-HO AND THE KOREAN STUDENTS.

Pak Yong-ho, who had been receiving treatment at Dr. Kitazato's hospital at Azabu, Tokyo, left there on Saturday last and proceeded to Yokohama with the intention of sailing for the United States. It is stated that such had been his original purpose when he escaped from Seoul, but that he was prevented from leaving for America immediately upon his arrival in this country by the necessity of receiving medical treatment. Dr. Kitazato is reported to have pronounced him fit to undertake the journey provided that due precautions are observed.

The Korean students who assembled at the Legation of their country on Saturday last, are reported to have returned to the Keiwo Gijiku on Monday. Their misconception about the connection between Mr. Fukuzawa and Pak, was entirely removed by the former's explanations as to the distinction between political refugees and ordinary fugitives from justice, and they are now pursuing their studies as before.

THE "MAINICHI SHIMBUN" CASE.

The suit brought by Police Inspector Ikegami against the *Mainichi Shimbun* on account of the latter's refusal to insert his letter correcting an erroneous statement in the newspaper's account of the suspension of Mr. Shimada Saburo's speech at the Kinkikan, was heard on the 11th and 13th ultimo before Judge Sakurai in the Kyobashi District Court. The point at issue was whether or not Police Inspector Ikegami ordered the suspension of Mr. Shimada's speech while he was in the act of reading an Imperial Rescript. The accused and the reporters of the *Nippon* and a few other papers insisted that the order was given while the speaker was reading an Imperial Rescript, whereas the Police Inspector was equally positive in asserting that he stopped Mr. Shimada just when the latter began to speak about the return of the Liaotung peninsula. The stenographic report of the speech preserved at the Kanda Police Office seemed to support the statement made by the Police Inspector. Judgment was given on the 17th ultimo in favour of the prosecution, the editor of the *Mainichi Shimbun* being sentenced to a fine of 50 yen for violating Article XIII. of the Newspaper Regulations. The accused will, it is said, appeal against the decision. Extraordinary importance is attached to the case by the organs of the Opposition parties. They accuse the Judiciary of being subservient to the Executive. But in truth the case is of trifling moment whichever way it may be ultimately decided. It is a mere quibble to pretend that the reading of an Imperial Rescript can have provoked police interference. Everybody knows that Mr. Shimada's speech was stopped because of the nature of the matter that he set himself to discuss, and whether the Police Inspector issued his mandate at the moment when an Imperial Rescript was being read, or immediately after it had been read, is wholly immaterial. We confess that the spectacle of leading politicians' clutching at such straws of contention is not dignified or edifying. At all events, it was the *Mainichi Shimbun's* duty to comply with the law. Its editorial columns remain opened for protest or denial.

A CHOLERA RECORD.

The cholera has achieved a terrible record in the family of Mr. Yamamoto Mitsutoyo, in Nishirokukenbori-cho, Fukagawa, Tokyo. Between the 24th and the 28th ultimo, eight members of the family, the father, mother and six children, were attacked by the terrible disease, and five of them succumbed. It is further stated that at No. 16 and No. 17 in Matsumura-cho, in the same district, no less than 17 cases of cholera occurred between the 27th and 29th ultimo.

At the recent commencement exercises of Dartmouth College, Hanover, N.H., the honorary degree of LL.D. was conferred upon Rear-Admiral Belknap.

THE JAPANESE MINISTER IN PEKIN.

The Japanese Minister invited his colleagues to dinner at the Legation on the 12th instant. Among the guests, are mentioned the Representatives of England, the United States, France, Germany, Belgium, and Spain; Sir Robert Hart, his son, and Mrs. Hart, and the Secretaries of the Legations. The Russian and Italian Ministers could not be present owing to absence from the Capital, the former at Chefoo and the latter on a journey in the interior. The American Minister came back from the hills, where he was spending the summer vacation, specially for the purpose of attending the dinner. The Japanese correspondents, from whose letters we quote these facts, say that the relations between Mr. Hayashi and the British and American Representatives are daily growing more and more intimate. The German Minister also is reported to be showing much courtesy to his Japanese colleague.

The new Chinese Minister, Mr. Yu Kêng, is said to be a frequent visitor at the Japanese Legation. Formerly a Taotai in the south, he was summoned to Peking when the war broke out, and appointed Private Secretary to Prince Kung. In that capacity he had charge of the correspondence that passed between the Japanese and Chinese Government through the medium of the American Minister in Peking. He is said to enjoy the complete confidence of Prince Kung. He is a little past fifty, and his wife is stated to be a daughter of an American by a Chinese lady.

Recently the Chinese *Official Gazette* contained a Memorial to the Throne by an official named Kwan Ting-kien. The writer strongly recommended sweeping reductions in administrative expenditures so that the indemnity to Japan might be paid without borrowing money abroad. In the course of his memorial he applied the term "insular barbarians" to the Japanese. This was carrying matters a little too far, and the Tsung-li Yamên had to apologize to the Japanese Minister. But the very next day the same document was re-published and the same expression was suffered to appear. This called forth a fesh remonstrance, and the Tsung-li Yamên again apologized, promising that a special Edict should be issued to prohibit the recurrence of such a mistake. We do not understand how the re-publication occurred, but the story is related by Japanese journals in the form here given.

General Yu Lu, of Mukden, is stated to have addressed a memorial to the Emperor, bringing to His Majesty's notice the pitiable condition of the people in the Provinces of Kirin, Mukden, and Shinking, who are suffering terribly from famine, a result of the war. The memorialist advocates the abolition of the *likin* (internal transit dues) which greatly aggravate the distress of the people. The misery of the population in these localities is said to be really intense and widespread.

The *Nichi Nichi Shimbun's* correspondent hears that a certain merchant in Tientsin, of what nationality he does not state, is daily making large purchases of camels, and that his movements are causing much suspicion. The same correspondent learns that an army of 50,000 men is being moved along the north of the Desert of Gobi. "Is it meant," he asks, "as a demonstration to hasten the withdrawal of Japanese troops from Korea, or is it to be interpreted as a demand for the evacuation of Liaotung? If this report prove true, the time has not yet come for the Japanese to sheathe their swords."

At the date of the correspondence from which we have been quoting, namely the middle of the present month, the weather was very fine in Peking. There had been several showers of rain during the preceding few days, but they were not heavy enough to make the roads inconveniently bad.

THE KIMURA-CORNES CASE.

As usual the device of deliberate misrepresentation is resorted to by the *Japan Gazette*. It charges this journal with alleging that "when the Japanese defy the law, foreigners must also set the Courts at defiance." Of course we never said anything of the kind, or anything even remotely suggesting such disgraceful procedure.

The *Japan Gazette* further writes:—"Also the law as to the granting of execution after sentence has been delivered should be amended. If Messrs. Cornes and Company could have immediately proceeded to attach Mr. Kimura's wares we should have heard nothing of this most shameful case. Here then are two suggestions, both practical, and calculated to prevent any such conspiracies in future." Now it happens that the Code of Civil Procedure contains the very provision whose insertion the *Japan Gazette* advocates. Mr. Kimura's property could have been immediately attached after the delivery of the Court's verdict. But that is entirely outside the question at issue. There is not, and never has been, the slightest doubt that Messrs. Cornes and Company could have obtained from Mr. Kimura the full satisfaction granted by law. The point is that had the British firm proceeded to the extremity of its legal rights, it would have been boycotted. The law needs no amendment in that respect. The *Japan Gazette* seems to be alike ignorant of the Code and incapable of appreciating the issue really at stake in the Kimura-Cornes case.

The *Japan Gazette* further writes:—"Is Japan to let a social problem go unsolved because in England there is no solution? The law in Japan has many powers it does not possess in England. In Japan a policeman can enter a private house without a warrant, and it is criminal to play cards for a stake." Now, in the first place, it is quite untrue to assert that a Japanese policeman can legally enter a private house without a warrant. That blunder on the part of the *Japan Gazette* was long ago exposed. In the second place, it appears that we now have the *Japan Gazette* contending that since Japanese law sanctions procedure which in England would be at once illegal and intolerable, therefore Japanese law should be extended so as to carry such procedure to still greater lengths. A year or two ago the *Japan Gazette* wrote a series of violent articles designed to prove that foreigners ought never to be placed under Japanese jurisdiction because their houses would be exposed to visits from policemen without warrants. Now the same journal seems to contend that the existence of such an abuse in Japan constitutes a fair pretext for further legal license. The abuse being chimerical, the *Japan Gazette* has not even the satisfaction of contending that two wrongs makes a right.

THE TOKYO CHAMBER OF COMMERCE.

An extraordinary general meeting of the Tokyo Chamber of Commerce was held in its rooms on the 26th instant. There were present Messrs. Shibusawa Eiichi, Okusaburobei, Asabuki Eiji, Sakuma Teiichi, Kato Masayoshi, Shoda Heigoro, Watanabe Hiromoto, Nakano Buei, Yamamoto Tatsuo, and about twenty-five other business men of the capital. Mr. Shibusawa was in the chair. The proceedings commenced at 4 p.m. The first subject discussed was the report of a committee that had been appointed to enquire into the advisability of memorializing the Government about the reduction of freight rates on its railways. The committee recommended the presentation of such a memorial and submitted a draft, but as some points required correction, the draft was recommitted and the final vote was postponed to another opportunity. The next matter submitted to the meeting related to some extraordinary expenses incurred by the Chamber during the war. The account was passed without debate. The third measure related to filling up a vacancy in the Committee for Investigating the Civil and Commercial Codes, caused by the

resignation of Mr. Masuda Kokutoku. Mr. Sakuma Teiichi was nominated by the President. The fourth item was of more practical importance and occasioned an animated debate. It was a proposal to present to the Minister of Agriculture and Commerce a memorial about the revision of the Exchange Regulations. Under the existing provisions, a system of transactions known by the name of "standard transactions" (*hyojun baibai*) is allowed in the case of rice alone. The proposal is to have the application of the system extended to other articles also. In order to understand the significance of the proposed measure, it will be necessary to explain briefly the method of transactions in a Rice Exchange. Let us take that of Tokyo for our purpose. Busho produce of medium quality is adopted as the standard rice, and forms the basis of all transactions. The operations being mostly speculative, the quantity of rice actually changing hands is comparatively small, but still deliveries do take place. Such deliveries may be in rice of any locality and quality, provided that allowance is made for the grain's relative inferiority or superiority to the standard, in accordance with a scale fixed by the exchange. The buyer has no right to demand a particular sort of rice. This is termed a "standard transaction." The rule is different with other articles. In their case, all transactions are conducted with reference to a particular kind and class. For instance, if salt be in question, each purchase or sale is made in *shinzai*, *ako*, or some other kind, and delivery much take place in that very kind and no other. Now these transactions being mostly for speculative purposes, it usually happens that the actual delivery of commodities is conducted by parties other than those effecting the original operation. Consequently, the designation of a particular kind and class of article is not only unimportant, but very often causes inconvenience and trouble. Hence the proposal to apply the so-called "standard transaction" to the case of all articles, because by that method the above mentioned inconvenience may be obviated. After a warm debate, the measure was adopted by a large majority. There were four other proposals on the table, but it being now nearly half-past nine, the meeting was adjourned to a date not yet notified.

DR. ROBERT ALEXANDER JAMIESON.

It is with very deep regret that the *N.-C. Daily News* announces the unexpected and comparatively sudden death of Dr. R. A. Jamieson, which occurred on the morning of July 26th, at his house in Hongkong Road, Shanghai, at 1.15 a.m. Shortly after midnight on Wednesday (July 24) his boy went to his room with a note and found him unconscious. Dr. Paulun was called in and found him suffering from hemorrhage on the brain. He never regained consciousness. Dr. Jamieson leaves a widow and three sons and three daughters; one son and the oldest daughter, who is herself a widow, are at home. The very deepest sympathy is felt for his family. Dr. Jamieson was born in Ireland, and was apprenticed in 1856, when he was only fourteen years old, to a general practitioner in the south of that island, and subsequently went through the course of Queen's University, Dublin, ending in 1861. He did not qualify, being under age, and then accepted an appointment in the Consular Service in China, and was sent to Peking to study the language. In 1862 he came to Shanghai and started the *Shanghai Recorder*, of which he was Editor. In 1863 he joined the *North China Herald* as Editor, Mr. R. S. Gundry being sub-editor, and Mr. Colin Jamieson, who afterwards joined the Customs and was murdered by Chinese at Chefoo some years ago, being on the staff of this paper. In 1866 Dr. Jamieson gave up journalism and went home, and in 1868 took his degree at the Royal College of Surgeons, England, and subsequently the degree of M.D. at Dublin University. He returned to Shanghai in 1868 and has been in constant practice there ever since, being appointed medical adviser to

the Customs in 1869. He edited the weekly paper *The Cycle* during that journal's existence. It would be difficult to name any one in Shanghai in the last thirty years with a more acute intellect or a better stored mind than Dr. Jamieson. He was an admirable speaker and writer, and while an able and very busy practitioner, was essentially a scholar. His wide reading and constant mixing with men of all classes made him a delightful companion, and scholar as he was, there was nothing narrow about him. His opinions were his own, and he knew how to defend and how to adhere to them. Some months ago he had a severe attack of blood poisoning, and this had evidently weakened his constitution permanently. He leaves a large number of sorrowing friends and patients, while his death is a very distinct loss to the intellectual life of Shanghai.

The funeral took place on Friday evening, July 26th, at the New Cemetery, the Chapel, and a wide space round the grave, which is next the beautiful monument erected by Dr. Jamieson to his brother Colin, was thronged with his friends and acquaintances, including a large number of ladies. The service was conducted by the Rev. James Bates, who made a touching address in the Chapel. The coffin was borne to the grave by Messrs. Brunat, Cocker, J. W. Harding, Hippiusley, George Jamieson, Knights, F. J. Marshall, McBain, and Joseph, the Hospital attendant, and was covered with beautiful wreaths and crosses, conspicuous among them being one with the Irish harp in evergreens. The chief mourners were Messrs. A. H. Jamieson and A. W. Burkill.

In Japan Dr. Jamieson has many sincere friends to whom the news of his death will cause bitter grief: for to them it is known that the brave physician truly met a martyr's death. Through an act of noble, unselfish devotion in the cause of humanity—that devotion which has elevated the healing profession to such high rank in the esteem of the world—Dr. Jamieson contracted the fell disease that mastered him. His memory will long be cherished here, if for that bright deed alone.

THE PROSPECTS OF THE RICE CROP.

The prospects of the rice crop do not improve. One of the staff of the *Fiji Shimpō* recently undertook an excursion to a locality popularly called Nigō-han, six or seven miles north of Tokyo, noted for the production of early rice. The condition of the farms there is often relied upon by speculators as furnishing an index to the yield throughout the country. The visitor learned that rice plants of the early varieties are from 20 to 30 days behind time, and that the farmers expect a yield from 15 to 20 percent. below the average. Further, a rice merchant, quoted by the *Chugai Shogyō Shimpō*, has made a tour through the provinces of the Tokaido, and, as the result of extensive observations, is inclined to believe that, even assuming favourable climatic conditions hereafter, the crop will be decidedly poor. The report of the Experimental Farm at Nishigahara, Tokyo, points in the same direction.

A RADICAL LECTURE MEETING.

The Radicals held a lecture meeting in the Kinki-kan, Kanda, Tokyo, on the 25th ultimo. According to accounts published in the metropolitan papers, the affair seems to have been on the whole a success. Fears had been entertained that a number of hostile *soshi* would create a disturbance, and indeed attempts were actually made by *soshi* to cause confusion, but each essay of the kind was suppressed by the Radical adherents, and the meeting, which opened at 1 in the afternoon was brought to a successful close at a little past 5 p.m. More than ten speakers made their appearance, among them being Messrs. Kono Hironaka, Misaki Kame-nosuke, Ebara Soroku, Yamada Toji, Suzuki Jubi, and so forth. Two of the speakers were ordered to resume their seats before they could

finish their speeches. One of these, Mr. Imanishi Tsunetaro, stated that Japan must increase her navy so as to be of equal strength with that of the British fleet in the East, and was proceeding to explain that in making this increase her object was not to fight with England but with "another Power against which we entertain implacable resentment," when he was desired by the police to leave the platform. The other speaker that fared similarly, Mr. Saito Keiji, invited police interference by making irrelevant and imprudent remarks about the Pak affair, but with these exceptions the police took no action. All the speakers severely criticised the thoughtless and unpatriotic conduct of the Progressionists, and drew attention to the importance of devoting public energy uniquely to measures for the military, commercial, and industrial development of the nation. Mr. Kono Hironaka's speech may be quoted as a specimen. Greeted with loud and prolonged cheers, he stated that it was idle to discuss the Liaotung question, when so many other problems of pressing importance demanded the attention of the Japanese people. After dwelling upon the vital character of the Korean problem, the conditions upon which Liaotung is to be given up, the increase of the Army and the Navy, the settlement of Formosa, and so forth, the Radical leader in the House of Representatives said:—"Our Party will not hesitate to support, and cooperate with, any that endorse our political opinions, whether they belong to the Government or to other parties."

FORMOSA NEWS.

The *Fiji Shimpō* states that the following telegram, dated Taipeh, July 27th, 12.35 p.m., has been received at the Imperial Military Headquarters, Tokyo:—

"For the purpose of sweeping away the insurgents on both banks of the Takcham river, the principal bulk of the Yamane battalion was mustered at Takcham on the 21st instant; its left wing being collected on the left bank of that river. A few other parties were disposed as follows:—A company of Foot a little above Takcham; a second company to the west of Takcham on the left bank, and a third to the south-west of Taotsyuen.

"On the same day, the Naito Detachment mustered in the vicinity of Haishankow, and the Matsuware Detachment in the neighbourhood of Bankwitan (?).

"On the 22nd, the different bodies commenced operations. The Yamane Detachment marched in an easterly direction, and the Matsuware Detachment in a westerly. They advanced fighting the insurgents and burning their villages. Two mountain pieces were sent to the Matsuware Detachment from Taipeh on the same day. A party of cavalry was also attached to the left wing of the same Detachment.

"On the 23rd, a company of reserves was despatched from Taipeh to Bankwitan (?) to the assistance of the Matsuware Detachment.

"On the 23rd and 24th, the different detachments continued to advance. On the latter day they effected a juncture near Sakkayen (?). In the fighting up to that date, 500 insurgents were killed, while the loss on the Japanese side was 20 killed and wounded. The principal part of the insurgents fled into the mountains, but their strongholds, namely villages, have been mostly burnt down, together with the arms and weapons concealed in their houses.

"On the 25th, about 1,600 insurgents attacked Sinchuh at 1 a.m. They were completely driven back by 8 a.m., with a loss of over 100 in killed the Japanese loss being only 6 killed and wounded.

It is reported that 2,000 insurgents are assembled near Sincham to the south of Taipeh.

"The different detachments returned to their original rendezvous on the 25th, 26th, and 27th. After replenishing their stores of provisions and ammunition, they are to march to the attack of the insurgents on the south-east of Sinchuh."

THE FUTURE OF CHINA.

The *Kokumin-no-Tomo* believes that China will break up into two separate political bodies with the Hoang-ho as their boundary line. Our contemporary has no hope in the regeneration of the Pekin Government. The severe blows inflicted upon it by Japan have produced no beneficial effect. Instead of realising the paramount importance of adopting modern civilization and its material appliances, the Pekin statesmen seem to regret that they had so far condescended as to use European weapons and ammunition in the late war. Had they stuck to their old system, they believe that they would have escaped such disgraceful defeats. Moreover, the one man that has thus far succeeded in keeping the conservative propensities of the Pekin Government under some check—Viceroy Li—is already well advanced in years, and his political life can not be expected to last another decade. While the recent war has not produced any salutary effect upon the Government in Pekin, the *Kokumin* thinks that it has had a very important effect upon the Chinese population in the south, who are only waiting for an opportunity to throw off the yoke of the foreign dynasty. The Southerners were formerly afraid of the Manchu troops and the army under Viceroy Li. But the real worth of these troops in the field of battle has been ruthlessly exposed, and their name has entirely lost the awe formerly inspired by it in the minds of the people of the Chinese race proper. As an illustration of the attitude of the southern Chinese against the Pekin Court, our contemporary points to the refusal of the Fu-kien Squadron to come to the rescue of the Pei-yang fleet. Subsequently, when the Japanese were about to proceed against Shanhaikwan, most of the Chinese officials in Pekin fled to the country, and one of them, on being told by his Manchu superior not to fly, boldly declared that the displeasure of his chief was nothing to him since he was determined to get away. These facts are said to illustrate how weak is the influence exercised by the Manchu rulers upon the Chinese population. Things are thus believed to be ripe in the south of China for a rising of the people *en masse* and a declaration of independence of the Government in Pekin. In that very probable event, the Pekin Government will be helpless to put down the revolt. The only chance for it will be to keep the territory to the north of the Hoang-ho. Our contemporary writes in conclusion as follows:—"It will not do for our politicians to suffer themselves to be entirely engrossed either with visionary ideas for the conquest of southern islands or with mortification at what has taken place further to the north. Great problems, whose solution will require the whole energies of the Japanese nation, may be expected with certainty to rise along the Hoang-ho. We would, therefore, recommend our Government, instead of directing its attention entirely to the Pekin Cabinet, to pay more attention to the condition of things in Southern China. War vessels should be sent there to familiarize the people in the south with the armed strength of Japan, and statesmen should pay visits to those districts and enter into friendly intercourse with leading persons, with a view to keeping themselves in touch with the progress of events in that quarter."

RAILWAY ACCIDENTS.

The first statements about the accident on the San-yo Railway prove to have been greatly exaggerated. The latest official report received in Tokyo states that the number of lives lost was 16 and that 6 corpses have been recovered. This is confirmed by a telegram from Lieutenant Togawa, to whom had been entrusted the duty of directing the transport of the military patients. It is dated Itosaki, July 25th, 3.25 p.m., and runs as follows:—"The patients and their nurses, in all 347 are staying here. Eleven are severely, and seven slightly, wounded. Six dead bodies have been recovered. Ten are missing. Surgeon-General Sato and the rest

have arrived." From this telegram it appears that the wounded were 18 and the killed 16.

As to the cause of the disastrous accident, the original telegrams ascribed it to the force of the gale, which was reported to have upset the carriages and tumbled them into the sea. But this explanation is not generally credited. The true cause, it is surmised, was probably that the track having been injured by the dashing of the waves, the train became derailed and ran off the embankment into the sea. The place where the catastrophe occurred is a low embankment, with a hill on one side and the sea on the other, and the supposition now entertained as to the origin of the accident accords entirely with the circumstances.

The telegrams about the casualties caused by the accident on the Sanyo Railway are very contradictory. The latest message received at the Department of Home Affairs from Dr. Nakahama, specially despatched there for the purpose of investigation, runs as follows:—

Out of 360 sick and wounded soldiers carried by the train, 8 were found dead, 2 have died in consequence of injuries, 9 are severely wounded, and 81 are slightly wounded. The officers, 2 in number, are unhurt. The dead bodies of three engine drivers have been discovered. According to Surgeon-General Dr. Sato, two hours previous to the catastrophe a train had safely passed along the road, and after its passage the condition of the line had been found good, so that the regrettable accident is not to be attributed to any neglect on the part of the company's officials.

Later reports seem to confirm the conjecture that the accident must have resulted from injury done to the track by the sea dashing over it.

Another railway accident attended by serious consequences occurred on the Kyushu line between Shirono and Karita, at 1 p.m. on the 24th inst. Two cars, one carrying passengers and the other goods, were blown over by the wind, killing one person instantaneously, and injuring one severely and five slightly. This news was delayed on account of telegraphic interruptions.

It remains to be seen whether the accident on the Kyushu Railway is not attributable to the same cause as that on the Sanyo line. But assuming for the present that the cause was as assigned, namely, the force of the gale, this becomes the third time that railway accidents have been due to that agency. The two former accidents occurred on the Tokaido line about five years ago, both on the same day near Numazu, and the other on the bridge over the Tenryu River. In the vicinity of Numazu, the train simply went off the track, without causing any casualty. In the case of the Tenryu bridge, the carriages were thrown against the iron girders, no passenger being injured. The engine-driver, however, fell into the water below and was drowned.

CHINESE ITEMS.

Correspondence from Tientsin confirms previously received news that the principal movers in seeking redress for the Szechuan outrages are Sir Nicholas O'Connor and Colonel Denby. The statement that the French Representative, M. Gérard, had taken up the question vigorously, and obtained drastic terms from the Chinese Government, turns out to have been quite apocryphal. It will be remembered that the usual censure was heaped upon the head of the British Representative by local English journalists, who always seem to think that summary redress should follow immediately on the heels of every outrage, and that even the briefest interval for inquiry and negotiation indicates a disgraceful departure from the bayonet-and-bullet policy alone consistent with British prestige. The fact is that if the counsels of journalists in the East were adopted, war would be the normal state of affairs. It must be hard for a British Minister to work wholeheartedly in the interests of men whose first impulse always is to abuse him.

The Victory Li is said to be anxious lest, there being no longer a Peiyang Squadron to utilize the services of the naval officers trained in Europe at great cost of time and money, they may devote themselves to other modes of bread-earning, and thus cease to be available for naval purposes. There is talk of retaining them by

providing quarters at the Tientsin Naval College and paying them a pittance of four or five taels a month. It is characteristic of Chinese methods that such a dilemma should present itself, and that such a miserable exit should be sought from it. If the officers are worth anything to their country, they ought to be worth a salary higher than that paid to a scavenger or scullion. However, the affair is interesting as an indication that the northern Viceroy contemplates the reconstruction of his once celebrated squadron. Should the Viceroy of Canton also carry out the project assigned to him, and add some really powerful iron-clads and cruisers to the Nanyang squadron, China may yet be formidable at Sea.

Tientsin has been visited by a swarm of locusts, which are expected to do much injury to the young millet. On the other hand, they supply a pleasant diet to the people, who fry them in oil and eat them with great relish. Their taste is said to be "a combination of succulent roast pig and Chalons asparagus."

Meetings, missionary and otherwise, held in Hankow and Shanghai with reference to the Szechuan outrages, have been remarkable for the speakers' unanimity of opinion as to official complicity with these disgraceful riots. Men well known for the invariable moderation and charity of their views on all Chinese topics, agreed in declaring emphatically that the outrages had been officially inspired. The question as to whether telegraphic communication between the unfortunate missionaries and their Consuls in Chungking and elsewhere, had been deliberately stopped by the local officials—a question much discussed at the time—seems to have now been finally answered, for the chairman of the Hangkow meeting told his audience that the Viceroy of Szechuan, hearing of the despatch of a telegram to the British Consul in Chungking, ordered the operator to detain it and forbade the transmission of further messages from the missionaries. It further appears that the chief of the Chêngtu Police was the issuer of the villainous proclamation, put forth on the second day of the riots, to the effect that clear proof had been obtained of the kidnapping of small children by foreigners. The missionaries of Hangkow hold that the opening of the province of Hunan is an essential measure, since, in its present condition of isolation and exclusiveness, it constitutes a kind of nursery of delusion and anti-foreign feeling.

Another foreigner has been the victim of a murderous assault in China. On the morning of Sunday, July 7th, as the Rev. Dr. Sheffield, of the American Board Mission, was returning to his house outside Tungchow, after having performed religious service at his church within the town, he was set upon by two men, one armed with a file sharpened at both ends, the other with a hatchet. The missionary received 34 wounds, several of them very severe, and only escaped death by feigning it. Several persons witnessed the brutal assault, but not one responded to Mr. Sheffield's appeals for aid. Afterwards, as he lay bleeding but still conscious, on the road, the same indifference was shown by the passers-by. Ultimately, a master-workman, who had been warned too late of what was projected, and had hastened with five others to prevent it, arrived upon the scene, and carried the wounded man to his residence, where he now lies apparently progressing favourably. The moving spirit in the outrages was a carpenter, a man evidently half crazy, who, having been prevented by Mr. Sheffield, some time previously, from doing bodily harm to a mason, had resolved to be avenged on the foreigner. He persuaded one of his brothers to join him in the attack, but another brother refused to take part in it, and gave information to the master-workman by whom the reverend gentleman was carried home. The two ruffians are in custody. Tungchow is a town on the Peiho, some 16 miles from Pekin. It is the place where travellers by river from Tientsin to Pekin leave their boats to perform the rest of the journey overland.

We take the following from the *North China Daily News*:—"On the 13th inst., an exhaustive trial took place at the Kiangnan Arsenal of

several kinds of smokeless powder, made at Lungwha under the superintendence of Deputy Yang, who is now in charge of the Smokeless Powder Works there. The trial, which took place in the presence of Liu Taotai and under the supervision of Mr. N. E. Cornish, of the Arsenal's Ordnance Department, was in every respect satisfactory, the powders comparing favourably with those imported from Europe. Liu Taotai, who is the originator of the scheme, is to be congratulated, also the Deputy Yang, to whose energy and intelligence, we are informed, the success is solely due. The plant for making the powders was ordered through Messrs. Buchheister & Co. from Germany."

COLONEL COCKERILL'S LETTERS.

Colonel Cockerill's latest letters to the *New York Herald* contain many interesting bits of intelligence. Speaking of Mr. Foster's visit to Japan, he writes:—

Mr. Foster says the treaty made with Japan is very unpopular in China, and that Li Hung-chang is in great disfavour. His failure to go to Peking after his return from Shimonoseki was taken advantage of, and the Dowager Empress, who was inclined to favour him in the palace party, has been finally forced to give him up. Chang Chitung, the Viceroy of Nanking, who has long been an enemy of Li Hung-chang, is now the vital force in politics. He is an elderly but very active gentleman. Mr. Foster did not say so, but I have reason to believe that this malignant old rascal has had much to do with stirring up the trouble in Formosa. He worked against the ratification of the treaty with Japan even down to Chefoo, and he is determined to break down and destroy Li Hung-chang.

Mr. Foster insists that Li is the ablest and best man in China. He cannot be compared with the Japanese leaders, who have had education and touch with all the world, because he has never been outside of China. He still carries the superstitions of his race, and after being wounded at Shimonoseki last March he sent home for a necromancer, who prepared to evaporate the bullet in his face by burning sacred bits of paper and waving his hands.

It is Mr. Foster's opinion that it is a fearful mistake for China to have a financial deal with Russia. He says that Li Hung-chang is bitterly opposed to any relations whatsoever with Russia, for he well knows that Russia means no good to the Celestial Empire.

From an interview that the Colonel had with with Field Marshal Count Oyama, we take some extracts:—

"I think," he said, "that everything has been written and said about the war that needs to be said. It was not much to boast of. If there had been a real enemy it might be different. About all we had to do was to make plans and carry them into execution."

There is one thing about all the military and naval heroes that I have met here which impresses me. That is, their modesty. They are in no sense boastful. If they had simply been over to China on a target practice excursion they would not be less presumptuous. I have yet to see a vainglorious Japanese officer.

After delivering himself of the above the Count turned to a chair loaded with large photographs and asked me if I had heard of the wondrous work done by photographers during the war. He showed me a picture of the naval conflict off the mouth of the Yalu River, taken on the spot, and was particularly jolly when he pointed to a Chinese ship in the act of sinking. He next called my attention to a picture of the landing of his second division at Kwa-Yuen-Kiu, near Chinchow, the first contact of the Japanese with Chinese soil. He remarked that if the Chinese had not been arrant cowards they might have given him a great deal of trouble at that time, but they all ran away. This was an outpost of Port Arthur, and it should have been defended. He then showed me pictures of the fighting around Port Arthur. The pictures were full of action and were excellent art works.

I asked the Marshal if he found the Manchurians any braver or better soldiers than the old style Chinese whom he subsequently met.

"No," he replied, "there was no difference so far as I could judge. As citizens I found the Manchurians peaceful and inclined to be obedient and decent. I liked them. They are far superior to the Koreans, who are utterly worthless and incapable, dirty, and treacherous. They are even now intriguing with the Russians against the Japanese, who tried to secure them their independence."

Speaking of the great work accomplished by the Japanese, the Marshal said:—"I am very proud of my soldiers. Their discipline, obedience, and patriotism achieved all. There was no great opportunity to test their qualities in full, for the enemy would not stand long enough for that. At the same time I do not regard the Chinese as lacking in soldierly qualities. Their officers in the late war were worthless and the men untrained. Led by good men and properly organized I think they would give a good account of themselves."

I told him that General Lord Wolseley had written the same thing in an American magazine not long ago.

"I think," said the Marshal, laughing, "that if I had the drilling and organising of the Chinese army I could make it a very effective body. The Chinese can be made good soldiers, I am sure."

"What do you regard as the most important of your campaigns?" I inquired.

"Weihaiwei," was the response, "because of the terrible winter weather and the hardships of every kind endured by the troops. Their courage in meeting all obstacles, their cheerfulness and their alacrity seemed to me miraculous. I can say one thing truthfully, which may surprise you, and that is that throughout that terrible campaign the regimental sick lists were smaller then when we were in garrison. It took the Chinese twenty years to fortify Port Arthur, and we captured it in ten hours. The campaign of Weihaiwei involved from first to last a terrible battle with the elements. My army stood it all splendidly."

I asked the Marshal if he believed that the Japanese soldiers had endurance equal to European soldiers, and if he thought they had endurance on the field—the real, tenacious fighting instinct, which could withstand the siege and the week's hard pounding.

"As to that, I cannot say," he replied, "but they have stood all tests. They are not impulsive, but determined and earnest. They require but little food, and that is very important in prolonged fighting. Exposure does not concern them. They exhibited their fighting qualities in the Satsuma rebellion of 1879. Then Japanese met Japanese, and the result was the killing of a great many more people than in this late war, and in much less time."

"Do you regard the Japanese soldier as the equal of the Russian?" I asked.

"I cannot judge, but I certainly think so," said the Marshal.

Discussing the arms used in the late war, he said that he regretted that the new magazine rifle of the Murata pattern had not been given a better test. "We could not get cartridges in time," said he, "and hence they had but little usage. The Imperial Guard and the Osaka division had these rifles, but they did not reach the seat of war in time. Some of these troops are being sent to Formosa now, and they may have a chance to test their arms. They hold ten shots and they carry almost twice as far as the weapons we for the most part used."

I asked him if it were true that himself and officers had studied the topography of Korea and Manchuria before entering on the campaign, as reported.

"Yes," said he. "The Germans knew France in 1879 better than the French, and so we knew the roads and streams and bridges and resources of the countries we invaded better than the people who lived there."

I remarked that it was rather singular that where England, Russia, the United States, France, and other countries sent military attachés and observers with the Japanese army, Germany, whose military methods and tactics were supposed to be followed by the Japanese, was not represented.

"True," replied the Marshal. "But while our army was at first laid on German lines, we latterly adopted the French formation and tactics. That may have had something to do with it."

"How many men did Japan actually send across the water during the war?" I asked.

"In all, the expeditionary forces in Korea and China numbered 220,000 men. Of these nearly one-half were coolies who not only hauled the supplies for the fighting men, but for themselves as well. Some idea of what we had to contend with in the way of transportation may be gathered from the fact that even our charcoal and firewood were taken with us from Japan. Even with our lack of horses we took no less than 20,000 of these animals with us and much of the forage used."

We agreed that no such army had ever been transported so far by water in the history of the world. I suggested that while there was great disadvantage in having one coolie for nearly every soldier there was this advantage, that in a case of a pinch these coolies might pick up arms and fight, as many did in some of the battles, but that no

assistance of that character could be had from horses. To this the Marshal heartily assented.

Touching the future, the Marshal said he did not anticipate early trouble. He hoped that Japan would be given a good rest and chance to further build herself. He did not believe that the Russians were massing troops around Vladivostok, as represented, because their railway was not yet completed. As for China, she had no future. He believed her now to be doomed. China was a great bubble and the Japanese had now burst it. I suggested that Russia might be something of the same order, and that Japan might be called on to perform a similar service. The Marshal laughed, incredulously.

In all the talk about the war with China the manner of the Marshal was that of a man who believed that nothing had been added by it to military science or method, and that nothing had been demonstrated beyond the effective courage and capacity of the Japanese soldier and the utter worthlessness of the Chinese.

Colonel Cockerill interviewed Count Ito also, and his letter containing an account of the meeting is excellent reading. Here is a part of it:—

Referring to China, he said that he was not at all surprised that the world at large thought it would be impossible for Japan to conquer her. He felt certain that China could not be quickened into activity because of the lack of nationalism, and that her future now was dark. He thought that England had acted wisely throughout her late troubles in the Orient. When I suggested that the time had come for Japan to form an alliance with England the Count smiled, but declined to commit himself.

In speaking later on of the work of the Japanese army and navy on the war the Count spoke in the highest terms of the splendid transportation service. He thought the transfer of an army of over 200,000 men and 20,000 horses across the Yellow Sea and the feeding and caring for them from a home base was something to be proud of.

On the subject of war ships and the strengthening of the Japanese navy, the Count remarked that there were many war ships for sale now in the world, and that perhaps it would be better for Japan to buy what ships she might need than to either build them or have them built abroad.

He could not quite understand the friendship said to exist between the people of the United States and Russia. I explained the sentimental part of it to him to the best of my ability, but it was plain that Japan's Prime Minister could not quite understand how there could be any substantial tie between a liberty-loving, enlightened Republic, such as ours, and an autocracy, such as Russia.

Referring to the alliance between the Powers which had interfered with Japan, the Count said that he feared very much that the Europeans had not quiet understood the commercial features of the treaty of Shimonoseki. They had, perhaps, regarded the opening up of certain ports in China as purely in the interest of Japan. Such was not the case. Japan has no more to gain than other nations commercially. The opening of the port of Chungking, on the Yang-Tse-kiang, was something which England had long been trying for and had been unable to accomplish. The right to import machinery into China was certainly not in Japan's interest. He thought that when the treaty was better understood there would be less prejudice toward Japan. The Count remarked that he had just received from Spain her official congratulations on the acquisition of Formosa by Japan, and coupled with them the hope was expressed that Japan would not feel inclined to intend her island possessions further to the south, the Philippines being manifestly referred to. The Count observed that it was the general opinion that the government of Luzon Island and Manila was very corrupt and weak.

The Count agreed that in giving back the Liaotung Peninsula to China much had been done to unite the Japanese people and allay political dissension at home. He admitted, with a smile, that there was much politics in Japan. Sometimes, he said, there were eight or nine political parties, and sometimes as many as eleven. I asked him if there was likely to be a special session of the Diet soon. He replied that he could not possibly get ready for a special session, as he was overwhelmed with work at present. He did not think that there would be a session before the regular meeting in November.

The new Chinese dollar, struck at H.E. Chang Chih-tung's mint at Wuchang, is said to be a decidedly handsome coin. On one side is the dragon, with the legend in English, and the statement that it represents 7 mace two candareens, while on the other side is the value of the coin in Chinese.

THE LIAOTUNG QUESTION.

IT is greatly to be regretted that silence has been imposed on the politicians seeking to organize an anti-Cabinet campaign in connection with the return of the Liaotung Peninsula. We do not base this regret on any of the considerations that have already furnished material for loud criticism. In the abstract it is, of course, very shocking that leaders of thought and members of parliament should be obliged to submit their treatment of public problems to the judgment of a police inspector. Particularly revolting is such an idea to Englishmen, who attach inestimable value to freedom of speech. When it is related that at such and such a political meeting speaker after speaker was ordered by the police to resume his seat before he had sketched more than the outlines of his subject, it is not surprising that foreign observers should scoff at Japanese constitutionalism, and deny that the rights of the individual have yet received even elementary recognition in this country. As to that, however, one point must be noted: these aggrieved politicians are shackled by fetters of their own forging. They themselves enacted a law investing the police with censorate powers, and they enacted it in the exercise of legislative functions entrusted to them by the Constitution. We are not confronted by any case of an autocratic will imposed by autocratic methods on an oppressed people. The representatives of the people have themselves created the instrument that locks the lips of these political agitators. Thus the whole question resolves itself into this—have the police abused their power, or did the suppressed agitators abuse their privilege? In every country the police are competent to stop public speeches that seem likely to disturb good order. Even in England they have that power. But it has virtually ceased to be exercisable through want of exercise. Sometimes, but very rarely, we hear of a blue-coated peace-guardian “moving on” a spouter of socialistic insanity and his audience in Hyde Park or some other favourite resort of idleness. We do not hear, however, of police inspectors’ applying the gag to Mr. SEXTON, or Mr. JOHN MORLEY, or Mr. LABOUCHERE, when they address gatherings of respectable citizens on classic ground. That political gunpowder should never be tamped is the accepted principle of British administrators: flashed in the open it dissipates its energy in an idle puff; fired under restraint it becomes a destructive agency. Undoubtedly that is the wisest principle if circumstances permit its application. Do they permit it in Japan? That is the crux. Nothing in the world is easier than to compose frothy declamations about liberty of the subject, freedom of speech, and other fine offspring of mature civilization.

Second-hand eloquence on such themes may be borrowed from the least extensive library. But before a full charter of freedom is granted to any people, it has to be determined whether they possess a corresponding sense of the responsibilities attaching to its exercise. Now that is precisely the faculty that does not seem to have been perfectly educated in Japan. We speak within limitations. The Japanese have always appeared to us a discreet people. They meddle as little as possible in each other’s concerns, and their language—the truest index of a nation’s habits—contains quite a repertoire of diplomatic formulæ for daily use. But in the fields of parliamentary discussion, international relations, political agitation, journalism, and all the other adjuncts of their new civilization, experience has not yet furnished them with scales to weigh cause and consequence correctly. Everywhere an inadequate sense of responsibility makes itself apparent. The utterances of statesmen out of office, the conduct of the Opposition in the Diet, the writings of the press, the proceedings of anti-Cabinet agitators, all alike display a similar tendency to sacrifice large issues on the altar of small effects. May such a tendency be safely left unchecked in a matter like the Liaotung agitation? Were the agitation successful, it might drive the Cabinet out of office. But it would do a great deal more. It would seriously compromise the empire’s foreign relations. It would exhibit the nation in an attitude of declared opposition to the moderate policy pursued by the Government *vis-à-vis* Germany, France, and Russia. It would amount to a defiance of any combination of European Powers. It would constitute an emphatic announcement that the East is for Japan, and that the West shall have no voice in its destiny. Blind, wilfully or veritably, to all such grave issues, the agitators struggle desperately to achieve their petty purpose, the downfall of the Cabinet. But the Cabinet is plainly determined that these firebrands shall add no mischievous caloric to the nation’s mood, and that the country’s foreign relations shall not be dragged into the arena of party politics. We confess that, however ardently we desire to see Japanese political life permeated by a robust atmosphere of liberty, and however sensible we are of the discredit inseparable from this gagging process, it seems to us that the power of the police has in this instance been exercised with wise regard to the interests of the country. Not for that reason, therefore, do we regret that the mouths of the agitators have been stopped. It is purely a matter of curiosity. Nothing could have been more interesting than to learn how the agitators justify their attitude of discontent. One complaint would be comprehensible with regard to the Liaotung Peninsula, namely, that the Japanese

Plenipotentiaries ought never to have asked for it; ought never to have run the risk of provoking European opposition. But the agitators are effectually debarred from any contention of that kind, inasmuch as they were themselves conspicuously insistent that not only the Peninsula but also the greater part of Manchuria should be taken from China. We must assume, therefore, that they censure the Government for not defying the united strength of Germany, Russia, and France, and holding the Peninsula in despite of their protest. Is that conceivable? The *Kai-shin-to* leaders are shrewd men, very well acquainted with their country’s fighting capacity, as well as with the capacities of Russia, France, and Germany. We should like to see them extricate themselves from the perplexity of either blaming the Government for asking even less than they themselves dictated, or condemning it because, at the close of an exhausting war, it did not plunge the country into a new fight with three Great European Powers simultaneously. It seems a pity that the agitators were not left to impale themselves on the horns of that dilemma. However, they will still have an opportunity of doing so in the next session of the Diet.

THE CORNES-KIMURA CASE.

A VERY determined effort has been made to raise a wordy controversy over the case between Messrs. CORNES & COMPANY and Mr. KIMURA. Such matters ought to be capable of calm discussion, but unfortunately no instance of calm discussion has ever yet graced the history of journalism in Yokohama, and it is evident that the present case is not to be any exception to the rule. So far as concerns the unalterable tendency to wrangle, there is consequently no reason to be surprised. But the ingenuity shown on this occasion to invent material for dispute is really curious. Already the *Japan Mail* is being angrily torn to pieces, although it is in absolute agreement with its assailants as to the main principles under consideration, having stated in most unequivocal language that the procedure of the Yokohama Guild of Dealers in Yarns and Textile Fabrics seems to admit of no excuse whatever, and that the contemptuous attitude assumed by a number of Japanese merchants towards the law courts of their own country cannot be too strongly denounced. In the face of such unmistakable declarations, it is amusing to learn that the tone of the *Japan Mail* indicates serious peril to the future trade of Great Britain, and suggests unpleasant diplomatic complications “in the days when we are given over hand and foot to the inoperative decisions of Japanese law-courts.” There was a time, and that not very long ago, when apprehension centered entirely on the prospect of Japanese judicial decisions’

becoming operative, but now the terror seems to be lest something should intervene to render them ineffective. Leaving these things to the wranglers, however, sober folks will reflect quietly on the actual facts of the situation and their significance. The Yokohama Guild has successfully set aside the decision of a court of law, and under the menace of a disastrous boycott has compelled a British merchant to submit to an unjust loss. It does not follow, of course, that a Japanese guild would be equally successful in every struggle of a like nature, but it does follow that a most disquieting precedent has been established, and that any attempt to seek legal redress may hereafter expose a foreigner to losses far heavier than those involved in the question immediately at issue. What is the remedy? In all branches of foreign trade the Japanese seem to have organized associations, the principal function of which, so far as experience shows, is to support their members in every dispute with a foreigner. As to the spirit prompting these combinations, we believe that it has two sources; first, a sense of umbrage against the tradal methods pursued in the Settlements, and a consequent wish to contrive some means of opposing the foreigner's dominance; secondly, a shrewd desire to take full advantage of a peculiar situation. Everybody knows that in certain respects the tradal methods pursued in the Settlements are not such as would be tolerable were Occidental merchants alone concerned. It is of no use to gird at this statement as some local critics do. The facts are there, and can not be gainsaid. Neither need there be any hesitation on the part of the foreigner to acknowledge their truth, because they are methods to which he was compelled to have recourse in early days owing to the commercial inexperience and improbity of his Japanese clients. The responsibility does not rest with him, and if he has occasionally abused the power he possesses, nothing need be said except that, so long as man is human, a system lending itself to profitable abuse is sure to be abused. Still, it is inevitable that in the very origin of these methods a Japanese must find grounds of umbrage, apart from their practical irksomeness. He is constantly sensible of the inferiority to which they condemn him, and for years he has been talking, in print and from the platform, of emancipating himself from foreign mastery in commerce, and of recovery the equality to which he thinks he is entitled. Probably the projectors of the guilds did not very clearly formulate to themselves the measure that they proposed to adopt for the purpose of "asserting their commercial rights," as they are wont to say, but they felt instinctively that strength lay in combination, and so they combined. Nothing could exceed the excellence of their avowed programme. The mission

they claimed was to correct the very lack of commercial morality that had necessitated unusual precautions on the foreigners' part—though, of course, they did not state the case exactly in that form—and thus to place business on a sound footing, in which latter result was evidently involved the abolition of everything tending to relegate them to a lower level than their foreign clients. As to the second motive making for combination, namely, a desire to take the fullest possible advantage of the competition existing among the foreign merchants, it is easily understood. In the old days, the foreigner observed cognate precautions with regard to imports and exports alike. He purchased nothing for export until it had remained in his hands long enough for an exhaustive examination, and he accepted no order for imports unless it was accompanied by a substantial payment of bargain-money. But by degrees one importer after another, seeking to attract custom from a rival, reduced or dispensed with bargain-money, and in fine abandoned it altogether. Nay, to such a point was competition carried, that a Japanese dealer known to have failed in implementing a contract with, or to have taken unfair advantage of, a certain foreign firm, nevertheless found little difficulty in obtaining credit next door. The Japanese were far too shrewd not to detect the opportunity offered by such a state of affairs. The more competition on the foreign side and the less on their own, the better. Hence an additional inducement to combine. If all the purchasers of a particular staple, being closely associated, were represented in the market by one or two buyers only, while all the sellers were working, each for his own hand, it is easy to see what an immense advantage the former must have over the latter. Thus equally from sentimental and sordid points of view the organization of these guilds must have commended itself strongly to the Japanese, and their dissolution will be proportionately difficult. Up to the present their influence has made itself felt in the import trade chiefly, if not altogether, buyers being naturally in a better position to impose conditions than sellers. But the domain of the export trade will by and by be invaded, and the recent success of the Guilds in the KIMURA-CORNES case will not have the effect of deferring that result. The weapon employed by the Guilds is potent. We have said that the boycott has never been brought under the control of law in any country, and we are answered by reference to provisions actually existing in the laws of the United Kingdom. That is not an answer at all. The question is not whether laws exist, but whether their control has been effective. It has not. To establish a case of which the law can take cognisance in such matters is almost impossible. An open-

ly organized association is not necessary. Even supposing that these trade Guilds were deprived of their licenses on the ground of conspiracy to defeat the ends of justice, or to impede the lawful operations of commerce, the bonds that hold them together would remain, and their capacity for united action might be exercised as freely as ever. There has been talk of a violation of the Treaties, on the ground that official interference with trade is forbidden by their provisions, and that, since the Guilds exist by virtue of official licence, they are invested with some vicarious element of officialdom. The contention is mischievously silly. In the first place, the official interference referred to in the Treaties has reference, as is well known, to something of a wholly different character. In the second, it would be equally reasonable to connect the Government with all licensed traders in Japan, publicans, confectioners, or pawnbrokers for example. And in the third, there is question here, not of interference with trade in general, but of a refusal to deal with a particular trader. We do not adduce these difficulties by way of supporting the Japanese position. On the contrary, we heartily condemn it, and are emphatically of the opinion that if any remedy, however feeble, against improper boycotting can be supplied by legal provisions, such provisions ought to be enacted without delay. But we have little faith in a remedy of that kind, and we are persuaded that recourse to official aid is worse than useless in the absence of individual effort. It is an invariable experience that whenever a question arises between foreigners and Japanese, the true issues are obscured by shallow declaimers, who try to drag the Treaties, the Government, or Treaty Revision into any and every context. What can be more dishonest than to simulate a belief that the existence or non-existence of Consular Jurisdiction concerns the conduct of a Japanese Guild? It is conceivable that Treaty Revision, by widening the circle of business relations, may remove foreign merchants beyond the sphere of these guilds' dominance, but the fact that foreign tribunals sit in Yokohama to adjudicate complaints preferred by Japanese against foreigners, does not bear the most shadowy relation to cases in which foreigners are the aggrieved parties, and we fail to see what good purpose can be served by fomenting unjust prejudices and raising baseless apprehensions as to the results of throwing open the whole country to foreign trade and restoring Japan's judicial autonomy. The situation at present is clear enough. On the one side we have a number of foreigners, each working for his own hand, and all competing vigorously for a share in a trade of limited dimensions; on the other, a number of Japanese organized into guilds for the purpose of deriving the

fullest possible advantage from foreign competition and imposing their own will upon their foreign clients. It is idle to expect that either diplomacy or legislation can correct such a state of affairs. We hear perpetually of Japanese merchants dishonestly refusing to take delivery of goods imported to their order; and now we have the boycott introduced to coerce the unhappy foreign importer and to protect his unscrupulous victimizer. But never once do we hear that the faithless dealings of a Japanese trader have procured his exclusion from transactions with foreigners. Apparently to prove himself untrustworthy *vis-à-vis* one foreign firm does not disqualify a Japanese for obtaining credit from another. If there existed on the foreign side any effective organization by which a Japanese trickster could be ostracised from all dealings with foreigners, would not trade at the ports have been long ago cleared of baleful parasites, and would not the Western merchant be thoroughly secured against unfair pressure of the kind recently exercised upon Messrs. CORNES AND COMPANY? It may be objected that such a method also would be boycotting. Of course it would. Does any one pretend that foreign merchants would have the smallest conscientious scruple about applying the boycott in a cause judged by them to be just? They would do it just as readily as in their school days they sent a liar or a thief into Coventry. But no. The foreigners prefer to be a community of Ishmaelites, sitting inert while the Japanese combine to exploit their suicidal competition by fair means or by foul. They are content, when a specially evil day comes, to listen to appeals for aid that could not be efficient and to invectives against agencies that bear no tangible relation whatever to the dilemma.

THE "KOKUMIN" ON AN ANGLO-JAPANESE ALLIANCE.

WE have hesitated to reply to the *Kokumin's* latest article on an Anglo-Japanese alliance, so much annoyance do our recent remarks upon the subject seem to have caused our contemporary. Still as it would be regrettable that any discussion on a matter so important should end in a misunderstanding, we quote the *Kokumin's* comments:—

Does the *Mail* aim at making Japan beg for England's favour? It says that there can be no equality unless Japan is prepared to assist England in whatever war she may undertake, in Egypt, Australasia, or where not. So long as the English people are as stupid as our contemporary in confounding equality of footing with equality of dimensions, an alliance between Japan and England will be impossible. The *Mail*, on the one hand, declares that Japan and England are not equals, but on the other, advocates an alliance between them. Is it not evident, then, that its aim is to make Japan dependent upon England's favour? That would mean for Japan not an alliance but a humiliation, for she must occupy the position of a mendicant. Does our contemporary want Japan to suffer such a humiliation? Can

there be anything more discourteous than such writing? If the Japanese-English alliance fails to become a fact, the *Mail* must remember that the existence of an insolent paper like itself is one of the causes.

We should indeed think it our duty as British subjects to oppose, by every possible means, an alliance between Great Britain and a Japan represented by the *Kokumin*. But the *Kokumin* is one of the mouth-pieces of those that advocate an alliance between Russia and Japan, and we are therefore gratified to find that its writings reflect an unpractical intolerant frame of mind such as a long experience of Japanese modes of thought warrants us in regarding as quite exceptional. It is certainly not characteristic of Japanese manners to attribute to another opinions never expressed by him, and then to call him discourteous and insolent for holding such opinions. In this discussion the *Kokumin* itself set out by sneering at England. It spoke of her as an effete Power, reduced to a defensive rôle because she no longer possesses force to be offensive. It accused her of cowardly time-serving on the ground that, having withheld her aid from China in the latter's period of distress, she turned a friendly face to Japan so soon as the military superiority of the Japanese became unquestionable. "We appreciate England's good-will," said the *Kokumin*, "but no importance can be attached to it when we remember that, under similar circumstances, it may be transferred to another quarter." * * * "It will not do for Japan to commit herself to any positive step on the strength of promises that are not likely to be fulfilled." In reply to these most offensive and insulting comments we observed that, whereas "the greatest Power in the world, or any combination of the greatest Powers in the world, would be proud to have England for an ally, it had been reserved for a Japanese periodical to discover her unworthiness to stand side by side with a little Oriental State." Upon this the *Kokumin* grew much incensed. The epithet "a little Oriental State" seemed to cause it serious umbrage. It forgot altogether what evil and contemptuous things it had itself been saying about England, and remembering only that its country had been called "a little Oriental State" it charged us with seeking to "make Japan a suppliant for the help of England, and declared that "if it should ever become necessary for Japan to seek an ally, she would seek it only on a footing of equality." Our readers will observe that the *Kokumin* itself, in this rejoinder, reduced the comparison to one of dimensions. Its rhetoric was inspired solely by the idea, "a little Oriental State." Yet, when, in reply, we pointed out that alliance with England on a footing of equality would involve an almost world-wide responsibility, the *Kokumin* turned round and

accused us of being too obtuse to distinguish between equality of dimensions and equality of footing! Our contemporary requires a very large charter of liberty. Having sneered at England, offered her gross insults, and declared her too unworthy of trust to be a safe ally for any Power, it cries out against the discourtesy and insolence of suggesting that Japan is not great enough to ally herself on equal terms with the greatest empire the world ever saw. In short, this eminently un-Japanese journal claims the right of insulting England to its heart's content and then becomes hysterical if the slightest doubt be raised of Japan's might and majesty. The explanation of such an unreasonable mood is easy to understand. The *Kokumin* is opposed to any alliance between Japan and England. It favours an alliance between Japan and Russia. To popularize its theory it set out by depreciating England's power, describing her as unworthy of trust and otherwise defaming her. When these criticisms evoked a brief reply to the effect that England was not, after all, so petty and that Japan could scarcely yet claim equality with her, the *Kokumin* saw a fresh opportunity: it pretended to have discovered that alliance with England could not be purchased except at the cost of humiliation for Japan. Thus by belittling England, on the one hand, and exciting baseless prejudices among its own nationals, on the other, it pursues its pro-Russian campaign. That it has not the slightest chance of success is proved by the nature of its methods: only a sense of failure could prompt recourse to arguments. Every educated Japanese must know that from the point of view of such a Power like Great Britain, Japan is still a small State. An alliance between the two, or rather an understanding—for we do not believe in the possibility of an actual alliance—would have to be of a limited nature and for particular purposes. Such an understanding involves no hypothesis of superiority or inferiority on either side. Just as a convention between independent States for specific objects proceeds upon the assumption of absolute equality between the contracting parties, so a diplomatic arrangement between two Governments for the protection of their mutual interests in a certain region, places both on precisely the same footing within the sphere of contemplated coöperation. It may very well be that one of the Powers concerned is prepared to contribute a larger share of concrete force than the other, but that fact does not at all effect their relative national status. Considering that Great Britain has rescued Japan from the inferior position to which the old treaties relegated her, and has secured her admission to the comity of nations on equal terms, nothing could be more graceless than the *Kokumin's* attempt to discredit, belittle, and misrepresent its country's benefactor.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

THE EARLY ARAB TRADE WITH CHINA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In your issue of the 16th March you published an article (from the *Mainichi*) on "The Chinese Mahomedans," which contained some historical inaccuracies. I did not point them out to you at the time, as I was waiting to send you in print the "resumé" of a lecture I gave before the China Branch of the Royal Asiatic Society in Shanghai. In a question of over a thousand years ago, I thought a delay of a few months unimportant.

In that article it is mentioned that an uncle of Mahomet went to China and obtained an audience from the Emperor in A.D. 520 during the Tung (Tang?) Dynasty. There are in this statement several chronological errors: the Tang Dynasty commenced to reign much later, and an uncle of Mahomet, even if he could have existed 50 years before the birth of the Prophet, would have been a man of no importance about 100 years before the Hegira. The Arabian in question was a descendant of Mahomet and visited China during the IX. century. A full account of his travels, as well as of Arab trade during the T'ang Dynasty, is contained in a manuscript which has been successively translated by Reinaudot and Reinaud, and of which a printed copy exists in our library.

I send you two copies of the "resumé" of the Lecture "On Arab Trade in China during the T'ang Dynasty," which was delivered extemporaneously on the 26th April, 1893. As by the new Treaty, Hangchow is to be opened to trade, it may be of some interest in Japan to know of the flourishing Western commerce which existed in that port over 1,000 years ago.

One of the copies you may send to the *Mainichi* if you think it may interest that paper.

Yours faithfully,
Z. VOLPICELLI.
Hon. Secretary C.B.R.A. Society.
July 13th, 1895.

MINUTES OF PROCEEDINGS AT A GENERAL MEETING HELD AT THE SOCIETY'S LIBRARY, MUSEUM ROAD, SHANGHAI, ON WEDNESDAY, 20TH APRIL, 1893, AT 1 P.M.

Mr. N. J. Hannen, who presided, announced that the only business to transact, before calling upon the Lecturer, was to announce that Mr. Schomburg had been elected a member.

Mr. Z. H. Volpicelli delivered a lecture on "Arab Trade in China during the T'ang Dynasty" (9th century), with an account of the country as given by those early travellers.

The Lecturer, speaking extemporaneously, reminded his audience that a short time ago he gave an account of the early Portuguese traders in China, and he now proposed to go back and speak of a much earlier period, when the Arabs traded with China. We were apt sometimes to think that we were almost the first who had been in China, just as we sometimes thought when we came across a fact unknown to us, that we were the first to discover it. The first proofs of Arab trade with China dated back to the 5th century, the principal port from which it was conducted being on the Euphrates at a point now no longer navigable. Afterwards the starting-point of Arabian trade shifted successively to Basrah, Al Siraf, and later on to Ormuz. The trade eastwards rapidly extended, and the accounts we had of the trade in the 9th century were from an interesting manuscript in two parts, which was translated by the Abbé Eusebius Renaudot in 1718. It was a fairly good translation, but as the manuscript could not be found for a long time, people began to doubt its existence, until it was discovered some fifty years later: another translation was compiled in 1845 by Reinaud. Of the first part of the manuscript we could not tell the author, but the second part we knew was written by Abu Zeid Hassan of Siraf. The Lecturer then proceeded to endeavour to locate the ports of call mentioned in the manuscript, contending that if attention were paid to the statements as to the time occupied in passing from one to the other, we could gain a very fair idea of their approximate positions. The ports of call extended along to Cochin-China and then northwards, and he thought they might identify Khanfu, the great Arabic trade port in China, with Hangchow Fu. The travellers give a very detailed account of China, as well as of India, and the islands of the South Indian Archipelago. The first author, speaking of the climate of China, says it is very good and far healthier than India. The country is more populous, and whilst he found many desolate places in India he did not notice the

same in China. He speaks of the large rivers, and the moisture of the climate, matters which would naturally strike a native of the dry atmosphere of Arabia. He says the people are very fine-looking, and very white, an impression which the traveller might have formed as a result of his wanderings amongst the darker natives of India. The dress of the Chinese he describes as being silk, both the poor and rich being clothed in that material, and he was very much struck by the number of articles of clothing they wore. He says that the people wore five or more dresses; that they were a black-haired race—in fact the darkest haired race in the world; the men let their hair grow long, and did not wear turbans; the women did not wear any head-covering, but they usually indulged in a number of combs, and he had seen as many as twenty. Like a good Arabian the writer regrets the absence of palm-trees, and he mentions the absence of lions and elephants, and considers the Chinese horses superior to those of India. There were two hundred principal cities, each having many smaller ones administratively dependent on them. The cities, he says, have generally four gates, and he makes some curious remarks upon the cities, stating that each gate is provided with five large trumpets, with are blown day and night to announce the hour. The peculiar construction of the houses is remarked upon. They are of wood or bamboo, and on account of the frequency of fires, have no steps or staircases, so that the contents can be easily removed. The houses are also furnished with boxes on wheels, and when a fire breaks out the household articles are put into them and they are run out of the houses. The food of the people consists largely of rice, but not exclusively. They have no wines, but they make a spirit from rice, which of course is what we know as *samshu*. The people, he further says, eat all kinds of animals, and also those that had died. The writer is one of the few mediæval writers who mentions tea, and describes the plant. He notices that the people are not very clean, and says they never perform any of the ablutions of the Mahomedans. The marriage customs strike him as peculiar, and he speaks of the noise made by the beating of drums and musical instruments during the ceremony. Speaking of the burial customs he remarks upon the long time they keep the corpses, and notices the extraordinary care they have in performing the funeral rites, and the long time of mourning, which is generally three years. He adds—but perhaps it is a slight exaggeration—that those who do not grieve constantly for the loss of their parents are bamboozed. Polygamy is practised, and he says that the expenses incurred over funerals frequently ruin people. The great skill of the Chinese as workmen is spoken of, and he goes so far as to say they are the most skilful people on earth. He says that when any workman accomplishes a new kind of work, which he thinks worthy of consideration, he presents it to the king (or governor) and the work is exhibited for a certain period. If nobody can find fault with it, the workman is rewarded, and he is entered in the corporation of artists. As an instance, the writer says that a workman executed a most beautiful piece of embroidery, representing a bird resting on some corn. It was put on exhibition and admired for some time, until a hunchbacked man came to see it, and began laughing. Asked the reason of his merriment he said that everybody must know that if even the smallest bird rests on an ear of corn it would bend, but here the corn was quite straight. The criticism was found to be just, and the workman received no reward. Nearly everybody could read and write, and there were public schools where the people gained instruction. The peculiar coins are described, and he says they are strung on strings in bundles of a thousand, with a knot tied at every hundred, to facilitate counting. When a man cannot pay his debts, all his property is seized for the benefit of his creditors, and all debtors have to pay what they owe the man. If the bankrupt reveals all his belongings, and is found not to have concealed anything, or to have handed over any property to others for keeping, he is released, but if he is discovered acting fraudulently he is punished by death. Describing the punishments of the Chinese, he said that they have a peculiar one, which consists in fastening the hands and feet behind the culprit's back, so that he becomes very much like a ball. He is then rolled about until his joints are dislocated, after which he is bamboozed and left to die. The fondness for gambling is a peculiar characteristic, but the people are generally sober: they have little or no knowledge of science, and their mode of medicine is principally cauterisation. The Emperor lives in seclusion, only going out every ten months, the reason being that he thinks respect is gained by fear and mystery. When the officials go out, they

are preceded by men beating pieces of wood which is a sign to the people to retire into their houses. The administration of justice is carried on by written statements, and he describes its working. The only taxation is by a poll-tax, every man on attaining the age of 18 being liable. When a man reaches 80 years of age, not only is he exempt from further taxation, but he receives a small allowance from the Treasury as a matter of right. The Arab merchants in Khanfu (which, as already mentioned, the Lecturer argued was Hangchow Fu) were allowed to have their own judge and composed a self-governing body. This was the account given by the first author. The second writer mentions that in the year of the Hegira 264 (A.D. 877) this happy state of things had been changed by a great rebellion which had broken out. The rebels rapidly gained aid, and attacking Khanfu, destroyed the mulberry trees, and caused a scarcity of silk in the district. The Emperor fled to Chengtu, but with the help of the Tartars, returned and crushed the rebellion. The carnage at Khanfu when it was destroyed is described as very great, some 120,000 persons being put to the sword. In concluding, the Lecturer pointed out that the greater part of what this Arabian author had written on the subject corresponded with the Chinese accounts of the insurrection of Hwang Ch'ao of the T'ang dynasty. This gave good grounds for believing all the rest. He thought the records he had spoken of might be regarded as having really wonderful accuracy. He hoped to be able to give a translation of the author, for although the existing translation was a good one yet it might be improved.

Mr. Kingsmill was inclined to differ with some conclusions the Lecturer had come to with regard to the identity of some of the places mentioned. At the time of which the Lecturer had been speaking Hangchow as a port might be regarded as non-existent, and he himself inclined to the belief that Khanfu corresponded with Canton.

Mr. Volpicelli replied that Canton was mentioned by other Arabian authors, who gave it another name, and he did not think the distance mentioned in the manuscript of which he had been speaking would agree with Mr. Kingsmill's contention. He also pointed out that according to the second Arab author, the siege of Khanfu took place in the year 264 of the Hegira, which commenced on the 18th September 877 (N.S.) and would extend far into 878; and the Chinese historians mentioned the taking of Hangchow by the rebel Hwang Ch'ao in the 8th moon of the 5th year of Hsi Tsung (A.D. 878). This chronological agreement was strong proof of the identity of Khanfu and Hangchow.

Mr. Playfair remarked that one argument in favour of Hangchow being Khanfu was that at one time it was the capital of the empire, whereas there was no record of Canton being the capital.

Mr. James Scott added that at the present time there was a large Mahomedan community in Canton, which had kept itself quite distinct. Within the last few years the better class Mahomedans had taken them up and were endeavouring to raise their status.

The proceedings then terminated.

"WITH WHOM HAST THOU LEFT THOSE POOR SHEEP IN THE WILDERNESS?"

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I gather from your issue of yesterday that a poor sailor (named Lee) had to be buried by the U.S. Vice-Consul on 31st ultimo, because there was no Minister of the Gospel in town to read the service over him. I think that this is a great shame. I know very well that the Rev. Mr. Primrose is in Nikko; that Dr. Smithson is in Hokkaido; that the Rev. Mr. Pilot is in the country; and that our missionary co-residents are up in the hills of Shinshu by the score. But surely, Sir, this ought not to be. Why do our spiritual pastors and masters desert us thus for two or three months in the hot season? Poor fellows sweltering in Yokohama over a big mail, may be tempted to use "cuss-words"; and may very rightly think that they deserve a holiday more than those shepherds who thus desert the flock. Surely, if our spiritual guides must go abroad, they might arrange among themselves so that one is left on watch, as officers of steamships do at meal times when upon a voyage at sea.

Yours faithfully,
Yokohama, 2nd August, 1895. ALEPH.

[We rather than the Rev. E. Champneys Irwine was in Yokohama, and would gladly have given his services had they been called for.—Ed. J.M.]

MESSRS. LANGFELDT AND CO.,
LIMITED.

The half-yearly general meeting of shareholders in Messrs. Langfeldt and Company, Limited, was held in Kiel's Building on Monday afternoon. There were present, Mr. O. Kiel, in the chair, Messrs. J. F. Lowder, J. Strauss, R. H. Bleifus, E. Berger, H. F. Klingen, and J. Feicke, Secretary.

The CHAIRMAN, having called the meeting to order, said that the report and accounts of the Directors had been in the hands of the shareholders for one week, and they had doubtless carefully perused and digested them, thus rendering it unnecessary to have the figures read out to them that day. He would only add that the past half-year was the hardest—in so far as the work was concerned—that the Company had experienced. Shareholders were therefore indebted to the result of the half-year's working to the energetic labours of all of their employees during that period. He had been connected with the management of the business for the last four years and a half, and could therefore bear testimony to the hard labour gone through by the staff throughout the past half-year. He hoped that at the close of the year the company would be in a position to reward its employees to the extent of their due.—(Hear, hear.)

Mr. BERGER moved and Mr. KLINGEN seconded the adoption of the report and accounts.—Carried.

REPORT OF THE DIRECTORS AND STATEMENT
OF ACCOUNTS.

The Statement of Assets and Liabilities, and the Profit and Loss Account for the half-year ended the 30th June, 1895, accompany this Report.

The next Profit for the half-year, including balance brought forward from the 31st December, 1894, and after providing for General Expenses, Directors' and Auditor's fees, Interest, Depreciation, and Losses, amount to ... \$20,228.47 which it is proposed to apply as follows:—

In payment of a Dividend of 20 per cent. for the half-year	\$20,000.00
Balance to be carried to new account	\$ 228.47
	\$20,228.47

According to Article 85 of the Articles of Association the amount of the Directors' Fees for the year ending June 30th, 1895, will have to be settled at this meeting.

O. KEIL,
J. F. LOWDER, } Directors.
Yokohama, July 22nd, 1895.

STATEMENT OF ASSETS AND LIABILITIES ON JUNE
30TH, 1895.

E. & O. E.
Yokohama, June 30th, 1895.
O. KEIL,
J. F. LOWDER, } Directors.

J. FEICKE, Secretary.
I have examined the foregoing accounts and compared them with the vouchers of the Company, and certify them to be correct.
THOS. S. BAKER, Auditor.

In regard to fixing the Directors' remuneration for the ensuing twelve months, Mr. Berger wished to move that the remuneration be fixed \$200 per annum for each of the Directors, with an extra \$400 to the Managing Director, Mr. Keil.

The CHAIRMAN said that this could not be done, as to the Articles of Association fixed the maximum remuneration of a Director at \$500.

Mr. BERGER said he thought the extra \$100

could be taken as a bonus by Mr. Keil—as a mark of their appreciation of his labours on their behalf.

The CHAIRMAN said that he was greatly gratified to hear that the shareholders appreciated his services so highly, still he could not go beyond and behind the rules of the Company.

Mr. BERGER said that the maximum allowance which the Company could vote its directors was \$2,500: at present they only voted \$1,100. His proposal therefore only made the vote \$1,200.

Mr. KLINGEN said he supported the idea of voting the Directors \$1,200.

The CHAIRMAN disapproved of the principle of voting one Director \$400 more than the rest of the Board, even if it had not been contrary to the rules. Besides, the Company's business might not always be so successful, and should the dividend drop from 20 per cent. to 8 per cent., shareholders might not like to see the Board taking 2 per cent. of the dividend.

Mr. BERGER still persisted, and appealed to Mr. Lowder to confirm his reading of the rules, against the Chairman's interpretation.

Mr. LOWDER—You would be proceeding very contrary to the rules if you did as you propose.

The CHAIRMAN again acknowledged his thanks to Mr. Berger for his warm appreciation of the work he had done, and then asked him if he would be content with receiving his assurances of thanks.

Mr. BERGER—Very well, then. I move that the remuneration be the same as before.

Mr. KLINGEN seconded.—Carried.

The CHAIRMAN—Before separating, I should like to place on record a hearty vote of thanks to our manager and all our staff for their services during the past half-year.—(Hear, hear.) They have worked both day and night, sometimes far into the night, and often on Sundays too. It is to their hard labours that I attribute our successful half year's result.—(Applause.)

Mr. BERGER, in seconding, said that the Chairman had merely anticipated him in moving a vote of thanks to their staff.

The meeting then dispersed.

YOKOHAMA ENGINE AND IRON
WORKS, LIMITED.

The annual general meeting of shareholders in the Yokohama Engine and Ironworks, Limited, was held at Keil's Building on Wednesday afternoon. There was present Messrs. J. F. Lowder, in the chair, F. H. Bull, Jas. Walter, C. K. M. Martin, W. R. Bennett, Jas. Dodds, J. Rickett, H. S. Thompson, S. D. Hepburn, C. Guissani, J. H. Curtis, J. Johnston, B. H. Pearson, and C. G. Charlesworth, Secretary.

The CHAIRMAN said he thought that shareholders would be satisfied at the gratifying statement of accounts which the Board of Directors had to lay before them that day in regard to the working of the company for the past year. It was most gratifying to know that they had not only been enabled to pay off the whole of their debt to the Bank, but they had also converted a debit balance on their profit and loss account into a credit balance of a much larger amount. It was no doubt true that circumstances had been exceptionally favourable for the Company during the past year, but he (the chairman) would remind shareholders that a great deal of the Company's success was due to their staff. He wished to emphasize this fact, for if the staff had not been able when the emergency arose to cope with it, a great deal of the work which the Company had done would have passed into other hands. Mr. Johnstone, though not so in reality, was in fact their Managing Director, and to his indomitable energy assisted by their efficient staff of three Europeans—to these four men and the favourable circumstances of the year, the Company's success was due. It would be the Board's duty within a day or two to consider what steps should be taken to mark in a sensible manner the Company's appreciation of their labours in its behalf. No doubt all present had carefully studied the figures in the present accounts and would be sensible of the difference in this year's figures with those of the year before. It would easily be seen that their gross receipts had more than doubled, that their wages account had also greatly increased: that would convey to them some idea of the Company's work. Another figure which might interest them to know was that the average number of men at work for them was 200 daily, and their European staff had frequently been obliged to work both day and night. Mr. Weaver, their foreman, never worked less than 12 hours a day, Mr. Tresize their efficient manager, and Mr. Charlesworth, their capable secretary, had each worked equally hard. Their property appeared in the books at the same

value as it did eight years ago, notwithstanding that goods and materials have more than doubled in value within the past few years. Their property account was put at \$50,389.40, but this did not represent half its value, for their Kobe property alone the Board put at 50,000 to 60,000 yen. But they could not write off more than they had done, though it might, from an accountant's point of view, seem that \$17,965.36 was a large sum to carry forward, and their Secretary, Mr. Charlesworth, said that it was impossible to further write down the stock or reduce the figure. With these few remarks he presented the report and accounts for the approval of the meeting.

Mr. JAS. WALTER proposed, and Mr. W. R. BENNETT seconded, the adoption of the report and accounts.—Carried.

REPORT AND ACCOUNTS.

The Directors have great satisfaction in reporting that the profits of the past year have been such as to enable them to pay off the whole of the Company's indebtedness to the Liquidator of the New Oriental Bank Corporation, which, on the 31st May, 1894, stood at \$42,559.23, and also to convert a debit balance, at the same date, of \$16,142.84, into a balance at credit of Profit and Loss on 31st May, 1895, of \$28,365.36, exclusive of an interim dividend of 3 per cent. paid in February last, which absorbed \$3,900.

The gross earnings during the year under review were more than double those of the previous year; and the Directors have pleasure in recording their conviction that this increased prosperity is in a large measure due to the efficient activity of those servants of the Company who are more immediately responsible for the management of the Works.

From the net profit for the year, amounting to \$28,365.36, the Directors recommend the payment of a dividend of 8 per cent., which will absorb \$10,400, and leave a balance \$17,965.36 to be carried forward.

In accordance with the Articles of Association, Messrs. Hepburn and Dodds retire from the Board of Directors by rotation, but they offer themselves for re-election.

Messrs. Keil and Fraser also retire, but are eligible for re-election as Auditors.

J. F. LOWDER }

G. CHARLESWORTH, Secretary.

We have examined the foregoing accounts, and compared them with the books and vouchers of the Company and find them to be correct.

O. KEIL,
R. N. ST. JOHN, } Auditors.

Yokohama, July 25th, 1895.

The next business was the appointment of two Directors. Messrs. Hepburn and Dodds retired, but Mr. RICKETT moved, and Mr. CURTIS seconded, that these gentlemen be re-elected.—Carried.

The CHAIRMAN said that the Board recommended the re-appointment of Messrs. Keil and Fraser as Auditors. He had not received any communication from Mr. Fraser, but he heard privately that he would in all probability be back in Yokohama, and as he had served the Company well in the past, it would be nice to pay him the compliment of re-electing him in his absence.

Mr. CURTIS moved and Mr. BENNETT seconded the re-appointment of the retiring auditors.—Carried.

Mr. WALTER said he should like to make a few

remarks upon the report ere the meeting separated. The Chairman had said, and perhaps rightly, that the past had been a phenomenal year for the Company. At one time the shareholders had felt very anxious about the prospect before them, and the future of the company at one time certainly did look very black. Now they had a good year, a phenomenal year, and the outcome had shown what the capabilities of the Company were, if trade continued good and brisk. The Chairman had referred to the past year's work as exceptional, and no doubt it was partly due to the war that it was so. Also, that the success of the twelvemonth's working was due to the energy of their European staff, Mr. Tresize, Mr. Weaver, and Mr. Charlesworth: also that Mr. Johnstone, who was on their Board of Directors, had been the moving spirit and had worked hard for them all. He would therefore like to move a vote of thanks to the Board of Directors, especially coupling with it the name of Mr. Johnstone, and including their staff, Messrs. Tresize, Charlesworth, and Weaver.—(Hear, hear.)

Mr. GUISSANI seconded, and the compliment was carried.

Mr. JOHNSTONE bowed his thanks.

The CHAIRMAN—Mr. Johnstone is speechless, so I will thank you for him, and also for the staff. I would not care to repeat again in Mr. Johnstone's presence what I said just now before he entered the room, else we should render him more speechless still.—(Laughter.) Gentlemen, I thank you for the vote of thanks.

The proceedings then terminated.

ARRIVAL OF THE NEW BRITISH MINISTER.

After eleven years of absence from Japan, Sir Ernest Mason Satow, K.C.M.G., returned on Sunday by the steamship *Empress of China*, after a remarkably quick passage from England. The afternoon was very sultry, and now and again drops of rain pattered down, but this did not prevent a very large gathering of British residents assembling to greet the new Minister. Among those gathered at the *hatoba* were Messrs. J. F. Lowder, A. C. H. Bonar, J. H. Brooke, E. Whittall, J. A. Fraser, T. Thomas, E. J. Moss, Rev. E. Champneys Irwine, W. F. Mitchell, J. R. Parsons, P. S. Bent, E. O. Kenyon, J. Symes Thompson, W. Ross, Jas. Walter, A. J. Wilkin, F. Townley, G. Buchanan Dunlop, W. Gordon, J. P. Mollison, E. Flint Kilby, J. Rickett, W. J. S. Shand, W. Tucker, J. Beattie, J. Diack, J. J. Efford, R. N. St. John, J. B. Barrett, R. Home Cook, C. D. Moss, A. C. Read, A. H. Cole Watson, F. H. Adams, G. Allcock, B. Gillett, A. Owston, F. P. Solomon, F. H. White, L. J. Healing, W. W. Till, J. J. Keswick, Dr. Wheeler, H. C. Litchfield, F. Schwabe, W. B. Walter, J. H. Boag, C. Rhine, E. Rogers, M. T. B. Macpherson, A. G. Lines, E. J. Libeaud, and others. H.M.S. *Leander* saluted as the stately white mail-boat entered between the lightships, giving H.M.'s representative 13 guns, and the U.S.S. Flagship *Baltimore* responded with an equal number. Sir Ernest Satow was accompanied over the side by His Honour Mr. Justice Mowat, Mr. Gerald Lowther, H.M. *Chargé d'Affaires*, Mr. G. H. Parlett, of the Legation, Mr. J. Carey Hall, H.M. Consul in Yokohama, Mr. P. Peacock, Mr. G. Hodges, and Mr. N. P. Kingdon. They took passage ashore in the C.P. launch *Spindrifft*, which bore the Minister's flag at the fore, and H.M.S. *Leander* furnished the guard of honour, the lusty British tars keeping up easily with the launch. At the landing-steps hearty greetings were exchanged, many of Sir Ernest's old friends being recognised by him ere he reached the land. Then a move was made to the British Consulate, the new Minister heading the files and entering first.

Mr. J. A. FRASER, after the company had assembled, stepped forward, and in the name of the British community gave a hearty welcome to Sir Ernest Mason Satow upon his return to this country in the capacity of Her Britannic Majesty's representative to the Court of his Majesty the Emperor of Japan.—(Applause.) To the speaker had been delegated the extreme honour of presenting the new Minister with a short address from his fellow-countrymen, and although he (the speaker) could not lay claim to being one of the leading merchants of the community, still he could justly consider himself as one of their oldest residents.—(Hear, hear.) Many present in that room could recall the day when Sir Ernest Satow first landed in this country, a tall, slim, youthful student-intrepreter filled with a zeal and determination to master the intricacies and difficulties of the language of this country; and still more could remember him in the later years when, after acquiring a close intimacy with

the literature and a keen insight into the character and modes of thought of the people of Japan, he became Japanese Secretary of Legation and in that capacity lent such immense assistance to his chief, the late Sir Harry Parkes.—(Applause.) He could perhaps bring before their eyes in a more striking manner an illustration of the work done by Sir Ernest Satow in those early days. It was a cartoon, one of the many which appeared in the pages of the *Japan Punch*, and came from the fertile and imaginative brain of the late Mr. Charles Wirgman. Well, this cartoon was labelled, "The centre of our policy in Japan," and depicted a small gunboat, a very small gunboat, attached to which was a very big Union Jack. This gunboat was steaming from Yokohama across the Bay to Edo, as the capital was called in those days. On this tiny craft appeared a tall, slim figure, which towered much above the funnels, standing in a contemplative attitude. This gunboat was H.M.S. *Wasp*,—or some such name as that—and the tall figure in the contemplative attitude was our new Minister, the plain Mr. Ernest Mason Satow of those days.—(Applause.) This cartoon, the speaker contended, gave a good illustration of the important work which Mr. Satow performed in those days, towards strengthening the British influence in Japan. During all the years of his absence, years that he had spent in the service of his country in lands far separated, they had followed his career with interest as he advanced from post to post, until he returned to them to fill the highest position which his sovereign could confer upon a subject in this land.—(Hear, hear.) We therefore have taken this opportunity, said the speaker, to present Sir Ernest Satow with a simple address, an address of personal welcome, purposely avoiding any mention of any of the matters which have occurred during his years of absence—the signing of the new Treaty, for instance, which might very well have been alluded to. But we preferred to confine the address to a simple form of personal welcome, and to exclude all matter that might be deemed of a controversial character. The address is as follows:—

Yokohama, 27th July, 1895.

To Sir ERNEST MASON SATOW, K.C.M.G.,

H.B.M. Envoy Extraordinary and Minister Plenipotentiary and Consul-General,
Tokyo.

SIR,—We, the undersigned, deem it a privilege as Englishmen to meet here to-day to present to you, in the name of the British Community, a short address of welcome on the occasion of your return to this country to occupy the high position of British Minister in Japan to which you have been appointed.

Happily, in your case, we feel that we are not addressing a stranger.

To many of us it is possible to claim the honour of a personal acquaintance, and though others are in this respect less fortunately circumstanced, yet we all alike feel that your name is a household word in our ears when we look back to the history of this country in pre-Restoration days and in those years immediately following that event.

When some eleven years ago you left Japan to serve your country in other parts of the world in a diplomatic capacity, we watched your career with no small degree of friendly interest and pride. From Siam to Venezuela, from Venezuela to Morocco, we traced your onward progress in the diplomatic service of your country, each fresh appointment bearing strong testimony to the trust reposed in you by your Sovereign; and in the Knighthood which Her Most Gracious Majesty has been pleased so recently to confer upon you, we see fresh recognition of the esteem in which you are held at home.

You have now returned to the scene of your earlier labours, where, in a position of a less exalted nature than the one you are now called on to fill, you then won fame and distinction; and where, with the advantage of the able leadership of such a distinguished chief as the late Sir Harry Parkes, whose memory lives, and will continue to live, strong in the hearts and affections of his countrymen in the Far East, you not only did good work as one of his lieutenants, but contributed so largely to the cause of scholarship in Japan.

We desire now to offer you our most cordial congratulations on the well merited distinction of Knighthood which has been conferred upon you, and at the same time to give you a hearty welcome back to Japan.

It is our hope that you may be spared for many years to come to discharge, in the full enjoyment of health and strength, the duties of that responsible position to which you have been appointed, and we can assure you that any information that you may require at any time in connection with the commercial relations of this port, which it may

be in our power to afford, will be gratefully and willingly given.

We have the honour to be,

Sir,

Your most obedient Servants.

[Here follow Signatures.]

Sir ERNEST SATOW, who was greatly moved, said that he was taken so greatly by surprise that they must excuse him from making a long speech. He was gladly surprised at meeting so many of his old friends, friends whom he had not expected to have again met in Japan, and also at the large number of other gentlemen, his countrymen, whose acquaintance he made for the first time that day. He was very gratified to hear all the kind things which Mr. Fraser had said of him, and all the kind expressions which the address contained. Especially pleasing was the reference to his earlier residence in Japan, when it was his good fortune to be in a position of subordinate usefulness to the late Sir Harry Parkes.—(Applause.) He cordially re-echoed all that the address and Mr. Fraser had said in regard to his late revered chief.—(Applause.) He did not exaggerate when he said that no public man east of India had his country's interests more at heart than had the late Sir Harry Parkes.—(Hear, hear.) He had served under him for seventeen years, and could bear witness to Sir Harry's intense love of work. He had seen him in times of great peril preserving the utmost calmness and coolness; and he had seen him day after day absorbed in advancing the interests of his nationals. In concluding, Sir Ernest said, I may hope, though the field of the diplomatist has greatly diminished since Sir Harry's days, that I may be able to follow in his footsteps, though but feebly in comparison; still I can assure you that it will always be my first endeavour to guard and further the interests of our country.—(Loud Applause.)

A general introduction followed, and then Sir Ernest drove off to catch the afternoon train to Tokyo.

LETTER FROM PHILADELPHIA.

(FROM OUR CORRESPONDENT.)

Philadelphia, July 4, 1895.

The Republican party always controls State and National issues in Pennsylvania, only losing a county election here and there. It looks as if, at this writing, the party would be torn in two by the antagonism between Governor Hastings and U.S. Senator M. S. Quay and their followers. Mayor Warwick, of Philadelphia, is vigorously helping Governor Hastings' wing. The election for chairmanship of the State Republican committee is to be held shortly, and the whole political history of the State will be affected by the result.

Philadelphia, having seen nearly a hundred persons killed under the wheels of the new Juggernaut, the trolley cars, is up in arms about it. Fenders, of a more or less useful sort, have been attached to all the cars. The great speed of these cars and the increased comfort has been achieved at loss of life. Our great railways are experimenting as to the use of electricity instead of steam as a motive power. The Pennsylvania Railroad has one branch line already equipped with an electric locomotive system. The Baltimore and Ohio Railroad now uses electric locomotives to draw trains through its great tunnel under Baltimore. Any of you who visit the Eastern States about the year 1900 will surely find few if any other kind of locomotives.

We are all greatly disturbed about the possibility of a war between Japan and Russia. We hope that there may be none. All our sympathies are with Japan, and we cannot but feel that Russia has gone beyond all right in the matter of interfering with the settlement between Japan and China. By "we" I mean, not myself simply, but the general opinion of Americans as expressed unhesitatingly in our newspapers.

The American Board C.F.M. are just about sending a Deputation to visit the Congregationalist missions in Japan. It is likely that Hon. W. P. Ellison, of Boston, Rev. James L. Barton of Boston, Rev. James G. Johnson, of Chicago, and Rev. Amory H. Bradford, of Montclair, N.J., will constitute the Deputation. They are to examine into the needs of a readjustment of missions in Japan, especially in view of the great advances Japan has made in recent years. The Deputation leaves in September. They are to confer, not only with the American missionaries, but also with the native Japanese Christians, who feel that the evangelization of their own country can now be left in the hands of Japanese. The very appointment of this Deputation shows how willing Americans are to believe the best things of the Japanese and yet how willing also they are to

get an exact understanding of the situation from the missionaries themselves. The results of this visit will concern the missionary work of all denominations in Japan, since all will be more or less influenced by its conclusions, and guided in their future plans.

The Christian Endeavour movement will take Boston by storm in the week beginning July 9th and following. From information received at this time, a few days in advance, it looks as if at least 50,000 members of Christian Endeavour Societies from outside Boston would visit the city at the great meeting. Every hotel, apartment house, and private boarding-house has been canvassed to find quarters for the delegations. The railroads and steamers have made special rates, generally about one-half the usual charges, and everything is being done to bring the crowds and to care for them in comfort. The largest auditorium in Boston, the Mechanics' Institute, seating 10,000 persons, has been engaged, and two immense tents holding also 10,000 each, have been put up on Boston Common. All the Churches and great halls in the city have been also arranged for. That the authorities should permit the use of Boston Common for this purpose is something wonderful, and it but illustrates the power of Christian Endeavour as an influence that it is at all possible. There are now 2,400,000 members of Christian Endeavour Societies, almost all of them young men and women, in the United States. There never were such gatherings as these now held year by year. Besides question of general religious interest, especial attention will be given to temperance and missions. The great day will be Saturday, July 13th, which will be "Good Citizenship" Day. Monster open-air meetings are to be held out on the common; 50,000 copies of the hymn, "My country, 'tis of thee," have been printed as a souvenir of the day. The Good Citizenship movement has, as the name indicates, an end of purest patriotism. It touches corruption in politics, temperance questions, and everything else that has to do with good government, and yet is wholly apart from the political parties. All Boston is awake to the coming of the Convention. The gardens, public and private, have been arranged with the C. E. emblem in growing plants in the Convention colours, crimson and white; all the great buildings will be decorated with bunting of these colours, and with the C. E. badge reproduced and enlarged. Hospitality Committees will be at all the railroad stations and steamer landings. While the Young People's Society of Christian Endeavour is wholly undenominational, it is not anti-denominational; it urges young people to be loyal to their own churches and to their own denominations, while yet cultivating a fraternal fellowship with those of other denominations. Besides union meetings, one afternoon is wholly given up to denominational gatherings. The Baptists, who probably will be present in the largest numbers of any of the denominations, will hold one gathering in one of the great tents, and other denominations in the Halls and Churches round about. Even the great newspapers are moved to report the Convention at length.

The Baptist Young People's Union of America meets the next week in Baltimore, and to this Convention already some 12,000 have indicated their intention of coming. The best speakers of the denomination are to make addresses. This B.Y.P.U.A. takes in some who are members of the Christian Endeavour Societies, and, while not discouraging interdenominational fellowship, encourages and emphasizes denominational loyalty. All these young people's movements, together with the Methodist Epworth League, the Episcopal Brotherhood of Saints Andrew and Philip, and the Presbyterian Oxford League, indicate a new condition in the religious life of the United States.

LETTER FROM AUSTRALIA.

(FROM OUR CORRESPONDENT.)

Healesville, Victoria, June 23rd, 1895.

The doctors election campaign, has commenced in Melbourne. Once in every four years sixteen highly valued positions are offered for competition by the Melbourne Hospital, and, since the competitors frequently amount to double the number of places vacant, the contest is necessarily keen. Polling does not take place till August, but canvassing has been going on since April. The positions are sought for the sake of the status they give and the practice they afford. With the exception of advertising, which the etiquette of the profession will not allow, the doctors make use of every device known to municipal and parliamentary candidates for obtaining votes. Well-to-do doctors are in the habit of putting a few hundred or even a thousand subscribers on the list of electors at a

guinea a head. In the 1891 election one doctor, not finding sufficient supporters in Victoria, enrolled three or four hundred Adelaide subscribers and secured the votes of their proxies here. But proxy voting is now put a stop to. The system of voting is considered unsatisfactory, but what keeps it alive is the revenue it brings to the Hospital. The most popular candidates for the highest post in the Melbourne Hospital are Drs. O'Hara and Plevna Royan. Dr. O'Hara has for some years been on the Alfred Hospital Staff. The Alfred is regarded by medical practitioners as a stepping-stone to the Melbourne.

The figures furnished by such an eminent statistician as Mr. Mulhall in a recent number of the *Contemporary Review*, have naturally attracted a good deal of attention in these parts and have acted as a much needed antidote to the effect of the gloomy forebodings which have lately been published in the *Investor's Review*. The leading features and facts of Australasian progress as given by Mr. Mulhall are well worthy of the attention of those critics who present Australia as a country where borrowing has far exceeded the warrant of existing resources. The following are some of the interesting statistics published by Mr. Mulhall:—The increase of population in the Australasian colonies since 1873 has been 112 per cent., but revenue has increased during that period by 127 per cent., that is, has grown 15 per cent. faster than the population. During the above-named period the colonies produced wool and gold to the value of £500,000,000 sterling. The human race now draws 30 per cent. of the wool it uses from the backs of Australian sheep. In 20 years Australian sheep have increased 98 per cent., Australian cattle 116, and Australian horses 120. The colonial governments, in ten years sold 53,400,000 acres of land for the sum of £22,100,000, an average of 8/6 per acre. Tillage has advanced at an equal rate with sheep, cattle, and horse-breeding. The average value of crops and pastoral products is £17.6 per inhabitant, a rate which, says Mr. Mulhall, has no equal in the world. The United States, which comes next, is only £13 per inhabitant. To come to gold, Australia extracted in 20 years no less than 790 tons of gold, worth, roughly, £100,000,000 sterling. Australian railways since 1873 have cost £108,000,000. So that the money extracted from gold mines has been expended on railways. Australia's debts have risen in 30 years from an average of £22 to £51 per inhabitant. The ratio is nearly three times that of Great Britain. Debt, however, contends Mr. Mulhall, should be measured by revenue rather than by population, and if Colonial Railways were sold at 10 per cent. less than the cost of their construction, the debt would be thereby reduced to five years of revenue. Now the debts of the great European states range from 8 to 10 years of revenue, and that of the United States is equal to 7 years of revenue. The average yearly accumulation in Australia for the twenty years ending 1890 is £19 per inhabitant; it is £8 in the United States and only £5 in Great Britain.

The message announcing the result of the English Derby reached Australia, allowing for the difference of time, in one hour and six minutes, being record time. This result was obtained by the use at several stations of automatic repeaters. The number of these repeaters is to be increased and when this is done, it is calculated that a message from England to Australia, which now ordinarily takes 3 hours, will be sent in half an hour. In this connection it is interesting to know that Australasia spends no less than £1,000 a day on telegrams.

The act of Abraham in making preparations to offer up his son has been repeated in Victoria within the last few weeks, with the alteration that in the case I am about to refer to the son determined to offer up his father as a sacrifice. A young man named Carey erected in his father's paddock a rude altar and on a certain day tried to induce his father to go with him to the spot. Not succeeding in this, he attempted to murder his father with a reaping-hook. The explanation he gave at the Lunatic Asylum to which he was taken, of this conduct was that God had appeared to him in a vision telling him to offer up his father as an Abrahamic offering.

Mr. T. A. Browne (Rolf Boldrewood), the well-known novelist, has been a District Police Magistrate at Corowa, in New South Wales, and has just received a testimonial on his retiring from the bench.

The following notice of an exhibition of Japanese photographs appeared in the *Argus* a few weeks ago:—The shortest route from Collins-street to Japan is by way of "Cole's Arcade Walk," and the most leisurely tourist on arriving there finds he can learn as much of that wonderful country and its people in the course of an hour as he could

acquire by reading all the latest books on the subject. In a well-lighted gallery are exhibited 1,500 coloured photographs by Japanese artists, forming a perfectly unique collection of object-lessons with respect to "the land of the rising sun." Apart from their high quality as sun-pictures, they are extremely interesting and instructive as vivid representations of the daily life of the people. This may be studied under every conceivable aspect. Their religious ceremonials; their marriage festivities and funeral rites; their social usages; their public and private recreations; their modes of agriculture; the industries pursued by their artisans; the life of the streets and the occupations of the small traders and itinerating hawkers—all these are graphically illustrated, so that it may be doubted whether any phase of Japanese civilisation has been left unrepresented in this really remarkable collection of photographs. And the beautiful scenery of the country—its mountains and cataracts, its umbrageous forests and highly cultivated harvest fields—has not been overlooked by the artists, who display, as may be expected, a refined sense of what is most picturesque and most effective in their selection of subjects. Add to these numerous examples of the religious, civic, and domestic architecture of the Japanese, of their sculpture and bronze-casting, and it will be seen that the exhibition is a very comprehensive one, and that it possesses a not inconsiderable educational value, especially as it brings us almost into touch with a nation which has just shown that it intends to play a leading part in the history of that portion of the globe wherewith the future of Australia must be intimately identified.

Victoria is said to be sadly overchurched. There are no less than 4,760 churches or chapels in the Colony, that is a building devoted to public worship for every 50 adults. In almost every country township from the Murray to the sea there is the spectacle of underpaid Divines preaching to tiny and overburdened flocks. The various branches of the Methodist Church are about to unite, and Chief Justice Way has come all the way from Sydney to take the chair at a Melbourne meeting called for the purpose of arranging the union. An English Bishop who recently visited this Colony went so far as to say, on his return to England, that the rivalries of the sects in Victoria resembled those of hotel-keepers.

Considerable surprise has been felt and expressed that the Premier of Victoria, Mr. George Turner, a solicitor, should have taken part in the defence of certain gun-makers named Abrahams who have been convicted of the wrongful use of the trade name of Greener and called upon to pay £5,500 damages. A criminal action against the defendants has followed the civil verdict, and it looks as though it would go against them. It has been said, and I think with justice, that for the Premier of the colony to figure as counsel for a set of swindlers is most derogatory and liable to create a bad impression in England if not here. But it is no doubt hard for a lawyer to forego his fees for the sake of the public. No one here really expects such a sacrifice.

Mr. Frederic Villiers, the well-known war artist, has been lecturing in Melbourne on the Chino-Japanese war. The newspaper reports of lectures, which are to be repeated elsewhere, are necessarily very meagre. The following extract will give some idea of the description given by the lecturer, who, it should be mentioned, illustrated his lectures with limelight views. In his account of the capture of Port Arthur by the Japanese during the last war, the lecturer related many instances of brutal savagery on the part of the victorious invaders, who were maddened by the sight of the mutilated remains of their brothers in arms previously taken prisoners by the Chinese. The massacres of Chinese citizens by the troops of General Oyama went on, he says, for four days, and no doubt the effect was heightened by the apathy of the Chinese themselves, who are callous, by the rules of their religion, in the presence of death and suffering. Still, one may as well recognise that hardly a single war of modern times has been free from similar barbarities, and that battles, as a military epigrammatist once put it, are not won with rose water. Zola's account of the conduct of the Bavarians at the burning of Bazeilles before Sedan may be set beside the stories of Japanese cruelty at Port Arthur, and the atrocities inflicted both by the Turks and the Russians in their last war leave little room for a balance to be struck in favour of the West as against the Far East in point of humanity. Still there are a few lines by an old poet which set forth that what comes to us through the ears stirs the heart more slowly than the things which are depicted before our eyes, and possibly the realism of the kodak brings home to us more closely than any mere written description could do those dread experiences of humanity which are commonly

classed under the trite phrase "the horrors of war."

The following official returns show the increase in the area of land under vine cultivation and the quantity of wine produced in Victoria during the past five years:—

Area under Vines.	Wine Produced.
Acres.	Gallons.
1890 15,662	1890 1,578,590
1891 20,686	1891 2,008,463
1892 24,483	1892 1,554,130
1893 28,052	1893 1,694,745
1894 30,275	1894 1,440,184

The viticultural statistics of the colony are evidently not considered of much importance, for they omit to state whether the area, now under cultivation, includes vineyards that are not yet in full bearing; also what proportion of grape varieties are grown for table use. It is noticeable that, though the area under cultivation doubled itself in the 5 years, the amount of wine produced decreased. During the five years the average prices obtainable for Victorian wines have declined 35 per cent.

A most extraordinary incident occurred on H.M.S. *Ringarooma* some little time ago. The Commander, Captain Johnson, reprimanded the doctor, Surgeon Lea, for not seeing that a sliding table was in its proper place. In the altercation which followed, Surgeon Lea ordered the captain on the sick-list. The captain refused to obey this order, though some maintain that its legality cannot be impugned, and subsequently ordered the arrest of the doctor. A Court-martial followed, during which the surgeon maintained that the captain was off his head and not competent to command the ship. The case, however, went against the doctor and he was dismissed from the service. The Court seemed to be of opinion that while any surgeon may put an officer on the sick list, he can only do it if the officer be willing. The naval surgeons in Port Jackson hold that Surgeon Lea was hardly treated and propose to appeal. It is not improbable that the power of the surgeon *vis-à-vis* the captain has not been clearly defined, and that this may account for the extraordinary action of Surgeon Lea.

Some statistics have lately been published bearing on the consumption of tea, which tends to show that the Australian drinks more and stronger tea than any other member of the human family. The average for Great Britain in 1860 was 2½ lbs. per head. In 1890 it had risen to 5 lb. The average for the continent is less than 1 lb. per head, while that for the United States is 1.3 lbs. In Australia the average is 7.3 lb. per head. In Western Australia it rises to 10.6 lb. The Australian, however, seems to go to excess in many other things. He eats 276 lbs. of meat in the year as against 109 lbs. of the average Englishman. His consumption of spirits and beer is correspondingly prodigious. In no country, perhaps, is drunkenness so common and so little thought of. Max O'Rell thus describes his experience in a provincial town:—"I had occasion to go and see the mayor. I found him tipsy. On leaving his presence, I went to the office of the town clerk. He was tipsy. From there my manager and I went to call upon the director of the principal bank. He was tipsy. The proprietor of the hotel where I was staying was in bed suffering from delirium tremens. The some night at my lecture the police had to eject from the front seat two individuals who by their conduct were preventing the audience from following me. One was a prominent person in town and the other was the worthy representative of the district in Parliament." "In France," continues Max O'Rell, "a man who finds himself overcome by drink hides himself. In the Colonies he parades his state and does not mind showing himself in public with his family. If he proves too noisy, his wife takes him home to save the policeman the trouble. And when his club mates see him depart, they merely say to themselves 'Poor old Dick! he has had a drop too much! Fond of his glass—a jolly good fellow, capital!'" May not the enormous consumption of tea alluded to above be rendered necessary by the large amount of alcohol imbibed by the typical Australian. Max O'Rell's description of Australian life and manners in his work entitled "John Bull & Co.," is worthy of a fuller notice than I can give it here. Some of his observations are extremely shrewd and witty. Speaking of the heat of February and March he says, "if one passed from these parts to the infernal regions one would need to take a great coat with him." Speaking of the slowness of some of the colonial trains he says: "A French writer, whose name I cannot remember, has remarked that in these days people no longer travel—they set out and they arrive. In the colonies you set out, but you do not arrive. . . . In France we have the same word for funeral processions and

ordinary trains, *convoy*. It is not so in Australia, but there is so much resemblance in the things, if not the names, that when we passed one of those trains, I instinctively lifted my hat." "Ah," said an Australian bigot to Max O'Rell one day, "you French do not pass the Sunday in prayer, as we do." "No," replied the lecturer, "in France we have not to pass every seventh day in repenting of what we have done during the other six." On Australian Journalism, Max O'Rell writes: "Of all the achievements of which Australia can justly boast, there is not one which surpasses what she has accomplished in the way of journalism. I do not know in Europe or America any papers which have more serious value than many which are published daily in Victoria and New South Wales; the *Argus* and the *Age* in Melbourne, the *Morning Herald* and the *Daily Telegraph* in Sydney, these papers, composed of eight and sometimes ten large pages, are sold at a penny, and are from every point of view as well edited and as well informed as the *Daily News*, *Daily Telegraph*, the *Standard*, and the *Daily Chronicle* of London. They have not perhaps the literary value of the *Journal des Débats* or of the *Paris Figaro*, but they are much more complete in the matter of news. They strike a happy medium between the English daily papers and the American ones, being less sensational in style than the latter, but decidedly brighter in tone than the former. One wonders with amazement how a country so young can keep alive, and even richly flourishing, such daily papers as these, besides numerous and excellent evening papers, such as the *Evening News*, the *Echo*, and the *Star* in Sydney; the *Standard* and the *Herald* in Melbourne. The Melbourne *Age* was printing a hundred thousand copies a day when I was in Australia; and when one of the partners withdrew the sum that had to be paid to him was £150,000 sterling. It is really impossible to overpraise the spirit of activity that has rendered such papers an absolute necessity." Of the Sydney *Bulletin*, the French critic justly writes: "In its way, it is the most scathing, most daring, the witziest, the most impudent, and best edited paper I know. Nothing quite so audacious exists even in America, where all sorts of journalistic audacities are permitted. The circulation of this paper is enormous. You meet with it everywhere. . . . This paper exposes many follies, many impostures and the scourging it administers without respect of persons to snobs, humbugs, hypocrites, renders a service to Australian society. But that which counterbalances the good it does, and tends to make the publication a harmful one is its alimentation of that very characteristic Australian trait—want of respect for what is respectable and its encouragement of affectation in a certain section of Australians by lending its columns to the chronicling of all their little sayings and doings. The *Bulletin* is constantly guilty of the very failings that it so cleverly satirises in the public who read it."

JAPANESE TOPICS IN AUSTRALIA.

BY JOHN PLUMMER, M.J.S.

Sydney, June 26.

Despite the excitement prevailing in political circles in consequence of the attempt made by the Legislative Council of New South Wales to indirectly block the free trade policy sought to be initiated by the Colonial Premier, Mr. G. H. Reid, the importance of developing commercial relations between Australia and Japan is not being overlooked in Sydney or Melbourne. In the latter city the proposal of the Victorian Minister of Agriculture to test the markets of Hongkong and Japan by a shipment of live stock, will probably be carried into effect at an early date, if reasonable freight can be arranged for. Recently, a representative of a leading Victorian firm of stock and station agents waited upon the Minister, and stated that one of the clients of the firm was prepared to supply 12 head of good cattle to be forwarded by the steamer *Guthrie*, if the freight was not too high. The rate quoted by the agents of the steamer, Messrs. Gibbs, Bright, and Co., was however, considered somewhat excessive. It was arranged that the Minister should have an interview with the leading individuals concerned with a view of coming to some arrangement which will permit of the stock being shipped by the steamer *Guthrie*. Should the cattle be exported to Japan the result of the shipment will be watched with interest, as it may lead to the development of a large trade in live stock. At present, the freights are considered too high to admit of large shipments of an experimental character from Australian ports.

The second reading of the Bill introduced by

Mr. Crick into the New South Wales Legislative Assembly, for the purpose of amending the Chinese Restriction Act, so as to include Japanese and other Asiatic immigrants, has been blocked by matters arising out of the political crisis. But an effort will be made to secure its being passed before the intended prorogation, although it is almost certain to be thrown out by the Legislative Council. It must be distinctly understood that there exists no prejudice on the part of Australians against the Japanese people. What is feared is the wholesale introduction, by unscrupulous syndicates, of Japanese labour of the cheapest kind, the refuse, as it were, of industrial Japan. When it was proposed to do something of the same kind in connection with the unemployed problem in England, there was some talk in Australia of adopting the immigration law of the United States, prohibiting the landing of destitute emigrants. A paper devoted to the labour interest in New South Wales, commenting on the Bill introduced by Mr. Crick, says:—"If decisive steps are not at once taken to prevent the influx, and large numbers of the Japanese race take up their abode here, when the Government takes action they will find it met by a stubborn resistance. Japan having a large number of her people settled here will strongly resent any interference on the part of Australia, and claim the right of free entrance for her people, and she would have to be reckoned with. This will be by no means pleasant, and it would be prudent therefore to take such steps as will avoid this reckoning. This may be done by promptly dealing with the question in such a way as will keep the alien race away from our shores, and if by this means it cannot be averted, then it will be more easily met then when the conquerors of China have secured a firm footing on our shores."

The subject of Chinese labour in Australia is again attracting public attention. Recently Mr. Reid, the New South Wales Premier, received a deputation representing the Gardeners, Society and Furniture Trades Association, of that colony, the members of which urged that effect should be given to certain recommendations made by a late Royal Commission appointed to enquire into various matters connected with the Chinese population resident in Sydney. It was urged that the Chinese should be compelled to live in a more sanitary condition, that greater powers should be given the police in dealing with gambling shops. It was pointed out that the Chinese gardeners had driven Europeans out of the trade. They saved expense by pigging together in hovels and sheds, and storing their vegetables under their beds and about their filthy sleeping apartments. The Chinese could sell their filthy infected vegetables cheaper than Europeans could afford to, and consequently the Chinese controlled the trade. It was said that the Chinese had completely secured the furniture trade. It was urged that to overcome the difficulty a Factories and Workshops Act should be passed, providing for stamping furniture, sanitation to prevent the use of shops as dwelling rooms, and make the Chinese work generally on more equal conditions. The Chinese worked on Sundays and for 12 or more hours a day, and under conditions in which Europeans could not work. At present all the work went to the Chinese; and Europeans, in order to live, had to work for Chinese masters, who offered 25s. a week for 72 hours' work. They had to take that or starve, and they would prefer to starve. In replying to the deputation, Mr. Reid said that the colony was behind in much necessary legislation. People should be compelled to observe the ordinary sanitary rules of living and working enforced in all other countries. The white men did so, and it was only proper that the Chinaman should be made to do so. There was no reason why the liberty of the Chinaman in this direction should not be interfered with when the interference was in the interests of the country. That these Chinese places were dens of disease and filth had been proved over and over again, and the whole thing required reformation. He was warmly in favour of action which was no coercion, but making conditions of whites and blacks equal. The question of protection and free-trade did not arise in this matter. It was a national question this safeguarding the health of the people, a matter of vital importance rising above every other consideration. Unless some great political convulsion arrested the course of domestic legislation the Government would give great prominence to these matters next session.

The relations subsisting between Russia and China continue to provoke considerable discussion. The *Newcastle Daily Herald*, commenting on the Russian guarantee of the Chinese loan, says:—

No country, and Russia least of all, would become guarantor for such a large amount without some valuable consideration. Even if China should not give any tangible guarantee for the good services of Russia in connection with this matter, in national as in private life it is often the case that the borrower becomes servant to the

lender. Siberia is next door neighbour to China, and if an ally were required by the latter she would doubtless prefer to turn to the Muscovites for comfort and assistance rather than to Japan, which has humbled her self-esteem too much to be regarded with cordiality at the present juncture of affairs. There can be no doubt that shortly the world will be informed that China has ceded a large slice of territory, including some useful ports, to Russia, and that the other Powers regard the transaction as one in which they have no right to interfere. With a port open to navigation all the year round, the demands of the Russians will be satisfied for the time being. It is certain that such a port will be made into a strong place of arms, and the great military and naval arsenal in the North Pacific. Fortunately, the objects of its foundation will not be totally warlike. The Czar's subjects have the largest railway enterprise in the world on hand at the present time, and will pick out a port suitable for being made the terminus thereof. The completion of this gigantic undertaking will have a powerful effect upon the commerce of the globe, and give to Russia a place in Asia which may seriously affect by comparison the position of other European powers in that continent.

It remains to be seen, adds the *Herald*, what effect the immense development of Russia in the Orient will have on British interests in that part of the world.

The British Government, doubtless, consider that the territories in India, Burmah, and the Straits Settlements form a charge important enough to occupy their attention for years to come without seeking to add to it by challenging Russia's position in the northern area of the continent. It is hoped that, by the operation of the peaceful process of arranging by delimitation commissions the respective spheres of influence of both empires, the friction between two such masterful nations will be reduced to a harmless extent. The recent events in China show that the influence of Russia in that many-millioned empire is likely to be far more powerful than in the past. Without exercising direct control over the Celestial Empire, an enormous power may be wielded over its Government for the purpose of promoting the policy of the Czar's advisers. The theory of the balance of power is regarded by many as inapplicable to the conditions of the present age. Whether this idea be right or wrong, the course of events seems to indicate that the power of the British in India will in a few years hence have a considerable counterpoise in that of Russia in Eastern Siberia and Manchuria. By becoming responsible for the enormous debt now being incurred by China, the Russian Empire binds itself to far more than a sentimental interest in that vast and populous empire and all that concerns it.

Mr. F. Villiers, the "war artist," is now relating his Japanese experiences to Victorian audiences. On his arrival in Melbourne he was confronted by the inevitable interviewer, to whom he was exceedingly communicative. After describing the difficulties encountered by him in getting to the front during the war, Mr. Villiers said:—

The Japanese army is everything that could be desired. The soldiers are naturally fighting men by virtue of their old feudal system; and the officers, educated in all the best military schools in Europe, are excessively brainy, clever men. Their rifle, invented by Murata, one of themselves, is on the latest pattern, resembles the Mauser, has a bolt action and can be used as a magazine rifle—although in the recent fighting magazines were not carried by the troops. At 1,000 yards it can put a bullet through a man. Their artillery is very efficient. They have light field guns of European make, and mountain guns of the howitzer pattern, which they make themselves. The physique of the troops is not great, yet they are a sturdy lot of little men. One or two regiments from Kumamoto, in southern Japan, are of a fine type, but even they are small compared with the Chinese. The Chinese who fought at Port Arthur were very superior looking—as much superior to the Chinese you see here as the Highlanders of Scotland to the emaciated Portuguese. Some of them stripped and attempted to escape by swimming but were shot in the water. They were splendid looking, Apollo-like types of humanity.

Being asked what he thought of the fighting Mr. Villiers replied:—

It was simply a walk-over for the Japanese. The Chinese made one or two stands in front of Port Arthur, but they were of slight duration. The officers ran away, and the half starved, unpaid, badly armed troops followed suit. Their weapons were condemned refuse from Europe foisted on to the Chinese Government at extortionate prices. As for the Japanese, I did not see them suffer any serious reverse, therefore cannot tell how they would fight under trying circumstances. The best fighting men are those who can take a jolly good licking and face the foe again, in the way we British are proverbial for. I may say, however, that the Japanese thoroughly expected to lose a great number of men at Port Arthur. General Hasegawa told me he counted on losing 3,000 out of his brigade of 7,000, but at Port Arthur the wounded and killed on the Japanese side only numbered 29 out of an army of 22,000. I have not arrived at the total Japanese loss during the whole war, but I should think the number absolutely killed in action was not 1,000. One remarkable conundrum is, considering that the Chinese never really fought, how were so many of them killed in comparison with the Japanese small losses? The only answer is that the battles were simply so many periodical massacres. The butchery by the Japanese was terrible. It would not, perhaps, have so shocked the world had Japan not been posing as a civilised nation. The veneer of civilisation was completely thrown off, and they went in for merciless and fiendish slaughter. And, mind you, they had invited the people of Port Arthur to remain in the town, giving them an assurance that they would be well treated. I myself saw proclamations to that effect posted in Port Arthur; and in face of all that the Japanese went in, officers and men, and slaughtered the whole lot. To us, the European correspondents, who had thought well of the Japanese, and had been well treated by them, this was a tremendous sorrow. I never felt so depressed and miserable in my life before. Pursuant to our duty as press correspondents, we told the truth, and

now the Japanese deny our statements. That is why I show views of the scenes in my lectures.

Regarding the naval work of the Japanese, Mr. Villiers said they handled their ships to perfection. You cannot choose between their army and navy in the matter of efficiency. The Chinese vessels fought pretty well, but they were not in proper formation when attacked, and the result was as, would be said in America, "they were rattled," or got scared at the beginning. I do not think there were any naval lessons to be learned by England, more than that the importance of quick-firing guns and speed was demonstrated.

Replying to the question as to the Japanese opinion of England and Australia, Mr. Villiers said:—

Japan has a contempt for England, but she has also at present contempt for all other nations. She has, in fact, a "swollen head," but there is little to wonder at in that considering her wonderful successes. She thought England was more or less sympathetic with China on account of trade relations, and she is also jealous of England's trade with China. This is due to the fact that Japan is herself becoming a great manufacturing country. The Japanese are patriotic, industrious, and thrifty, and will eventually become excessively rich, and are therefore worth looking after. The progress and success of Japan ought to benefit Australia, for in the development of her manufactures she will draw on these colonies for wool, hides, and meat. During the war it was found that the troops did more work when they got a small meat ration each day—a luxury they never had before—and these men—60,000 of them, will take their newly acquired taste back home with them and distribute it throughout their country. As Japan is not suitable for grazing, they will look outside for their meat supplies. What they have been having has been canned beef from America. They will not want supplies of that kind, but of the raw material to be canned if necessary by themselves. In short, they do not want manufactured goods at all, but they will offer an enormous market for raw materials of many kinds, and especially of the kinds Australia is so well adapted to produce. It occurs to me also that the Japanese with their cheap labour could advantageously tin Australian meat for the whole of Europe, and that would mean a big trade indeed. The Japanese, too, are great leather workers, and are obliged to import the hides, and they are bound to take to woollen clothing. I tell you, it is time the Australian colonies had agents over there hustling about, and paving the way for the development of trade. Some day the Japanese will cut out Germany in the manufacture of the "Jager" woollens, now so much in vogue throughout Europe.

With respect to the attitude of the European powers towards Japan, Mr. Villiers remarked:—"It is evident that it is Russia more than England that cannot afford to see Japan advance, and I believe that England, realising that fact, has given Russia *carte blanc* in the matter. You see, it would have been very awkward for England to have interfered, as she would have had France to account with, and Russia can act in the matter with impunity. Besides, it would be unfair to prevent Russia having a port somewhere in Korea, and indeed we cannot stop her from having an outlet there. I don't believe that Russia cares about Australia. If she did assail it she would only do so as a flank movement in her attack on India, or to draw off British strength from other positions.

INQUEST.

An informal Inquest was held in H.B.M. Consulate on Thursday afternoon by John Carey Hall, Esq., H.B.M. Consul and Acting Assistant Judge, into the circumstances attending the death of Kammit Mahmit, a Lascar fireman on board the British steamer *Energia*.

The Master stated that the deceased died of *beri-beri*, the doctor certifying that the symptoms denoted the disease. The diet of the Hindus was mainly fish and rice while at sea, but they had fowls, eggs, mutton, and fish whenever they could be got. The seamen and fireman got the same food as the *serang*. They were fed up to the correct Board of Trade scale, and even better. The men would not eat meat unless they killed it themselves. Then were all Mahomedans—strict Mahomedans. No complaint had ever been made by the men of the diet or treatment. The men were shipped in April this year at Singapore. The vessel had been running for the Nippon Yusen Kaisha, consequently she was in port very often. Witness had followed the doctor's instructions in the matter: he had whitewashed their quarters and disinfected it with Condy's fluid twice. There were twenty-one coalmen and trimmers, including the cook—all Bengalis. The three deaths came from the forecabin, which is capable of accommodating seventeen men. The space is larger than specified by the Board of Trade. There are two ventilators on deck besides three or four ports. In bad weather, when the side ports or ventilators are closed, the large door in the alleyway is left open for air. The men have clothing supplied them for different weathers or money to purchase

it. The Chief Engineer had just been informed by the *serang* that four or five more men were suffering from the disease. The Chinese lived in the same place, but opposite, and none had been touched with the malady.

Chofa Ali, the *serang*, stated that deceased died yesterday after an illness of 15 or 16 days. The doctor saw him eight or nine days ago, when he complained of feeling worse. All three men died of the same sickness—had never had sickness before, but this time all the sick men had died. They got plenty of fresh air.

The Chief Engineer here stated that the Lascars never say anything when ill for fear of the hospital; when they die it somewhat interferes with their religious rites. The deceased was a man of fairly good constitution. The man had joined at Singapore and came up here, calling at all the coast ports. They were then chartered by the N.Y.K. to ports between Yokohama and Otaru for the last two months. Two or three days before their arrival, on the 16th or 17th July, the first symptoms developed, and the first fatal case occurred after arrival in port, and in the fortnight since elapsed three deaths occurred. This was witness' first experience of the disease *beri-beri*. There had been a larger mortality from this disease at Colombo on board the *Pathan*. It might have been due to defective ventilation, the food, or the sudden changes of temperature undergone by the men, but he could form no opinion as to the real cause of the deaths.

AUSTRALIAN PRODUCE REPORT.

Mr. Jas. R. Ford, Wool and Produce buyer, Macquarie-place, Sydney, writes as follows:—

Sydney, June 24.

THE WOOL TRADE.—Since last week some of the wools withdrawn from sale at auction have been disposed of at slight advances on previous bids. In fact, but for the determination of certain owners not to sell in Sydney the lots thus reserved, it is certain that every bale of Queensland wool held over last week would ere this have found buyers at full market rates. Otherwise the trade is almost at a stand-still, as is, indeed, only what is expected in June and July. The sales of scoured skin wools are small, and outside these, with the exception of the Queensland wools already mentioned, there is nothing doing.

The impression seems to be gaining ground that the clips of New South Wales and Queensland will show no appreciable increase next season. The drought is in many parts very severe, and increased boiling-down operations will, in all probability, be undertaken. The present depression in tallow, owing to the increase in freights, has naturally a tendency to check this policy, but a rise of ten to twenty per cent. in tallow would settle the question, and send still more sheep to the boiling-down pots.

The following may be quoted as the ruling value in the local market:—

Description.	Superior:	Good.		Medium.		Inferior.	
		d.	d.	d.	d.	d.	d.
Greasy fleece	None offering.	6½ to 7	5 to 6	3½ to 4½			
Greasy lambs		5 to 5½	4 to 4½	2 to 3½			
Greasy pieces		5 to 5½	3½ to 4½	2½ to 3½			
Greasy bellies		3 to 4	2½ to 3½	1½ to 2½			
Greasy xbd		6 to 6½	5 to 5½	4 to 4½			
Washed fleece		8 to 9	7 to 7½	6 to 6½			
Scoured fleece		11 to 12½	9 to 10	8 to 8½			
Scoured pieces		11 to 12½	7 to 8	5 to 6½			
Scoured bellies		7 to 8½	6 to 6½	4 to 5			
Scoured flecks		5 to 5½	4½ to 4½	3 to 4			

Since writing the above, prices have improved in London 3 to 5 per cent.

SHEEPSKINS.—No change was apparent on Tuesday, either in strength of competition or range of values. On Friday fairly large catalogues were offered, and no difficulty was experienced in selling at prices quite up to recent quotations. Cross-breeds, which had been comparatively neglected, shared more fully in the strong demand. Quotations:—Full wools, to 4d; superior lines, to 4½d; fair, to 3½d; medium, 3d to 3½d; short, 1½d to 2½d per lb.; butchers' green skins, 28d to 45d; short, 18d. to 26d.; pelts, 1½d. to 2½d. per lb.

TALLOW.—The increased rates demanded for freights and the absence of any definite cable information regarding London sales combined to adversely influence the sales yesterday, and all grades were again lower in value, and by no means in strong favour. The offerings were large and attractive, but the bulk was withdrawn. Quotations:—Best mutton, £19 10s. to £20; medium mutton, £18 15s. to £19 5s.; best mixed, £18 to £18 10s.; medium mixed, £17 10s. to £17 15s.; best beef, £18 to £18 10s.; medium beef, £17 10s. to £17 15s.; broken, small, and inferior parcels, £16 to £17.

The number of casks offered was 1,703, of which 735 were sold.

HIDES.—An easier tone again manifested itself in this market, accompanied by an all round decline in values, amounting to fully $\frac{1}{2}$ d. per lb. on those current last week. Sloppy and ill-conditioned lots have receded considerably from favour, and the decline in these was even more pronounced. Quotations:—Prime extra heavy and best conditioned, 67lbs. and upwards, $\frac{3}{4}$ d. to $\frac{3}{8}$ d.; good heavy, 60 to 65lbs., $\frac{3}{4}$ d. to $\frac{3}{8}$ d.; ordinary and sloppy heavy, $\frac{2}{4}$ d. to $\frac{3}{4}$ d.; medium, 50 to 58lbs. best, $\frac{3}{8}$ d. to $\frac{3}{4}$ d.; ordinary, $\frac{2}{4}$ d. to $\frac{2}{8}$ d.; light best, 38 to 45lbs., $\frac{3}{8}$ d. to $\frac{3}{4}$ d.; ordinary, $\frac{2}{4}$ d. to $\frac{2}{8}$ d.; dry station, 2d. to $\frac{2}{4}$ d.

BARK.—Large catalogues were on Tuesday submitted to a moderate attendance of buyers. The average quality of the bark offered was good. Competition was slack, and prices were only maintained at last week's level by very heavy withdrawals. Quotations:—Best chopped bark, £5 to £5 10s., superior lines to £6 6s.; medium, £4 to £4 10s.; light £3 to £3 15s.; inferior, £1 to £2.

BEESWAX.— $11\frac{1}{2}$ to $12\frac{1}{2}$ per pound.

HAIR, HORNS, & BONES.—At the sales held last Saturday horns, shanks, and hoofs were in full supply. With an average attendance of buyers competition was fairly brisk. Shanks realised 5s. per ton more than last week, while knuckles advanced 2s. 6d. per ton. Horns showed an improvement of 2s. 3d. per hundred. Hoofs suffered the heavy decline of 7s. 6d. per ton, while hair and common bones made last week's rates. Quotations:—Horse hair, 10d. to 16d.; cowhair, 4d. to 11d.; stump, $\frac{4}{8}$ d. to $\frac{6}{8}$ d. per lb.; common bones, £1 12s. 6d. to £2 10s.; shanks, £2 7s. to £5 10s. per ton; round shanks, to £6 7s. 6d.; horns, large, £1 1s. to £2 7s. per 100; medium, 10s. to £1 9s.; tips and small, 2s. 6d. to 12s.; hoofs, £1 12s. 6d. to £4; white hoofs, to £5 10s.; knuckles, £1 10s. to £2 12s. 6d. per ton; beeswax, to 13s. per lb.

MARSUPIAL SKINS.—A quieter tone pervaded the market this week, the larger quantities now offering having a slightly depressing effect, but prices must still be considered satisfactory, especially for prime lines of kangaroo and wallaby. Bear were in steady demand at low prices. Rabbit unaltered. Opossum skins: 42,000 skins were offered. Prices were slightly easier than last week, though a few lines of special quality sold well. Quotations:—Kangaroo, large grey, 40d. to 57d.; medium, 20d. to 37d.; small, 10d. to 17d.; large red, 25d. to 41d.; small to medium, 6d. to 20d.; wallaroo, 10d. to 39d.; seconds, $\frac{1}{2}$ d. to 6d.; wallaby scrub, 17d. to 27d.; seconds, $\frac{1}{2}$ d. to 6d.; swamp, 7d. to 17d.; seconds, $\frac{1}{2}$ d. to 6d.; rock, $\frac{1}{2}$ d. to 2d. each; goats, 5s. to 14s., seconds 1s. to 4s.; bears, 1s. to 4s. 6d.; hares, 6d. to 1s.; domestic cats, to 3s., native cats, to 3s. 3d. per dozen; rabbits, 3d. to $\frac{4}{8}$ d. per lb.; opossums, super grey, 8s. to 9s. 9d. (superior line to 11s. 2d.); top grey, 5s. to 7s. 6d.; first grey, 3s. 6d. to 4s. 10d.; second grey, 2s. to 2s. 9d.; rough rumped and small, 6d. to 2s.; first reds, 5s. 6d. to 9s.; second reds, 1s. 6d. to 4s.; black, to 16s.; black Tasmanian, to £1 10s.

GRAIN, ETC.—A week of comparative quietness has to be recorded in the market, transactions being on a rather small scale in all cereals. Buyers have been extremely cautious, and have limited their purchases to ordinary trade requirements, while even these have been within a smaller compass than usual. The unsettled position of the maize market, induced by the action of holders in insisting on high values last week, has for the time being created a depression in all feed grains, and the unwillingness on the part of buyers to enter into any large purchases may be attributed to this. Undoubtedly it was an error in judgment on the part of vendors to force the prices so quickly, as buyers were in no way pressed with large orders, and therefore could afford to wait. Prices have now receded to 2s. 6d. per bushel, and even at the reduced rates, buyers show some hesitancy in purchasing. Oats are in fair supply, and stocks have not been augmented to any extent of late. Business during the week has been rather quiet, but values exhibit very little alteration. Quotations are 2s. 1d. to 2s. 2d. for prime feed, and 2s. 3d. for milling samples. Bran and pollard firm at 1s. per bushel. Wheat: There is no alteration to note in this market, scarcely any business of importance being reported during the week. In milling lines there is very little doing and quotations are nominal at 3s. 6d. to 3s. 9d.. Chick wheat still very scarce and in brisk demand at 3s. per bushel.

Queen Victoria never makes purchases in a shop, but has everything brought to her. There was much gossip in St. Petersburg some time ago over the new Tsar's unprecedented act of going into a store with his wife to buy gloves. The Austrian Empress seldom goes into a store in Vienna, but is very fond of shopping when she can do so without being recognised on her travels.

BASEBALL.

MR. TILDEN'S TEAM VERSUS MR. BOECK'S TEAM.

On Saturday afternoon a baseball match was played on the Cricket ground by nines captained respectively by Messrs. Tilden and Boeck. The former were assisted by a pitcher and catcher from the American man-of-war and won easily, the score at the conclusion of the ninth innings standing 30 to 6. Mr. Boeck's scratch team were greatly out of practise, and at times allowed their opponents to get men home through sheer carelessness, or else through over-towering ambition, trying to put out base-holders by double-play, in which they never succeeded. Scores:—

MR. TILDEN'S TEAM.				Pos.	Runs.	Outs.

WHAT RUSSIA WILL GAIN.

St. Petersburg, June 18th.

Not for a long time has St. Petersburg had so many big financiers gathered together as are here just now. Foreigners all—representatives of the Banque de Commerce, Hollandsche Bank, Credit Lyonnais, &c. They have gathered here to arrange for the £16,000,000 which Russia is about to guarantee as a loan to China.

Russia is guaranteeing China a loan of £16,000,000 at a moment when Russia herself is greatly in need of money for the completion of her various railroad schemes, more especially that great and vital artery of communication, the Siberian Railroad. What is Russia going to get in return, by way of compensation?

"What?"

I have applied for an answer to that question to a certain number of distinguished personages, and must call upon you to accept assurance that they are of those among the most capable and interested in the question. Their positions forbid their names being mentioned, or even hinted at.

The first, a distinguished diplomatist, said:—"We may be perfectly sure that Russia is not guaranteeing this loan on account of the good looks of the Chinese, or for any sentimental reason. I know this, however, that the Russian government totally denies that it is going, in consequence of its action in the matter, to obtain any concessions whatsoever."

"And the Chinese that it is going to grant any, is it not?" "Yes! We understand so."

"China, you think, will accept the loan?" Considerable doubt had been thrown upon this question by another personage whom I had seen.

"With negotiations having gone so far, I do not see how she can do otherwise. But the question is one which is full of complications, which many people who look superficially do not realize."

"In the first place you must bear in mind that the Chinese asked for a loan of £35,000,000. Now here is only sixteen millions, leaving another nineteen millions to be provided for."

How is China going to get the rest of the money she needs? This sixteen millions she gets on the most advantageous terms. It will be what is known as a first mortgage loan, and, as usual with such loans, guaranteed on customs duties. Then what will there be left as guarantee when it comes to a question of raising the second and larger loan? Why, she will not possibly get the money under eight per cent.

"There is yet another question which China has to consider, and it is that this guarantee as it has been brought about reaches them in the nature of a political loan. It reaches them at the expense of the resentment of Germany, and I presume also that there has been considerable irritation in the English money market. The Germans are furious, naturally enough."

"What does Russia want?" "What does Russia propose to do next?" These are the two

questions that occupy the interest of every nation and every diplomatist of to-day.

France asks them, eagerly, hopefully.

The Kaiser, as he reviews his troops on the Tempelhofer Feld, considers with knitted brow, for he knows that the armies of Russia are greater than his.

England broods over them deeply, and vitally interested as she is in the reply, and getting none, watches wistfully every move that Russia makes, eager to outflank her.

The Sultan of Turkey, from behind his guarded walls, with Oriental furtiveness, shivers' twist fear and hope at every move of his colossal neighbour, and asks equally, "What does Russia want?" "What does Russia propose to do next?"

But the Russians take a remarkable delight in mystifying "those who want to know." With them it is no effort to mystify, it is only natural. Even in Russia itself the people and the press are forced to be contented with the least amount of political news. A few, a very few, considering the population and the size of the country, form public opinion—they are growing more every day. With several of such people—I choose them from among those who think, talk and write and who are good Russians, well wishers of their country, loyal and loyal subjects of the Czar—I have had the opportunity of talking freely for some time past, and their remarks, taken collectively, representing Russian sentiment, may be read with interest by those whose channels of information are here sorely restricted and others.

"You ask," said one who, after being assured that his name would not be made use of, spoke very freely, "what Russia's policy is. First of all, let me tell you that Russia's policy is under the control of no one but the Czar. Of Russian feeling, however, I can speak. I can tell you that from one end of this vast empire to the other there is but one feeling, and that is Russia cannot permit, now or at any other time, any Power to bar her way toward an opening for her commerce and her railroad in the far East."

"Have the people who talk loosely about Russia and the Japanese question realized the enormous issues that are at stake as regards our country? Have they dreamt that the fact of Japan or any other country occupying the mainland would forever destroy the one hope of obtaining a port which Russia has cherished for so long? Do they realize that the enormous expenditure of life and money which the building of the Siberian railroad has cost would be almost thrown away were Japan to take Korea?"

"Have those who—and how many they are—look upon Russia, falsely, as an absorber and exhaustive annexer of countries, instead of, as she really is, liberator of the oppressed, considered that at the time being Russia is shut in in every sea she has?"

At this point he drew a pencil from his pocket and began sketching the outlines of a map of the scene of action of the last war. "You see here," he resumed rather excitedly, "suppose Japan had taken Korea or even kept it under her influence, she would have commanded the Korean Straits, and Russia would have found herself again, when her great dream, the Siberian railroad, had been completed, in another closed sea, while the occupation of the Liaotung peninsula would have entirely shut out any hopes of outlet in that direction. Now, could any one expect Russia to submit to that? I say no! no! no! She could not, and she never will. Let people understand that a little more and they will not be surprised that Russia should be so firm in the matter."

"And the question of the railroad crossing Manchuria?" I asked.

"If we could bring the road across Manchuria it would save a distance of one thousand versts in a country of the greatest engineering difficulties. If people would only take the trouble to understand it, Russia absolutely does not want any more territory. She has far too much territory as it is, if Russia makes any arrangement with China on that score it will be only for the upper part, from some distance south of the railroad course, embracing everything to the north."

"There have been many ideas. One of them—and I look upon those who advocate it as fools—is to run the railroad, with the permission of China, directly to Port Arthur. That, to my mind, would be building a railroad for the astute Chinese to seize at any moment, more especially at a critical moment, and put it to their own uses."

"A port in Eastern waters, however, Russia must have."

"Where? And which?"

"In Korea! And the harbour, Port Lazareff."

"And the railroad—where would that go to?"

"Simplest thing in the world," he replied, "For the matter of that, it need never touch Manchuria at all. If needs be, it might be continued on the

original course outlined and pass down right along the Korean coast to Port Lazareff. The port is not a good one, but it is not frozen over three months in the year, like Vladivostock.

"And, mind you," he said, as I was leaving. "I am one of those who consider that this last Russian political action, which appears to have given so much satisfaction in official circles and has been quoted as a strong policy, is nothing to boast about. It has, to my mind, been purely negative. When we look around we find that, after all the talk, we are just as we were, whereas I hold that we might by a different policy have obtained something of benefit."

I was wondering what he meant, for he would not say what that policy might have been, when the explanation came in his last words as I passed out:—"Remember, Russia will be good friends with Japan before long! Japan represents civilization, and it cannot be otherwise!" It needs not to be a great diplomatist to put two and two together as regards this last sentence!

Many others of those I saw echoed almost exactly the above sentiments, with the exception of the reference to Japan. But there was one whom I must especially quote, for he represents a large section here—those who are Anglophobes.

He said:—"We trace the whole of the late war to the intrigues of the English. They stirred up the revolution in Korea as a pretext for Japan to go to war with China. They had been hard at work. That I know from a man who was on the spot, in the Korean service; but it turned out differently to what they expected in the end. The English got the better of us in the Pamir question, taking advantage of the illness of both the Czar and M. de Giers, but we will rectify that."

"But does Russia—that is to say, is there any serious feeling among the Russians of trying to take India for Russia?"

"Not the least. Russia does not want India, but she does not care to have the English there. If we Russians ever took India from the English it would be to give it back to the people to whom it belongs. Russia would be the liberator, just as she has been in other countries—Bulgaria and so forth."

"That is another English scheme into which she seeks to draw us. That is what the feeling here is. We don't want to have anything to do with it."

"At the present time the feeling in Russia toward France is warmer and more cordial than ever. It is shown in thousands of ways. We find the Czar sending presents to France, the Grand Dukes going out of their way to send their photographs, signed, to prominent people in France, writing letters to enthusiastic Frenchmen who keep sending souvenirs. I know of the most interesting correspondence which is going on between a Grand Duchess and a Frenchman whom she has never seen. He sent her a present from pure patriotism. She wrote him a letter, also from pure patriotism, in return, and thus a patriotic correspondence, overflowing with patriotic enthusiasm regarding the Franco-Russian union, has been going on for years."

I have just read one of the most eloquent letters from a French soldier to a young Russian girl, who had written to him. He had originally sent her a flower from Toulouse. He says that her letter shall, so long as he has life, never leave him. Her letter has, he says, been regarded by himself and his fellow soldiers as a most precious souvenir, as coming from a daughter of the country so beloved by the French. And it ends up:—"I send you a most respectful brotherly kiss." But, in truth, the amount of patriotic correspondence of all kinds which is going on between Russia and France, ever since the visits of the fleets of the one country to the other, is something to marvel at. The feeling which binds Russia and France together is the spontaneous outburst of the feelings of the two peoples. Those who cast any doubts upon it are completely in the wrong, wilfully or not, as the case may be.

"Russia has no love for the Germans. She supported—unfortunately—Germany in the war of 1870, because that was announced as being directed against Napoleon III. personally; but when it came to be a question of Germany making war again on France then Russia said 'No!' We are well aware that there are many German officers who do not trouble to conceal their desire to cross the Russian frontier and try conclusions with us. Let them try! And let me tell you that if the Germans boast of being anxious to cross our frontier and think they could make an example of us and beat our soldiers, there are just as many Russian officers, as keen as men can be—and they are men made for fighting and who live for nothing else—whose greatest anxiety and ambition in life is to be allowed just to cross over into Germany and let the Germans taste a little

of the Russian metal which they affect to despise. Let them beware when that time comes!

"In my opinion the Japanese question as regards Russia is far from being finished. It is only just commencing, and it will not end until the time comes when Russia shall have a port in Japanese waters or the Yellow Sea. That she must and will have, and no Russian will give you any other sentiment on the question. That is Russia's aim, even if she has to fight for it in the future."

"As for England, our policy is that she shall not advance further than she is. We don't like the English here—they are too cold and reserved; they are perfidious, we consider. America is in the highest degree popular over here, and we believe that the Americans have a kindly sentiment toward us, for they have shown it on several occasions. We like them all the more because they are not mixed up in any foreign political intrigues and are fair and impartial in consequence. We naturally consider that when the Siberian railroad, which is getting on rapidly, is open, it will greatly increase our trade with the United States. It is sure to do so, and therefore I think that the Americans should take a great interest in its future development.—*New York Herald*."

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club is closed for the season: and re-opens on Thursday, 3rd October.

The Tokyo Chess Club is now closed for the holiday season and will reopen on Friday, 4th October, 1895.

PROBLEM No. 189.

By JESPERSEN.

BLACK.

WHITE.

White to play and mate in three moves.

THE ADJUDICATION QUESTION.

The following is taken from the *Chess-Player's Chronicle* of April 24th. It appears there as a portion of some observations on the adjudication question. The writer begins by announcing that, without a doubt, "adjudication as a method of deciding unfinished games in club or other matches is doomed." He then cites some remarks by Mr. Gunsberg on the difficulties with which chess referees have to contend, included among which is the ever-present contingency that after a position has been turned over and over again, somebody may discover, say, a White win by means of an extraordinary series of moves that would never have been thought of in actual play. The suggestion is next thrown out that the work of an adjudicator ought to vary according as the games with which he has to deal have been played in his presence or sent to him from a distance. In the one case he "is in a position to judge of the styles of the players, the times they have occupied

in their contests, and other general surroundings which should have due consideration, and should play an important part in his decisions; in the other he should know nothing except the position of the pieces, and whose turn it is to play. In both cases, however, the ordinary conditions of play should be observed, particularly that which stipulates for a recognised time limit; and on that account it is not fair for an adjudicator to devote more than 5min., or at most 10min., to the examination of a position." The writer adds that games from a distance should never have the names of the players attached. He approves, however, of the making of claims for wins or draws on behalf of the players concerned; and he lays down the broad general rule that a referee ought rather to pronounce on the merits of a claim than to enter upon an exhaustive analysis of the possibilities of a position. These common-sense remarks in reference to an unsatisfactory and confessedly difficult element in the conduct of chess matches strike us as deserving of careful consideration; and the last suggestion, more particularly, seems to be one which it would be well to embody in the accepted code of chess law. A referee would then be relieved from the laborious duty of submitting positions to the test of closet analysis; and he would only be called upon to pronounce authoritative decisions on definite claims. These claims would be official, and they might be publicly announced without complaint in any quarter. This, in itself, would be a great improvement on the present state of matters, under which it is quite possible that one person may regard the mention of the floating gossip of a chess-room as innocent and allowable, while another may condemn and denounce it because of his honestly believing in the possibility of its having some influence upon the judgment of a referee.

A CORRESPONDENCE MASTERPIECE.

The following magnificent game, for the moves of which we are indebted to the *Weekly Times*, was contested recently by correspondence.

White mates in two moves.

GAME NO. 311.

Played by Herr Albin with a well-known Philadelphian player:—

GIUOCO PIANO.

WHITE. Herr Albin.	BLACK. W. P. Shipley.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to B 4	3—B to B 4
4—P to Q B 3	4—Kt to B 3
5—Castles	5—Castles (a)
6—P to Q 4	6—P takes P
7—P takes P	7—B to Kt 3
8—P to Q 5	8—Kt to K 2
9—P to K 5	9—Kt to K sq.
10—P to Q 6	10—P takes P
11—P takes P	11—Kt to Kt 3
12—B to K Kt 5	12—Kt to B 3
13—Kt to B 3	13—P to K R 3
14—Q to Q 3	14—P takes B
15—Q takes Kt	15—Kt to R 2
16—Kt to Q 5 (b)	16—P takes Q

White mates in two moves.

(a) P to Q 3 is better. Generally it is unwise to castle early in this opening, and here White gains a grand winning pawn attack at once.

(b) Mr. Showalter is correct in describing this as "a beautiful final stroke to a splendidly-conducted game on the part of White."

GAME NO. 312.

A sparkling game, played recently by Herr Lipschütz (Giucco Piano):—

With chess (says the Belfast *Northern Whig*), there is the danger of becoming engrossed in the game, and of making it your business. This ought to be avoided. Yet a weakness for chess is an amiable weakness. It is the queen and empress of games. In chess the understanding, which is the working faculty, is the strong element, and not the memory. "You must study an opening to see what it means and to catch its genius, for in every opening there is an *idea* which animates it like a soul. Transposed as the opening may be through different variations, it is still there, and the value of all the moves depends on their relation to it. Until you have seized this idea you have done nothing; once you grasp it, the working it out becomes pleasant, even fascinating. The game begins to have a meaning, and the men feel as if they were alive. In the course of experimenting you stumble betimes on difficulties. A defence of which you can make nothing suggests itself, and you come to a standstill. This is the place to call in the book with its long results of time; to look down the variations till you find out how the nut was cracked by those gone before—Philidor, Staunton, MacDonnell—or by the great Steinitz of the present day. Reading in this way, you soon grow familiar with the country, not by merely copying the map, but by walking over the ground map in hand, and making yourself acquainted with every spot. As for remembering, you have no need to trouble yourself. Once you have thought out and mastered a position, and understand it, it remains with you of its own accord."

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, July 31.

The final result of the British general elections is as follows:—Conservatives, 340; Unionists, 70; Liberals, 173; Parnellites, 12; Anti-Parnellites, 68; and Labour Members 2.

["SPECIAL" TELEGRAM TO "JAPAN MAIL."]

Otaru, July 27, 4.45 p.m.

Her Majesty's ships *Centurion*, *Undaunted*, *Edgar*, *Spartan*, *Porpoise*, and *Alacrity* have just left this port for Barracouta Bay.

(FROM "LE COURRIER DE SAIGON.")

Paris, July 11.

A German squadron is to proceed to Morocco, and will occupy Rabat and Casablanca if the natives of Morocco who assassinated two Germans are allowed to go unpunished.

(FROM THE "CHINA MAIL.")

Singapore, July 22, 12.20 p.m.

Lieutenant Clement Vincent Molyneux Sarel, of the 2nd Battalion Northumberland Fusiliers, has succumbed to cholera.

(FROM "L'AVENIR DU TONKIN.")

Paris, July 12.

The Senate has adopted, by 192 votes to 24, the financial proposals for Tonkin, inviting the Cabinet to settle the financial affairs of the Colony.

The Chambers are to be dissolved to-morrow. In the Chamber of Deputies, M. Goblet introduced a motion to separate the Church from the State. The motion was rejected.

Paris, July 14.

The Crown Prince of Siam has arrived in France on a visit.

The national celebrations of the Fourteenth of July went off everywhere with great success.

Hanoi, July 10.

News has just come from the Lyaudet family, abducted by Chinese some months ago. The little girl, Sarah, died on the night of the 29th June. Her mother is very ill and cannot rise from her bed. Lyaudet himself is kept apart from the rest, and is never allowed to be seen abroad. There are two other Europeans in the hands of the brigands: the elder of the two is now probably near Mama, alone, and the younger one is said to have broken both legs in trying to escape, with fatal result, though this report is on somewhat doubtful authority.

(FROM THE "SIAM OBSERVER.")

London, July 10.

According to the latest advices from Abyssinia the Negus Menelik has imprisoned the Italian

engineer Capucci for having communicated with General Baratieri. The attitude of the Negus towards the Italians is markedly more hostile.

London, July 10.

Sardar Nasr Ulla will leave for Paris on his homeward journey on the 22nd instant.

Rangoon, July 12.

A military road is to be made through Burmah to Kengtung, and the work upon it will be commenced in the next cold weather.

London, July 14.

It is reported that the extension of the Siberian railway by a line through Manchuria has been definitely decided upon.

(FROM JAPANESE PAPERS.)

Kashiwabara, July 29.

The railway track has been damaged between Toyono and Mure on the Naoyetsu line, and railway communication is interrupted.

Hongkong, July 29.

A typhoon is raging off this port; the storm will very likely proceed north-westward.

Shimonoseki, July 28.

Four German men-of-war passed here shortly after noon to-day.

Shimonoseki, July 29.

On the lower reaches of the Kon river in the Liao-tung peninsula, says a man who has just returned from that district, two Chinese boats laden with rice and other goods were looted by a party of over 150 robbers on the 19th inst. It is said that 30 robbers are living on the southern bank of the river, and causing trouble to the inhabitants. He also states that three Russian war ships and two torpedo boats have been cruising off the river.

Kagoshima, July 28.

The steamer *Nishima Maru* ran on to the rocks at Kushinoseto in this Prefecture, while entering from Nagasaki on the 24th inst., and sank. The crew and passengers, number about 51 in all, were drowned with the exception of 8 persons. The steamer was of 86 tons carrying capacity with 29 horse-power.

Moji, July 28.

Over 500 boats were wrecked at Wakamatsu during the recent storm, and only a very few boats remain undamaged.

Kagoshima, July 30.

Owing to the violent gale of the 24th inst. a large number of fishing boats were wrecked in various parts of this Prefecture, and 1,016 persons are missing, or were drowned. The *Kaimon Kan* left here to-day to search for them.

Osaka, July 30.

The Ogaki and Tarui section on the Tokaido Railway is under water in consequence of the overflow of the Akasaka-gawa. The depth of water is over 8 feet. Railway communication has been interrupted since last night. Rain is still falling, and the rivers are very full. The section can not be opened for some time.

A report has reached here to the effect that the Hikida and Yanagase section on the Tsuruga line is also interrupted.

Otsu, July 30.

Severe floods have occurred in Sakata, Higashi-asai, Ika, and Nishi-asai Districts, where embankments have been broken and bridges destroyed. An extensive area of rice fields have been inundated. Communication is interrupted, and a number of residents have been killed or wounded. The Governor has proceeded to the spot.

Nagoya, July 30.

Rain has been falling for two days and a great inundation has occurred in the town, some houses being submerged in water. The Kiso and Shonai rivers are greatly fed, and it is feared they will break their embankments. The residents are panic-stricken.

Tsu, July 30.

The captured gun-boat *Chen-peh* put into Toba, Shishu, last night on the way to Yokosuka. She will stay for two days. The residents were allowed to visit her.

Hiroshima, July 30.

Colonel Hishijima's Mixed Brigade has arrived at Ujina from the south, and left for the east yesterday.

Shimonoseki, July 29.

The transport *Sendai Maru* arrived here to-day from Kobe with 400 coolies for Formosa.

Nagoya, July 30.

A luggage train, which left Ogaki for Yonebata at 1.15 a.m. this morning, was derailed owing to a flood between Ogaki and Tarui. No trains are now running to the west of Ogaki.

Later.

A train was derailed on the Ogaki-Tarui section early this morning, and some persons were either killed or wounded. The track in the district is under water to a depth of 4 ft. and the rice fields are merely a vast lake.

Fukui, July 30.

The embankments of the Kutorin-gawa and Ashih-gawa have broken down and the river has overflowed, covering one-third of the town with water. No houses have yet been destroyed nor anybody killed. Roads are submerged, and communication interrupted. Rain is still falling.

Söul, July 29.

Count Inouye, Japanese Minister will proceed to the Palace at 2 p.m. to-day to have audience with the King.

Gifu, July 30.

Owing to the interruption of railway communications over 1,000 military coolies to be sent to Formosa have gone back to Nagoya from Ogaki.

Gifu, July 31.

Various rivers have overflowed their embankments and much damage has been done. The whole town of Ogaki is flooded.

Fukuoka, July 31.

The total number of houses thrown over is put at 12,200, the lives lost being over 60.

Utsunomiya, July 31.

A severe shock of earthquake was felt here at 5 p.m.

Kyoto, July 31.

The ceremony of formally closing the Industrial Exhibition was held at 5.25 p.m. to-day. Mr. Kaneko, Vice-Minister of Agriculture and Commerce, first reported upon the exhibition from its opening, H.I.H. Prince Komatsu, Superintendent of the Exhibition, then declared it closed, after which a congratulatory address was read by Mr. Watanabe, Governor of Kyoto, who represented all other Local Governors, and the ceremony concluded.

An exceedingly severe thunderstorm took place yesterday afternoon, and eight places were struck by lightning.

Nagasaki, July 30.

Nishidomari has been selected as the site for the telegraph store tank, and Mr. Oi, an expert of the Communications Department, leaves for the capital to-day to report to the Government.

The following telegram reached the Foreign Department yesterday.

The Commercial Treaty between Japan and Italy passed the Chambers on July 29th by a large majority.

Nagasaki, July 31.

The *Matsushima Kan* has arrived here from Formosa.

Kyoto, July 31.

The Kyoto Exhibition was visited by 1,136,695 persons during the whole period of its existence.

Nagasaki, August 1.

The Italian man-of-war the *Cristoforo Colombo* has arrived here from Chefoo.

Sapporo, August 1.

Fire broke out at Sakaicho, Otaru, at 3 p.m. yesterday. A strong southerly wind was blowing at the time and over one hundred houses were destroyed, the fire being extinguished by 6 p.m.

Another fire occurred at Osamanbe-mura, Yamagoshi District, Ibur Province, yesterday, destroying the village office, police office, and 33 houses.

Kyoto, July 31.

Some persons have been consulting upon continuing the Industrial Exhibition by forming a society for that purpose, but no decision has yet been arrived at and it is at present arranged that all exhibitors will sell their own articles at the Exhibition rooms.

Shimonoseki, August 1.

The number of cholera patients is daily increasing owing to the intense heat. Over ten cases were reported yesterday.

Kyoto, July 31.

H.I.H. Prince Nashimoto reached here to-day.

Kyoto, August 1.

H.I.H. Prince Komatsu left here for Tokyo to-day. He intends to pass the night at Otsu, and call at Atsuta the following day.

Phyong-yang, July 31.

From July 1st up to to-day 230 Koreans, 3 Japanese soldiers, 2 coolies, and 4 merchants have succumbed to cholera. No new cases have been reported among the Japanese since the 20th, and hopes are entertained of stamping out the malady.

Tottori, August 1.

While the remains of a cholera patient, who had died at Kawaoka-mura, Aimi-gun, were being carried through Kusaka-mura, a number of villagers interrupted the passage of the corpse, and behaved in a disorderly manner towards the constables. The corpse was finally taken to the cemetery by the police, but great discontent is entertained by the villagers.

Sendai, July 31.

A meeting of the Radical Party, which was held here to-day, was a great success, over 1,500 persons being present.

Hiroshima, July 30.

Surgeon-General Sato is to inspect Kokura, Fukuoka, and Kumamoto, being released from the office of President of the Temporary Military Hospital at Hiroshima. He will return to Tokyo about August 10th.

Shimonoseki, July 30.

Sasaki Tomezo, Sato Yoshimasa, Nanaka Matsutaro, and Yagimura, who were ordered to leave Korea the other day, arrived here to-day. Mr. Tsuneya Takayoshi, M.P., also returned from Korea the same day.

A Japanese coolie is said to have been affected by cholera at Fusan yesterday. Effective measures have been taken to prevent its spread. It is stated that no injury was done at Fusan or Ninsen by the recent storm.

Fukui, August 1.

Besides the damage formerly telegraphed the following reports have been received from Nanjo, Imadate, and Yoshida Districts:—Nanjo: 9 lives lost through landslips, over 10 wounded, 35 missing, 16 houses fallen in, one school and 7 other buildings buried beneath debris, 27 houses, one shrine, one temple, and 4 other buildings carried away by floods, 4 houses and 2 godowns ruined, and 6 bridges destroyed; Imadate: 10 houses, one shrine, and 2 other buildings washed away, and 7 houses collapsed; Yoshida: 5 persons drowned, one house ruined and one bridge destroyed.

Gifu, August 1.

Over 20,000 houses are submerged here, the rain still continues to fall.

Fukuoka, August 2.

The captured gunboat *Chen-tung* arrived at Hakata last night, and proceeded to Kure this morning.

Gifu, August 2.

The water upon the railway track has greatly decreased, and the work of repairing the damage commenced to-day. It is expected that railway communication will be resumed in four or five days.

Osaka, August 2.

The special committee of the City Assembly has decided that the action of the local authorities in connection with the defective drainage work was improper.

Provost Charles C. Harrison of the University of Pennsylvania has made to that institution a gift of half a million dollars, to constitute a Foundation in memory of his father, thus following the noteworthy example of President Low of Columbia. The following suggestions as to the use of the resulting income were made by the donor: 1. The establishment of scholarships and fellowships. 2. An increase of the University Library. 3. The temporary relief of professors from their regular work, permitting them to engage in research. 4. The engagement of non-residents to lecture for a term at the University.—*Dial*.

METALS.

Bars dull with a sagging market. Some enquiry for Plates and Wire Nails. Pig active. Tin Plates dead.

	PER PICUL.
Flat Bars, 4 inch	\$3.25 to 3.30
Flat Bars, 4 inch	3.30 to 3.35
Round and square up to 2 inch	3.25 to 3.35
Iron Plates, assorted	3.40 to 3.50
Sheet Iron	4.30 to 4.50
Galvanized Iron sheets	8.50 to 8.75
Wire Nails, assorted	5.60 to 6.00
Tin Plates, per box	5.20 to 5.40
Pig Iron, No. 3	1.65 to 1.70

KEROSENE.

Quiet, with a drooping tone. Buyers, however, hold off, looking for still lower prices. Stock here is about 1,000,000 cases (or 10 million gallons) of all kinds. The country dealers are reported short of supplies, and it is expected that they must come into the market ere long.

American	\$2.20 to 2.25
Russian	2.10 to 2.15
Langkat	1.90 to 2.00.

SUGAR.

Brown—A good trade both in Formosa and Manila sorts, the season being in full swing. Prices for the above are strong, and quotations show a rise on the week. White—A fair trade at unchanged prices.

	PER PICUL.
Brown Takao	\$3.65 to 3.70
Brown Manila	4.30 to 4.50
Brown Daitong (New)	3.10 to 3.20
Brown Canton	3.10 to 3.60
White Java and Penang	6.10 to 6.20
White Refined	6.00 to 9.25

EXPORTS.

RAW SILK.

A good trade both for Europe and America at steady prices. Arrivals have been ample and holders current. The export for the past month was close upon 4,000 piculs—a record for July.

QUOTATIONS.—(NEW SILK.)

Filatures—Extra 9/11, 10/12 deniers	\$870 to 880
Filatures—Extra 13/15, 14/16 deniers	860 to 870
Filatures—No. 1, 10/13 deniers	850 to 860
Filatures—No. 1, 13/15, 14/16 deniers	830 to 840

Re-reels—No. 3, 14/20 deniers	700 to 710
Kakedas—Extra	790 to 800
Kakedas—No. 1	770 to 780
Kakedas—No. 14	750 to 760
Kakedas—No. 2	720 to 730

WASTE SILK.

Market very quiet, and no New fibre of any consequence offering. Holders are strong for the

few parcels Old Waste of good quality now remaining; but all quotations are nominal, and we give no list of prices until the market for New Waste is established.

TEA.

A fair daily trade at quotations. Settlements to date are still 7,000 piculs ahead of last season, and the Export keeps well abreast of that at same date last year. Third crop is now coming in, and seems to be a fair average as regards quality.

	PER PICUL.
Choicest	\$30 to \$32
Choice	27 to 28
Finest	25 to 26
Fine	23 to 24
Good Medium	21 to 22
Medium	19 to 20
Good Common	17 to 18
Common	15 to 16

EXCHANGE.

Exchange has fluctuated little this week, partly owing to the temporary breakdown in the telegraphic service.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health
for all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribu-
aries in Abyssinia," says—"I ordered the dragoman Mahomet
to inform the Fakir that I was a Doctor, and I had the best
medicines at the service of the sick, with advice gratis. In 1
short time I had many applicants, to whom I served out a
quantity of Holloway's Pills. These are most useful to an ex-
plorer, as, possessing unmistakable purgative properties, they
create an undeniable effect upon the patient, which satisfies
them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations
of all kinds. It acts miraculously in healing ulcerations, curing
skin diseases, and in arresting and subduing all inflammations.
MR. J. T. COOPER, in his account of his extraordinary travels
in China, published in 1871, says—"I had with me a quantity of
Holloway's Ointment. I gave some to the people, and nothing
could exceed their gratitude; and, in consequence, milk, fowls
butter, and horse feed poured in upon us, until at last a tea-
spoonful of Ointment was worth a fowl and any quantity of peas-
and the demand became so great that I was obliged to lock up
the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughout
World. May 1st, 1890.

NOW READY.

EIGHTH SESSION.

THE PROCEEDINGS

OF THE

YOKOHAMA: SATURDAY, AUG. 10TH, 1895.

MARRIAGE.

At Penang, on the 28th June, by the Rev. M. Biggs, at St. George's Church, Miss MINA HENRIETTA, daughter of the late George Blakeway, to Mr. WILLIAM HARTLEY, eldest son of Mr. William Hunting.

SUMMARY OF NEWS.

MARQUIS ITO is passing a few days at a villa near Yokohama.

THE Japanese Consulate at Chefoo was reopened on the 4th inst.

COUNT INOUE's first audience with the Korean King on his return to Seoul, was of long duration.

THE death is announced of Dr. Iwasa, a retired Court Physician, which took place on the 3rd inst.

THE Korean students at Mr. Fukuzawa's institution will spend their Summer vacation at Kanazawa.

A good many invalided soldiers have passed through Yokohama on their way to Tokyo during the week.

THE forces in Formosa are to be raised to forty-

five thousand men, the Government having determined to thoroughly stamp out the insurrection there.

It is hoped that the weather has settled for a time. The *Kawabiraki* festival on the Sumidagawa came off on Friday.

DR. KITAZATO is reported to have inaugurated a new treatment of cholera, by inoculation, on the lines indicated by Dr. Koch.

THE new treaty between Japan and Italy was ratified by the King of Italy, and ratifications exchanged at Rome during the week.

THE Japan Railway Company has declared a dividend for the first half of the year of 12 per cent., carrying forward yen 13,232,918.

TEN missionaries, eight ladies, one child, and a man—all reported to be English—have been massacred by Chinese near Foochow.

SURGEON-GENERAL ISHIGURO has been permitted by the Decorations Board to accept a decoration conferred on him by the Emperor of China.

THE four German war-ships now in Yokohama leave for Hakodate on the 12th inst. After a cruise of four weeks they will revisit Yokohama.

MR. ABENHEIM's 16-rater *Petrel* won the Committee's Cup in the sailing race last Saturday with only 1½ minutes to spare on her handicap.

Two Japanese spies who were reported missing at the beginning of November, are said to be alive and well, being decently cared for by General Sung.

THE Emperor has granted a sum of yen 300 to all the epidemic inspection commissioners now engaged at the various military quarantine stations.

THE Hongkong and Shanghai Banking Corporation declare for the half year a dividend of £1.5s. per share, absorbing \$444,444.44, and carry forward \$312,217.

COLONEL FUKUSHIMA, who injured his right leg during the late war, proceeded to Hakone on the 4th inst. He will stay there for about three weeks to recuperate.

THREE *attachés* in the Finance Department and fifty-three selected officials of various Custom Houses have been ordered to Formosa to take charge of the Customs there.

THE Yokohama Charity Organization, which does an immense amount of work among the distressed seamen of the port, closes its first financial year with a balance in hand of \$61.94.

CHARLES HOFFENDEN, a quartermaster on board the steamer *Energia*, has been sentenced by Mr. Justice Mowat, sitting with a jury, to 4 months' hard labour for stealing an officer's sextant.

MR. SONE ARASUKE, Japanese Minister to France, has been ordered to represent Japan at the International Convention on Weights and Measures to be opened in France on September 6th.

THE new Willard Opera Company opened to a packed house at the Public Hall on Wednesday evening. The "Gaiety Girl" proved a most delightful comic opera as played by this Company.

COUNTS ITO, Yamagata, Saigo, and Oyama have been raised to the rank of Marquis, besides receiving decorations and suitable Civil List allowances; Viscounts Nozu and Kabayama have been made Counts; and Lieutenant-General

Kawakami and Vice-Admiral Ito, Viscounts, for services during the late war.

THE Emperor is now specially granting audience to all leading civil and military officers, on their return from the Liaotung peninsula, who have to leave immediately for Formosa.

THE devastation caused by the floods in Central Japan is very severe, though only very meagre details are to hand. The damage done to railway tracks has been repaired, and the trains are running regularly again.

THE captured battle-ship *Chen-yuen* was thrown open to inspection at Yokosuka this week, and the enormous crowds attracted thither from the capital and the vicinity taxed the capabilities of the railway and steamboats to the utmost.

CHOLERA having broken out on board the flagship *Matsushima Kan*, while at Kelung, she returned to the Magami Quarantine Station, Nagasaki, on the 31st ult., for disinfection. The *Naniwa Kan* has been made temporary flagship.

It is stated that the proposed Naval Extension Bill to be introduced in the Diet by the Naval Department contains proposals for the construction of four 12,000-ton battle-ships, four 8,000-ton cruisers, four 4,000-ton cruisers, and some torpedo-catchers and torpedo boats.

REUTER TELEGRAPHS:—M. Speier, the present Russian Minister at Teheran, has been appointed Minister to Korea. Referring to the telegram of the 27th of June, stating that the relations between Bulgaria and Turkey were strained owing to the warning given by Turkey to the Bulgarians to abstain from agitation in Macedonia, it is now reported that the rising in Macedonia is increasing and that Bulgarians are joining the insurgents. The Marquis of Salisbury has demanded that the Government of China shall issue a Decree ordering the death of the culprits in the recent massacre of missionaries, the fullest protection to missionaries, and an escort for the Consul who is going to enquire into the circumstances of the massacre. The Chinese Government has assented.

THERE is no revival worth noting in any department of the Import trade, the enquiry for Yarns and Grey Goods being as dull as ditchwater. A few parcels of Turkey Reds have been taken at late rates, but no movement to any extent has been made in Fancy Cottons. Woollens, except Italian Cloths, which are improving in value, are lifeless, and appear likely to remain so for some time to come. There is nothing doing in Metals. In Kerosene there is nothing to report beyond the fact that holders and buyers are at arms' length, but the latter will probably be the first to succumb. The Sugar Market has not seen much alteration; China and Manila sorts are in fair demand, and rates harden. Whites continue to be sold at late rates. The Raw Silk trade is running smoothly; holders are current at late rates, and the market is well supplied with goodly parcels of fine Silk. In the Waste business, holders continue to fasten on for their money to old fibre of poor quality that nobody wants, and as new fibre is not forthcoming in quantity next to nothing has been done. In the Tea trade a fair amount of business has been passing at advancing prices for the grades on offer. Choice leaf is extremely scarce, Common to Good Medium being the quality of most of the parcels at present on the market. Settlement and export figures are now about on a par with those of last season at same date. Exchange closes weak.

SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The political world has been uneventful during the present week. The only incident that attracted attention and furnished opportunity for some effervescence on the part of the Opposition journals was the conferring of honours upon the Premier and the higher officers of the Army and Navy in recognition of their services in connection with the war. So far as these officers are concerned, the Opposition papers do not question the justice of the Imperial favours. But they pretend to be ignorant of any service on the part of Marquis Ito that entitles him to such high recognition by his Sovereign. In editorial columns, in personal notes, by poems and by pictures, the Minister President of State is held up to popular ridicule and execration. All the latent jealousy and envy of his enemies seem to have been roused by the bestowal of distinctions that he richly deserves for his indefatigable devotion to the interests of the country ever since he came into office, but more especially during the recent war, when he was always by the side of His Majesty, taking part not only in civil but also military affairs. These disgraceful attacks upon him, however, are doubtless treated with well merited contempt by all level-headed men.

The interesting controversy between the *Nichi Nichi* and the *Nippon* on the question of Ministerial responsibility in connection with the Liaotung Peninsula continues. As stated in our last weekly summary, no occasion exists to thread the labyrinth of arguments adduced by each side. It will suffice to notice one or two special points interesting to the general public. One is a distinct declaration by the *Nichi Nichi* that it is not an official organ, but a strictly independent journal expressing the opinions held by its own editor. The *Nippon's* taunt of dependence elicits the retort that the *Nippon* itself represents and is supported by Viscount Tani and his faction. That the *Nichi Nichi* is not an official organ has been again and again declared, but the public persistently clings to the opinion that it is. In fact, our contemporary's position, is a little singular. It is no doubt perfectly justified in denying itself to be a Ministerial organ. The denial is borne out by the bold and independent manner in which it sometimes criticises the policy of the Government. But its sympathy is on the whole with the Government, and its position may consequently be pretty correctly described as that of an independent supporter of the Cabinet. Another point that may be noticed is the stress laid by the *Nichi Nichi* upon the fact that the Liaotung Peninsula is still Japanese territory. Its return to China is no doubt a logical consequence of the promise made to the three Powers that Japan would not retain permanent possession of the district. But it is not the only consequence; there are other ways in which the problem can be settled with China without violating Japan's pledge. What Japan has promised to renounce is permanent retention of the peninsula. Short of that, she has perfect liberty to make any arrangement she pleases with China. Everything depends upon the way in which this problem is solved. Hence it is too early to discuss the question of Ministerial responsibility in connection with this matter. A third fact clearly brought out by the controversy is that the Opposition journals, though eager to write on the subject in a seditious and sensational manner, studiously avoid looking at it squarely and discussing it rationally and calmly. The *Nippon*, it is true, attempted to do so, though not with very marked success. But then the *Nippon* always poses as a neutral, independent alike of parties and of the Government. None of the regular organs of the Opposition has taken up the gauntlet thrown down by the *Nichi Nichi*, which is thus left undisputed master of the situation.

A section of the Press urges the Government to be quick in settling the Liaotung question, so

that all danger of misunderstanding between Japan and China may be removed once for all. The papers of this class write as though the settlement of the question is delayed because the Government is not certain what course to pursue. That is nonsense, however, for Japan's terms of rendition have already been officially formulated.

As to the future of China, many Japanese thinkers are inclined to believe that the much talked of awakening of China is a mere chimera. The most prominent advocate of this view is the *Fiji Shimpō*. Alluding to the entire absence of resentment on the part of the Chinese against their conquerors, as reported from various parts of the Middle Kingdom, our contemporary observes that, had the case been reversed, a very different state of affairs would have been noticed. Had the Chinese been victorious, it would be impossible for them to travel in the interior of Japan. This absence of ill-will among the Chinese may be due to one of two reasons. It may arise from an elevated notion of neighbourly hospitality and friendship, or it may be simply owing to lack of patriotism and of all national sentiment. The latter interpretation recommends itself to the *Fiji*, which consequently, believes that the integrity of the Chinese Empire is doomed.

The *Kokkai* entertains a similar idea about the future of China. It holds that the partition of the Middle Kingdom is only a question of time. For the present, however, our contemporary thinks it the duty as well as the interest of Japan to shape her policy with a view to the preservation of China's independence, at the same time always keeping in mind the fact that the European Powers whose interests are diametrically opposed, as England and Russia, may very easily come to an understanding with each other so soon as the question of partition enters the realm of practical politics. Our contemporary's meaning doubtless is that Japan should seek to defer such a catastrophe, inevitable though it be, as long as she possibly can, and that when it can no longer be averted, she should go in for her share boldly.

Commenting upon the recent massacre of English Missionaries in the neighbourhood of Foochow, the *Kokumin Shimbun* regrets sincerely that the Japanese armies did not occupy Peking. Apart from the maintenance of Korean independence, the object of the war was to deal a final blow to the conservatism of China, and to bring her under the influence of modern civilization. But the latter half of Japan's purpose has not been attained, because the capital of China was not occupied. The continued acts of cruelty committed against foreigners and the application of contemptuous epithets to Japan in official papers, clearly show that not the slightest impression has been made upon Chinese minds. The *Kokumin* declares that it is Japan's mission to lead her benighted neighbour into the full sunshine of civilization, and advises its countrymen to study the methods by which that task should be essayed.

Marquis Saionji's educational policy, as made known by his speeches and his conversations with journalists, seems to be approved by the larger portion of the educated classes. Stated in a few words, his idea is to reject the narrow and one-sided moral system favoured under the régime of his predecessor, and to bring up the young generation on liberal lines. He attaches great importance to the study of the English language, declaring it to be his purpose to make that study compulsory where it has hitherto been optional, and to make it optional where hitherto it has not been included at all in the curriculum. The *Fiji Shimpō* states that, although there is nothing very remarkable in the views enunciated by the Minister of Education, great significance attaches to the very fact that it has become possible to appoint a man of such liberal ideas to the chair of Education. No such appointment

could have been made some years ago, when excessive jingoism and fantastic ideas of nationality were in vogue. In short, our contemporary thinks that the tone of national opinion has greatly changed for the better; men have grown more liberal and come into closer touch with the current of universal civilization.

Much is written on the subject of the pacification of Formosa. The Government is universally urged to make quick and sharp work of the insurgents, whose barbarous conduct does not entitle them to any show of mercy. The Authorities are recommended to attach no importance to silly statements made about their actions in Formosa by certain obscure and contemptible foreign sheets in the East.

SHOCKING OCCURRENCE IN YOKOHAMA.

A terrible affair occurred upon the Bluff, Yokohama, on Friday afternoon, which has caused a shock to the whole community. About twenty minutes past 4 o'clock a Japanese house-boy in the service of Mr. B. E. Brackenbury, one of the junior staff of the Hongkong and Shanghai Banking Corporation, entered his master's bedroom at No. 156, Bluff—more familiarly known as "The Niche"—and found him extended upon the floor, with a revolver lying near his hand, and a bullet wound in his right temple. The events immediately preceding the finding of Mr. Brackenbury may never accurately be known, but some of the more salient, as ascertained by the servants and friends of the unfortunate gentleman, can be given in print. It appears that Mr. Brackenbury—than whom a pleasanter or more genial companion, both at work and play would be difficult to find—left the Bank, apparently in the best of spirits, shortly after closing hours, and, getting into a *jinrikisha*, rode up to the Bluff. Arriving at his residence, which he shared with four other gentlemen, his servants saw him rush across the lawn, which lies in front, and disappear into his room. They heard the sound of a pistol being discharged but took no notice, it being quite a usual thing for Mr. Brackenbury and his friends to practise with this description of fire-arm. Twenty minutes later a house-boy entered the room, and found Mr. Brackenbury in the position described above. He was conscious and made some request in English, which the Japanese servant scarcely understood. The alarm being raised, the servants at once sent for Mr. Pinckney, one of the Mess, and another messenger went in search of Dr. Wheeler. What medical assistance could be rendered was quickly afforded by Dr. Wheeler, who found that the bullet had penetrated the skull for a distance of over three inches. The condition of the injured man was so serious that Dr. Wheeler telegraphed to Tokyo for Dr. Scriba, and Dr. Todd was also called in. Mr. Brackenbury, we gathered this morning, passed a fairly easy night, being conscious at times.

At 8.30 this morning, Mr. Brackenbury was removed to the English Naval Hospital, where an operation to remove the bullet will take place this a.m. The revolver, which was found in the room, was an American "Automatic" of Messrs. Hopkins and Allen's manufacture, with a calibre of 38. Out of a package of 100 Eley revolver cartridges, two were subsequently found missing, and on examining the revolver one barrel was found to be discharged, while another was loaded. Little hopes are entertained of the unfortunate gentleman's recovery.

A dispatch from Mr. Sasao Shojiro, of Yokohama, who left for Weihaiwei the other day for the purpose of raising the Chinese man-of-war *Lai-yuen*, states that his party arrived there on the 25th ult., and immediately set to work.

Mr. Fujita Shigemichi, chief engineer of the Japan Railway Co., leaves Tokyo on the 18th inst. for Europe and America to inspect railway works there.—*Asahi Shimbun*.

EDITORIAL NOTES.

FATAL ACCIDENT ON BOARD THE "EMPRESS OF JAPAN."

ON Saturday evening, July 27th, the tugboat *Samson* landed four Chinese at Shanghai, whom she had brought up from the *Empress of Japan*. The men were wrapped up in lint and were in great pain and were immediately taken to the Shanghai General Hospital. From information obtained from various sources, it appears that an explosion of coal gas occurred on board the *Empress* boat, and that the victims were the firemen who were shovelling the coals in one of the bunkers. The accident happened while the vessel was at Amoy, and five men were seriously burnt, the injuries of one being so serious that he subsequently died. The other four men were attended by the doctor on board the vessel and they were sent up to Shanghai and conveyed to the General Hospital where Dr. Paulun attended to them and redressed their wounds. The men were terribly burnt and presented a fearful sight. The men are patient under their sufferings and are doing well.—*N.-C. Daily News*.

WRECK OF THE "MISHIMA MARU."

THE *Mishima Maru* encountered the typhoon when off Kagoshima and was swept towards the group of islands called Koshiki-shima off Satsuma Province. She left Nagasaki on Tuesday, the 23rd ult., at 1 p.m. bound for Kagoshima and carried a miscellaneous cargo and 19 passengers in addition to her crew of 17 hands. Ten of the latter were drowned, while all the passengers, with the exception of one, were carried away by the seas which swept her decks, and were lost. Amongst the passengers were the eldest son and nephew of Mr. Irisa, the Chief Superintendent of Police for Nagasaki Prefecture, aged 17 and 20 years respectively, who were on a visit to their native place during the summer vacation of the Bijutsu Gakko, Tokyo. Much sympathy has been expressed with Mr. Irisa in his sudden bereavement. The *Mishima Maru* was a small vessel of about 86 tons and 20 horse-power. She was the property of a small Kagoshima Company and had been running there, to and from Nagasaki, for a considerable time.—*Nagasaki Express*.

THE "AFRIDI."

THE new steel screw steamer *Afridi*, built by Sir Raylton Dixon and Co., Middlesbrough, for the China and Japan trade, to the order of the Mogul Steamship Company, of which Messrs. Gellatly, Hankey, Sewell, and Co., of London, are managers, is now on its way to Japan. Her dimensions are:—Length, 372ft.; breadth, 45ft. 6in.; depth, 28ft. 4in. The vessel has a carrying capacity of 5,500 tons dead-weight. Triple-expansion engines have been fitted by the Wallsend Slipway and Engineering Company (Limited), of Newcastle-on-Tyne, with cylinders 27in., 44in., and 72in. in diameter, by 48in. stroke, and working at a pressure of 170lbs., steam being supplied from two single-ended boilers, fitted with Howden's system of forced draught.

DISTURBANCE BY MILITARY COOLIES IN YOKOHAMA.

ONE thousand military coolies, who are awaiting transport, are at present housed at the Minato and Chitose Theatres in Yokohama. About half-past one o'clock on Wednesday morning three or four of them, while visiting the low houses at Maganecho, picked a quarrel with a few *sendo*, who were also rambling through the district. About fifteen residents of the quarter also took part in the dispute, assisting the *sendo*. One of the coolies returned to the theatre and called for aid, whereupon about five hundred of the men proceeded to Maganecho. Upon the approach of the coolies the *sendo* and their supporters promptly disappeared, hiding themselves in various houses. The angry coolies thereupon divided into small parties of twenty or thirty men each, and attempted to enter the houses wherein the *sendo* were sheltering. In the meantime about two hundred constables from the Isezakicho,

Bluff, and Settlement Stations reached the spot, and eventually succeeded in subduing the disturbance. Six persons were injured during the fighting, and some buildings were damaged. Some arrests have been made.

KOBE FLOODED.

ON Saturday afternoon the streets of Kobe were converted into rivers, and old residents say that the Concession, particularly the upper part of the Settlement, has not been flooded to a like extent for many years. As a result of a phenomenally heavy rainstorm which took place in the afternoon, water rushed up the man-holes of the Paper Mill drain about half-past three, and shortly afterwards the open drain at Uramachi was over-flowing and water running in great volume down to the Concession. The native shops in Uramachi were inundated, and men, women, and children were vainly exerting themselves to stem the torrent. In the vicinity of the Ikuta temple it was nearly as bad. The depth of the water in some of the streets of the Concession was fully four inches, while at the sides of the streets it was very much more, being augmented from the side streets, where the depth of the water seemed to be greater than in the main thoroughfares.—*Chronicle*.

A NEW P. AND O. STEAMER.

ON June 25th Messrs. Stephen launched at Linthouse, on the Clyde, the new steamer *Sumatra*, built to the order of the Peninsular and Oriental Steam Navigation Company. The dimensions of the vessel are—400 feet by 46 feet 6 inches by 31 feet, with long bridge, poop, and forecastle. Gross tonnage about 4,650 tons and a dead-weight carrying capacity of about 5,900 tons. She has been built to class 100 A 1 at Lloyds, under the three-deck rule, but is in many respects strengthened in excess of their requirements, and complies with the Admiralty regulations for transport service. There are seven water-tight bulkheads, all extending to the upper deck and provided with watertight doors, so that a clear passage can be had fore and aft in the upper 'tween decks. Water ballast is provided for in double bottom throughout. The fore and after peaks can be used for carrying fresh water when desired. The weather decks are sheathed with teak. The holds and bunkers are amply ventilated by a combination of Uley's and ordinary ventilators. The most ample provision is made for working cargo by steam winches and cranes. The boats are fitted with Angove's patent disengaging gear. There is accommodation for over 50 first class and 25 second class passengers. The first class passengers are located in large and airy state rooms under the bridge deck, with dining saloon at the fore end. The music-room and smoking-room are placed on the bridge deck and are entered direct from that deck. The saloon, music-room, and smoking-room are beautifully decorated apartments. The second class passengers are berthed under the poop deck in large and well ventilated state rooms, with suitable dining accommodation. The engines have cylinders 28 inches, 46 inches, and 77 inches diameter by 54 inches stroke. The boilers are large, fitted with Howden's forced draft, and work at 160 lbs. pressure.

AN AUSTRIAN MAN-OF-WAR.

THE Austrian man-of-war *Aurora*, Captain C. Pott, arrived at Hongkong on July 30th. The *Aurora* is a single screw unarmoured vessel with a composite hull, which was launched in 1873. Her dimensions are, length 190 feet 6 in., beam 32 feet 10 in., and draught 16 feet 1 in., with a displacement of 1,370 tons. She has engines of 1,000 h.p. with a speed of 11 knots an hour. Her crew numbers 194, with 32 officers and staff. Her armament consists of two 12-c.m. Warendorf guns, five light guns, and two machine guns.

SAD DEATH OF A NAVAL LIEUTENANT.

LIEUTENANT OMMANEY, of H.M.S. *Victor Emanuel*, was found drowned off Tsat-se-mui, between Bay View and Quarry Bay, Hongkong, on the morning of July 25th. The body was fully dressed, in plain clothes, with shoes, and was

lying on the beach at the water's edge. It was seen about ten o'clock by a Chinaman, who gave information to the Wanchai police. An inquest will be held. The deceased had been in the navy eighteen years and arrived in Hongkong only as recently as the end of last January. Since his arrival here he has not been in good health. It was only last Sunday that his wife, who came with him to the colony, died, but her husband was too ill to attend her funeral. It is feared that this recent trouble preyed upon his mind to such an extent that he decided to destroy his own life.

MISS GRACE HAWTHORNE'S BENEFIT PERFORMANCE.

THE production of Victorien Sardou's spectacular play "*Theodora*," upon the limited stage of the Public Hall and with the scanty auxiliaries available in this place, was indeed an ambitious undertaking, and—we regret to say it—proved anything but a success. The handicap was too great even for the indomitable Miss Grace Hawthorne to surmount, and everyone was really glad when the tragedy reached its close. Mr. Hoggan-Armadale had to double some of the parts, *Justinian* and *Marcellus*, and neither was particularly happy, Mr. Montgomery as the young Greek *Andreas* played up well to *Theodora* (Miss Grace Hawthorne), but the bathos of the mock heroics was too apparent, and instead of being on the verge of tears, the audience were feign to hide their feelings, in blank looks of amazement at some of the unpremeditated situations. With a wider field the play would undoubtedly have succeeded, for the principals played most conscientiously throughout. To the regret of many, Signorina Belinfante was too unwell to appear, and the songs put down on the programme were omitted.

NEWCHWANG.

MESSRS. BANDINEL & Co., writing on July 25th, say:—Our last report dated the 12th of June. The Japanese Customs are more in touch with the local merchants, and business is consequently improving. The recent rains and north wind have brought down large quantities of beans, and stopped the advance in prices. Quotations are:—Beancakes per 10 pieces, Taels 4.75; stock 60,000 pieces. Bean oil per 10 piculs, Taels 3.65; stock 15,000 piculs. Beans per 3 piculs, Taels 3.40; stock 200,000 piculs. Accounts of the growing crops are favourable, and we hope to see a good fall and spring business. Arrivals to date are 21 steamers and 3 sailing vessels, against 200 steamers and 25 sailing vessels last year. Vessels in port *Tainan*, *Kweilin*, *Keiyang*, *Whampoa*, *Peiyang*, *Cassius*, *Siegmund*, and *Elisabeth*.

DR. KITAZATO.

THE *Kokkai* states that a new Cholera Hospital is in course of construction at Hirowo, Azabu, Tokyo, and that it will be placed under the charge of Dr. Kitazato, who proposes to treat patients according to a new method upon which he has been experimenting since the outbreak of the present epidemic. No particulars of the treatment are given, but it seems to be on the same principle as that elaborated by Dr. Kitazato in concert with his master, Dr. Koch, in the case of phthisis.

THE O. R. AND N. CO.

THE O. R. & N. Co. has decided, says an American shipping exchange, to have its China steamers stop at Honolulu on the outward voyage. The first steamer which will touch at the islands will be the *Asloun*. This vessel was due in Victoria on the 20th July and will leave on her return trip on August 1st for Japan and China *via* Honolulu.

NAVAL NOTES.

H.M.S. *Zinnel* went out on July 25 for gunnery and general exercises in the vicinity of Hongkong, making Tytam Bay her head-quarters for a few days. The *Leander* is expected there next week *en route* for England to pay off. The *Victor's* relief, the old troopship *Tamar*, is expected to arrive at Hongkong about the 3rd

or 4th August. She will call at Penang and then come on to Hongkong, avoiding Singapore on account of the epidemic of cholera at that port. The *Esk*, at present on the Yangtze, is coming to Hongkong to pay off, her new crew arriving by the *Tamar*.

COMMANDER BEARCROFT.

A PRIVATE wire announces that Commander J. E. Bearcroft, now in command of H.M.S. *Linnet*, has been promoted to the rank of Captain, among the Queen's Birthday honours. This officer has seen a great deal of foreign service, and was specially promoted to the rank of Commander for admirable seamanship in the West Indies, where he had to handle his vessel (the *Contest*, we believe) under sail and beat off a lee shore. He also did good work last year at Tientsin. This well-earned promotion, says the *China Mail*, will be heartily welcomed all over the East.

WEATHER AT HONGKONG.

SAYS the *China Mail* of July 29:—During the whole of Sunday Hongkong harbour was swept clean by violent winds, not quite of typhoon force. Almost all of the steamers in port had to go away for shelter, and the service of ferry launches was suspended. In the afternoon the wind went down slightly, and the rain came down not slightly but by tons. With a final burst in the small hours of this morning, the typhoon left the neighbourhood, bound west. No damage is reported. Over 6 inches of rain fell within a few hours.

BRITISH SHIPPING.

ACCORDING to the annual statement of the Navigation and Shipping of the United Kingdom for last year, 388,847 vessels, of 94,387,371 tons, entered, and 354,891 vessels, of 88,497,509 tons, cleared, against 380,238 vessels, of 88,964,468 tons, and 346,175 vessels, of 83,216,391 tons, in 1893, and 376,597 vessels, of 87,087,970 tons, and 343,510 vessels, of 81,876,330 tons in 1892.

THE NEW TREATY BETWEEN JAPAN AND ITALY.

THE *Nichi Nichi Shimbun* states that a telegram received by the Foreign Department from Mr. Takahira, Japanese Minister, says that the King of Italy has ratified the new Commercial Treaty between Japan and Italy, which was lately passed by the Chambers and the Senate, and the ratifications were exchanged between the commissioners of both countries on the 4th inst. at Rome.

TRANSPORT NOTES.

THE *Ainsen Maru* left here on Thursday with over 190 of the Imperial Guards and several horses for Formosa, while the *Niigata Maru* arrived here with over 400 invalided soldiers. The *Tosa Maru* arrived in port on Friday, but put back into quarantine immediately. It is supposed that she has sickness on board.

THE MURDERED MISSIONARIES.

THE *Kobe Chronicle*, prints a special telegram, received from Nagasaki at 3.50 p.m. on August 6th, which says:—The American Admiral here has received confirmation of the report concerning the murder of missionaries at Foochow. It appears from the information reaching him that nine British missionaries were killed and one American missionary wounded.

RESCUED FISHERMEN.

FIVE fishermen were found floating by the steamship *Coptic* while passing Kagoshima on the 25th ult., and brought to Nagasaki. They were kindly treated by the Captain, who gave them food and clothes besides 10 yen. They were the only survivors out of 29, who went out fishing on the 24th.

H.M.S. "TAMAR."

THE engines and boilers are to remain in H.M.S. *Tamar* pending instructions from the Admiralty, and before taking up the post of receiving ship in Hongkong in place of the

Victor Emanuel she will go north to take a number of reliefs for the Squadron and bring back the time expired men.

THE U.S. SQUADRON.

THE U.S.S. *Olympia* is under orders to leave San Francisco by the middle of August to relieve the *Baltimore*. The *Baltimore's* return will be followed by her assignment to the Pacific station as relief of the *Philadelphia* as flagship. The latter vessel is now undergoing repairs at Mare Island.

THE FORMOSA GOVERNMENT.

As it was originally believed that the pacification of Formosa would be accomplished without much trouble, Count Kabayama's staff was organized exclusively on a civil basis. Circumstances having now made it necessary to undertake the work of subjugation on a large scale, the organization of the Formosa Government has been changed into a military one. The Governor-General, as hitherto, assumes the command of the Imperial forces in the island. The Administration is divided into four general divisions; namely, the Governor-General's Office, the Military Bureau, the Naval Bureau, and the Civil Bureau. The Governor-General's Office comprises two sub-divisions; the Staff Department and the Aides-de-Camp Department. The Military Bureau is sub-divided into the Director's Office, the Artillery Department, the Engineering Department, the Gendarmery Department, the Paymasters Department, the Cash Department, the Provisions Department, the Medical Department, the Judicial Department, the Telegraph Department, and the Post Department. The chief staff officer will be either a Lieut.-General or a Major-General, and the Directors of the different Bureaus will be of similar rank. The names of the officers chosen for these positions have not been made public.

It is understood that the remainder of the Second Division in the Liaotung Peninsula is on its way to Formosa. Rumour further says that about 7,000 of the First Division will be despatched thither before long.

EXCHANGE OF PRISONERS.

A Committee for the exchange of prisoners taken in the recent war was appointed on the instant. The Committee consists of fifteen officers, with Lieut.-Colonel Murayama at its head, and includes two army surgeons and one paymaster. These officers are to be assisted in their duties by a body of non-commissioned officers and private soldiers, at the rate of two of each for every 100 of the Chinese prisoners. The prisoners now in charge of the First (Tokyo) Division will be shipped at Yokohama on the 10th instant; those under the Third Division at Taketoyo; those under the Fourth Division at Kobe; and those under the Fifth Division at Mitsuahama. The exchange will take place at Taku on the 20th instant. All communications addressed by the Japanese Government to the Peking Authorities with reference to the number and names of the prisoners held by China, have failed to elicit any definite answer, but it is believed that the number will be about fifty, mostly consisting of military coolies. Lieut.-Colonel Murayama and Paymaster Hirayama left Tokyo for Kobe by the night train on the 8th instant.

THE STRANDED VESSELS AT KUCHINOTSU.

The *Nagasaki Express* says that during the recent typhoon no less than five foreign vessels, four steamers and one sailing vessel, were driven ashore at Kuchinotsu. Owing to the breaks in the telegraph wires it was not until some time afterwards that the news reached Nagasaki, where, luckily, no accidents worthy of mention were reported amongst the shipping. The five vessels ashore are the Norwegian steamers *Lyderhorn* and *Wedel Jarlsberg*, the British steamer

Bentala, the British ship *Marèchal Suchet*, and the German steamer *Helene Rickmers*. The last two are the only vessels that have apparently sustained any serious damage, the three first mentioned, the *Lyderhorn*, *Jarlsberg*, and *Bentala* having grounded on a muddy bottom with a gradual incline. The first two of these vessels had each a half-cargo of coal on board, while the latter was in ballast. Neither of the three are reported to be making any water.

The sailing ship *Marèchal Suchet*, however, fared less fortunately. She touched on the rocks under the lighthouse, and then dragged on to the mud, sustaining some damage and making three inches of water in four hours in her hold. As she has 3,000 tons of coal on board, the Captain could not ascertain the precise nature of the leak. She is under charter for San Francisco but will have to be docked before she can sail, and a survey is an absolute necessity.

The German steamer *Helene Rickmers* got ashore about 7 miles west of Kuchinotsu, at a little village called Katsusa. She went broadside-on on a shingle beach or bar which runs across the mouth of a small river. Like the *Marèchal Suchet*, she struck the rocks under the lighthouse before coming ashore. In the No. 1 hold, she had about 3 feet of water and about 3½ feet everywhere else, according to soundings taken on Saturday. Under her engines, the bottom is bulged in and leaks considerably. The *Helene Rickmers* eventually floated off and was safely taken into Nagasaki.

REWARDS FOR DISTINGUISHED SERVICES IN CONNECTION WITH THE WAR.

The following honours were bestowed at Court yesterday at 11 a.m., by His Majesty the Emperor:—

Prince AKIHITO, Field Marshal and Chief of the General Staff—Decorated with the Collar of the Order of the Chrysanthemum, and with the Second Class of the Order of the Golden Kite.

ITO HIROBUMI, Count, Minister President of State—Decorated with the Grand Order of Merit and the Grand Cordon of the Order of the Chrysanthemum, and promoted to the rank of Marquis, in consideration of meritorious services.

YAMAGATA ARITOMO, Count, Field Marshal, Inspector of the Army—Decorated with the Second Class of the Order of the Golden Kite and the Grand Cordon of the Rising Sun, and promoted to the rank of Marquis.

SAIGO TSUKUMICHI, Count, Admiral, Minister of State for the Navy—Same as above.

OYAMA IWAO, Count, Field Marshal, Minister of State for War—Same as above.

NOZU MICHITSURU, Viscount, Field Marshal—Decorated with the Second Class of the Golden Kite and the Grand Cordon of the Order of Rising Sun, and promoted to the rank of Count, in consideration of meritorious services.

KABAYAMA SUKENORI, Viscount, Admiral, Governor-General of Formosa—Decorated with the Second Class of the Order of the Golden Kite and the Grand Cordon of the Order of the Rising Sun, and promoted to the rank of Count, in consideration of meritorious services.

KAWAKAMI SOROKU, Lieutenant-General, Vice-President of the General Staff—Decorated with the Second Class of the Order of the Golden Kite, the First Class and Grand Cordon of the Order of the Rising Sun, and raised to the Peerage with the rank of Viscount, in consideration of meritorious services.

ITO SUKEYUKI, Vice-Admiral, Chief of the Command Office of the Navy—Same as above.

Cholera having broken out on board the flagship *Matsushima Kan*, while at Kelung, she returned to the Megami Quarantine Station, Nagasaki, on the 31st ult., for disinfection. The *Naniwa Kan* has been made temporary flagship. Four cases occurred on the *Matsushima*, of which one ended fatally, and three patients were removed to the epidemic hospital at Megami. The ship and crew are being disinfected.

FORMOSA NEWS.

The last batch of Japanese correspondence from Formosa (up to the 17th ultimo) contains little news of any general advance to the south, being chiefly concerned with the guerilla warfare in the vicinity of Taipeh, Tako-ham, and Shin-chuh. Among numerous stories of gallant deeds on the part of Japanese troops, particularly noteworthy is the conduct of a little party of thirty-five, that convoyed a flotilla of provision boats up the Tako-ham. The flotilla consisted of 18 Chinese river boats, carrying 185 *hpo* of rice and a quantity of preserved plums. It left Taipeh on the evening of the 11th ultimo, and reached Sanchne-yung the following evening. At that place a portion of the provisions were landed, and early on the morning of the 12th, the boats resumed the tedious voyage up the river to Tako-ham. After going a little over 1,000 metres, the flotilla was moored in a shallow part of the river, and the party prepared to breakfast. The Japanese soldiers left the boats and entered the stream—some in their clothes and boots and others after having removed a part of these garments—to wash their faces and hands preparatory to the meal. While they were thus engaged, a party of fifteen or sixteen natives assembled on the right bank of the river. Their appearance does not seem to have occasioned any alarm at first, for they carried no weapons and their demeanour presented nothing suspicious. But presently one of them raised a peculiar cry, which was the signal for an instantaneous shower of bullets. The Japanese were taken completely by surprise. But they did not give way to any panic. Rapidly taking up their arms and forming themselves into a line, they replied to the enemy's fire. Another party of insurgents having appeared on an eminence on the left bank of the river, the Japanese divided into two bands, one under Sergeant Sakurai crossing to the left bank, and the other, under Corporal Ebashi, remaining on the right bank to check the advance of the enemy from that direction. The insurgents on the hill on the left bank increased in a few minutes to about 500 or 600; and the situation being critical, Sergeant Sakurai ordered Corporal Ebashi to join him. Collecting the whole party on the left bank, Sergeant Sakurai cheered his men, saying that, "so long as his eyes remained black," he would never allow the rascals to touch a grain of the provisions under his charge. He also told the soldiers, that they must that day place their lives at his disposal. The determined band of thirty-five fought desperately and held the body of several hundred Chinese at bay for four hours. By this time their number was reduced to twenty-four, among the fallen being their brave leader Sergeant Sakurai, who was killed by a bullet that struck him in the breast. Being completely surrounded by a steadily narrowing ring of insurgents, they resolved to charge the thinnest point of the circle. The onset proved successful, but when the line had been cut through, the Japanese found their number diminished to fourteen or fifteen. Then perceiving another line of the enemy in front at a distance of 50 or 60 metres, the little band closed up their ranks for another charge. One of them, Corporal Oi, had received a fatal wound in the first charge, but wresting a pennon from the enemy, he bound it round his hurt and prepared to join in the second onset. His pluck, however, proved greater than his strength. After a few paces he dropped in his tracks, and crying out, "Comrades, pardon me for going before you" (*hokun, osaki ni gomen wo komuru*), "Hurrah for Japan" (*"Teikoku bankai"*), he took a bayonet and thrust it into his throat. All this was the work of a moment. The second charge was as successful and as costly as the first. When the little party made their way through the insurgents' line and came out upon a plain, their number had been reduced to nine, Corporal Ebashi and eight privates. The enemy being some distance in the rear, they sat down to consider their future course of action. Corporal Ebashi took cigarettes out of his

pocket, and sharing them with his men, they all smoked and rested. Then the corporal ordered four privates, who alone had escaped unwounded, to carry the news of the fate of the party to head-quarters. As for the other five, who like himself were all severely wounded, he proposed that they should die by their own hands rather than be taken prisoners by the enemy. The proposal having been unanimously approved, was carried out in the first place by two of the most severely wounded, who, drawing their bayonets, plunged them into each other's breasts, a mode of ending life very common among Japanese *samurai* under similar circumstances in former days. Another pair immediately followed this example. Last of all, Corporal Ebashi, evidently pleased with the heroic manner in which his men had died, calmly committed *harakiri*. The surviving four men who, not without deep emotion, had silently watched these operations, took leave of their dead comrades, and hastily ran in the direction of a grove at some distance, for the insurgents were again coming in sight. After passing through the grove, they came out upon the bank of a swamp. One of the men, Tanaka, remembered a story told by some friends that had escaped pursuit during the Satsuma Rebellion by concealing themselves among the reeds of a pond. He, therefore, proposed to hide in the swamp until evening. But the rest, thinking the plan dangerous, fled in the direction of the hills. Tanaka, thus left alone, concealed himself as best he could, remaining in the swamp until about 8 in the evening. While he was there, the inhabitants of an adjacent village frequently came to wash rice, and on each of these occasions, he was compelled to submerge himself entirely in the water, keeping only his mouth and nostrils above the surface. At about 8 in the evening, it began to thunder and rain heavily. Retracing his steps, Tanaka went over the scene of the day's fighting, and emerged at the river where the boats were moored. He observed that six of the boats were still there and that the villages in the neighbourhood were blazing with camp fires. By this time the storm had passed, and the moon was shining bright and serene. It was, necessary, of course, to avoid the banks. Tanaka accordingly entered the water and walked down with the current. Shooting an insurgent on the way, he proceeded slowly in this fashion the whole night, until at break of day he heard, to his infinite relief, the sound of horses neighing in a Japanese camp, which he soon reached and made the above report to the Colonel in command of the Regiment stationed there. The other three soldiers are believed to have safely reached the Commissariat station at Tantseyuen, but at the date of the letter from which this story is quoted, no definite news had been obtained about their fate.

A squadron of cavalry, 22 strong, left Taipeh on the 15th ultimo on a scouting expedition, their route being along the Tamsui river toward the hills. Some miles beyond the walled town of Pankuitan, the party saw a few natives on the top of a hill. Two privates rode up to them to ascertain whether they were not armed insurgents. They were not armed; moreover there were a number of women with them, and they showed by various signs that they were peaceful villagers. Seeing nothing suspicious about them, the Japanese troopers advanced still farther into the hills, when at a precipitous mountain pass, they were suddenly attacked by insurgents who seemed to be swarming in the hills. Taken completely by surprise in an extremely disadvantageous position, only three or four managed to gallop away. They were pursued along the road by screaming bands of villagers, including some women, all variously armed with rifles, spears, and swords.

Other attacks upon provision trains and scouting parties not very far from Taipeh itself are recorded, but need not be reproduced here. These constantly recurring acts of violence on the part of the semi-civilized tribes and the regular insurgents quartered among them, seem to have led to the drastic measures recently taken by the Japanese troops to clear the locality

between Taipeh and Shinchuh of all insurgents by burning their hiding places, the villages among the hills (*vide Japan Mail*, July 30th).

Kelung and its neighbourhood are quiet, and the inhabitants are said to be well affected towards their new rulers. The management of public affairs is left, for the most part, in the hands of native officials elected by the people and confirmed by the Governor at Kelung, Mr. Furusho Yoshikado. The people praise the impartial and liberal manner in which they are treated by their new masters. It is also stated that investigations are being made by the Japanese officials with a view to the improvement of the harbour of Kelung.

On the 22nd of July very sensational telegrams reached Shanghai from Amoy. They announced fierce fighting between the Japanese and the Hakkas; represented the latter as having decoyed 800 of the former into an ambush and killed 600 of them; asserted that the insurgents were advancing in great force on the Japanese intrenchments at Teckcham (Sinchuh), and added that the Chinese inhabitants of Tamsui, losing confidence in the ability of the Japanese to protect them, were leaving the place in large numbers. It is, of course, easy to trace the origin of these rumours. They are evidently a magnified version of the annihilation of two Japanese detachments, one consisting of 35 infantry soldiers, the other of 22 troopers, and of the movements leading up to the unsuccessful attempt made by the insurgents to recapture Teckcham on the 25th of July. The Amoy telegrams purport to give accounts of events up to the 18th of July, but, as our readers know, we are in receipt of telegrams from Taipeh up to the 27th of that month, and can therefore state with tolerable certainty what actually occurred in Formosa. In the first place, it is plain that the Japanese commanders over-rated the result of early victories and imagined that the strength of the insurgents had been completely broken in the district between Taipeh, Tamsui, and Teckcham. Thus we find them despatching a flotilla of commissariat boats, on the 11th of July, up the Tako-ham river, accompanied by an escort of only 35 men, and four days later a scouting party of 22 troopers left Taipeh to reconnoitre along the Tamsui river toward the hills. Both of these parties were destroyed by the Chinese, four only of the provision escort and three of the cavalry squadron managing to escape. These events supplemented by attacks made upon commissariat stations, seem to have opened the eyes of the Japanese commanders to the necessity of adopting more drastic measures, and on the 22nd of July three bodies of troops were sent out to restore order in the disturbed districts. These operations lasted until the 24th, by which time 500 of the insurgents had been killed and the remainder driven to the mountains. It is, therefore, quite plain that the Amoy telegrams are a greatly distorted version of the facts, and that, although the failure of the Japanese to employ drastic measures has had the effect of deferring the restoration of tranquillity, the situation in the north of the island is very different from that reported in Amoy on the 22nd of July.

It would seem that the Black Flag Commander, Liu, has moved up from Tainan, as was conjectured some time ago, and is about to risk a general engagement against the Japanese in the vicinity of Teckcham. A telegram from Hiroshima, dated 6.40 p.m. on the 3rd instant, and published by the *Kokkai*, says that a great battle is expected to take place shortly between Liu and the Guards near Teckcham. This intelligence, not being official, can not be accepted without reserve. But there is certainly reason to suppose that the insurgents are assembled in considerable force to the south of Teckcham, since 1,600 of them made an abortive attempt to recover that town on the 25th of July.

In the Amoy telegrams referred to above the following paragraphs are found—

It now turns out that a large body of Hakkas and Black Flags, who had been giving the Japanese a good deal of trouble, inveigled 800 of the latter into an ambush and then attacked them, causing them to retreat after a des-

perate engagement in which several hundreds were killed on both sides; the Japanese lost about 600. The insurgents followed up the Japanese, and, encouraged by their success, fought desperately, ultimately dislodging them from Tokoham and driving them northwards and westwards.

As soon as the Japanese Commander saw he had been deceived by the insurgents, and that his men were being rapidly slaughtered, he gave orders that no mercy should be shown to the enemy.

It is reported that as they retreated, the Japanese destroyed every house they chanced to pass, and killed every man, woman, and child they either got hold of or could get a shot at!

If these statements be carefully considered, it will be seen that 600 Japanese, out of a battalion of 800, having been killed by the Hakkas and Black Flags, the remaining 200 in their retreat "destroyed every house they passed and killed every man, woman, and child they could either get hold of or get a shot at." It will further be seen that the Japanese commander, finding that his men were being rapidly slaughtered, gave orders that no mercy should be shown to the enemy." It is a new experience in warfare to learn that a defeated general orders his troops to show no mercy to their victors, and that 200 men retreating from a fight in which 600 of their comrades fell, have leisure and strength to devastate the country and slaughter the inhabitants. As to the killing of women and children, it is mentioned only as a report, and since the engagement and ambushade of which these atrocities are said to have been the result, never took place at all, we can not believe the charge brought against the Japanese until further evidence is forthcoming.

The latest letters from Formosa just published in Tokyo are dated the 26th ult. They, however, contain no particulars of the operations then going on among the hilly districts to the south-east of the railway line between Taipeh and Shinchuh. But a letter dated at Taipeh on the 22nd of July, and published in the *Fiji Shimpō*, contains some particulars about the plan of action, and we find therein confirmation of our previous statement that these operations were undertaken for the purpose of effectually quelling the insurgents in the localities above indicated, who had been making repeated attacks upon scouting parties and commissariat trains. This measure was necessary in order to secure the safety of the line of communications with Taipeh for the purposes of a general southward advance of the Imperial Guards, preparations for which were then in vigorous progress. The troops charged with the task of driving the insurgents out of these localities were to proceed to a common centre from three different directions, the starting points being Takoham, Haishan-kau, and Taipeh, and then to trace their steps over the same ground once more so as to complete the work of clearing out the villages. That these operations were successfully carried out, has already been announced by telegrams reproduced in these columns on the 30th ultimo.

The *Nippon's* correspondent, who accompanied the Yamane detachment in these operations, writes from Sanchue-yung, under date of the 24th ultimo. His accounts are very meagre, but he bears full testimony to the stubborn courage displayed by the insurgents, who, on several occasions, bravely held their breach works when charged by the Japanese, so that the latter were obliged to resort to cold steel. The villages where these insurgents were posted had to be burned down, and every one offering resistance was shot. At Sanchue-yung, the correspondent, found various proclamations in the name of the Commissioners sent by the rebel officer in command at Taiwanfu. The ignorant villagers were exhorted in these documents to resist the Japanese by every means, and were most solemnly assured that the cause of the independence of Formosa would certainly win the day, certain friendly Powers having promised to give assistance. It was farther stated that a large army was on its way to recover the north of the island from the *wojens*. Following the example set in Manchuria, the Chinese officers offered a reward of 50 taels for a Japanese head. In one of the proclamations, it was stated that, according to a telegram from the Viceroy of Kiang-si and Kiang-su, Russia had recognized the independence of Formosa.

The Tamsui correspondent of the *Hongkong Telegraph*, writing under date of the 17th ult., says:—

The Japanese forces advancing on Taiwanfoo were attacked a few days ago in great force near Tokoham by Hakkas, thousands of whom suddenly surrounded the Japanese and gave them a sound thrashing. Great numbers were, of course, killed on both sides, the Japanese loss in killed and wounded being variously estimated at between two and three hundred.

It is well known that ere the Japanese arrived here to "pacify" the island, the Hakkas had been well armed by the retiring Chinese officials with Mauser and Winchester rifles and vast quantities of ammunition, and it seems that they have now acquired fair knowledge of the use of these weapons. This in itself is a serious matter for the Japanese, but when we add to this the Hakka's thorough knowledge of the mountainous country and the fact that they are hardy hill-men, accustomed to guerilla warfare, and number about 10,000 fighting men, it is not difficult to conceive that the Japanese will, if they wish to avoid years of serious trouble, have either to flood the country with troops or else make up their minds to carry on guerilla warfare here for the next half-dozen years, just as we did in Burma owing to the slipshod methods of the Indian military department.

Owing to the Tokoham disaster the expedition which was to be despatched to South Formosa on the 18th instant has been postponed *sine die*, and a Council of War is now sitting in the capital to decide on the next move, which will probably be to hold the positions now occupied until strong reinforcements arrive from Hiroshima or Port Arthur, and then advance steadily on Taiwanfoo, laying waste the whole country *en route* and killing every man who offers resistance. That is what I gather is likely to be the policy pursued from now on, and it seems fairly reasonable, for there can be little doubt that the Japanese have hitherto been too lenient with the insurgents whom they have treated with just as much consideration as would be due to Europeans. That is just where they've made one great blunder, for it is impossible to deal, under the circumstances, with an uncivilised enemy in the same way as you would with a civilized foe. Another mistake made has been the failure of the Japanese to "put the fear of God" in the hearts of the Hakkas, Black Flags, and savages from the very beginning of the "occupation." Had overwhelming forces been rushed into the country from the north and the south simultaneously there cannot be a shadow of doubt that all opposition would have been crushed and the whole country well under civilised rule long ago. Instead of this being so, the very reverse is the case and goodness knows where it will all end. It means loss to Europeans, loss of valuable lives, much money and loss of no little prestige to the Japanese, and doubtless causes no small amount of amusement to Japan's worst enemies—Russia and France. Of course the Japanese have by this time seen the error of their ways. They have sent for 20,000 men and are resorting to strong measures in the interior. Villages found to harbour insurgents are burnt, and the villagers now find that the little white flag hung up over their houses no longer acts as a charm, for it is now only too well known that the white flag has been used to cover, if not a multitude of sins, at least scores and hundreds of the enemy.

It is possible that the insurgents, that is the Hakkas and savages, are not so much to blame as at first sight it might be supposed. They don't grasp the situation. The retiring Chinese officials spread false reports throughout the length and breadth of the land, and made the country folk understand that the Japanese were mere pirates and rebels and that the people would only have themselves to blame if, with the aid of the Black Flags, they had their homes and means of earning a livelihood taken from them by the hated and well-despised "*wojens*." Consequently, as the Japanese have failed to send suitable interpreters among the Hakkas to explain the true state of affairs to them, the hill-men assert that they are fully justified in fighting for their homes, and that they prefer to die on the field of battle than allow their little all and their wives and families to fall into the hands of what they have been taught to regard as "ruthless, ferocious, despotic, and cruel invaders."

Fighting is going on daily, and on the 16th the sound of firing could be distinctly heard at Tuatutia, and at night the glare of burning villages to the south was seen from the deck of my boat as I was proceeding down river to Tamsui. No doubt lots of innocent people are now suffering owing to the "change of front" adopted by the Japanese, but that is inevitable.

Blood-curdling reports of atrocities, perpetrated

by the Japanese, are circulating very freely in every direction, and it is even alleged that the troops have been guilty of revolting and brutal excesses of the most atrocious and savage description. Doubtless the true state of affairs is a good deal exaggerated, *à la Chinoise*, but it is conceivable that it is serious enough. At all events these alarming reports, added to the news that the Black Flags and large bodies of Hakkas are making steady headway towards the capital and that the insurgents are, in fact, within a few days' march of Tuatutia has caused a great panic amongst the Chinese settlers who are fleeing to the mainland as fast as they can get steamers and junks to carry them. Each steamer leaving here for the mainland has her full complement of passengers and some big Chinese are doing a roaring trade in carrying the refugees over to Amoy and Swatow. Hundreds have already cleared out and hundreds more—men, women, and children—are awaiting an opportunity to cross the channel.

For some weeks the Japanese have employed a flotilla of river boats carrying stores and ammunition between the capital and Tokoham, about forty or fifty men being employed in looking after the boats and their loads. The other night these boats were attacked about half way to Tokoham, every man of the guard was killed and the boats taken heaven only knows where.

The Japanese are very reticent about their defeats and never admit losing more than a dozen or so in a brisk skirmish, but there is no question about the Tokoham disaster and the subsequent burning of the whole city by the Japanese, who are reported to have killed every man, woman and child they came across in their retreat towards Teckcham and Taipeifu.

Mr. Thomson, of Tuatutia, reports that he was shot at near Tokoham by Japanese and that one of their bullets went clean through his pith helmet. He had been to Tokoham to "look see" and was returning by boat when the alleged outrage was committed.

The lights on north Formosa coast are now lighted as usual.

On the 16th the *Sumidagawa Maru* entered the Tamsui river. She is the first Japanese merchant vessel that has arrived in this port. Her tonnage net is about 600. She is discharging a cargo of Government stores.

We cannot doubt that the latter account is correct, since it is confirmed by official reports, which show that the insurgents were completely cleared out of the districts between Taipeh, Tuatutia, and Teckcham, on the 22nd, 23rd and 24th of July, and that the Japanese were in possession of Teckcham on the 25th, when a body of 1,600 insurgents attacked the place and were repulsed with heavy loss. The Hongkong journal's account does not profess to be founded on anything more substantial than Chinese rumours; indeed we find it distinctly stated there that the Japanese admit no such defeat as that spoken of—a defeat, for the rest, entirely inconsistent with subsequent operations, as officially reported. With regard to the atrocities attributed to the Japanese, it will be observed that they, too, are explicitly referred to Chinese sources of intelligence, and are consequently unworthy of credence until independently confirmed. On this point judgment must be reserved.

Particulars of the operations recently undertaken by the Imperial Guards to put a final stop to the trouble caused by the Hakka tribes inhabiting the hilly country between Shinchuh and Taipeh, have just arrived in Tokyo. As already stated, the troops marched from three directions. The largest force, nearly 2,000 strong, under Major-General Yamane, advanced from Takoham; the second, about 1,000 strong, under Colonel Naito, from Haishankan; and the third, about 600 from Taipeh. The common objective point was Sanchue-yung, where it was believed that the tribesmen were assembled in large force. The march was commenced by the three attacking columns simultaneously on the 22nd. It will not be necessary to follow the movements of each. We shall attach ourselves to the Yamane corps, as its operations give a pretty clear idea of the general nature of the campaign.

The main column of the corps consisted of two battalions of foot, a company of artillery, a company of engineers, and a medical staff. The left flank was covered by a company of foot, a squadron of horse, a section of artillery, and half a squadron of engineers, under the com-

mand of Captain Hayashi. Another small detachment, consisting of a company of foot, under Captain Tada, was detailed to maintain communication between Captain Hayashi's force and the Commissariat Station of Tongtseyuen. Another company of infantry was left at Takoham as a guard, and yet another company was posted between that place and Tiongleck to preserve communications.

The principal column, under the personal command of Major-General Yamane, left Takoham early on the morning of the 22nd. When the head of the column came within a distance of about 5 miles south-west of Sauchue-yung, it was fired at by a body of 500 or 600 tribesmen posted on an eminence directly in front. They were armed with guns, spears, and swords, and made a stout resistance, but were dislodged from their position with a loss of from thirty to forty, while the casualties on the side of the Japanese were three wounded. Every house in the vicinity which showed the least trace of having harboured insurgents was burnt down. That night the column encamped in sight of the enemy about 3,500 metres south-west of Sanchue-yung.

On the morning of the 23rd, the attack was re-commenced. The enemy assuming positions on the precipitous sides of the mountains, resisted with considerable skill and daring. But artillery fire, combined with determined charges by the Guards, were too much for the Hakkas. They fled over the mountains at about half-past nine: their loss in killed and wounded being 40, while the Japanese had 2 killed and 22 wounded.

The small detachment under Captain Hayashi, which had advanced along the left bank of the Takoham to cover the left flank of the main column, came into direct communication with the latter at 11 a.m. on the 23rd.

On the afternoon of the 23rd, all the columns assembled in the vicinity of Sanchue-yung, exactly as had been previously arranged.

On the 24th, after having completed a thorough search for tribesmen hiding in the vicinity of Sanchue-yung, the Yamane column returned to Takoham, as did the other columns to their respective starting points.

Among the incidents of this desultory fighting, it is mentioned that young women very often acted as scouts. At first the Japanese soldiers did not take any notice of these women, but it is stated that their conduct finally left no doubt as to the nature of the business they were about. A little boy of twelve or thirteen boldly accosted Colonel Naito, and handed him a document demanding the dead body of the lad's father, who, deceived by the insurgents, had joined them, and was believed to have been killed by the Japanese. When asked about his mother, the boy answered with tears that she had been burned to death with her house, where she was confined to a sick bed. The Japanese officer, pitying the unhappy child, offered to take him under his care. But he refused, saying he could not leave his father's dead body to decay among the mountains. Neither would he receive a gift of money from his father's enemies. Colonel Naito finally prevailed upon him to carry away a paper securing to him a free passage through the Japanese lines. The same officer, after dislodging the enemy from a hill, found there a number of women. One of them was wounded in the body, and a child that she carried in her arms had been injured on the forehead by the fragments of a shell from the Japanese battery. The mother and child were attended to by a Japanese doctor, who received orders from the Colonel to visit them again on the following morning. In several villages the Japanese soldiers found clothes, note-books, and other articles that had belonged to their comrades, who had been killed and stripped by the tribesmen. The spirit of desperate resistance and the entire disregard for life displayed by the Hakkas excite the genuine admiration of Japanese correspondents, who compare these qualities to the *yamato damashii* of Japan, and say that they recall the state of affairs prevailing in some parts of Kyushu at the time of the Satsuma Rebellion. Not only are the in-

surgers as stubborn and fearless as were the men of Satsuma, but the so-called peaceable inhabitants are entirely in sympathy with them, so much so that it is often impossible to distinguish combatants from non-combatants.

Latters describing the previous march of the Yamane corps from Taipeh to Shin-chuh and the hard fighting done by the Bojo battalion at and near Takoham about the middle of last month, have been very late in arriving, owing to unexplained causes.

As some erroneous reports seem to have been circulated about these operations, it may be worth while to reproduce the outlines of what actually took place.

On the 12th ultimo the Yamane corps began its southerly march from Taipeh. It advanced along the railway in the direction of Lintongpo. Simultaneously, a battalion under Major Bojo marched by the left bank of the Takoham, with orders to join the Yamane corps at Lintongpo. The main body of the Yamane corps, passing through Taotseyuen and Tiongleck commenced the attack of Lintongpo on the morning of the 14th. The engagement began at half-past seven. As had happened elsewhere in the island, the enemy occupied a very advantageous position, the houses forming their citadels being surrounded on all sides by thick and almost impenetrable groves of bamboo. It is stated that in Formosa the bamboo branches into more than ten stems from the same stock, so that it is extremely difficult to dislodge insurgents posted in these groves. Company after company, however, charged in and gradually expelled the insurgents. But when the attacking forces emerged on the opposite sides of the groves, they were subjected to such a deadly fire from innumerable apertures in the walls of the houses, that Major-General Yamane thought it advisable to recall them, and to bombard the houses with six mountain pieces. The artillery did terrible execution in the village, and the infantry again charging into the place, took possession of it at 4 p.m. More than 100 insurgents were shot and cut down, the loss on the Japanese side being 11 killed and wounded.

A company of foot, under Captain Hayashi, which had been advancing at some distance to the right of the main column, dispersed a small party of the enemy on the 14th, and encamped that night at a village a few miles from Lintongpo.

It had been arranged that the Bojo battalion, marching along the left bank of the Takoham, should join the main corps at Lintongpo on the 14th. But neither on that day nor on the following did the battalion make its appearance, and great anxiety was felt about its safety. Major-General Yamane wished to march to the rescue of the battalion, which must certainly be in trouble, but his position at Lintongpo being menaced by a large body of insurgents collected at Niulangho, about three miles off, he had first to disperse the latter before proceeding to Major Bojo's assistance. Consequently, at 8 a.m. on the 16th, he advanced to the attack of Niulangho, and obtained possession of it at half past seven, killing 20 of the insurgents and sustaining no loss himself. He caused all the barracks to be burnt and all works of defence demolished. Then at once retracing their steps, his troops reached Lintongpo at 9 a.m. They were there met by a messenger from the Bojo battalion, a private of the first class, Hirai Heikichi, by name, who had just succeeded in getting to the place after various dangers and narrow escapes. He had shaved his head, and put on a dirty suit of Chinese clothes with a large bamboo hat. He told the Major-General and his staff that the Bojo battalion was surrounded by a superior force of the enemy and was on the verge of starvation.

At 11 a.m., that is to say immediately after their return from the fighting at Niulangho, a portion of the troops under Major-General Yamane left Lintongpo to relieve the Bojo battalion. They came in sight of Takoham at 1 p.m. Planting a battery on the left bank of the river opposite the village of Takoham, a cannonade was opened at 2. A company of foot having been detached to protect the battery, the rest of the force, consisting of two companies,

marched down to the river by a precipitous slope, and wading across a distance of more than 1,000 metres under a smart fire, climbed up the high bank on the opposite side. Forming on the bank in battle array, they at once advanced to the attack of Takoham, which, after a stout resistance for several hours, was captured a little before dusk, the enemy flying across the river.

While the Yamane corps was besieging Takoham, it was joined by a small force belonging to the Bojo battalion, then posted on a neighbouring mountain. The enemy having gradually drawn off after the fall of Takoham, the Bojo battalion was enabled to march down and join the Yamane corps on the morning of the 17th.

The story told by the Bojo battalion was this:—As far as Sauchue-yung, where it encamped on the night of the 12th, it met with no enemy. But a few miles beyond that place, it began to be attacked by a large body of insurgents. The country was mountainous and the roads were extremely bad. At one place the battalion, then advancing in single file, was cut in two. On the 14th, it pushed as far as an eminence a few miles from Takoham, being all the time under fire from an increasing number of insurgents. Finding the position untenable, the Japanese retreated about 700 or 800 metres, and bivouacked there for that night. Next morning, the number of the insurgents still increasing, the battalion again retreated about 400 metres, and took up a position at a place surrounded on all sides by lofty hills. Digging shelter trenches, the troops determined to hold the place against the enemy, until succour could arrive from either the Yamane corps or the head-quarters at Taipeh. Four messengers were sent out, two each to these respective destinations. The battalion could have cut its way through the insurgents and proceeded to Lintongpo, but it was deterred from doing so by the fact that there were about thirty wounded who would have had to be left behind. One of the messengers, as already stated, succeeded in reaching Lintongpo, and another afterwards reached Taipeh in safety, two having been killed on the way. This affair is evidently that alluded to by the correspondent of the *Hongkong Telegraph*, who said that 800 Japanese had been defeated at Takoham with a loss of 600.

The following telegram from Governor-General Count Kabayama, dated Taipeh, August 4th, 6.40 p.m., has been received at the Imperial Military Head-quarters in Tokyo:—

"The Imperial Guards Division having decided upon undertaking for a second time operations for clearing the villages of insurgents, the head-quarters of the Division and the Matsubara column left Taipeh on the 29th of July and reached Taotseyuen on the same day. The Naito column leaving Haishankan on the same day, defeated about 400 insurgents to the north-west of Kwei-lun, killing 64, and bivouacked to the north-east of Taotseyuen. The casualties on the Japanese side were 5 killed and wounded.

"On the 30th, the head-quarters of the Division and the Matsubara column reached Tiongleck. The Naito column continued its westerly march without meeting a single insurgent.

"On the 31st, the Yamane column left Takoham and moved toward Sin-fu. A part was ordered to advance along the left bank of the Takoham, while the rest marched to Lungtanpo, whence a small force was despatched in a northerly direction. In this manner the Yamane column attacked the insurgents, who had constructed defensive works along the plateau extending from the left bank of the Takoham, a little to the north-west of Si-si, as far as the south of Yang-mei-leck. The outer line of works was taken. Meanwhile, the Naito column was ordered to repair to Tiongleck to replace the Matsubara column which had advanced to the attack of the enemy's left flank. The latter force encamped that night on a tableland about 1,000 metres south of Yang-mei-leck, after having killed about 40 of the enemy, with casualties on the Japanese side of 11 killed and wounded. The head-quarters of the division and the Naito column remained that night at Tiongleck.

"On the 1st of August, the head-quarters of

the Division reached Ta-ho-kan. The Matsubara column attacked a strong fort on the left flank of the enemy and took it at 1 p.m. The Yamane column drove the enemy from Ninlan-wa and advanced toward Sin-fu.

"On the 2nd, the Yamane and Matsubara columns surrounded Sin-fu, and took it at 3 p.m. Leaving 200 dead behind them, the bulk of the insurgents seem to have retreated in the direction of Miao-li. The two columns encamped that night in the vicinity of Sin-fu.

"On the 3rd, the cavalry and artillery of the Naito column were attached to the Yamane column, posted at Sin-fu. The rest of the Naito column and the Matsubara column entered Sin-chuh, together with the head-quarters of the Division."

KOREAN NEWS.

Count Inouye's arrival in Söul forms the subject of the latest newspaper correspondence from the Korean capital. He was greeted on landing at Yong-san—which place he reached at 7 p.m. on the 20th ultimo—by the members of the Japanese Legation, the Japanese Advisers of the Korean Government, the officers of the Japanese troops stationed in Söul, the principal Japanese residents, and a number of Korean functionaries, among them being Mr. Jokohan, Minister of Justice; Mr. Yu Kitsuei, Acting Minister of Home Affairs; and Mr. An Keiju, Police Inspector-General. The Minister and Countess Inouye proceeded to Söul in palanquins, followed by the rest in *jinrikisha* and on horseback. At the South Gate, the party was met by two companies of Japanese troops, the bulk of the Japanese residents, the school boys, and so forth, while the streets inside were lined with a dense crowd of Koreans, who had collected in the expectation of seeing the Japanese Minister enter the city with Pak, followed by a formidable army, and who were, consequently, greatly surprised by what they actually saw.

The first to call on the Japanese Minister at the Legation were Prince Wi-hwa, Mr. Boku Teiyo, Minister President of State; Mr. Kim, Minister of Foreign Affairs; Mr. Shin, Minister of War; Mr. Li, Minister of Education, and a few other Ministers and Vice-Ministers.

The Korean Government promulgated Regulations for the newly established postal system in the *Official Gazette* of the 21st ultimo. Twenty-four post offices are to be opened in the Kingdom, with a large number of smaller stations. For the present, however, the system will be brought into operation only in the capital and Ninsen. The stamps, of four kinds, were manufactured in the United States some years ago when a commission went there to study postal business. The Regulations just promulgated are based upon those of Japan.

Cholera is said to be spreading in Korea. The Authorities are constructing a cholera hospital in Söul, and a sum of 20,000 yen has set aside to defray the expense of the institution.

Count Inouye is said to have had a long audience with the Korean King on the 25th ultimo. He proceeded to the Palace at 2 p.m. and left there a little after 10, the actual interview lasting from 3 to 9, after which the Count is reported to have had the honour of dining with His Majesty. As usual there were present at the audience the Queen and the Crown Prince. This being the Japanese Minister's first interview since his arrival in Söul, extraordinary importance naturally attached to the event by the politicians of the Korean capital. The Japanese correspondents confess ignorance as to the nature of the conversation between the King and the Count. It is stated, however, that, according to trustworthy information, the Japanese Minister confined himself to speaking of what had thus far taken place, and reserved to a future occasion the discussion of future measures. The conversation is, moreover, said to have been conducted in a spirit of marked mutual confidence and frankness. Among the King's numerous misconceptions, which Count Inouye corrected, one concerned Lieutenant-General Viscount Miura, who is generally expected to be Count Inouye's successor sooner or later.

Pak, it seems, in his conversations with the King, used to speak of Viscount Miura as one of his best Japanese friends, and the news that the Viscount would probably come to Söul as Japanese Representative had consequently caused much uneasiness, especially since it was received just when Pak had fled to Japan. His Majesty's anxiety on that score was dispelled by Count Inouye's assurance that no connection whatever existed between Pak's flight and Viscount Miura's probable appointment to Söul.

Absurd rumours are still said to agitate the inhabitants of Söul. They refuse to believe that Pak is not coming back at the head of a Japanese army. Recently a few Japanese warships entered Ninsen on their way home from Port Arthur. The Koreans at once concluded that Pak was on board one of these ships, and rumours of the wildest description are said to have been circulated in Söul.

How devoid the Koreans are of the spirit of independence may be seen from the fact that they take delight in anguring the downfall of their unfortunate country from every natural phenomenon that appears in the least extraordinary. On the 25th ultimo, considerable excitement was caused in Söul because a bright star could be seen by the side of a new moon before the sun had entirely set. This was at once interpreted by white-bearded *savants* as a sign of the extinction of Korea's national existence.

The *soshi* Sasaki, who was the cause of the Pak incident, left Söul, on the 24th ultimo in consequence of a Consular notice served on him to remove himself from Korea within ten days. A Korean official Kanzaigeki, who had extracted the implicating information from Sasaki, was sent to Ninsen to hand a sum of money to the departing *soshi* as a reward for his services to the State!

Notwithstanding the faction struggles continually distracting the political world in Söul, the work of administrative reform is reported to be making slow but steady progress. This is owing to the presence of a staff of Japanese advisers in every Department of State. Concerning the postal service recently established in Söul, it is stated that the number of letters handled on the opening day, the 21st ultimo, was 6. During the next three days, the number averaged 9 daily, and it increased to 11 on the 5th day. The system is still in its infancy, but so far as office arrangements are concerned, there appears to be little to find fault with.

THE "KOKUMIN SHIMBUN."

We regret to have been the unintentional means of betraying the *Kokumin Shimbun* into the display that disfigures its reply to our article on the subject of Great Britain and Japan. "The summer insect," says our contemporary, "knows nothing of ice. Mercenary soldiers do not understand national troops. Slaves have no idea of liberty. The hired organ of a Foreign Government can not appreciate the champions of independence. It is unavoidable that the *Japan Mail* should be unable to comprehend our true meaning." What a pity that the *Kokumin* did not perceive these things before it embarked upon a controversy destined to betray it into such comical extravagances. For our own part, our curiosity is satisfied. In noticing the writings of the *Kokumin* our only object was to ascertain what kind of logic underlay the views of a journal that counted Great Britain contemptible, and desired to link Japan's destiny with that of Russia. Of course the whole problem is now solved. Since the *Japan Mail* is a summer insect, a mercenary soldier, a slave, and a hired organ of a foreign Government, the public is at once enabled to estimate Great Britain's status and her value as an ally. Englishmen, also, are helped to perceive the moral calibre of the pro-Russian party in Japan. It is all very instructive, and we can not but compliment the *Kokumin Shimbun* on its clear insight into international affairs, its instinct of relevancy, and the perfect courtesy that marks its conduct of a controversy.

ECONOMICAL AND INDUSTRIAL.

The banks of Yokohama have lowered their rates of interest since the 1st instant, the new rates being as follows:—

	Overdraft (per 100 yen per diem.)	Advances (per 100 yen per diem.)	Discount (per 100 yen per diem.)
2nd National	2 sen 8-9 rin	2 sen 8-9 rin	2 sen 5-6 rin
74th National	2 sen 8-9 rin	2 sen 7-8 rin	2 sen 6-7 rin
Mitsui (Branch)	2 sen 6-8 rin	2 sen 6-7 rin	2 sen 5-8 rin
1st National	2 sen 7-9 rin	2 sen 5-8 rin	2 sen 6-7 rin
Yokohama	2 sen 7-8 rin	2 sen 6-7 rin	2 sen 5-6 rin

It should be noticed that these rates are generally standard. Actual rates may be a trifle higher or lower according to the financial circumstances of borrowers.

According to investigations made by the Finance Department, the amount of Government paper money and bank notes in circulation at the end of June last was 33,277,662 yen 25 sen. Compared with the figures for the preceding month, there is a decrease of 426,312 yen 50 sen in Government paper, and of 5,735 yen 50 sen in bank notes, as shown by the following table:—

	End of June.	End of May.	Decrease
Government paper money			
of 1 yen and higher denominations	9,149,711.500	9,516,024.000	366,312.500
Government paper money of 50 sen and lower denominations	2,835,311.750	2,895,311.750	60,000.000
Total	11,985,023.250	12,411,335.750	426,312.500
Bank Notes	21,292,719.000	21,292,719.000	—
Notes of Banks closed	78,655.500	78,655.500	—
Total	21,371,374.500	21,371,374.500	—
Grand Total	33,277,662.250	33,782,710.250	505,048.000

An increasing desire manifests itself among business men, says the *Chugai Shogyo Shimpō*, to extend the list of shares taken as security by the Bank of Japan, and also to increase the value at which these shares are taken. The present list of shares accepted as security and their security values are as follow:—

	Paid up Yen.	Security value. Yen.	Current Market Price. Yen.
Kyushu Tetsudo	41	32	51
San-yo Tetsudo	30	21	37
Tanko Tetsudo	50	45	93
Ryomo Tetsudo	50	45	65
Ko-Bu Tetsudo	45	60	100
Kansai Tetsudo	47	35	57
Hankai Tetsudo	50	80	133
Osaka Tetsudo	50	50	65
Sanuki Tetsudo	50	30	54
Osaka Shosen Kaisha	25	32	33

The scale of security value at the Bank of Japan was fixed in November, 1893, and has since been kept unchanged. Since those days various other shares have come to command credit in the market, and changes have also taken place in the relative financial positions of the different companies. Hence it is natural that a revision of the list and of the scale of security values should be advocated in business circles. Among shares that might safely be added to the list, the following are mentioned:—

	Paid up, yen.	Current Market Price, yen.
Chiku-Ho Tetsudo	50	86
Sangu Tetsudo	50	64
Kawagoye Tetsudo	50	66
Han-Tan Tetsudo	50	49
So-Bu Tetsudo	50	88
Nara Tetsudo	50	50
Koshu Tetsudo	50	63
Naniwa Tetsudo	50	50

Next to railway enterprises, projects for banking establishments are the most prevalent feature in business circles. There is not a large commercial centre in the country where the establishment of one or two private banks is not under contemplation. Some persons seem to think it important that a check should be applied to this tendency. But according to information obtained by the *Chugai Shogyo*, the officials of the Department of Finance are disinclined to adopt any repressive policy. At present all the private banks are in a thriving condition, and there is evidently room for the extension of banking operations. Hence the Okurasho will probably not hesitate to grant a charter to any new bank whose projectors possess the proper qualifications.

The *Chugai Shogyo Shimpō* states that there is a project in Yokohama for the establishment of a private bank with a capital of 15,000,000 yen. The names of the projectors are kept

secret for some unexplained reason. As to the origin of the project, our contemporary thinks that it must be attributed either to a reaction against the monopoly enjoyed by the Specie Bank in its special field of operations, or to the mania now prevailing in business circles for the establishment of banks. If the project owes its conception to the former cause, the *Chugai Shogyo* sees reason to approve it, for the sake of foreign trade; but if it be referable to the other cause, the projectors are warned that they will probably be disappointed, for the profits secured by banks in recent years are not likely to continue much longer.

The Kyoto people's idea of having the closing of the Exhibition postponed, has failed. But they have succeeded, it is reported, in persuading the exhibitors to continue the institution for a further term of three months in the shape of a bazaar.

According to statistics prepared in the Department of Agriculture and Commerce, the total quantity of tea of various kinds produced in 1894, throughout the whole country, except Kanagawa, Aomori, and Yamaguchi, from which reports did not arrive in time, was as follows:—

	Viyokuro. Kamme.	Senchu. Kamme.	Black Tea. Kamme.
1894.....	104,593.....	5,123,949.....	48,648
	Uryn. Kamme.	Pancha. Kamme.	Total. Kamme.
1894.....	17,224.....	2,395,951.....	7,690,365

1 Kamme—a little over 8½ lbs. Av.

An agricultural produce insurance company is as yet unknown in Japan. The need of such an institution has long been felt, and researches have even been made into the subject, but thus far nothing practical has come out of them. Some bankers at Aboshi, in the province of Harima, are reported to have now under consideration a scheme for establishing such a company in their locality.

The total quantity of rice exported from Kobe during the month of July was 3,285 tons, as shown in the following table:—

	Quantity. Tons.	Value. Yen.
Uncleaned rice	1,331.....	89,916.00
Cleaned rice.....	1,846.....	161,824.65
Ground rice.....	8.....	160.00
Total.....	3,185.....	251,900.65

The quantity exported during the nine months from November, 1894, to July, 1895, inclusive, is given as 100,164 tons.

The following statistics collected in the Department of Finance show the quantity and value of camphor exported to the various countries mentioned during the first half of the present year:—

	Quantity. Catties.	Value. Yen.
Hongkong	822,453.....	467,414.69
United States	89,054.....	58,902.85
Germany	114,125.....	56,255.89
England	71,720.....	41,245.27
France	28,376.....	13,295.87
British India	8,475.....	5,622.20
China	9,219.....	4,080.56
Canada	1,989.....	1,462.50
Australia	1,637.....	1,077.60
Korea	151.....	100.30

Total..... 1,147,199...649,457.73

Application has been made for a charter for an electric railway connecting Yokohama with Fujisawa, touching *en route* at Kamakura, Shichiriga-hama, and Enoshima, the whole distance being 17 miles 42 chains. The capital is put at 700,000 *yen*; the wide gauge of 4ft. 8 in. is to be adopted; the speed will be 30 miles per hour; and trains are to leave both termini every 15 minutes. Among a long list of projectors, we notice the names of Messrs. Wakao Ippai, Watanabe Jiyemon, Kimura Masamoto, Minakawa Shiro, Nakano Buei, and so forth.

As already stated, there are several rival projects for laying electric tramways in the capital. Negotiations for amalgamation are proceeding between two of the principal companies, and

hopes of success are entertained. The united company's capital would be 2,800,000 *yen*, divided equally among the two original companies.

The Nippon Tetsudo Kaisha has decided to send a commission to Europe and America to study all the different aspects of railway business. Messrs. Fujita Shigemichi and Adachi Taro have been selected for the mission. They are to leave here for Canada on the 22nd instant, and will visit all the principal countries of the West, spending altogether about twelve months on the tour.

The Nippon Tetsudo Kaisha's traffic receipts for the first half of the present year amounted to 1,773,902 *yen*. The length of lines open for traffic was 596 miles; the total distance traversed by trains was 1,431,525 miles, and the actual business days during the period numbered 181. Thus the average earnings per mile of the line were 3,006 *yen*, and the daily amount per mile was 16 *yen* 60 *sen*. Compared with the figure for the corresponding period of last year there is an increase of 244,299 *yen* in traffic receipts.

CURRENT TOPICS.

The Radicals of the Kwanto provinces held a meeting in the Nakamura Restaurant, Ryogoku, Tokyo, on the 4th inst. There were present Messrs. Yamada Toji, Ishizaka Shoko, Nakajima Matagoro, Yamada Taizo, and more than two hundred others. A resolution unanimously adopted at the meeting contains a clause expressing enthusiastic approval of the manifesto recently issued from the head-quarters of the Party. This circumstance, coupled with reports coming in from other localities, makes it plain that, notwithstanding rumours circulated by the Progressionist organs to the contrary, the Radical Party is in no danger whatever of a rupture. It is true that the Radicals in Echigo behaved in a thoughtless manner, but the ease with which they were recalled from their mistaken course seems to indicate that there is no desire on their part to separate from the party.

The Progressionist journals and their sympathizers are disgracing themselves by personal attacks upon the Premier on account of his promotion to the rank of Marquis and decoration with the Grand Order of Merit. The *Kokumin Shimbun* and the *Mainichi Shimbun*, as usual are conspicuous for unscrupulous abuse of one of their country's greatest statesman. The methods pursued by these journals can not fail to be condemned by all sober-minded men.

Concerning the projected establishment of an Iron Foundry, a journal in Tokyo recently published a rumour to the effect, that Marquis Ito's idea is to permit a certain well known foreign company to open a branch establishment in this country on condition that the foundry becomes the property of the Government by purchase after lapse of a certain length of time; that Count Matsukata, on the other hand, is in favour of the work being undertaken by the State and afterwards handed over to a private firm, such as the Mitsubishi or the Mitsui; and that the latter proposal will most probably be adopted by the Cabinet. The *Nichi Nichi*, however, denies that the rumour has any foundation. According to its informant, who is described as an official connected with the project, the Government long ago decided in favour of a state-owned foundry, and there is no difference of opinion in the Cabinet.

Concerning the slow progress made in the pacification of Formosa, some persons, apparently well informed, allege that the Imperial Guards are not really the flower of the Japanese Army, and that they are rather inferior in many important respects to the troops of the Divisions. According to these military critics, the fault lies in the method of recruiting the Guards, more importance being attached to good looks and family standing than to military qualifications. In consequence of this mode of selection, the Guards are composed, for the most part, of the sons of wealthy merchants and

well-to-do farmers; while the other Divisions consist almost exclusively of sturdy peasants. There appears to be some truth in these criticisms, but the question is obscure. Whatever the truth may be, the Guards are considered to be too lenient and forbearing in their method of dealing with the insurgents.

The appointment of a Minister Plenipotentiary to Söul by Russia has attracted a good deal of attention in Tokyo. Nothing definite is known by the metropolitan journalists about the antecedents and ability of Mr. Speyer. But from the fact that he has represented his country in Persia, where Russia and England are playing an important game, and that he has been selected for the Legation in Söul at the present juncture, the Japanese editors conclude that he must be a diplomat of first rate capacity. They make his appointment an opportunity to repeat their conviction that a strong policy must be pursued in Korea by Japan, yielding nothing to any other Power.

Writing on the subject of the pacification of Formosa, the *Fiji Shimpö* remarks that the obstinate resistance offered by the native tribes will prove an advantage to Japan. Its inevitable result will be the adoption of sweeping measures, which will end either in the extermination of the tribesmen or their deportation from the island, thus getting rid once for all of troublesome characters and altogether avoiding complicated questions relating to rights of private property. The permanent beneficial consequences of such a step are held to more than outweigh the loss of lives and money. Our contemporary goes so far as to suggest that not only those actually resisting by force, but even such as may be suspected of unwillingness to submit to Japanese rule, would be driven out of the island. The *Fiji* hears also that arms and ammunition are being secretly supplied to the insurgents by sympathizers on the continent. Should this report be true, our contemporary entertains no doubt that the Japanese Government will have the matter righted by the Chinese Government.

The more the Liaotung question is discussed, the more absurd becomes the position taken up by the Opposition politicians. The interesting controversy still going on between the *Nichi Nichi* and the *Nippon* on this subject must have served to remove many of the misconceptions and misstatements circulated by interested politicians. Another severe blow has been given to the Extremists by Mr. Sugiura in the editorial columns of the *Tokyo Asahi Shimbun*. He is strictly independent in politics, and this circumstance, no less than his reputation for sound judgment, gives weight to his articles on any political subject. He says that those who make so much noise about the so-called question of Ministerial responsibility do not understand their own contention. The Liaotung question remains to be adjusted, and pending its final settlement, no one can possibly say in what respects the Ministers are blameworthy or whether they are at all to be blamed. Who knows whether the Government is not devising some scheme to conclude the matter in a way highly creditable to itself and to the country? Under such circumstances, to demand the resignation of the Ministers, would be tantamount to judging their actions in advance. Mr. Sugiura advises the Opposition politicians to desist from such an unreasonable course, and to give the Cabinet time to settle the question according to its views. Should the settlement prove unsatisfactory, then not only the Opposition politicians but the whole nation ought to unite in censuring the Cabinet. He is of opinion that the public takes too light a view of political responsibility. Formerly statesmen answered for their mistakes by committing *harakiri*. Such a method may be out of the question now, but Mr. Sugiura is persuaded that the public should consider the question of political responsibility more seriously.

JAPANESE VIEWS ON THE ORIENTAL QUESTION.

The *Taiyo* of latest date contains two articles on the Oriental Question, one by Mr. Oishi Masami, formerly Japanese Minister to Korea, and the other by Mr. Inagaki Manjiro, author of "Japan and the Pacific." Mr. Oishi advocates an Anglo-Japanese alliance, and in the present essay expounds his views more fully than he has yet attempted. He commences with the consideration of Japan's position in Korea. The Korean question, he says, resolves itself into a Russian question. It is not with Korea but with Russia that Japan has to settle the so-called Korean problem. Collision with the Northern Power is inevitable if Japan wants to maintain her position in the peninsular kingdom. And ought she to preserve her influence there? By all means, answers the writer. Her interest as well as her honour forbid her to pursue any other course with regard to Korea. As to considerations of interest, he mentions, first, that Japan has invested a large amount of money in the peninsula, the latest instance being the advance of 3 million *yen* to the Government of that country; secondly, that the Japanese form the bulk of the foreign community in Korea, whereas not a single Russian merchant is to be found in the whole kingdom; thirdly, that Korea is the natural bulwark of peace in the Sea of Japan; fourthly, that the loss of Korea would endanger the western coasts of Japan; and fifthly, that the abandonment of Korea would seriously interfere with the future expansion of this Empire. He has likewise much to say on the subject of the national honour being inseparably bound up with the maintenance of Korean integrity against the danger of encroachment by any other Power. From whatever point he views the matter, Mr. Oishi declares that Japan can never abandon Korea. But how is she to maintain herself there? That is a question now engaging the serious attention of the Japanese nation. Some propose to attain the object single-handed by increasing the fighting capacity of the country to the necessary degree. Mr. Oishi is, of course, aware of the necessity of increasing the Army and the Navy, but the measure would take years to complete, and, moreover, must be kept within the limits prescribed by the resources of the people. Nay more, if everything were to be decided by might, where would diplomacy come in? Mr. Oishi maintains that, incomplete as Japan's military preparations are, it is not difficult for her to maintain her ground against Russia in the peninsular kingdom by means of skilful diplomacy. In this respect, he thinks that the Korean question has to be settled not in the East, but in Europe. He urges the importance of forming an alliance with England. England, he says, is the only Power in a condition to fight with Russia in these waters. But will England consent to such an alliance? Mr. Oishi is inclined to believe she will. He then goes on to survey the situation in Europe in general and in England in particular. The fall of the Liberal Cabinet is ascribed to public dissatisfaction with its weak and irresolute foreign policy. While the Liberals are contented with guarding what England has already obtained, the Conservatives are in favour of a more aggressive policy. The protective commercial system pursued by the continental Powers of Europe as well as the great Republic of America, compels England more than ever to seek the extension of her markets in the less civilized portions of the world, in South America, Africa, and Asia. So far as Asia is concerned, England cannot, in Mr. Oishi's opinion, very well dispense with Japanese friendship and assistance in resisting the southward march of Russia. He also thinks that Japan's friendship is of great importance to England for the extension of her trade. He regards the state of things as rather critical in the Mediterranean, where the English, French, and Russians are said to be watching each other jealously. This is a rare opportunity for Japan. Then explaining more at length the superior position held by England to all other European

Powers in the East, the writer declares in conclusion:—"Russia is the enemy of civilization. In considering the question of an alliance, regard should not be had exclusively to interests and convenience. The great tendency of the world must be always kept in view. It is a law that whoever opposes the great current of civilization is doomed to perish. It is thus found that not only interest, honour, and circumstances, but a regard for civilization counsel Japan to ally herself with England, in opposition to Russia, so that she may become the arbiter of the Oriental question in general and of the Korean problem in particular."

Mr. Inagaki's object is to define the national policy to be pursued in the immediate future. There is nothing original in the policy defined by him: it is, in effect, the same as that which the whole nation is united in urging, and which the Government is believed to be in favour of. But his essay is worth notice on account of the views expressed on various aspects of the situation in the East. He considers that the peace of the Orient may be disturbed in three ways. First, it may be disturbed as the result of a break-up of the present equilibrium in Europe. The writer thinks that, as matters now stand, the Dreibund has little prospect of a renewal three years hence when its period elapses. The idea of combining Southern Europe against Northern Europe is regarded by him as a mere chimera. Secondly, the peace of the East may be jeopardized by the ambition of a European Power. In about five years, the Siberian Railway will be completed, and it may be expected that Russia will take active steps to obtain an ice-free port as terminus for her transcontinental road. Thirdly and lastly, peace may be disturbed by a scramble of the Powers for a share of the spoil in the partition of China. Nothing could be better for the sake of the East than the awakening of China and an effective coöperation between her and Japan. But Mr. Inagaki, in common with a large number of his countrymen—among the number being a writer of no less authority than the distinguished editor of the *Fiji Shimpō*—has little hope of China's resurrection. On the contrary, he is convinced that the big Empire is doomed to be cut up and appropriated by the Powers, and that, too, at no very distant date. In any of these emergencies, Japan can not be a mere spectator, but must take a leading part in whatever drama may be enacted on the stage of the East. Especially in the event of the partition of China, must Japan step in as a Power entitled to a voice in the adjustment of the question, with a resolution to fight for her rights against any of the European Powers. Too vindicate her rights and honour in any of the above mentioned contingencies, it is necessary for Japan to undertake preparatory measures on an adequately large scale. Mr. Inagaki recommends the increase of the peace standing of the Army from seventy-five thousand to a hundred and twenty, or even a hundred and fifty thousand, with a corresponding development of the war footing; the addition of five or six squadrons to the Navy; the establishment of two naval ports in the Sea of Japan; the establishment of large arsenals so as to secure complete independence as to arms and ammunition; the construction of more than 100 torpedo boats, and the encouragement of mercantile navigation so that a large number of transports may at any time be available. He urges the Cabinet to call together an extraordinary session of the Diet and introduce measures in the above sense for the approval of the Houses. He has little doubt of their receiving unanimous approval. The effect of the passage of these measures through the Houses of the Diet would be beneficial to the peace of the East. The news, he says, would produce a very salutary effect upon the minds of European statesmen. Europeans are as calculating as the Japanese are sentimental. The Japanese did not hesitate to attack Port Arthur with a Division and Mixed Brigade, and took it at a blow. Admiral Courbet, however, thought that it would be necessary to invest the place

with 50,000 men for six months. When Napoleon III. surrendered at Sedan, he had 80,000 men under him, and no doubt the course pursued by him was prudent, but a Japanese general in his place would have fought to the last. This difference in the mental constitution of Japanese and Europeans ought to be taken advantage of by Japanese diplomats. Mr. Inagaki thinks that, if it becomes known in Europe that Japan has decided upon measures of preparation such as those sketched out above, the fact would at once be taken notice of by the Powers and they would not fail thenceforward to rate Japan at her true value. He is very sanguine, believing that while on the one hand, Japan's enemies would feel the inadvisability of inviting her opposition, her friends would on the other, become more friendly. Among her friends, are classed the United States, Great Britain, Italy, and, to a lesser degree, Austria. Concerning England, he writes in the following strain:—"England took the lead in revising her treaty with Japan. She maintained strict neutrality during the recent Japanese-Chinese war, while at the conclusion of the war she refused to join the diplomatic combination of the three Powers. She did not oppose the cession of Formosa to Japan. She seems to be delighted with the rise of a new bulwark against Russia. In these and other respects, it is easy to see that she is growing more and more friendly to this country. And it may even be imagined that when our measures of military and naval development are carried out, she will desire to convert the friendship between the two countries into a definite alliance."

THE HARVEST PROSPECTS.

The *Chugai Shogyo Shimpō* has collected a large mass of information from all parts of the country with regard to agricultural prospects. Concerning rice, it is stated that the outlook has always been gloomy in the Provinces of Kwanto on account of cool and rainy weather. The provinces of the Hokuriku, Chugoku, Shikoku, and Kyushu were at first doing well, but even in these localities the recent bad weather has done great injury. In some parts of Kyushu it is reported that the young shoots having been up-rooted by the force of the recent typhoon, the fields have to be replanted. From these reports it is concluded that, even supposing improved weather hereafter, the yield of rice will show a decrease of from 20 to 30 per cent. as compared with that of a normal year.

As to the Summer and Autumn crop of silk, the cool and rainy weather having heavily told upon the growth of the worms, the yield is estimated at about 70 per cent. of a normal year.

Similarly unsatisfactory is the prospect of the cotton crop. In the provinces of Kawachi, Izumi, and Settsu, which are the chief centres of production, the plants are so stunted in growth and were so seriously damaged by the recent storm, that, however satisfactory the rest of the season may be, there is little hope of their reaching normal dimensions. Almost equally bad is the prospect in Owari, Mikawa, Ise, and Totomi. It is estimated that the yield will show, on the whole, a decrease of at least 30 per cent.

Beans, millet, buckwheat, and so forth, have made too rank a growth to promise a good harvest. Even in the provinces of the North-East, where the prospect is stated to be tolerably good, there will be a decrease of from 20 to 30 per cent.; while in Kyushu, the yield will be still more scanty on account of the recent typhoon.

The growth of tobacco leaves had been exceedingly good, and a splendid harvest was expected in Kyushu, especially in Satsuma, but the recent storms wrought great havoc. A report from Taniyama, in Satsuma, states that the damage done by the late gales was so serious that the yield is expected to be only about 50 per cent. of an ordinary year. The leaves in Kazusa have been miserable in growth and appearance from the first. A better prospect is reported from Hatano in Sagami and Mito, but even in these

localities the harvest is not expected to be as good as usual.

Hemp plants have made tolerably good growth, and the process of cutting them and taking off the rind has already been commenced. It is reported that the present damp weather seriously interferes with drying operations.

CHINESE ITEMS.

The new Chinese Minister to Japan, Mr. Yü Kêng, is not spoken of in very laudatory terms. He is said to have no special reputation for diplomatic astuteness and little experience to guide him. Of foreign customs even, he is virtually ignorant. Possibly his appointment has influenced the Japanese Government's decision to conduct the negotiations for the return of the Liaotung Peninsula in Tientsin, not in Tokyo. The latter place was originally selected, but since it has become apparent that the Chinese Government is not prepared to send to Japan a plenipotentiary competent to deal with so large a question, its settlement will be entrusted to the Representative of Japan in China, the Chinese delegates being the Viceroy Li and Mr. Wong. It is understood that the terms proposed by Japan have already been communicated to the Powers directly or indirectly concerned, but what opinion, if any, they have expressed is not yet known.

The river pirates of Chêkiang now adopt the methods of Grecian banditti: they capture men of substance and hold them to ransom. Their latest victim was a wealthy merchant of Huchow who was on his way to Soochow to buy silk. When the unhappy man's ransom came, he was in a demented condition owing to fear of a horrible death.

A very curious question has been raised with reference to the notes of the Hongkong and Shanghai Bank. It appears that the Chinese, among whom they circulate, often write upon them—in ideographic script, of course—comments of an abominable and insolent character, sometimes libelling the staff of the Bank, the foreign consuls, or foreigners in general. It is doubtless an excellent joke in Chinese eyes to see foreign merchants gravely receiving and paying out notes that bear such superscriptions. Folks urge that the Bank should turn the laugh by announcing its resolve not to cash notes thus disfigured, but it is very questionable whether the Bank could repudiate its own notes for any reason of the kind.

A Mahomedan revolt in Kansu appears to be assuming serious dimensions. The trouble originated in a dispute between two sects. It was temporarily quelled by the exertions of a Mahomedan General, but subsequently, during his absence at Peking, whither he went in command of a contingent of his fellow-believers, his family were murdered and his possessions seized. By and by some Chinese officials, attempting to arbitrate, were killed, and Chinese soldiers proceeding to punish this violence were utterly routed. Mahomedans are now arming on an extensive scale and Chinese troops are massing to oppose them.

According to statements emanating from Chinese sources, active measures are on foot to resuscitate the Peiyang Squadron. Two iron-clads, ordered in Europe before the war, are expected to arrive in China before the end of the year, and seven cruisers have been ordered, two in England, two in France, and three in Germany. The celebrated Yuan Shihkai, formerly Chinese Representative in Seoul and certainly a very able diplomatist whatever may be his naval capacities, is expected to be placed at the head of the new Squadron. There is also talk of the Emperor's adopting suggestions urged by a memorialist who served with the old Squadron, to the effect that the whole navy of the empire should be placed under the sole control of the Central Government; that the provincial authorities should have nothing whatever to do with the ships, arsenals, or dockyards, and that the Admirals should be appointed in every case from Peking. Such a reform would mean much. In the recent war the Nanyang (southern) Squadron made not the smallest attempt to participate

in the defence of the country, and in every respect China was debilitated by dissipation and division of her strength.

From all parts of China comes intelligence that the war has not produced the smallest perceptible effect on the nation. Some know nothing about it; others believe that their country was victorious. The much predicted wakening of China is a myth: she sleeps as soundly as ever. Had the Japanese gone to Peking and driven the Court from the capital, the pulses of the lethargic Colossus might have been quickened. But that was not to be. The mandarin remains as he always was, and the mandarin's very existence depends on keeping progress at arm's length.

Now and then the world is casually reminded of what is meant by a Chinese prison. Recently the sub-prefect of Chien-chou caused two prisoners to be bambood so severely that they died. He was sent to prison, as were also the two *yamên* runners that administered the beating. But before the sub-prefect's trial came off, the prison had killed him. The runners fared similarly. The horrors of imprisonment brought death before the slowly moving processes of justice reached their case. The fate of the three men was reported in the most indifferent manner. Nothing seemed farther from anybody's fancy than to imagine that the prisons of Hunan are not everything a prison ought to be. But the law must be satisfied. The three dead men were solemnly sentenced to be bambood and banished.

The Governor of Honan has applied to Peking for permission to open mines in that province, and to import foreign machinery for the purpose. At first sight the intelligence suggests an important departure, for China is undoubtedly rich in mineral wealth, and were her underground resources intelligently exploited, the world would soon feel the effect. But experience has taught the public to suspect that all such projects as that of the Governor of Honan are merely pretexts for putting money into the pockets of officials. The province will have to pay for the machinery, but the machinery will never pay the province.

The Mahomedan rebellion in Kansu is reported to be assuming serious dimensions. It appears to be spreading from three different centres of disaffection, and the whole province is in a disordered state. General Tung, the Kashgarian commander-in-chief, who set out from Peking in May with an army of 25,000, has defeated the rebels in two battles, and saved Lanchow, the capital of the province, from being besieged by them. But even with the aid of the territorial troops—some 20,000 strong—he does not seem able to cope fully with the insurrection, and large re-inforcements have had to be sent from Peking, Shensi, and Hupeh. The rebels are said to number 100,000, among whom are 30,000 Buddhists, stirred to revolt by financial distress. Should the Mussulman population in Shensi also take up arms, the trouble may severely tax the resources of the central Government.

Since the Japanese Mint was established in Osaka the Japanese silver *yen*—a beautiful and trustworthy coin—has been steadily gaining a footing in all eastern markets from Singapore to Shanghai. The merchants of Hongkong, however, have long agitated for a British dollar, so that their supply of silver might be placed on an independent basis, and their wishes have at length borne practical fruit, the Bombay Mint having commanded the coinage of the much desired dollar. It is a clumsily designed affair, and has been universally condemned from an artistic point of view, but its ugliness will not interfere with its utility. Meanwhile, the French in Indo-China, where also the Japanese *yen* has largely gone into circulation, have decided to assimilate the weight of the French trade dollar to that of the Japanese coin, and as the steamers of the Messageries Maritimes are required, by their contract, to carry public funds free of charge, the trade dollar can be brought to its Eastern place of circulation more cheaply than either the British dollar or the *yen*. What with chopped Mexicans, Hongkong Britannias,

Saigon Trades, Japanese *Yen*, and Chinese Taels, the currency of the Far East is becoming very prettily complicated.

The story of anti-missionary outrages in Szechuan is not a totally black page: there are some spots of light in the record. Miss Hol, of the China Inland Mission, describes how, when the house in which she and two other ladies resided was attacked by the mob, a man with a drawn sword appeared at the door, and while engaged sharpening his weapon on a stone, warned the rioters that the women were good folk, and that he meant to defend them. The crowd fell back, and one of the ladies attended by a Chinese maid, effected her escape to the *yamên*, only to be refused admittance. But the Chinese attendant raised a loud outcry, wailing that unless the officials gave them refuge they would die at the gates, and at length they gained entry. The officials, however, were too terrified to send succour to the other two ladies. They, also, owed their safety to the man with the sword, who procured chairs for them and got them to the *yamên*. He appears to have remained incognito. Another missionary, escaping from his burning home, entered the house of a Chinese doctor, who swathed him in bandages, covered his head with a Chinese hood, and in the guise of a moribund Chinaman, placed him on the shoulders of coolies and sent him to the *yamên*. Yet another missionary reached the out-station where his wife awaited him, by disguising himself as an official *en route* to meet the in-coming Viceroy, the real officials making him up with blue glasses, long boots, uniform cap, and so forth. But against the comfort inspired by these evidences of native goodwill has to be placed the fact that although a month and a half has elapsed since the riots took place, many missionaries at out-stations in Szechuan still remain without protection, exposed to mob violence at any moment. The whole problem of foreigners' residence in the interior of China becomes more and more perplexing as years go by. As for the Viceroy of Szechuan, Liu Ping-chang, who is charged with direct responsibility for the riots, he doubtless supposed that, being on the eve of surrendering his Viceroyalty, all inconvenient consequences might be avoided so far as concerned himself. But he reckoned without his host, for his successor, Lu Ch'uan-lin, memorialized the Throne that Lin should remain to settle the trouble, since it had taken place during his term of office, and the result was that Liu had to return to Chêngtu, though he had already put a considerable distance between himself and that city.

Germany is reported to have obtained a Concession in Tientsin. The land granted has a river frontage of about two-thirds of a mile and extends backwards some 400 yards from the foreshore. It is below the British Concession, and includes the former American Concession. A period of thirty years will be allowed to buy out existing Chinese interests. There is no expectation that Germany will attempt to reserve the Concession for her own subjects only: the lots will probably be put up to public auction. Hence the event is universally welcomed, for the foreign residents of Tientsin have long been suffering from a state of congestion. It is hinted that this is the reward obtained by Germany for her share in "advising" Japan to surrender the Liaotung Peninsula. If so, the drama of Triple Alliance is now fully *en evidence*. France obtains possession of the territory that should have constituted a buffer state between Indo-China, British territory, and China Proper; Germany gets a concession in Tientsin; France and Russia become Peking's bankers, and Russia acquires an inferential title to some part of Manchuria. It is the prettiest example of vicarious pilfering on record. Japan does the fighting and exacts the spoils of victory, three European Powers wrest the spoils from the victor by a show of overwhelming force, and sell them back to the vanquished in exchange for fresh spoils of which each appropriates a portion. These are *fin-de-siècle* object lessons in national dignity and international morality.

THE JAPANESE IN FORMOSA.

WE are again confronted by a terrible indictment of the Japanese troops. "Japanese inhumanity in Formosa calls aloud for protest," writes the *Japan Gazette*. "Japan in Formosa is repeating the Port Arthur atrocities with cold-blooded resolution. . . . The Japanese are ruthlessly butchering men, women, and children. . . . This sickening massacre of the innocents is not war. Before this hideous sacrifice of life the atrocities of a HEROD seem inoffensive. . . . It is the result of deliberate instructions issued by the officers in charge. It is part of the orders. It has been determined, apparently, not merely to conquer but to exterminate. . . . This savagery will recoil upon the Japanese heads. . . . Suppose Japan had ceded Kiushu to China, does anyone imagine that the haughty spirits of the southern Japanese would lead them to accept Chinese Government without a struggle? But go further, and imagine the Chinese soldiers burning the villages as they went, slicing to pieces helpless infants, infirm women, and mothers with child. Civilized Christendom, infuriated at the sight, would teach such a lesson to the ruthless Celestial as would cause Peking to shudder, and men to speak in affrighted whispers in Far Turkestan of the wrath of the West. . . . A few shots from village patriots is sufficient excuse for the Japanese to send every soul to judgment. . . . In indulging an army in the lust for innocent blood, the Japanese are creating a FRANKENSTEIN which one day may grow beyond control. In inculcating into so many men a contempt for the sacredness of helpless life they are storing up for posterity an inheritance of violence that future rulers of Japan may have cause to curse. The Japanese should pause. If to-day the world applauds, history will be severe in its strictures, and nature has a terrible method of visiting upon the children the sins of those who think to defy her laws with impunity, and she punishes even to the third and fourth generations. Infanticide and a craving for the blood of helpless women is an appalling legacy for heredity to transmit to posterity."

We have made these copious extracts in order that our readers may form a clear idea of the character of the accusation preferred against the Japanese troops in Formosa and of the spirit in which it is preferred. It would scarcely be possible to employ stronger language than the *Japan Gazette* employs. It paints an appalling picture, and when it tells us that "the atrocities of a HEROD seem inoffensive before the hideous sacrifice of life" taking place in Formosa, we see that there is question of one of the most awful pages ever added to the history of warfare. Let us hasten at once to say that if even a small part of the charges formulated

in such excited and sensational language by the *Japan Gazette* be true, it will become the duty of all civilized persons to raise their voices in indignant protest. But for that very reason, for the reason that the crime alleged against the Japanese troops is so terrible, so damnable, it is a plain duty to investigate it thoroughly before passing judgment. By and by, we shall have ample evidence to prove or disprove the charge, but in the meanwhile, since it has been publicly advanced in such unmeasured terms and with such absolute assurance, it can not be suffered to pass without analysis. What is the *Japan Gazette's* authority? "Private advices from the north of Formosa." These are its own words. Not another tittle of evidence does it adduce in support of the awful indictment. "Private advices from the north of Formosa." What is the date of these advices? That is an important point, because there are also public advices apparently up to the latest possible date, and they contain nothing to warrant the *Japan Gazette's* terrible charge. The quickest route for receiving intelligence from Formosa is *via* Shanghai. By that route we have Japanese correspondence up to July 17th, and we have English correspondence up to July 16th and July 20th. The Japanese correspondence need not be considered in this context, but the English correspondence is of vital importance. That of July 16th takes the form of a long letter to the *North China Daily News* from that journal's "correspondent with the Japanese Army." We reproduce the letter in full elsewhere. It does not say one word about the awful and wholesale massacres described by the *Japan Gazette*, the massacres "beside which a HEROD'S atrocities seem inoffensive." On the contrary, it is filled with praises of Japanese leniency, and it describes the Chinese as panic-stricken believers in every idle rumour that reaches them. The letter of July 20th is much shorter. It describes the difficulties encountered by the Japanese, but contains no hint of any barbarities perpetrated by them. This correspondent is actually with the troops. It is incredible that the widespread horrors alleged by the *Japan Gazette* can have occurred without his knowledge. Are the *Japan Gazette's* "private advices from North Formosa" of later date than July the 16th or July 20th? If not, where and when did the massacres of women and children occur; the "slicing to pieces of helpless infants, infirm women, and mothers with child"? If the *Japan Gazette* has any advices warranting its fearful indictment, they should have been produced at once. Never did any newspaper take upon itself such an immense responsibility in so light and trivial a manner. If it can prove its charges, every journal in the East will echo its condemnation. If

it can not, it will stand permanently disgraced and discredited.

We have spoken thus far of journalistic correspondence, written correspondence, and we have seen that, so far from confirming, it emphatically contradicts the *Japan Gazette's* "private advices." Telegraphic intelligence remains to be considered. A telegram from Amoy, dated July 18th, says:—"It is reported that as they retreated, the Japanese destroyed every house they chanced to pass and killed every man, woman, and child they either got hold of or could get a shot at." This, it will be observed is given as a "report." We have discussed it elsewhere and shown that the battle from which the Japanese were supposed to be retreating when the atrocities took place, never occurred at all. Official reports up to July 27th show that the engagement referred to in the Amoy telegram, the engagement of July 17th, when 800 Japanese "advancing from Tokoham towards Tainan-fu" were inveigled into an ambush and lost 600 of their number—official reports show that this engagement never came to the notice of the Japanese Authorities. Everything seems to indicate that it is a greatly exaggerated version of the annihilation of a Japanese detachment of 35 men on the 12th of July. Moreover, the Amoy telegram contains intrinsic evidence of untrustworthiness, for it represents a defeated General as ordering his soldiers to give no quarter, and it asks us to believe that a little band of 200 men, flying from a field where 600 of their comrades lay dead, destroyed every house and killed every human being they encountered in their flight. Such things are not absolutely impossible, but they are in the last degree improbable, and, at any rate, the conduct of a small party of fugitives escaping under such circumstances would constitute a ludicrously inadequate basis for the tremendous indictment preferred by the *Japan Gazette*.

It is a public duty to sift the truth of such charges. If they be proved, every one will join in denouncing the guilty persons. Until they are proved, judgment must be suspended. In the meanwhile, we venture to affirm that never before did a newspaper prefer such a tremendous accusation on the strength of mere "private advices," not a word of which is placed before its readers, and not a word of which is confirmed by published correspondence covering the whole period within which the atrocities are alleged to have taken place.

THE "CALÉDONIEN" AFFAIR.

IT is to be hoped that the Kobe journals will endeavour to obtain and publish further particulars of the disturbance on board the M.M. steamer *Calédonien*. The fact that fights between Japanese coolies and foreigners occur frequently at Kobe and are

comparatively unknown elsewhere, tends to show that some special element of truculence exists among the Japanese labouring classes in Hyogo. It might, of course, be argued that Kobe's notoriety in this respect suggests a violent spirit on the side of the foreigners there, but we can not see how such an inference would hold when it is remembered that the foreigners—mainly shipping folk—implicated in these disturbances are a shifting population, whereas the coolies remain practically the same. There are consequently grounds for viewing the action of the Japanese with suspicion from the outset. But unfortunately the published accounts of these occurrences are always of an *ex parte* character. The foreign journals naturally derive their facts from foreign sources only, and nothing is ever heard of what the Japanese may have to say in their own defence. This suggestion will, of course, expose us to much abuse. A storm of indignation will be raised at the mere notion of hinting that there can be two sides to such questions. But people desiring to be fair will at once appreciate the propriety of our criticism. Certain newspapers have established in Japan a tyranny of injustice, so despotic that scarcely once in a twelvemonth does any individual venture to assert independence of judgment. It is necessary either to take an anti-Japanese view of everything or to be held up to public scorn as a renegade and a rascal. The spirit of fair play may have become very debilitated under such circumstances, but it is not dead. The *Calédonien* affair, as it stands, presents some curious features. It has already evoked some strongly worded articles, in which the coolies are denounced in unmeasured terms. "Always ready to provoke a quarrel," they have become, we are told, so puffed up by their country's successes in war, that they now represent a very dangerous element. Moreover the whole responsibility for the *Calédonien* fracas is laid on their shoulders, and the police, also, are blamed for not being sufficiently active in suppressing such disturbances. Now, our own observation certainly does not warrant us in endorsing the assertion that Japanese coolies are "always ready to provoke a quarrel." We should be disposed, on the contrary, to describe them as eminently good-humoured, peaceable folk. Rarely indeed do they quarrel among themselves, and when anything of the kind happens, the invariable tendency of the majority is to play the part of peacemakers. At the same time, it does seem that the whole Japanese nation is permeated by a fighting spirit. Something very like pitched battles are not infrequent occurrences in the agricultural and fishing districts. These happenings belong, however, to a special category. They are not mere truculent brawls, but deliberate contests in defence of some real or alleged right, and their only bearing

on cases like that of the *Calédonien* is that they show the Japanese in the light of men too ready to resort to violence if they believe themselves aggrieved. But there must be a grievance. Assuredly where foreigners and Japanese are concerned, especially when the latter are in the position of the former's *employés*, there will seldom, very seldom, be found on the Japanese side a disposition to take a violent initiative. We have not seen one instance of the kind in twenty-eight years, though, of course, we do not claim any conclusive value for negative testimony. Passing, however, from the general question of the Japanese labourer's disposition, let us briefly examine the facts of the *Calédonien* affair as set forth in the Kobe journals. The opening incident was that a coolie "accosted a Japanese woman on the ship's spar deck and attempted to take liberties with her." We are told that she was "a helpless, inoffensive Japanese woman." Who and what was she, this woman, and what was the nature of the liberties in question? Japanese females found on the spar decks of steamers in port are not generally very particular as to the nature of the greetings they receive. As a matter of ship's discipline, it is conceivable that the woman should not have been there at all. That point should certainly be ascertained as essential to a just review of the whole affair, for though under no circumstances was the coolie warranted in "attempting to take liberties with her," the degree of his offence depends in part upon her character. The next incidents were that "one of the French mail boat's crew interfered on the woman's behalf, whereupon the aggressive coolie gave the foreigner a sharp shove." What was the nature of the Frenchman's "interference" on the woman's behalf? That is a most vital question. Did he strike the coolie, or did he thrust him aside? Did he lay hands on him at all? If he did, the responsibility of aggression does not rest with the Japanese. Then "the foreigner retaliated and a fight commenced," with the speedy result that several of the coolies and of the ship's crew were engaged. The captain of the *Calédonien*, in attempting to restore order, received two blows, and thereupon issued orders to his crew to clear the decks, which was done with such resolution that, in a few moments, "seven Japanese were lying in various positions on the pier, *hors de combat*." "One coolie," we read, "on being thrown over the side, struck one of the bollards on the pier with such force that his face was badly smashed, and the man curled up in a heap on the Pier. Another fell between the Pier and the ship's side, but he was dragged up shortly afterwards. . . . Two of the seven men were found to be very badly injured, and were taken away to the Kobe Hospital. One wounded man was not removed

until about 11 p.m. In the meantime, he was left in an unconscious state in one of the goods trucks under guard of a Policeman." It is worth while to consider this result carefully. Seven Japanese coolies were so badly hurt that they lay about the pier, crippled for the moment; one had his face so badly smashed that he "curled up in a heap;" another was thrown between the pier and the ship's side, and another lay insensible for several hours. Was any one on board the steamer hurt? We are not told that there was, and it is very certain that such an omission would not have been willingly made by the reporters. With such evidence before us it is difficult to escape the conviction that needless and dangerous violence was resorted to by the ship's crew. That, however, is a delicate and difficult point. So soon as force is employed for the purpose of clearing a body of men from the deck of a ship, the question of degree becomes hard to estimate. At all events, the last phase of the affair seems to have been exceedingly one-sided, so far as it went, and although Captain BEVILAQUA may have been well advised in resorting to most vigorous methods before the coolies could be re-inforced, fuller evidence is needed before such a perilous display of strength can be approved. We do not pretend to pass judgment either way; the published reports are not sufficient. Our object is merely to show that a rough and ready verdict does not fit the facts as we know them, and that, while the real origin of the fracas remains obscure, the results were of a very one-sided character. We trust, therefore, that the investigations made by the Japanese police authorities in Kobe and by the French Consul will be carefully published, for, as the case now stands, neither the ship nor the coolies are vindicated.

MASSACRE OF PROTESTANT MISSIONARIES IN CHINA.

FROM telegrams received on Monday in Tokyo it appears that an appalling outrage has been committed in China at a place called Kuchang, which, we believe, is a summer resort near Foochow. It is stated that ten English missionaries, among whom were eight ladies, have been massacred. Beyond this meagre account we know nothing, except that the terrible barbarity is attributed to a secret society. If the latter hypothesis be correct, the outrage is probably intended to embroil the Government with foreign Powers. We fear that there is little reason to doubt the truth of the massacre. The first news reached Tokyo on Saturday. It spoke of five foreign ladies having been killed and others wounded. On Monday this was confirmed by another message, putting the total number of the victims at ten, including eight ladies, and describing them all as English. Nothing so shocking

has occurred in China since the Tientsin massacre in 1870, when thirteen women and eight men met their deaths at the hands of a mob. On that occasion France's attention was so fully occupied by her war with Germany that the barbarous murder of nineteen of her subjects—two of the victims were Russian—did not receive expiation commensurate with the magnitude of the crime. The incident was followed by a strong wave of anti-foreign feeling throughout the Chinese empire, and that men in high places sympathised with the sentiment was proved by the publication and wide circulation of the notorious "Death-blow to Corrupt Doctrine." Owing, however, to the exertions of the liberal party in Peking, popular prejudice was prevented from immediately claiming any fresh victims, but it has always been believed that the comparative immunity enjoyed by the perpetrators of the massacre is responsible for many of the outrages recorded during the quarter of a century that has elapsed since then. We are now confronted by the fact that in the rapid sequel of a wide-spread series of outrages against foreign property in Szechuan, terrible destruction of English life has taken place in a totally different part of the empire, and it is difficult to avoid the conviction that nowhere in China can foreign life or property be counted safe. Confronted by such circumstances, it is not the duty of any journalist to foment public excitement by dwelling on the heinousness of the crime or by clamouring for signal vengeance. HER MAJESTY'S officials may be safely relied on to take whatever steps the occasion calls for. But it must be confessed that the problem of foreign relations with China is becoming more and more complicated, and that the constant repetition of these horrors must soon exhaust the patience of Western Powers. If only full punishment could be made to fall upon the actual perpetrators of the crimes and upon those directly responsible for the preservation of law and order, some hope of reform might be entertained. But a Treaty State is constrained to deal with the Central Government, and under China's administrative system the Central Government's arm does not reach beyond the walls of Peking.

JAPANESE FORCES IN FORMOSA.

WHEN it became known that Count KABAYAMA was to be accompanied to Formosa by a Division of the Guards, numbering from twelve to fourteen thousand men, many persons believed that the circumstances did not demand the employment of so large a force. But events have proved that the Japanese Authorities under-estimated, rather than over-estimated, the nature of the resistance to be overcome. The people of Formosa are fighting with stubborn bravery unexampled

in the history of Chinese warfare. They can not, indeed, make head against the well disciplined and resolute troops of Japan, but, on the other hand, they do not accept defeat. To be driven with heavy loss from one position means only to rally in another. Even the women seem to be sharing in the task of repelling the invaders. It looks as if the thorough conquest of the island must involve terrible bloodshed. No one can choose but sympathise with the stout-hearted islanders, who fight, as they imagine, for their hearths and homes, not knowing that submission would secure them in the possession of both under a regimen of law and order such as they have never before experienced. Naturally people ask whether it is not possible to bring that knowledge home to them by means other than shrapnel and mitrailleuse. But we may infer from the history of Japan's campaign in Manchuria that her commanders in Formosa have neglected no opportunity of proclaiming and showing clemency to all that refrain from armed resistance. Long and cruel experience of the ways of their own troops have, however, rendered the Chinese utterly distrustful of all soldiers, and it seems as though, for the present, a resolute exercise of force can alone resolve the situation. Very plain predictions that such a necessity would have to be recognised sooner or later, have been made by foreign correspondents watching the campaign, but their letters betray such unmistakable indications of strong anti-Chinese prejudice that the public has hesitated to accept their deductions. They appear to have prophesied truly, however. Probably the most merciful course now offering is an exhibition of overwhelming force, and a campaign that will sweep away every vestige of resistance from end to end of Formosa. The Japanese Government is believed to have resolved upon that plan. The opening scenes of the campaign were misleading, since the opposing forces consisted of the wretched rabble called soldiers in China. These men were speedily routed: indeed their deportation to the mainland was the principal task involved in getting rid of them. But when it came to fighting with the islanders proper, the Hakkas and the tribesmen—the Black Flags have not yet appeared upon the scene and will probably give little trouble when they do—a different state of affairs was discovered, and unfortunately there is little room to doubt that we shall be once more obliged to witness the uncompromising subjugation of a brave people fighting against hopeless odds. The more speedily and effectually the drama is concluded, the better. It is now understood to be the Government's intention to raise the army in Formosa to two Divisions and a half, or about forty thousand men. Under any circumstances, the permanent garrison of the island must be at least two

Divisions, one stationed in the north, with its head-quarters at Taipeh; the other in the south, with Tainan for head-quarters, and though the original programme may have been to despatch these troops gradually, it is now evidently desirable that they should go at once. The Guards, of course, will not remain in Formosa after the subjugation of the island: they will have to be brought home and replaced by another Division. Thus, expediency and economy alike dictate that the troops destined ultimately to garrison the place should be sent thither quickly. After all, Formosa will not be added to the Japanese empire without heavy outlay of blood and treasure.

THE KOBE COOLIES.

SINCE writing about the fracas on board the M.M. steamer *Calédonien* we have received from a trustworthy source information that shows the coolie question in a very evil light. We are assured that the truculence and disorderliness of these men have almost passed the bounds of endurance, not in Kobe alone, but also in Yokohama; that they behave with the greatest insolence; that they hustle the officers of ships, smash the gear, and altogether render themselves as objectionable as possible. We are also assured that matters have become distinctly worse since the war, inasmuch as, owing to the great demand for seamen, it has been found necessary to have recourse to the coolie class to man the ships, the result, of course, being that the crews are no longer so steady as they used to be, and can not be trusted to assist in preserving order when men of their own genus have to be dealt with. Under such circumstances we can well conceive that the action taken on board the *Calédonien* was prudent and necessary, and that the terrible punishment inflicted on the coolies may have a salutary effect. Our informant adds, however, that the police show a great want of alacrity in these cases. They do not yet recognise the essential fact, recognised and acted upon in all Western countries, that the master and officers of a vessel are the responsible representatives of law and order on board, and that on their appeal the whole strength of the police should be exercised in accordance with their direction, no pause being made to investigate the rights and wrongs of the case until after order has been thoroughly restored. We are assured that this thing has reached a dangerous pass, and that already the greatest difficulty is experienced in preventing the crews of ships from having recourse to weapons, which, if once brought into use, would involve most serious results. Considering the *Calédonien* incident apart, there is evidently room to question which side first assumed the aggressive; but considering it in conjunction with what we are now told of the general conduct of

the coolies, we can have little difficulty in allotting the blame. We venture to hope, therefore, that the Japanese Authorities will give their earnest consideration to the matter. One or two more incidents like that of the *Calédonien* may produce a state of affairs no longer capable of being brought under the control of ordinary executive measures, and at any moment we may hear of bloodshed that would long embitter the feelings of the Japanese, and possibly produce international complications. It is not to be denied that foreigners have often been rough and overbearing in their demeanour toward the Japanese. But all that belongs to the past, and even if the memory of it be partially responsible for the conduct of the coolies to-day, no allowance can be made on that score. Two wrongs do not make a right. We do not think that we exaggerate the importance of this matter when we say that it demands immediate official attention, and that, in view of the frequent disturbances now on record, the responsibility of discovering and applying a remedy must be held to rest with the police.

THE ALLEGED ATROCITIES IN FORMOSA.

THE *Japan Gazette*, having accused the Japanese of "repeating in Formosa the Port Arthur atrocities with cold-blooded resolution;" of "ruthlessly butchering men, women, and children;" of perpetrating such "a hideous sacrifice of life that the atrocities of a HEROD seem inoffensive before it;" of committing excesses for which history has no parallel "unless we go back to the days of the Huns, and even they sometimes spared the woman;" of "slicing to pieces helpless infants, infirm women, and mothers with child"—the *Japan Gazette* having preferred this awful accusation, having deliberately declared that the Japanese methods of warfare in Formosa are more savage than anything recorded in history, refuses to adduce one iota of evidence in support of its assertions, and justifies its refusal by alleging that the *Japan Mail* has no right either through its impartiality or its veracity to pose as a judge. We believe that if this incident were introduced, exactly as it has occurred, into a stage burlesque of journalism, its extravagance would deprive it of any title to be ridiculous. The *Japan Gazette* acknowledges no duty toward the Japanese nation whose troops it has openly accused of these appalling atrocities; acknowledges no duty to the public at whose bar it has laid this terrible charge. It imagines that it can escape the responsibilities of truth, of honour, and of justice, by alleging its unwillingness to be judged by the *Japan Mail*. It withholds every word of evidence. It "declines to state who the gentleman was in North Formosa that furnished the information." Was it ever asked to state his name? Of

course not. That is a miserable subterfuge. What the public wants are his words. Does he say that he witnessed these atrocities with his own eyes? Does he say that he saw, he himself saw, the "ruthless butchery of women and children," the "slicing to pieces of helpless infants, infirm women, and mothers with child?" This is a cruel business. If the Japanese are doing what the *Japan Gazette* alleges, they deserve the execration of all the world. If they are not doing it, the *Japan Gazette* deserves that execration. In either case, we are persuaded that no other instance is on record of a newspaper's preferring a fearful accusation of savage inhumanity against the troops of a civilized nation, and preferring it in the strongest terms that the English language furnishes, without producing a tittle of testimony in support of the accusation. There the matter must be left for the moment. Nothing can be affirmed, nothing denied, with our present knowledge. Judgment must be reserved.

IT is worth while to draw the attention of our readers to the letter, published in our columns to-day, from our correspondent with the Japanese troops in Formosa. The writer is at present at Nagasaki, but was in Formosa up to a very recent date. What we desire to point out with regard to his letter will be best explained by an extract from our issue of August 5th:—

On the 22nd of July very sensational telegrams reached Shanghai from Amoy. They announced fierce fighting between the Japanese and the Hakkas; represented the latter as having decoyed 800 of the soldiers into an ambush and killed 600 of them; asserted that the insurgents were advancing in great force on the Japanese intrenchments at Teckcham (Sinchuh), and added that the Chinese inhabitants of Tamsui, losing confidence in the ability of the Japanese to protect them, were leaving the place in large numbers. It is, of course, easy to trace the origin of these rumours. They are evidently a magnified version of the annihilation of two Japanese detachments, one consisting of 35 infantry soldiers, the other of 22 troopers, and of movements leading up to the unsuccessful attempt made by the insurgents to recapture Teckcham on the 25th of July.

If, now, our readers will turn to the Nagasaki letter they will see that it explicitly, though, of course, unwittingly, confirms our conjecture as to the origin of the Amoy rumour. "It was this affair" (*i.e.*, the annihilation of a detachment of 32, or 35, infantry) writes our correspondent, "combined with the loss of 15 cavalry men about the same date, that gave rise to the Chinese reports which placed the Japanese loss all the way from one hundred to one thousand." The public is already too familiar with Chinese fabrications and exaggerations to be surprised that the annihilation of an infantry escort and a cavalry patrol should assume the dimensions indicated in the Amoy telegram. Were the question one of hyperbole alone, we should not think it worthy of special reference. But it was in the sequel of this imaginary ambush and wholesale slaughter that the Japanese soldiers are alleged to have committed terrible

atrocities. Here are the words of the telegram:—

It now turns out that a large body of Hakkas and Black Flags, who had been giving the Japanese a good deal of trouble, inveigled 800 of the latter into an ambush and then attacked them, causing them to retreat after a desperate engagement in which several hundreds were killed on both sides; the Japanese lost about 600. The insurgents followed up the Japanese, and, encouraged by their success, fought desperately, ultimately dislodging them from Tokoham and driving them northwards and westwards.

As soon as the Japanese Commander saw he had been deceived by the insurgents, and that his men were being rapidly slaughtered, he gave orders that no mercy should be shown to the enemy.

It is reported that as they retreated, the Japanese destroyed every house they chanced to pass, and killed every man, woman, and child they either got hold of or could get a shot at!

On receipt of this telegram we at once pointed out the inherent improbability of the statements contained in it; namely, that a General, at the moment of receiving a crushing defeat and losing 75 per cent. of his men, should issue orders to show no mercy to the enemy, and that 200 soldiers flying from a field where 600 of their comrades lay dead, and followed closely by their foes, should burn "every house they chanced to pass" and kill "every man, woman, or child they either got hold of or could get a shot at." But it is now certain that the alleged inveighing of 800 Japanese into an ambush, the slaughter of 600 of them, the retreat of the rest and the re-capture of Tokoham by the Hakkas and Black Flags, are all mythical occurrences. What then becomes of the "killing of every man, woman, and child" that the retreating Japanese could get hold of or get a shot at? There were in fact some retreating Japanese: three troopers out of a squadron of 18, and four infantry soldiers out of an escort of 32. Were these the fiends that perpetrated "hideous sacrifices of life and sickening massacres of the innocents before which the atrocities of a HEROD seem inoffensive?" The soldier that hid in a marsh all day and waded down a river all night to save his life, was he a seventh part of the army that "sliced to pieces helpless infants, infirm women, and mothers with child," and "stored up for posterity an inheritance of violence that future rulers of Japan may have cause to curse?" However, it is fruitless to pass judgment upon charges totally unsupported by any evidence. Chinese rumours have hitherto been the sole basis of one of the most turgid and sweeping denunciations ever levelled at any army by a newspaper. The most important of those rumours have now been proved groundless. It remains to be seen whether the rest will stand the test of fuller information.

MESSRS. VILLIERS, CREELMAN,
AND O'BRIEN.

WE are constrained to revert once more to the Port Arthur affair. We do so with many apologies to our readers, but it shall not be said that we deliberately suffered to pass uncorrected any of the

miserable misstatements that continue to accumulate round this wretched business. As usual, the *Japan Gazette* is in question—a journal that has shown incredible pertinacity in endeavouring to represent in their very worst possible light the excesses committed by the Japanese soldiery, and in attacking with fierce insistence every effort to sift the false from the true. Speaking of Mr. VILLIERS, the correspondent of *Black and White*, the *Japan Gazette* now says:—"Because he told what he saw, and took photographs of what he saw, of things done by Japan, we are asked to believe him guilty of the most awful lying that any correspondent could ever perpetrate against soldiery." Truly this reads like a dream. When and by whom has Mr. VILLIERS been charged with "awful lying?" In the columns of this journal his statements about Port Arthur have never been discussed. We regard him as a strictly honourable man, and have never doubted that he spoke exactly what he believed to be true. Of Mr. CREELMAN we can not say quite so much, for he has undoubtedly been convicted of things difficult to reconcile with a strict sense of veracity. But we do not undertake to judge between sensationalism and falsehood; between the exaggerations of an excitable word-painter and the deliberate misstatements of a romancer. Mr. CREELMAN may have written in perfect good faith, but he certainly was guilty of hyperbole. As for Mr. COWEN, whose testimony also is cited by the *Gazette*, his last verdict—spoken in a recent lecture in Hongkong—is this:—"Practically it" (the Port Arthur business) "amounted to hardly anything more than the killing of men who could have been taken alive. This was certainly reprehensible, but none the less almost anybody on earth would have done the same under the provocation given." We ourselves hold this to be too lenient a verdict. But there it stands. No fault can be found with it for want of explicitness, nor can Mr. COWEN be any longer cited as a witness for the prosecution. Why there should be so much anxiety to make the case as black as possible for the Japanese, we do not perceive. It is black enough in all conscience, without the addition of any sensational exaggerations. In this instance the avowed object of the *Japan Gazette* in reverting to the subject is to prove that no evidence unfavourable to the Japanese will ever be received by us. It forgets conveniently that we were the first to publish an account of the Port Arthur excesses, on the strength of evidence furnished by a foreign correspondent. It forgets that we condemned those excesses in strong terms before any other detailed reference to them had appeared in print. It forgets a great many things, but one of its most curious and unfortunate lapses of memory is now before us. To demonstrate it, three quotations are necessary:—

Japan Gazette. July 30th.

Lieut. O'Brien, says the *San Francisco Bulletin* has been recalled because at Tokyo he is a *persona non grata*. He wrote an account of the Port Arthur massacre. The letter is dated December 28th. It reads in part:—

"As to the unfortunate circumstances at Port Arthur I can only speak of what I saw, of course, but I am sorry to say that even that little is such as to lay the army open to the most severe censure. I have seen a number of cases of the killing of men who not only could have been made prisoners without difficulty, but who were plainly unarmed and in a position of humble surrender. I have also seen a number of bodies whose hands were tied behind their backs. Also bodies very much mutilated and having wounds that indicated that they were killed with the bayonet, when beyond question there was no resistance. I have seen these and other horrors in the course of my observations of the battle while going to the forts and main points of interest. I saw no new acts of war or pillage on the 22nd and 23rd (November), excepting the looting of houses and stores. That went on until there was nothing left to loot."

The letter goes on to assign as a reason for the Japanese atrocities that the army had expected greater resistance than it met; that with such an idea the troops began to clear the way by force and that control over them was lost.

The remark is made: "I do not think this excuse sufficient. Such acts have always met with censure and so must this case."

Japan Gazette. Aug. 5th.

Finally, an appeal was made to the evidence of Lieut. O'Brien. We have quoted that soldier's evidence, and it has been passed unnoticed as of no value.

Japan Mail, July 6th.

We have received "Appendix I. Foreign Relations of the United States, 1894," from which we extract the following:—

Mr. DUN to Mr. GRESHAM.

No. 90] Legation of the United States,
Tokyo, Japan, January, 7, 1895. (Received
January 29).

Sir,—Referring to my dispatch of date December 20, 1894, relative to the Port Arthur affair, I have the honour to inclose herewith an extract from a personal letter to me from Lieut. M. J. O'Brien, military attaché of this Legation, Kinchou, China, December 28, 1894, giving an account of the unfortunate circumstances attending the capture of Port Arthur by the Japanese forces.

Lieutenant O'Brien's statement corresponds with a statement made by Colonel de Wogack, Russian military agent to Japan and China; also with that of Mr. George W. Conner, an American in command of a Japanese transport, who was present at the taking of Port Arthur.

From the statements of these gentlemen, it appears to be clear that there was a slaughter of Chinese soldiers at Port Arthur on the 21st of November, 1894, but that the horrors reported by Mr. Creelman in his communication in the *New York World* as having taken place subsequent to that date are not true, and that the impression Mr. Creelman's reports are prone to convey is a gross exaggeration of the truth.

I have, etc.,

EDWIN DUN.

(Inclosure No. 90.)

Kinchou, Liau-tung Province, China,

December 28, 1894.

Dear Mr. Dun,—As to the unfortunate circumstances at Port Arthur, I can only say what I saw of it, of course; but I am sorry to say that even that little is such as to lay the army open to the most severe censure, especially as it was quite different from what one should have expected from Marshal Oyama's proclamation. I have seen myself a number of cases of the killing of men who not only could have been made prisoners without resistance, but who were plainly unarmed and in a position of most humble surrender. I have also seen a number of bodies whose hands were tied behind their backs. I have seen bodies very much mutilated and bearing wounds indicating that they were killed with the bayonet, when I know beyond question that where they lie there was no resistance. I have seen these things, not as a result of going around for the purpose of seeing horrors, but in the ordinary course of my observation of the battle and of trips to the forts and main points of interest; I heard talk here among the correspondents of atrocities committed on the 22nd and 23rd of November. Of these I know nothing whatever. I did not see any atrocities on those days. I heard some firing in the hills around the town, but saw no act of violence on either of those days. I was about the town most of the 22nd and during the afternoon of the 23rd, but saw no new acts of war or pillage, except the looting of the houses and stores. That went on until there was really nothing much left to loot.

I find some excuse for the acts of the 21st in the barbarities committed by the Chinese. The mutilated heads of some Japanese captives were hung on some small trees at the entrance of the town, and this sight must have enraged the troops. Again, I doubt if the Japanese for a moment thought they were going to have such an easy task in taking the town and sea forts. When they advanced through the town it is my belief that they were momentarily looking for the resistance, and with such an idea began to clear

the way, with the result that the troops soon got out of hand and made an unnecessary slaughter. I do not think this excuse sufficient, but it ought to be borne in mind that such occurrences happen in all armies and it is hardly fair to expect miracles of the Japanese. At the same time such acts have always met with censure, and so must this case.

To anybody who has—as I have since I joined this army—seen the kindness, courtesy, and gentle ways of the Japanese, the recollection of Port Arthur is especially unpleasant. Up to that time the behaviour of the army toward the poor people of this country was all that anybody could have wished. Since that time such has also been the case as far as I know. Here at Kinchou the Japanese have treated the Chinese in the most kind and fair way. Everything that could be done had been done to quiet the Chinese and to insure a just and fair treatment to them. Markets have been opened and fair prices have always been paid. There is no lawlessness and no sign of ill-treatment. In truth, I think these Chinese are now better off than they have ever been in their lives, and I think they appreciate the fact.

In view of these facts, I can not but feel that the acts of this army at Port Arthur ought not to be remembered and its acts at other times forgotten. There may have been special causes leading up to the affair at Port Arthur of which I am not aware. I have no doubt that exaggerated reports have been sent, but not having seen them I am not able to make any criticism of them. I have not up to this time made any report of this phase of the battle, and do so now only because I judge from your letter that reports of it have come to your ears and you may desire more solid foundation for any expression of view which might become necessary hereafter.

I have been very kindly and courteously treated by all the Japanese officers I have met. To Field-Marshal Oyama and his staff I am indebted for many comforts, all the more appreciated because of the especially friendly spirit in which they have been extended. To General Kawakami and his subordinates at Hiroshima I am also under many obligations. In fact, I cheerfully bear testimony to the fact that such general kindness and thoughtfulness is more than I could fairly have expected from any army in the world.

Yours very truly,

M. J. O'BRIEN.

If our readers will take the trouble to look at these quotations they will observe that the *Japan Gazette's* publication of July 30th is the first paragraph of the letter published by us in full on July 6th. If, again, they will take the trouble to compare the *Japan Gazette's* extract with the corresponding portion of the letter reproduced by us from the United States "Foreign Relations," they will see that not only is the former garbled, but it is also abbreviated. They will further see that whereas the extract purports to comprise the whole gist of the letter, it does nothing of the kind, since all the explanatory and extenuating portions of the document are expunged. It is, in fact, a grossly and palpably dishonest attempt to pervert Lieut. O'BRIEN'S evidence. No one has ever denied that excesses were committed at Port Arthur. Upon that point there is complete unanimity. The main question has been, were murderous atrocities deliberately perpetrated during the three days succeeding the capture of the town? Lieut. O'BRIEN'S letter, as officially recorded, says:—"I was about the town most of the 22nd and during the afternoon of the 23rd, but saw no new acts of war or pillage except the looting of the houses and stores." The chief value of this testimony lies in the fact that Lieut. O'BRIEN was "about the town" during the greater part of the two days immediately succeeding its capture. Mr. CREELMAN wrote that "a reign of murder continued all through the second day" (the 22nd), and that "the work of butchering the unarmed and unresisting inhabitants continued day after day until the streets were choked

up with mutilated corpses." Is it conceivable that such things could have happened without coming under the notice of a military attaché who was "about the town," going round the little place, where these awful scenes were being enacted, during a great part of the very days on which they are supposed to have happened? But the *Japan Gazette's* garbled extract carefully omits Lieutenant O'BRIEN'S statement that he was "about the town," and puts into his mouth a piece of comparatively worthless negative testimony. Again, the *Japan Gazette's* garbled extract makes Lieut. O'BRIEN say:—I do not think this excuse sufficient. Such acts have always met with censure and so they must this case ;" whereas, what he really wrote was:—"I do not think this excuse sufficient, *but it ought to be borne in mind that such occurrences happen in all armies and it is hardly fair to expect miracles of the Japanese. At the same time, such acts have always met with censure, and so must this case.*" Observe the omission—the italicized portion. Need we comment on it? Yet again the *Japan Gazette's* garbled extract makes Lieut. O'BRIEN say:—"I have seen these and other horrors in the course of my observations of the battle while going to the forts and main points of interest," whereas what the Lieutenant really wrote was, "I have seen these things, *not as a result of going around for the purpose of seeing horrors*, but in the ordinary course of my observation of the battle and of trips to the forts and main points of interest." His statement that he had not gone in search of horrors is perverted into an assertion that he had seen these and *other horrors*. Can any sane man, with all the goodwill in the world, believe that these omissions, these misquotations, these perversions, radically changing, as they do, the character of Lieut. O'BRIEN'S evidence, were the result of mere carelessness on the part of a copyist? But that is not all. We have still to note the most exquisite piece of clumsy audacity on the part of the *Japan Gazette* that has ever fallen under our observation. The *Japan Gazette's* garbled, dishonestly garbled, extract was published, as will be seen, on July 30th, whereas the complete letter from which it was taken, together with the United States Minister's covering despatch, appeared in the *Japan Mail* of July 6th. And now, on August 5th, the *Japan Gazette* actually accuses us of "passing unnoticed as of no value the evidence of Lieut. O'BRIEN"! Twenty-six days after we had published that evidence in full, the *Japan Gazette* gave a fraudulently mutilated fragment of it, and six days later alleged that we had passed the whole thing unnoticed, on the strength of which allegation it declares its belief that "if the Recording Angel came to earth and uttered a single accusation against the Japanese, he would be given the lie by the *Mail*!" Are there not comedies in real life that far surpass the conceptions of fiction?

JAPANESE MANUFACTURING INDUSTRY AT THE KYOTO EXHIBITION.

ONE of the most interesting features of the Kyoto Exhibition, which has just been closed, was the display of Japanese manufactured articles such as have hitherto been imported from abroad. Very great progress has evidently been made in this respect during the past few years, and there can be little doubt that the manufacturing capacity long attributed to the Japanese by foreign observers will ultimately be developed to a high degree. The extraordinarily low prices of the articles exhibited are not the least remarkable part of the affair. Visitors to the previous exhibition, held in Tokyo five years ago, were disappointed to find that some of the most useful and attractive exhibits had been marked at figures so low as to preclude all possibility of getting duplicates manufactured at the same cost. Many exhibitors had fallen into the foolish error of imagining that an exhibition was a place for displaying feats of manufacture rather than for showing specimens to invite custom, and they accordingly sought to enhance their own credit by affixing to their goods prices considerably below the cost of production. The resulting combinations of technical excellence and remarkable cheapness were, of course, very striking, but the impracticality of the thing became apparent when the exhibitors refused to receive any commissions at the prices for which they were nevertheless willing to sell their exhibits. This strange misconception was not repeated, so far as we can learn, at the Kyoto Exhibition, though some of the prices suggested suspicion. For example, among the exhibits from Kumamoto were excellent-looking sets of saddlery,—saddle, bridle, bit, stirrups, and numnah—ranging in price from 6.50 to 12.50 yen. It can not be supposed that leather produced in Japan from Korean hides will bear comparison with the imported material, but so far as finish and general workmanship are concerned, this Kumamoto saddlery did not seem inferior to foreign articles that would cost as many sovereigns as the Japanese goods cost yen. Flannel was almost as conspicuous among the exhibits for cheapness and quality. Kyoto and Ehime contributed the greater part of the specimens in this class, the prices ranging from 19.7 sen per yard (best white) to a little over 8 sen. We refer, of course, to cotton flannel. Of paper in all its varieties, lucifer matches, and cotton yarns, it is unnecessary to speak: in the manufacture of these staples Japan's competence is already recognised. But special reference may be made to the serges, tweeds, and cloth produced at the Oji Factory. These goods seem to be of really excellent quality, and the prices are about one-half of those ruling for imported goods. Here

is a rough list that will convey to our readers an idea of what the Japanese are doing:—

Articles.	Place of manufacture.	Price.
Boots (high-lows and long).....	Ehime and other places	2.80 to 4 yen per pair.
Red blankets	Oji, Tokyo	1.40 yen each.
Striped blankets...	Oji, Tokyo	1.15 yen to 1.40 yen each.
Carriage rugs.....	Oji, Tokyo	2.25 yen to 4 yen each.
Shawls	Oji, Tokyo	1.80 yen to 3 yen each.
Glass tumblers....	Osaka	50 sen to 3 yen per dozen.
Claret glasses	Osaka	90 sen to 2.50 yen per doz.
Lamp chimneys (glass)	Osaka	18 sen to 3 yen each.
Pencils (lead)	Osaka	70 sen to 2.20 yen per 12 dozens.
Pearl Buttons (small)	Osaka	3.50 yen per 144 doz.
Lamp-globes (glass)	Osaka	30 sen to 3 yen each.
Hats (straw)	Nagasaki.....	75 sen to 1 yen each.
Slate Pencils	Nagasaki.....	30 sen per 100.
Thermometers	Tokyo, etc.	50 sen to 80 sen each.
Clocks (octagonal)	Osaka	2 yen to 8.80 yen each.
Scent	Osaka	70 sen to 2.50 yen per doz.
Hair Oil	Osaka	60 sen to 2.50 yen per doz.
White shirt collars	Tokyo	8 sen to 10 sen each.
White shirts	Tokyo	1.80 yen each.
Chirimen-goro	Kyoto	4.65 yen to 6 yen per 20 yards.
Hats (felt)	Osaka	70 sen to 2 yen each.
Door Mats	Osaka	90 sen to 3 yen each.
Socks (cotton).....	Osaka	70 sen to 1.30 yen per doz.
Towels (cotton)...	Osaka	80 sen to 2.80 yen per doz.
Tooth-brushes....	Osaka	78 sen to 2 yen per dozen.
Feeding Bottles...	Osaka	55 sen to 1.80 yen per doz.

To this list might be added pianos, organs, harmoniums, musical instruments of various kinds, surgical instruments, optician's wares, surveying instruments, photographic apparatus, machinery, carpets, and not a few other things. But we have not the data at present for an exhaustive catalogue, and besides, our object is only to convey a rough idea of the development that Japanese industry is exhibiting.

HUXLEY AND MATERIALISM.

(COMMUNICATED).

PROFESSOR HUXLEY was a man of many-sided activity. His special department of science was animal biology; and in the early days of the Darwinian theory he took up a prominent position in the evolutionist camp. He wrote an admirable monograph on physiography, the science of the forces of nature at work on the surface of the earth. He was an indefatigable controversialist on topics ranging from the importance of private property and individual enterprise in promoting the forward movement of civilization to the ethical significance of the miracle of the swine at Gadara. But it is for the work that he effected in defining and maintaining against dogmatists of all orders the philosophical position of modern science that posterity will especially value his name.

The key-note of modern philosophy, as distinguished from Greek philosophy and mediæval philosophy, has been criticism—a criticism of the foundations of knowledge. If we examine the works of the masters of modern philosophy, of DESCARTES, of LOCKE, of HUME, and of KANT, if we seek to define what it is in each one of them that may be considered his greatest contribution to the progress of philosophic thought, we see that in all alike it has been, not any further addition to the multitudinous theories as to the nature of things-in-themselves, but a criticism of the foundations of all such theories, and an ever clearer recognition of the limitation of the human intellect to a knowledge of the finite, phenomenal universe. HUXLEY followed in the footsteps of these illustrious thinkers, with the advantage of living in an age in which the immense expansion of man's exact knowledge of the phenomenal world has rendered him less unwilling to be content to remain in ignorance of the infinite unknown. A critical philosophy alone could not have put the absolutist battalions to rout; there was needed also an enormous array of positive knowledge such as modern science alone has been competent to bring into the field. Before this irresistible combination, the spooks of metaphysics, whether of metaphysical theology or of metaphysical materialism, and the inanities of Pyrrhonism, are rapidly disappearing into the void from out of which man's restless mind had conjured up these vaporous absurdities.

We imagine that some of our readers, knowing HUXLEY less by what he has said himself than by what the apostles of unreason have said about him, may here interpolate:—"We know that HUXLEY made it the business of his life to war against theology, but did he also attack materialism? We have always understood that he was a materialist." In a certain sense it is true that HUXLEY was a materialist, as the following passage from his work on HUME will show:—"Surely no one who is cognizant of the facts of the case, nowadays, doubts that the roots of psychology lie in the physiology of the nervous system. What we call the operations of the mind are functions of the brain, and the materials of consciousness are products of cerebral activity. CABANIS may have made use of crude and misleading phraseology when he said that the brain secretes thought as the liver secretes bile; but the conception which that much abused phrase embodies is, nevertheless, far more consistent with fact than the popular notion that the mind is a kind of metaphysical entity seated in the head, but as independent of the brain as a telegraph operator is of his instrument." If this passage were quoted without its context, as unjust controversialists love to quote, it would seem to prove HUXLEY as thorough going a materialist as LAMET-

TRIE or BÜCHNER; and yet no nineteenth century philosopher has done more than HUXLEY to lay bare the fundamental error of materialism. Let us continue the above quotation:—"It is hardly necessary to point out that the doctrine just laid down is what is commonly called materialism. In fact I am not sure that the adjective 'crass,' which appears to have a special charm for rhetorical sciolists, would not be applied to it. But it is nevertheless true that the doctrine contains nothing inconsistent with the purest idealism. For . . . if we analyse the proposition that all mental phenomena are the effects or products of material phenomena, all that it means amounts to this: that whenever those states of consciousness which we call sensation, or emotion, or thought, come into existence, complete investigation will show good reason for the belief that they are preceded by those other phenomena of consciousness to which we give the names of matter and motion. All material changes appear in the long run to be modes of motion; our knowledge of motion is nothing but that of a change in the place and order of our sensations; just as our knowledge of matter is restricted to those feelings of which we assume it to be the cause."

"But if HUXLEY was opposed to materialistic philosophy, why was it," it may be asked, "that he devoted so little time to the refutation of materialism, and so much to the refutation of theology?" It is not true that he devoted little time to the refutation of materialism. It is impossible for any open-minded and conscientious reader of his works to fail to be convinced of the equal futility of idealistic and of materialistic hypotheses; but it is true that he gave especial attention to the refutation of idealism, rather than to the refutation of materialism, for the reason that idealism has for centuries occupied the position of handmaid to theology, and throughout all those centuries theology has stood in the path of progress. No man knew better than HUXLEY, no student of HUME could fail to know, that the absurdities of idealism are neither greater nor less than the absurdities of materialism, and that neither doctrine can be condemned without condemning the other. But he knew also, as HUME knew, that idealism has ever been made the foundation for a gigantic superstructure of falsehood. In his *Treatise of Human Nature*, when considering the rival hypotheses, on the one hand that all the phenomena of the universe, material as well as mental, are modifications of mind, HUME wrote as follows:—"I observe first the universe of objects or of body; the sun, moon, and stars; the earth, seas, plants, animals, men, ships, houses, and other productions either of art or of nature. Here SPINOZA appears, and tells me that these are only modifications, and that the subject in which they adhere is simple, un compounded,

and indivisible. After this I consider the other system of beings, viz., the universe of thought, or my impressions and ideas. Then I observe another sun, moon, and stars; an earth and seas, covered and inhabited by plants and animals, towns, houses, mountains, rivers; and in short, everything I can discover or conceive in the first system. Upon my enquiring concerning these, theologians present themselves, and tell me that these also are modifications, and modifications of one simple, uncompounded, and indivisible substance. Immediately upon which I am deafened with the noise of a hundred voices, that treat the first hypothesis with detestation and scorn, and the second with applause and veneration. I turn my attention to these hypotheses to see what may be the reason of so great a partiality; and find that they have the same fault of being unintelligible, and that, as far as we can understand them, they are so much alike, that it is impossible to discover any absurdity in one which is not common to both of them." What HUME wrote a hundred and fifty years ago is still true to-day. Idealism is still the handmaid of theology; it is still the philosophical gospel of the apostles of error.

With materialism the case is different. Every man with sufficient education to become a man of science, however little he may know of the philosophy of the schools, is sure to have some knowledge of the theory of cognition that culminated in the critical philosophy of KANT, and by such a one materialism can no longer be regarded as a philosophy. LANGE expresses the position with his usual clearness in his "History of Materialism": "The whole cause of materialism is forever lost by an admission of the inexplicableness of all natural occurrences. If materialism quietly acquiesces in this inexplicableness, it ceases to be a philosophical principle; it may, however, continue to exist as a maxim of scientific research. This is, in fact, the position of most of our modern 'materialists.' They are essentially sceptics; they no longer believe that matter, as it appears to our senses, contains the last solution of all the riddles of nature; but they proceed in principle as if it were so, and wait until from the positive sciences themselves the necessity arises to adopt other views."

Of this character was the materialism of HUXLEY. He did not regard it as a tenable philosophical theory concerning the nature of things-in-themselves, but he was glad to welcome it as the only and the all-sufficient organon of research. He knew that the universe could become the object of intellectual cognition only when regarded as a material system; and that the postulate of necessity, by which the idea of spasmodic interference with natural processes by hobgoblins great or small was necessarily excluded, was the

first requisite to any rational knowledge of phenomena. He was content to study the method of working of the universe, and, in view of the existing limitations of the human intellect, to throw aside as idle all speculations concerning the origin of the universe. With HUXLEY, then, materialism was a method merely, and could lay no claim to be a philosophy. In a note to a short criticism of BERKELEY, he wrote:—"The philosophical materialist who takes the trouble to comprehend BERKELEY finds that strict logic carries him no further than some such answer as this to the philosophical idealist:—Well, if I cannot show that you are wrong, you cannot show that I am; if I should happen to be right, your proofs of the impossibility of knowing anything but states of consciousness would be just as valid as they are now; moreover, your religious and ethical difficulties are just as great as mine. The speculative game is drawn—let us get to practical work."

And if the practical work of HUXLEY'S life to a large extent consisted in war on the theological conceptions of which latter-day idealism is the last frail support, and in a whole-hearted attempt to replace these conceptions by the "materialistic" teachings of modern science, the reason is not difficult to find, for as surely as the growth of science tends to guide man forwards, so surely does the survival of theology tend to drag him back.

The last published work of HUXLEY was the first instalment of a reply to BALFOUR, who is the latest, and in some respects the greatest, of the modern champions of the gospel of mysticism and unreason. This talented writer has coined the convenient name of Naturalism for the scientific way of regarding the universe. In rejoinder, we may perhaps venture to denote as Dæmonism the theory of the school to which he belongs, which is, in truth, an idealistic Pantheism, not naked and not unashamed, the theory that all the phenomena of the universe are manifestations of one all pervading thing-in-itself, the mind of GOD "in whom we live and have our being." Now if Dæmonism would do what materialism has done, if it would abandon its untenable claim to be a philosophy, and would confess itself to be no more than a view devoid of all logical foundation, which certain people hold because it pleases them to hold it, the quarrel between Dæmonism and Naturalism would disappear. But the fate of the two conceptions, the Dæmonistic and the Naturalistic, would be, indeed will be, widely different. For Dæmonism is merely a kind of spiritual intoxicant: it is not, and can never be, like Naturalism, an organon of research. It serves after its own unwholesome fashion to soothe and to support those among us who, feeble in intellect and infirm of will, cannot rest contented with the beneficent achievements of positive science, and need to be deluded with the belief that they have knowledge of things "behind the veil;" but throughout all the centuries in which Dæmonistic conceptions of the universe have been predominant, they have never given rise to the growth of any fruit on the tree of knowledge. Contrariwise, all the fruit that has grown on that tree has been under the developing sunlight of naturalistic conceptions and in spite of

the withering influence of Dæmonism. It is for this reason that men like HUXLEY think life well spent in warfare with Dæmonism and all its works. And the wide acceptance that the philosophy of science, so nobly championed by HUXLEY, has obtained, justifies the hope that Dæmonistic conceptions are destined in due course to find their proper place in the lumber-room of the History of thought. *Magna est Veritas, et praevalabit.*

ABOARD H.I.F.M.S. "MATSUSHIMA."

(FROM OUR OWN CORRESPONDENT WITH THE JAPANESE TROOPS IN FORMOSA.)

In Quarantine, Nagasaki, Japan,
August 1st, 1895.

On the morning of July 21st, while we were entering the harbour of Nagasaki, a seaman who had been sick ever since we left Formosa, died of cholera. In accordance with quarantine regulations we were laid up for disinfection, and I am now serving the second day of a seven days' confinement. This is specially unfortunate, as my leave to visit Japan and secure my equipment for the southern expedition against the Black Flags, scarcely allowed me more than a week or ten days, which are now being so unwillingly spent, three miles out from Nagasaki, with that city in plain view, and looking more enticing then ever a Japanese settlement looked before. But thanks to the exceedingly kind and courteous treatment received from the officers of the *Matsushima*, and the luxurious quarters placed at my disposal, the time is passing as pleasantly as possible under the circumstances.

The trip from Formosa was an agreeable one, as well as an interesting opportunity to observe Japanese men-of-war and their ways. But my expectation that I should see aboard the *Matsushima* glimpses of Japanese systems, surviving from the customs of their private life on shore, were not fulfilled, for in the entire trip I did not observe anything that struck me as being characteristically Japanese, except the people themselves and their language.

Owing to the kindness of the Editor of the Nagasaki *Rising Sun*, I have been supplied with the local exchanges, and in several, I observe extracts from the *Hongkong Telegraph*, which has swallowed every Chinese report from Formosa. Unfortunately in the articles their source is not mentioned, and many of their readers may consider them authentic. Although a trifle late, I wish to correct a few of the most important. In one account it is stated that "the Hakkas and Black Flags inveigled 800 Japanese into an ambush,—Japanese loss was 600," etc., etc.

The inveiglement referred to occurred on the eleventh of July, when thirty Japanese soldiers started up river guarding eighteen Chinese boats loaded with rice, intending to convey it to the first battalion then stationed at Tokoham.

[Here follows an account, as already published, of the annihilation of this little escort of 32 Japanese.]

It was this affair, combined with the loss of fifteen cavalry men about the same date, that gave rise to the Chinese reports which placed the Japanese loss all the way from one hundred to one thousand.

Affairs are not nearly in such a bad state as some journals attempt to make them out. The policy of dealing leniently with the natives has been the cause of the trouble for the last few weeks, and now that the Japanese are beginning to realize that the opposing Chinese must be handled as an enemy, not as a friend, the trouble will cease in the north very quickly.

The newspaper accounts regarding the sickness have also been exaggerated, and while there has been considerable, the Japanese have not been troubled with fever and the cases of genuine cholera are very few. For the month ending July 12th, out of 1,493 patients at the Hospital, only 156 died and 410 recovered. Of cholera in its different forms there have only been 198 cases.

CORRESPONDENCE.

THE LATE FUNERAL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Allow me to say that the following American clergymen were in Yokohama on Wednesday last, and I am authorized to state that any one of them would willingly have officiated at a funeral service if notice had been received that their assistance was desired:—Rev. A. A. Bennett, Rev. J. G. Cleveland, Rev. W. S. Worden, Rev. H. Loomis.

Yours truly,

H. LOOMIS.

Yokohama, August 5th, 1895.

ALLIANCE.

TO THE EDITOR OF THE "JAPAN MAIL,"

SIR,—The question of offensive and defensive alliance with any European Power that may be the subject of Japanese thought at this time I put aside, as it does not appear that the time has arrived that practical politics demand that step. Japan has no need to negotiate for any European assistance to maintain her position as an imperial State, and surely Japan should not load herself with the responsibility of aiding any of the Powers that administer the affairs of the Occidental world. To become a party to any European complication would prove but a costly move. Japan should confine herself to the politics and diplomacy of eastern Asia. Japan, China, and Russia are the dominant powers and should remain so in the realms of Eastern Asia. They sit beside and touch each other. That Russia, at this present is one of the mighty Powers in the Occident, demands from her that she play her hand for all it is worth in Occidental politics. She can command the peace or let loose the dogs of war in Europe at her will. Russia's possessions on her eastern frontiers are of huge proportions, she is rapidly putting herself in position to develop the vast field of her Siberian provinces. Nothing can permanently stop her in her march of material development on her Eastern border. To-day she might be despoiled of her seaboard by Japan, but time would work its revenge; without doubt Japan could capture Vladivostok and take possession of the section of railway now built westward from that point. Japan could delay the advent of Russia as a military power on her Siberian border—provided she had Russia alone to deal with. Yet, that being possible, would it be well? It would entail an exhaustive war, and eventually Japan would acknowledge her error. To keep Russia from the enjoyment of her Eastern development would not benefit Japan in the least. It is for the betterment of Japan, and the whole world besides, that the rapid consummation of Russian ambition be attained. There should be no friction between Japan and Russia. Russia needs a portion of Korea. With a large foothold in Korea she would not be inimical to Japanese interests politically or commercially. Korea should be absorbed. As a sovereign State, Korea should be obliterated; she is not worth the trouble of educating in politics or morals. If there was no Russia that needed a portion of the Kingdom, Japan would find herself eventually forced to take possession of and incorporate the peninsula into a province of the Empire. There is no other solution of the Korean problem. Either Russian or Japanese Korea must be, and that ere the lapse of the year 1900. With Korea Russian, Japan could live and be as secure against Russian aggression as England is with her neighbour across the Channel. France, Japan, and Russia should be as one in regard to the Chinese Empire. They should look upon China as their especial charge, to deal with her as they deem best. Eastern Asia should belong to and be dominated by Asiatics; Occidental politics might demand of Russia that she consult France and England. The contention that the Trans-Siberian iron-road is a commercial undertaking is not in accord with good commercial strategy; as a military necessity primarily, it will eventually become a commercial artery and play an important part in the development of the Siberian province. The Central Pacific Railroad was put through under governmental auspices as a military necessity, not as a commercial venture at all. Yet the building up of the Pacific tier of states has been the result, together with the great commercial development consequent thereupon. So will like results flow from the completion of the trans Siberian road: radiating lines will be built and in the not far distant future Siberia will give

to the world as astonishing examples of industrial and commercial progress as have been consequent upon the building of the first American trans-continental road. It may be that Eastern Russia, within the lifetime of those now living, may be the preponderating portion of the Russian Empire. The United States developed to the westward, Russia will find her development to the Eastward. As I have written, Japan possibly could delay matters, but allow the completion of the trans-Siberian railway and Russia will not come as a chicken to be plucked. Japan and Russia should be close friends, they cannot afford to be otherwise. The affairs of England, France, Germany, Italy, and Austria, Japan has no need to trouble herself about; they belong to another sphere of politics. Russia, so to say, is of the household: being largely Asiatic in her make-up, and further, she is next door neighbour. Japan is in a position to profit greatly by coming to an amicable arrangement regarding the absorption of Korea. By entering into a commercial reciprocity treaty, as the result of concessions made by Japan, she might secure to herself advantages, the benefit of which would vastly accelerate the development of her industrial and commercial ambition. It would be better for the Empire, for the Japanese to marshal their battalions of industrials to meet the demands of their commercial ambition than to place armies in the field for military conquest. "Peace hath her victories:" and they are more comfortable than those of war:—

Strength means something more than merely to be strong.
And life is not a lifetime spent in strain to live.

Japan should now repose upon her laurels, taking such ease as may be fitting, while yet she has to meet the demands made upon her for the subjugation of Formosa. Prepare for war and make friends with Russia, is what I should counsel were I a Japanese. Japan could become the friend of Russia upon terms of equality to the mutual good of both. Acting together they could solve all eastern questions as suited their needs. Russia could take care of all her western interests without embroiling Japan.

Yours respectfully, X.
Yokohama, August 3rd, 1895.

[X.] writes as though Russia's eastern development could be limited by rule and compass, and as though no Powers existed in the Orient save Japan, China, and Russia. We fear that the Japanese would be preparing for themselves a fool's paradise if they followed his counsel. Let Russia attempt to plant herself in Korea, and some other "re-distributions" may be speedily looked for.—Ed. J.M.]

SHORT WORK WITH FORMOSA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The necessity of employing adequate means to achieve any end is too well known to require demonstration. But the very fact of its familiarity is often responsible for a foolish departure from the axiom. The truth of the Chinese proverb, that "too much is worse than too little" is often proved, not only in the acts of individuals but also in those of corporations. Whatever philosophers and religionists may say, there is such a thing as an excess of efficiency, which fact the Chinese have again rendered into a proverb, "Don't use a butcher's knife to kill a chicken."

The reports from Formosa as published in the vernacular papers, contain intelligence of a very serious nature. At first the subjugation of the islanders seemed to require no very great precaution on the part of the authorities. The people also thought that the Body Guards, the flower of the Japanese army, would make short work of any persons offering resistance. But what surprise and disappointment! Report after report seem to show a worse state of things. The thrilling adventures of a body of some thirty men on the river Takocham is sufficient to fill anybody with horror and anger. As those men were going up the river with supplies to their comrades, they were surprised by a greatly superior force of the natives, some six hundred strong. Only three managed to escape after experiences of the most perilous kind. One of those who succeeded in reaching the head-quarters of the Fourth Regiment, had nothing to eat for twenty-four hours. He had fought for four hours; had been concealed for eight hours in a marsh, and had waded down a river for six hours. It is not against an army that Japan is waging war in Formosa. It is against a horde of undisciplined men, who offer desperate resistance to the well equipped and well organized troops of this empire. For subduing such foes, the means used at present by the Japanese are altogether too good. The only way to make short work of the insurgents is to inspire them with wholesome terror. Shrapnel shell and machine guns will terrify them to some extent, but that more is necessary becomes apparent by the light of recent experience. To convince the insurgents of the uselessness of further resistance, some other kind of display is needful.

Really formidable weapons wielded by resolute hands would soon subdue these disturbers of the peace of the island. I refer to something over and above the means at the disposal of an army organized and disciplined according to the modern art of warfare. Japan has a peculiar advantage in this respect. In addition to her army modelled after the European system, it is possible for her to organize a body of fighting men specially and peculiarly Japanese. Persons acquainted with the history of the late Satsuma Rebellion will remember the efficiency of the Police force, popularly called the *Battotai*, or Sword Battalion. A body of proficient Japanese swordsmen, whose blades cut a man in two almost at touch, would certainly inspire the Formosans with terror. Considering how easy it would be to get together a *Battotai*, and how suitable it would be for the subjugation of the Formosans, I cannot but wonder that some such step is not taken. There is another advantage connected with such an army, namely, its inexpensiveness. We do not need costly ammunition, but only good blades for each man. Japan has plenty of blades and plenty of men skilled to wield them,

Your obedient servant, H. M. S.
August 2nd, 1895.

THE LEAGUE OF CATHOLIC UNITY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I take the liberty of enclosing a clipping from *The Living Church* of Chicago, and beg for its insertion in the hope that it may be of interest to your readers. I venture the suggestion that many missionaries would be interested in a translation of the Pope's letter upon a similar subject.

Yours truly, KAMIWA.

In view of the acknowledged evils of a divided Christendom, and in view also of the growing desire for Church Unity, we, whose names are subscribed, devoutly seeking the Divine guidance and blessing, hereby associate ourselves as a League for the promotion of Catholic Unity.

Without detaching ourselves from the Christian bodies to which we severally belong, or intending to compromise our relations thereto, or seeking to interfere with other efforts for Christian Unity, we accept, as worthy of the most thoughtful consideration, the four principles of Church Unity proposed by the Bishops of the Protestant Episcopal Church at Chicago in 1886 and amended by the Lambeth Conference of 1888, as follows:

"I. The Holy Scriptures of the Old and New Testaments, as 'containing all things necessary to salvation,' and as being the rule and ultimate standard of faith.

"II. The Apostles' Creed, as the Baptismal Symbol, and the Nicene Creed, as the sufficient statement of the Christian Faith.

"III. The two Sacraments ordained by Christ Himself: Baptism and the Supper of the Lord, ministered with unfailing use of Christ's words of institution, and of the elements ordained by Him.

"IV. The Historic Episcopate, locally adapted in the methods of its administration to the varying needs of the nations and peoples called of God into the Unity of His Church."

We believe that upon the basis of these four principles as articles of agreement, the unification of the Christian denominations of this country may proceed, cautiously and steadily, without any alteration of their existing standards of doctrine, polity, and worship, which might not reasonably be made in a spirit of brotherly love and harmony, for the sake of unity and for the furtherance of the great ends of the Church of Christ on earth. This will appear the more closely each of these articles is examined.

The Holy Scriptures are already our accepted rule of faith, howsoever we may differ among ourselves concerning the mode of their inspiration and interpretation.

The Apostles' and Nicene Creeds, being in accordance with the Holy Scriptures, do already sufficiently express the Catholic doctrine, without precluding the more particular Confessions to which we are severally attached; such as the Augsburg Confession, the Heidelberg Catechism, the Thirty-nine Articles, the Westminster Confession, and other symbols or formularies not inconsistent with these two Catholic Creeds.

The Sacraments of Baptism and the Lord's Supper, as instituted by Christ Himself, and administered with His own appointed words and elements, are already recognized among us as the badges and media of Church membership and communion, although we do not yet agree as to particular modes of their administration or special qualifications for their reception, or even theories of their efficacy.

The Historic Episcopate in various forms already prevails extensively throughout the Chris-

tian world; and, as connected with the Scriptures, the Creeds, and the Sacraments, it might become a bond of organic unity among the Christian denominations completing the Congregational, Presbyterian, or Episcopal systems, and at length recombining them normally in one Holy Catholic and Apostolic Church.

In order to promote Catholic Unity, we recommend, as proposed by the Lambeth Conference, that these articles be carefully studied in connection with "the authoritative standard of doctrine, worship, and government adopted by the different bodies of Christians into which the English-speaking races are divided;" and, to this end, we reverently and lovingly invoke the countenance and aid of the Bishops of the Protestant Episcopal Church, and of all other Catholic Bishops and Christian Ministers of every order and name.

May our united prayers be so blended with the prevalent intercession of our ascended Lord, that we shall all become one in Him, for the glory of His Eternal Father, for the good of His Church, and for the redemption of the world.

YOKOHAMA CHARITY ORGANIZATION.

The first annual general meeting of subscribers to the Yokohama Charity Organization was held in Keil's Building on Monday afternoon. There were present, Mr. James Dodds, in the Chair, Messrs. A. J. Wilkin, A. O. Gay, T. Rose, and the Rev. E. C. Irwine, Hon. Secretary.

The CHAIRMAN, having called the meeting to order, said:—The last meeting of the Society was held on the 27th June last year, and now, as then, the Committee have been forced to call another meeting by exhaustion of the funds placed at their disposal by subscribers, and it would have been held earlier had it not been for a timely donation from the minstrel troupe of the U.S. S. *Baltimore*, who very generously made over part of the proceeds of an entertainment given by them to the Society for the relief of the less fortunate of their brethren of the mercantile marine. In the report published in the newspapers, and now submitted to the meeting, the Committee give an account of their stewardship, which they hope may be satisfactory to the subscribers. In dispensing the funds of the Society, it will be seen that the Committee have given prominence to the idea which primarily led to the formation of the Society, the relief of distressed Seamen of the mercantile marine whose cases could not be fully met by the Seamen's Mission; but, as will be observed, there have been many other cases of distress relieved by the Society. In dealing with the cases brought before them, the Committee have exercised what discrimination has been in their power; but they do not pretend to say that every case has been a deserving one. People in distress find themselves here in some way, and have to be helped away from the place or remain as a burden to the community. The funds, however, have been dispensed as carefully as circumstances would admit, and the Committee hope that subscribers will be satisfied with the results achieved. Seeing the good work done, I have no doubt the appeal that the new Committee will have to make as their first duty, will be as readily responded to as in previous years. The member of Committee, Mr. Lindsley, who has acted as Hon. Treasurer since the formation of the Society, has just left for home, and deserves, I think, the thanks of the subscribers for the good work he has done in connection with the charity; and in asking you to pass his accounts now submitted I would suggest a cordial vote of thanks to him be accorded at the same time.

Mr. GAY said the report was very full and

he should have great pleasure in seconding the adoption of the report, the passing of the accounts, and of moving the hearty vote of thanks to Mr. Lindsley.—Carried.

REPORT.

Report for the year included between June 22nd, 1894, and June, 30th, 1895.

The Committee of the Yokohama Charity Organization beg to lay before the subscribers their annual report and financial statement to June 30th, 1895.

The first and largest item in the Treasurer's Report represents the expenditure upon that portion of the Society's work which involves the most labour, and constitutes indeed its principal use and necessity, namely the direct relief of distressed seamen. An analysis of the counterfoils to tickets issued by the Hon. Secretary shows that out of probably double the number of applications 108 were acceded to, and that orders representing 377 days' board and lodging were distributed in varying proportion among 50 distressed men, 27 of whom were ordinary seamen, 5 from sealing vessels, 7 firemen, 1 steward, 1 cook, 1 brass-moulder, 1 apothecary, 1 railway-guard, 1 turnkey, 1 ranchman, 1 runner, 1 auctioneer, and 3 of no special occupation. Of these, 24 were British, 13 American, 3 Swedes, 2 Danes, 2 Norwegians, 1 French, 1 German, 1 Roumanian, 1 Chilian, 1 Arab.

The boarding and housing of these men has been most efficiently done by Mr. John Kernan, to whom a written order is given in every case. Tickets have on several occasions been returned by Mr. Kernan to the Hon. Secretary in cases where he found that the bearers were already provided for elsewhere, or where they had tried to raise money upon them in other quarters. Cash is never entrusted to the applicants, but when advisable, clothing is supplied to them, and part passages paid for them. It is absolutely necessary at times to assist certain inveterate idlers out of the place, rather than help them to prey on the community.

The Committee desire to thank residents and visitors for many gifts of clothing, which is stored at the Parsonage in a wardrobe belonging to the society. They also heartily thank the local journals, the *Herald*, *Gazette*, *Mail*, and *Advertiser*, for inserting every week without charge an advertisement calling attention to the Society's needs, thus giving what is equivalent to a handsome yearly subscription.

It cannot be too strongly urged upon business firms, and upon those gentlemen who do not subscribe indirectly to the Ladies' Benevolent Association, that a moderate subscription given to the Y. C. O. is a much more useful mode of dispensing their charity than that of giving away cash to casual applicants, who in most cases misuse the greater portion of what is thus given to them. Gifts of cast-off clothing to the Society will also do much more real good than when these articles are given away to house-servants, who either convert them into coin or themselves into caricatures. Underclothing and shoes are always in special demand.

This report cannot be closed without special reference to the voluntary assistance given by men of the U.S.S. *Baltimore*, who by their excellent and talented performance in aid of local charities have added a sum of \$151.50 to our fund, which will appear in the next balance sheet.

The following is a statement of receipts and disbursements from 22nd June, 1894, to 30th June, 1895:—

RECEIPTS.		
Balance in hand as per last account	...	\$ 36.78
Subscriptions	...	870.00
Interest on Deposit in Bank	...	4.22
		\$911.00
DISBURSEMENTS.		
Board and Lodging to Distressed Seamen	...	\$304.55
Assistance and Supplies to Destitutes	...	280.00
Assisted Passages from Japan	...	186.06
Medicines and Hospital Expenses	...	49.55
Wardrobe and Petty Expenses, Advertising, &c.	...	99.00
		\$849.06
Balance in hand	...	61.94
		\$911.00

E. & O. E.

The Committee now beg to tender their resignation.

JAS. DODDS, Chairman.
JNO. LINDSLEY, Hon. Treas.
JAS. MARTIN.
THOS. ROSE.
E. CHAMPNEYS IRWINE, Hon. Sec.

Yokohama, 30th June, 1895.

The CHAIRMAN said the next business was the election of a Committee to serve for the ensuing year. The remaining members of the old Committee were Messrs. Irwine, James Martin, Thomas Rose, and myself.

Mr. GAY—Are they not enough?

The CHAIRMAN—I think it would be better to have more nationalities upon the Committee considering how very cosmopolitan is our work in this community. If I might be allowed to suggest a name, I should like to see Mr. Howard, of the Pacific Mail Company, nominated on the Committee. He would be a very good man, especially as he would represent the shipping interest. He could also furnish us with valuable information in regard to special cases as they arise.

Mr. WILKIN—Yes, about cheap passages.—(Laughter).

The CHAIRMAN—Yes, that would also appeal to him.

Mr. GAY—And now you want one other.

The CHAIRMAN—Yes, I do not know who is to take the office of Hon. Treasurer, now left vacant through the departure of Mr. Lindsley. I have my hands full, and Captain Martin and others on the Committee will, I have no doubt, allege the same reason. Mr. Howard, when I approached him on the matter, said he would only accept a simple membership on the Committee; and the Hon. Secretary's work should be kept separate.

Mr. GAY—I think Mr. Baehr would make a very good member of the Committee.

The CHAIRMAN—So do I, but I think Mr. Baehr is connected with the German Fund, and the two might clash.

The Rev. E. C. IRWINE said the German firms had been most willing subscribers to the Organization. He had not approached them all, but those to whom he had gone had been only too ready to afford help; their subscriptions had been given most willingly.

The CHAIRMAN—I see that the German firms are very well represented on the list, and also Mr. Baehr's firm.

The Rev. E. C. IRWINE—I think they should be represented on the Committee. Our work is cosmopolitan and is confined to no one nationality, as the report will show. There is only one German mentioned in the report this year, but we don't get many German sailors, and I don't think this man was a real German, though he spoke the language.

The CHAIRMAN—Mr. Baehr would undoubtedly give us great assistance, and being connected with the German Fund—mind you, I am not sure that he is—the two organizations might work together.

The Rev. E. C. IRWINE—He could then tell us whether any person is being assisted by both organizations.

Mr. GAY then moved that the remaining members of the old Committee, with the addition of Mr. Howard and Mr. Baehr be elected as the Committee of the Yokohama Charity Organization for the ensuing year.

Mr. WILKIN seconded.—Carried.

The Rev. E. C. IRWINE said there was one donation which he should like to mention, as it did not appear in the report. It was a donation from Mr. Arthur Winstanley of \$150, which was sent from London accompanied with another of a similar amount for the Ladies' Benevolent Society. The donations were quite voluntary, and I think you will agree with me that it is a very kind thing for an old merchant friend to so remember the poor of the town in which he was resident for so long a period of his life.

The CHAIRMAN—There is one omission which I should like to explain. No auditor's name appears at the foot of the accounts, and the matter arises in this way. I received them too late from the late Hon. Treasurer, Mr. Lindsley, to go through them myself before this meeting, but as Mr. Lindsley's name appears upon them, I think all subscribers will be satisfied as to their correctness. Next year I promise you that they shall be properly audited.

The Rev. E. C. IRWINE said he had a few remarks to make upon what was called the grog-shop evil in Yokohama. The matter was continually arising in the public prints, and many admirable articles had appeared about it from the pens of local journalists, but the evil remained very much the same from year to year. He did not wish to be invidious, but there were certain nationalities who materially helped, through their Consuls, to shut down upon the grog-shop element. It was a pity that this was not done by other nationalities, for it would be a great advantage to the place, would lead to a diminution of vice, and help to prevent the expenditure of much money in a wasteful fashion, as now prevailed to such a large extent. He wished the Consuls had full powers to prevent these men from continuing their nefarious trade. Of course the licensing powers varied greatly with different countries, but he thought that some pressure might be brought to bear to prevent these houses from continuing in a disorderly state, to reduce the hours during which they remained open, and to be supervised generally. There should not be any greater enticements than possible held out to Jack when he came ashore, to cause him to get drunk, and a step in the right direction would be taken if the grogshops could be made to provide good liquor, and prevented from serving a man when drunk. At present no such supervision exists, and the result was only too well known. He was greatly pleased with the accommodation provided at the house of Mr. John Kernan where the Yokohama Charity Organization cases were sent. Kernan did all that he could for them, did not encourage the men to drink, but helped them and the Organization materially. He (the speaker) was in daily intercourse with Kernan and had seen the care which he took, especially whenever he found that any clothes given by the Organization to a man had been put to a wrongful use. Passing on to a kindred subject, the speaker made a strong protest against the practise of open ports to the west of Yokohama making a habit of sending on distressed seamen and others—paying their passages to Yokohama—in the expectation of the men getting work to do here. The result was that this

community is put to great expense in obtaining assisted passages for the men across the Pacific. This practise was to be greatly deprecated. The Government of Hongkong had powers to prevent the landing of such cases, but here in Yokohama we had not the powers possessed by the Crown Colony. Still he hoped something could be done by the various Consuls and the authorities of the *Ken* to prevent these unwelcome birds of passage from alighting on our shores.—(Hear, hear.)

Mr. GAY moved a hearty vote of thanks to Mr. Irwine for the good work he had done in the past in the community. Very few gentlemen would devote the time he did to taking up this unpleasant but imperative work.—(Hear, hear.)

Mr. WILKIN seconded. Such a vote of thanks was well deserved.

The CHAIRMAN—I can thoroughly endorse every word which has fallen from the mover and seconder of the vote.

The vote of thanks was then carried unanimously.

The Rev. E. C. IRWINE, in thanking the meeting for the compliment, said that he was only too pleased to be of some slight service to the community in which he lived.

This concluded the business of the meeting.

PRESENTATION TO MR. WILSON WALKER.

An interesting incident took place on board the Pacific Mail steamship *City of Rio de Janeiro*, on the vessel's arrival at Nagasaki on the 2nd inst. When the Company's Pilot, Mr. Wilson Walker, came off to the ship, Captain Smith mustered his officers, and in their presence made a complimentary speech to Mr. Walker in reference to his services rendered on the occasion the *City of Rio's* stranding on the rocks off Kagoshima. Captain Smith then presented Mr. Walker with a handsome gold hunting watch, to which was attached a heavy Albert guard and compass pendant, from the Board of Directors of the Pacific Mail Steamship Company, together with a letter, of which the following is a copy:—

San Francisco, Cal., July 12th, 1895.

Subject:—Recognition of Service rendered.

Captain WILSON WALKER, Nagasaki, Japan.

MY DEAR SIR,—I take pleasure in handing to you, through Capt. Smith of the *City of Rio de Janeiro*, a gold watch, chain, and compass, as a testimonial sent you on the part of the President and Board of Directors of the Pacific Mail Steamship Company, in recognition and remembrance of the very valuable services which you rendered to the *City of Rio* at the time of her stranding on the rocks of Kagoshima. Permit me to say that I hope that this watch will tell off to you many happy hours in the future.

Yours truly, (Signed) R. P. SCHWERIN,
Vice-President and Gen. Manager.

The watch bears the following inscription:—

Presented to
CAPTAIN WILSON WALKER
by the
Pacific Mail Steamship Company,
in appreciation of his
energetic and valuable services
in floating the stranded steamer
"City of Rio de Janeiro,"
January 6th, 1895.
C. P. HUNTINGTON,
President.

BELGIAN CONSULAR POLICE COURT, NAGASAKI.

(Specially reported for the Japan Mail.)

Before F. RINGER, Esq.—Consul.

The Procurator of Nagasaki versus Peter Verstappen, a Belgian subject, on the charge of the manslaughter of a Japanese woman named Nakamura Shige, living with the accused at No. 39, Sagarimatsu, Nagasaki, where the accused kept a drinking saloon.

By special request of the Belgian Consul, Mr. R. G. Forster, of the British Consulate, Nagasaki, appeared as counsel for the defence.

The hearing occupied several days, from July 23rd to August 2nd.

Dr. Ikebe, Resident Medical Officer of the Nagasaki Hospital, witness for the prosecution, stated that he had been summoned to Verstappen's house at 8.30 p.m. on the 18th of July. When he reached the house he found the deceased, Nakamura Shige, lying on her back on the floor in the room next to the kitchen. She was still living, but was pulseless, and the respiration was very weak. He applied artificial respiration and other restorative treatment, under which the woman rallied somewhat, but she never recovered consciousness, and she died at 11.45

p.m. Witness then described the mark made by the rope round the neck, and other marks of violence on the body. (These are given in detail below in connection with the evidence of the post-mortem examination.) In reply to a question by the Court, the witness stated that he considered the marks on the neck such as might be produced by suicidal hanging. The marks did not run horizontally round the neck, as in cases of suicidal strangulation, but ran somewhat upwards. There was no mark caused by the knot, but no such mark was usually present in cases of hanging. Of two ropes produced, a half-inch rope and a quarter-inch rope, the witness stated that the smaller rope corresponded with the marks on the neck. The witness had attended Verstappen on account of local paralysis, but he did not consider that this paralysis would affect the use of his hands.

Matsuo Minokichi, lemonade dealer, residing next door to Verstappen, testified that on the morning of the 18th July, at about nine or ten o'clock, he heard Verstappen's wife screaming as if in pain. He recognized her voice.

Sato Kichijiro was called as a witness for the defence. His evidence was taken out of order for the convenience of the Court, the prosecution having no objection. He resided in a house at the back of Verstappen's. He stated:—On 18th July I returned home at 7.30, and later, while having my supper, I heard Verstappen calling his daughter Nellie, much louder than usual. I saw, through Verstappen's kitchen window, Verstappen, standing on a dresser, and afterwards he jumped down and put the water-pot on the dresser, and when Verstappen moved a little I saw the woman dropping down. Verstappen took the woman in his arms and put her down on the pavement in the kitchen, then Verstappen went to the front room leaving the woman in the kitchen, and some Japanese came in and assisted Verstappen to remove the body into mates that there are in, but above all, around, Paris no less than 8,000 insalubrious establishments that ought to be suppressed, or forced to consume their deleterious exhalations. Among the chief evils that the police signal, but are incapable of remedying, are the open furnaces for the manufacture of several kinds of machinery grease and oils—that from fish included; incineration of the detritus of the knacker's yards and butchers shops' refuse, make animal black to refine sugar; the conversion of the night-soil of the city into *poudrette*, or Paris guano, or worse still, into sulphate of ammonia. To these must be added the fabrication of several chemicals only differing in degree of poison.

The Chamber of Deputies is to be highly congratulated on its resolution to make ministers responsible for their official illegalities. M. Delcassé, late Colonial Minister, was horn-blown as a heaven-born administrator; he was simply a puppet between the hands of the self-appointed committee of colonial expansionists. His successor, M. Chautemps, is a plucky, and must be an honest man, as he showed up the irregularities of his predecessors, and their questionable proceedings. Without ever consulting parliament, ex Minister Delcassé, fitted out costly expeditions to grab territories in the Soudan, and other parts of Africa, that might at any moment have brought the French into collision with Germany and England, money voted for some other purpose he applied, to the extent in one case of 600,000 francs to new and unsanctioned ends; he sent the brave Captain Monteil to extirpate "Samory," who was somewhere in the Soudan, without any plan, and next to destitute of food and the *matériel* of war. Samory extirpated the French, and Monteil was recalled. The mules sent to the latter arrived dead. Two companies of troops were decimated, having neither bread, salt, nor meat; cannon and ammunition had to be abandoned, and a terrible shake given to the Colonial projects of France in the Soudan. The deputies would listen to no more, but stood by the budget commission that complained it was never consulted about these expeditions, and the granting of contracts after the goods had been supplied at something like fancy prices, so voted that the ex-minister be held civilly responsible for expending State monies without authority. It is to be hoped he will make to pay the utmost farthing. Then the concessions in Africa, conceded to alleged bogus companies and capitalists without capital—are to be subjected to the search light. But the public has seized another side of the question: "What return does, or can France expect to reap, from the annual grant demanded for the Soudan of 90 million francs?"

The students of the Latin Quarter are in rebellion, and divided into hostile camps, the plutocrats and apparently the sanscolottes. The cause is this. Henri Murger, who died in 1861, was the author of *La Vie de Bohème*; that every student between the ages of 17 and 23 is presumed to read, mark, learn, and digest with a fervour as if for *Robinson Crusoe*, and in a spirit of devo-

tion, as if a breviary—in his breviary days understood. Murger was the artist, or portraitist of student life, embodiments of Mark Tapley, Bob Sawyer, and Dick Swiveller, in courage, strategy, and good heartedness, that life was merry in the midst of misfortunes, where pockets were often as empty as stomachs, and co-operative loaning of clothes suppressed the necessity of a chest of drawers or a wardrobe. Besides, "My Uncle" was their Privy Seal Keeper. They were the days when one went gipsying. A bust has just been inaugurated in the Jardin du Luxembourg to Murger, and so was a fête sacred to the students, their *Mimis* and the *Musettes* for a few of these, it seems, still exist. A committee decided to improve the occasion by holding a banquet—voted *nem. con.* But when the committee fixed the price of the ticket at 6 francs per head, this was a bolt from the blue, for that section of the students who had—and at the end of the month too, when parental allowances were at lowest ebb—not six sous in their pocket, and were debating the possibility of applying to one of the matrimonial agencies, that have ever one or two heiresses on hand, with a few millions of fortune, and desirous only to find a husband. A schism was the result: the "Have Nots," protested against the Rothschild section of the students, who furthermore had insulted the shade of Murger by assuming that any student worth the name could afford 6 francs for a dinner. By entering into commercial relations with the good "Uncle," to take charge of some of their books, and a pair of winter pantaloons—summer having set in—and by writing to their sisters for old postage stamps, to negotiate—though new ones would be preferred—it was agreed that the price of the ticket should be fixed at 2 francs. Then the orthodox Murgerites made a pilgrimage to their hero's tomb, each depositing thereon a one sou nosegay. Next, they returned to the Luxembourg, after a lunch on one sou of fried potatoes served in a brown paper bag. Before the statue they deposited roses at one sou each; they sang some songs by Murger; that ceremony—three days before the official one under the auspices of the government—they baptized a *demi-Vierge* inauguration. Then the 2 francs banquet took place in the Café Procope—that light of other days; the room intended to accommodate one hundred guests, was by good engineering filled with 400; then the balconies were crowded, and next—the best of places—the staircases. The waiters could not do more, so they passed the dishes along, and that were duly harpooned on the staircase, cleared out, and passed on to the 400; the latter had only the wine which had been laid on the table in advance. The guests on the balcony got nothing at all; they appealed in desperation to the neighbouring publicans and bakers, and pork butchers, who contributed gallantly, and sent up the victuals by cords. One student urged working the fire telephone, to call the fire brigade to rescue those imprisoned by the block. In the meantime, another schism had taken place on the part of students, who deemed 2 francs too expensive for a ticket, and organised a "Pannch" at two-thirds less. At the twelfth hour, a poster was set up, inviting students to dine where they pleased, and agree to pay when they had become celebrities. The usual conflict with the police followed.

The French are very circumspect and measured in their appreciation of the new English Cabinet. They admit that with such an assemblage of able public men, a new departure, both in domestic and in foreign policy, must ensue. That policy is not expected to be of any provocative character, but it will not the less be decided and resolute. The defensive resources of England will, say good and impartial judges, be largely developed, and no money spared upon the work; it is the premium on the nation's life assurance. The nomination of Lord Salisbury and Mr. Chamberlain, to take charge of Foreign and Colonial Affairs, is viewed as very significant, as the holders are known to have concrete ideas on questions effecting their departments. A *rapprochement* between Germany and Japan and England, is now accepted as an accomplished fact, and China is expected to fall into line, after emptying Russia's political wallet. The Egyptian question will be less harped upon—and that will be a boon and a blessing for both French and English. Even already Anglo-Saxons are ceasing to be regarded as the last of peoples.

The double suicide of M. Carré and his wife, though only some days old, is still discussed, proof of the exceptional importance and suggestiveness of the event. M. Carré was the son of a humble village schoolmaster, who came to Paris, struggled to be called to the Bar, and became one of the minor satellites of Gambetta, so rose to post and place. He was perhaps the ablest social

lawyer in France; he was consulted on such everyday cases as divorces, and few ladies in difficulties but sought his advice. He generally reduced mountains to molehills; was full of genial scepticism and saturated with Parisianism. He was standing counsel to the Municipality. His pleadings in divorce cases were a treat of elegant diction, sunny, eighteenth century cynicism, and delicate tact. If he could not reconcile husbands and wives, he secured that, divorced, they should depart in peace. In society he was a pet; ladies drank in his eloquence; and his philosophy was so gentle to practise! He pleaded for an Austrian lady, of French extraction, for divorce from her husband, a wealthy Vienna banker. He won, as a matter of course. "And now, M. Carré, what would you advise me to do?" "Marry me, Madame." Before two months they were man and wife. They were as happy as mortals could be; they were classed as turtle doves, the rarest kind of birds to encounter in Paris. But all this time, Carré, the model man, was wearing a mask. For three years he had for mistress the wife of a distinguished citizen; the latter discovered the treason of Carré, his friend. A duel was fixed; Clemenceau was to be his second. On the fatal afternoon, a lady on quitting his cabinet in an excited state, encountered her friend Madame Carré. "Oh, Madame, since three years I have been your husband's mistress; he and my husband are to fight a duel: let us prevent it." Madame Carré rushed to her husband; "Wretch, what have I done to be so betrayed?" She flew to her dressing room, seized a bottle of poison, but the private secretary, who had overheard all, followed, and secured the bottle. While they struggled, a pistol shot was heard in the study; Carré lay dead. While the secretary went to a sofa for a pillow, another pistol shot from the still smoking revolver; the wife now lay dead. Carré, for his own wedlock imbroglio had only the vulgar solution of suicide; his philosophy, his cynicism, had vanished. The good fairy had removed all the gorgeous trappings, and her protégé was reduced to rags. Parisianism is all masquism; that only the rich shopkeepers, the confessional, the tribunal, and the bankruptcy court know.

FORMOSA.

(FROM THE "N.C. DAILY NEWS" CORRESPONDENT WITH THE JAPANESE ARMY.)

Affairs are growing worse, and worse and unless the Japanese replace their policy of extreme leniency in dealing with the rebels, for one of strict unfeeling severity, the indications are that all the peacefully inclined Chinese will have left the country for the mainland, for, placed practically between two fires, being forced to serve first the Chinese soldiers and then the Japanese, to the sacrifice of property and sometimes life, and with no indication of decreasing hostilities, it has caused these people, naturally so cowardly, to be possessed with great fear. They cannot rightfully accuse the Japanese of the least act of injustice, but even here in the city where the Chinese are offered every protection, kindness is not only totally misunderstood, and unappreciated, but is seemingly taken actually as an injustice. When the Japanese first arrived many Chinese were brought into their service, many consenting not because they wanted to, but because they considered it obligatory to obey. Although they did not expect their conquerors would have so much condescension, they however were secretly greatly astonished at being paid generously and without delay often from the lowest soldiers in the army. As they expected being forced to work without any compensation whatever, one would naturally think they would appreciate the generous payment and would be satisfied, but no, they refuse to work unless doubly paid, and we find now the charges high and unreasonable.

I think the discipline observed by the troops since their arrival has been splendid, although as I make this statement the Chinese complain of the terrible outrages committed,—contradictions which I trust the reader will decide in my favour upon considering the character of the Chinese. It is scarcely possible but what the conquerors, be they natives of any country, will sometimes abuse their rights, and the Japanese soldiers have been no exception, but in this case the very few slight injuries have been taken by the Chinese as the most enormous outrages. I investigated a most terrific "pow wow" that was raging in a small Chinese shop and found the crime, which from appearances could have been no less than a murder, was committed by a Japanese who had made some purchases to the amount of one dollar and in place of tendering a mutilated chop dollar, had placed a brand new one yen paper note, actually having

a current value of three or four cents above the ordinary Formosa chop dollar, on the counter and departed. As a great deal of paper money had been circulated, a bright Chinaman of my acquaintance preyed upon the ignorance of his fellow beings and opened an exchange office giving chop dollars for *yen* notes, until it finally soaked through the head of the unsophisticated Chinese that they were losing three or four per cent. on their money, for the civil authorities were exchanging bright new silver *yen* for paper money if anyone did not desire the latter.

A mob of a hundred or two Chinese fired on some couriers who were on their way to Tiengliak and as it occurred only a short distance from Twatutia, the firing could occasionally be heard here. It created a great deal of excitement among the Chinese who are absolutely incorrigible, several hundred leaving for Hobe to cross to the mainland. The report was promptly put in circulation that the big southern army had advanced and were then just outside the city and were going to retake the foreign city of Twatutia, and the walled city of Taipeihu, at night, killing all the Japanese, foreigners, and the Chinese who had submitted to Japanese rule, and as only one hundred Japanese soldiers remained here the others having gone south, Chinese success was assured. It is not only surprising, but most wonderful and incomprehensible that the Chinese, who are at least expected to possess a little human intelligence, can believe such trash so implicitly. A well-known Chinese, an acquaintance of mine, informed me that he was very much afraid, and was going to Canton. So he packs up his household property; his wife and children, worked up to a state of frenzied excitement, are sent down river to be despatched at once on a cranky junk destined for Foochow, when in ten minutes by walking a few blocks, he could have satisfied himself as to the falsity of the story by seeing with his own eyes that, instead of there being only one hundred Japanese soldiers, as reported, there are nearer ten thousand. But the story remains uninvestigated, the harm is done, and a few hours proves that their fears were based on a series of fabrications, in the manufacture of which the Chinese are not only unexcelled, but unequalled.

The present condition of affairs not only affects the Chinese but the foreign tea merchants are heavy losers. Until the arrival of the Japanese, tea was coming in from the country about as usual, but for a few days a gradual falling off was noticed until the Japanese had established themselves at the capital, when it took a sudden spurt, but only for a few days. It then began a perceptible decrease day by day, until at present there is practically none coming in. As the quantity decreased the quality was also lowered owing to the plants not receiving sufficient attention and the picking being carried on hastily without regard for the time the leaves are considered of proper growth. The territory that is at present given over to warfare usually sends in at least half of the output, and the great fear with which the people are possessed prevents them picking and sending in the tea from portions of the island that are comparatively safe. General business is falling into the hands of the larger merchants, the smaller closing up their houses, for we find only twenty or thirty present out of the usual one hundred and fifty Chinese packers for the Tamsui and Amoy markets.

Owing to many of the Chinese having been prevented from carrying on their usual occupations and in some cases having lost time and money during the last and present troubles, the Japanese Formosa Government has made known its intention of giving to the Chinese all *likin* and other taxes for the year, with the exception of course of Customs duties, which will be collected as usual. This reflects great credit upon the Japanese and only adds one more to the many thoughtful considerations which have characterised their treatment of the island. Any other people on earth except the Chinese would feel duly grateful, but they acknowledge no kindness, as they recognise no ruler unless he be a master who will impose the most oppressive laws and is respected in a greater or less degree as he is possessed with a greater or less degree of brutality, ferocity, and barbarity.

One regiment is already on its way overland for the south, and the main expedition is hurrying the preparations for the two months' trip and are now only waiting for several transports expected every day bringing coolies and supplies. The exact date of departure has not yet been made known, but it will without doubt be before the last of the month. On the eleventh, the Chinese army in the hills about Teckcham again made trouble, with the fourth attack on the city. They took up their position on the east hills, fortifying them-

selves by throwing up entrenchments, and mounting them with jingals. They gained courage by not meeting with any opposition from the Japanese, who by their intended tardiness, were allowing several of their own troops to surround the enemy, which by a skilful manoeuvre was successfully accomplished, resulting in not only the complete defeat of the enemy, who left over two hundred and ten prisoners. The Japanese loss was three killed and eight wounded.

The Chinese in Formosa have from the start, with a few exceptions, conducted themselves in such a disgraceful manner that when one is found deserving of praise he should at least get the credit of it. Lin Wei-yuan, Senior Commissioner of the Imperial Stud, the wealthiest landed proprietor of Formosa, descendant of the chief lieutenant of Koxings, the Pirate King of Formosa in the early days of the present Manchu dynasty, and now one of the three chiefs of the Formosans, is the person. The morning of 24th May, when the independence of Formosa was declared and the determination to oppose the Japanese was made known, the gentleman above referred to stated publicly that he would have nothing to do with it whatsoever. So great was the condemnation of the rebels, that to insure his own safety he secretly left his *yamen* at the dead of night and kept in hiding until the first steamer left for the mainland. On this boat he took passage and has not been back to Formosa since. And the noble Imperial Government who allowed him to resign his rank probably did so because he refused to be a party to the debasing duplicity which characterised the handling of the whole Formosa affair.

One division of troops is expected in from Kelung to-morrow which should impart some confidence to the few respectable Chinese here and stop the flow of Chinese to the mainland. Nearly fifty junks were counted to-day, crowded with Chinese passengers and their luggage waiting to go out on to-night's tide. Of course there is no just reason whatsoever for such a movement which is due entirely to the cowardliness of the people, who seeing so many Japanese soldiers sent out and none returning and hearing firing going on outside the city actually believe before the week is out the great Chinese army will be in possession and that all will be murdered, Japanese, Chinese, and foreigners. No news ever reaches their ears but Chinese victories, at least if there does, it is never believed.

Twatutia, 15th July.

I have often heard it stated by foreigners that although the Japanese conquered the Chinese without difficulty, they could hardly have done otherwise, because there was no opposition, and if cases had been reversed, and the Japanese had been placed in battle, with no drill, poor equipment, and without proper commanders, the Chinese would have found the victory as easy. It is such incidents as the following that prove superiority. I have here to record a sad calamity, but one of undaunted courage and bravery. An act that brings out the true nature of these plucky soldiers, who although they have never yet been accused of cowardness, this leaves not a doubt of their valour. On the eleventh of this month, Sergeant Sakurai with thirty-one soldiers started up river with eighteen Chinese boats loaded with rice, intending to convey it to the first battalion who are stationed at Takoham. After having traversed the greater part of the distance in safety, they saw what they took to be Chinese soldiers about 1,000 *mètres* from the river. Fearing that the latter might surround their boats and seize the valuable cargo and upon closer inspection finding that there were only fifteen or twenty Chinese, they at once fired on them. No sooner had the first shot been fired than between four and five hundred Chinese soldiers came tearing out of an ambush on the left and commenced to surround the little party of thirty-two, which was divided into two squads, one under command of Sergt. Sakurai, and the other under Corporal Ibasha. Back to back they answered the enemy's fire gallantly, and encouraging each other, for three hours they fought until eight were dead and several were wounded. The twenty-four survivors placed their bayonets on the guns and made a charge at the enemy, who cowards as they are gave way enough to allow them to gain the outside of the ring, leaving a Corporal mortally wounded in the hands of the enemy, but the fiends were deprived of the pleasure of torturing this noble soldier, who with a shout of *Bansai*, drew his sword, and cut his own throat. The Chinese again surrounded the little party and commenced the fire and again the Japanese charged through their ranks, leaving nine of their own men dead and five badly wounded. The unharmed soldiers were about to return to the aid of the injured, who were soon

to fall into the hands of the Chinese, when these poor fellows implored them to fly and save their own lives, rather than return to certain death, then four that were together placed their swords at each other's throats and the fifth taking his own life, they all died together.

The four remaining, by sheltering themselves in the ambush near by, were able to put the Chinese off the track for the time, and later went to a pond which had an abundance of high water grass, which would hide them for awhile. It was then proposed at dusk to endeavour to escape from the vicinity, but one thinking it would be safer to remain until later refused to go and was left alone, the other three departing. This soldier then finding a suitable place kept his body immersed with just the eyes, nose, and mouth above water. Seeing Chinese approach to the bank, he thought he had been discovered, that all was up, but great was his joy when after washing some rice they departed and soon disappeared. Almost famished for want of food, and weakened with exhaustion, he stood for eight hours in the same position until it seemed as though he could hardly bear the suspense longer. Towards midnight, the sky darkened, heavy clouds appeared, accompanied by peals of thunder, and flashes of lightning, which gave way to torrents of rain. Then leaving his place of concealment and keeping a sharp lookout for Chinese soldiers, he reached the river bank and found only six out of the eighteen boats that had originally been brought up. The fires of the Chinese camps were visible, and as the storm then ceased and the moon appeared, there was only one course to take that would perhaps bring him through safely. So stripping himself of his clothes, reserving his jacket, cartridges and gun, he waded into the stream and by keeping his head and nostrils above water, sometimes sinking into pit holes over his depth, falling and plunging along, he passed for two and a half miles. Then seeing a form upon the bank and hoping that it might be Japanese he climbed upon shore, but came face to face with a Chinese soldier and fearing that the alarm would be given by this man who was apparently a sentry, he shot him and then plunged into the river again gaining considerable distance before the Chinese had appeared to investigate the rifle report. Continuing on but a mile or so, his heart was made glad by the neighing of a horse for he then knew he had reached the Japanese camp in safety. Nothing certain is known regarding the other three, but it is thought that they have reached some of the Japanese camps in safety.

Taipei-hu, 16th July.

INQUEST.

The adjourned Inquest into the circumstances attending the death of Kamil Mahmit, a Lascar fireman on board the British steamer *Energia*, was held in H.B.M. Consulate on Friday afternoon before John Carey Hall, Esq., Consul and Acting Assistant Judge.

Neil Gordon Munro, M.D., stated that there was no doubt as to the cause of death—*beri-beri*. He attended Kamil Mahmit, while the others were sent to hospital under Dr. Mécre. The men only went to hospital under considerable pressure, one positively refused to go. *Beri-beri* was the cause of death in all three cases. There were on the ship others suffering from the disease. He saw in the papers last night that four others were suffering from *beri-beri*, and he examined them and found that they were suffering from the first stages of the disease. There are three kinds of the disease; the men were suffering from an acute form of the disease. He was strongly of opinion it was a contagious disease, but that was a point that has not been cleared up. He only found such cases from men coming from the Malay archipelago, Ceylon, the Malabar coast, and sometimes, but not frequently, from China and Japan. The predisposing causes are climatic, or fermentation of the stomach. It is a form of *anæmia* and is associated with the diet of the natives from those regions. His personal belief was that it was a parasite in the bowels, which gains entrance with the food into the alimentary canals. He had had experience of *beri-beri* while in the P. & O., but not of so severe a mortality, but the authorities place the mortality next in order to that of cholera. He was examining the excreta of the men, to determine to what death was due. Changes of climate, food, or exposure to air, would lead to it; with predisposing tendencies changes of climate would lead to acute attacks. The very great change of climate between Yokohama and Otaru would lead to an acute stage if there were predisposing circumstances. He did not think the Board of Trade provisions are sufficient for the comfort and well-being of the men. The fore-castle of the *Energia* was much larger than in

some other vessels, where it is merely a den, but even on her when the ports are closed there is insufficient air. He did not consider the cubic feet and ventilation allowed by the Board of Trade adequate. He would recommend bread in place of rice, also eggs, poultry, &c. He should recommend that the men be prohibited from eating their rice cold, and only immediately after it was cooked. Their religious prejudices, however, stood in the way of a good many things. He had examined the men and found that three had their hearts affected. They never say they are ill: in fact they have to be found out. Only the symptoms of the disease are known, not the pathology, so patients have to be treated by the symptoms. They are given quinine, and other tonics to tone up the bowels.

Mr. Hall found that Kamil Mahmit died from an acute attack of *beri-beri*, that everything possible was done for him, and that no blame attaches to any one.

Dr. Munro strongly objected to the men now under treatment by him being sent to the General Hospital; they would get better treatment and care on board ship.

Mr. Hall said he could not see that the forecastle of a ship was better than the hospital. He would pay a visit to the General Hospital.

Dr. Munro replied that the establishment was in a filthy condition, the attendance was bad, and that only a steward was left in charge. They might be sent to the German Hospital or the British Naval Hospital.

INQUIRY INTO A DEATH AT SEA.

J. C. Hall, Esq., H.B.M. Consul, held an inquiry at the Consulate on Thursday afternoon into the circumstances attending the death of J. W. Twentymen, a steward's assistant, on board the British steamer *Aswanly*, which took place in the Red Sea on July 6th, 1895, in lat. 12° 14' N., long. 45° 50' E.

Capt. James Murray, Master of the *Aswanly*, deposed—The boy fell down an iron ladder just as the ship was entering Port Said, and was subsequently attended by a doctor in the service of the Canal Company. The lad was about 19 years of age and had, previous to the accident, complained of the heat and heart trouble. The steward sent the lad off for some sugar, and it was while he was returning that the boy's foot slipped. He was about a couple of steps from the bottom of the hatchway when the accident occurred. It was not till some hours after this that he complained of being hurt, and then a doctor was sent for. The doctor thought the hurt was but slight and would heal in a day or so. The lad died a week after his fall. The day before his death he took a bath in the Engineer's bath-room, and was not then complaining.

James Poole, the Chief Steward, who witnessed the accident from a distance of about four feet, said the time was about 6.40 a.m., June 28th, when it occurred. The lad refused to lay up and continued to work until the afternoon. The weight of the sugar which he was engaged in carrying could not have been more than 18 pounds. The lad must have taken a false step as he came down the ladder, and one of his legs went through. Probably the india-rubber shoes which he was wearing contributed to the result. After the accident every care was taken of deceased, and his diet was made as strengthening as possible. The boy was of a very weak constitution and often complained of pains in the heart and body. His death was quite unexpected.

John Scott, a fireman, who had been a male nurse in a hospital for six years, attended the deceased up till the time of his death. He applied cold lotions to the hurt every quarter of an hour until the day of deceased's death. The lad had had some previous heart trouble and was not strong. The day before his death a slight fever set in. Delirium followed, and death supervened about six o'clock in the morning. In one conscious interval before death, the lad said he was dying and thanked them all for what they had done for him.

His Honour said—I find that the deceased, J. W. Twentymen died in consequence of a hurt received while in the service of the ship: that all proper medical care and attention were bestowed upon him, and that no blame attached to any one.

The *Saturday Review* and several provincial Conservative journals complain that there are too many of Chamberlain's friends in the Government. They especially refer to the inclusion of Mr. J. Austen Chamberlain (Civil Lord of the Admiralty), Mr. Jesse Collings (Parliamentary Secretary to the Home Office), and Mr. J. Powell Williams (Financial Secretary to the War Office).

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, August 4.

M. Speier, the present Russian Minister at Teheran, has been appointed Minister to Korea.

London, August 8.

The Marquis of Salisbury has demanded that the Government of China shall issue a Decree ordering the death of the culprits in the recent massacre of missionaries, the fullest protection to missionaries, and an escort for the Consul who is going to enquire into the circumstances of the massacre. The Chinese Government has assented.

["SPECIAL" TELEGRAM TO "JAPAN MAIL."]

Kobe, August 9.

Telegraphic news has been received here from Hongkong, stating that riots occurred yesterday near Canton, and that the Wesleyan Hospital had been damaged. A meeting has been held in Hongkong, which condemned the policy of the British Government in China.

[FROM "N.-C. DAILY NEWS."]

Pekin, July 28, 10 a.m.

Lu Ch'uan-lin, the new Viceroy of Szechuan, has telegraphed a memorial to the Emperor laying the whole blame of the recent riots on Liu Ping-chang; and declaring that as he had countenanced them he should be the one to restore the *status quo ante*. The Emperor has consequently ordered Liu Ping-chang to remain in Szechuan and settle the affair.

[FROM THE "SIAM OBSERVER."]

Rangoon, July 15.

The Government of Burmah has published a notification in which the territory constituting the Burmese Shan States is defined. Among those in the northern Shan States are East and West Manglum, with their dependencies, and all the territories east of the Salween River which, on 27th November, 1885, owed allegiance, directly or indirectly, to the King of Burmah, and which still form part of Upper Burmah. In the southern Shan States are included Kengtung and its dependencies, with Kengcheng.

Allahabad, July 15.

Major-General Gerrard's party is believed to have safely crossed the Hindu Kush and to be making progress towards Maro, to the north of Gilgit.

Simula, July 17.

The following honours and promotions have been gazetted in connection with the recent Chitral expedition:—Dr. Robertson, K.C.S.I.; Lient. Whitchurch, V.C.; Colonel Kelly, C.B. and A.D.C. to the Queen; Capt. Townshend, C.B.; Capt. Borrowdale, D.S.O.; Lient. Jones, D.S.O.; Lient. Edwards, D.S.O.; Lient. Fowke, D.S.O.; Lient. Heynon, D.S.O.; Lient. Stewart, D.S.O.; Lient. Harley, D.S.O.

[FROM "LE COURRIER DE SAIGON."]

Paris, July 20.

The Cuban insurgents surprised and defeated Marshal Campos at the head of a small column. General Santogilde was killed while covering the retreat.

Paris, July 21.

At Stambuloff's funeral no official personage was present. A speech defending Stambuloff occasioned a disturbance.

[FROM JAPANESE PAPERS.]

Shimonoseki, August 7.

A letter from Sōal, dated the 1st inst., states that a private message dispatched by the wife of the Tai Wōn-kun says that Li Shun-yo, who was exiled the same time ago, is alive, but is receiving harsh treatment.

Osaka, August 7.

The latest dispatch from Shanghai under date the 3rd inst., announces that the thermometer has risen to 100 degrees since the 31st ult., and two foreign residents died from sun-stroke on the 2nd inst.

Nagasaki, August 7.

Lieut.-Colonel Nakamura, an Imperial Cham-

berlain, has reached here, and at once proceeded to Saseho.

Communication has been resumed on the Tsuge and Seki section, which was recently damaged.

Shimonoseki, August 7.

A Norwegian steamer arrived here last night with a large cargo of beans from Newchwang.

It is stated that a report having been received to the effect that 300 Chinese soldiers had secretly entered Haicheng on the 26th ult., the Japanese gendarmes took particular pains to discover whether the report was true or not.

On the same day, 20 Chinese robbers were said to have visited Kosoton, about 5 miles from Haicheng.

Business in beans is said to be very active at Newchwang, stocks arriving freely from the interior. It is stated that Custom duties to the amount of yen 500,000 are collected there during the three summer months. The Custom House is now under the charge of one foreign employé, five Japanese civil officials, and an officer of the gendarmerie.

Tsuchizaki, August 7.

The Yusen Kaisha's chartered steamer *Strathdale*, which left Honjo last night with some rice from Sakata and Honjo, ran on to a shoal off Arayagahama, Tsuchizaki, this morning, but floated at 4 o'clock in the afternoon.

The following telegram was yesterday received by the Government.

H.I.H. Prince Fushimi and his Brigade arrived at Kelung on the 6th inst. from Talien. No person had been attacked by epidemics.

Fukuoka, August 8.

The torpedo-boat *Kotaka* arrived at Hakata last night, and left for Yokosuka this morning. Lieutenant Nagai and 28 others are on board.

Osaka, August 8.

Two regiments of the Reserve leave here for Formosa about the 26th inst.

The total number of Chinese prisoners in Japan is 988, of whom 21 officers and 248 men are staying here, and 2 officers and 96 men at Otsu. Of those in Osaka 85 are disabled, and will remain here until they recover somewhat. The other prisoners will leave Osaka and Otsu on the 12th inst.

Shimonoseki, August 8.

The *Satsuma Maru* proceeded to Formosa to-day with some civil officials for Kelung and over 200 gendarmes.

Kobe, August 8.

The captured gun-boat *Chen-tung* arrived here yesterday.

Fukuoka, August 8.

The *Chen-chung* arrived here last night, and proceeded to Kure this morning.

Kobe, August 8.

The *Iwaki Kan* made a trial run yesterday. She will leave for Sasebo to-night.

The Italian man-of-war *Umbria* left for Yokohama this morning.

Okayama, August 8.

Forty-five cases of cholera were reported here yesterday.

Shimonoseki, August 8.

Yu Sei-yei, a manager of the Finance Department in Korea, and a few other Koreans arrived here by the *Shirakawa Maru*. They are to inspect Customs procedure at the Yokohama Custom House.

Shanghai, August 8.

Some Chinese soldiers dispatched to guard Kutien, Fukien Province, have behaved in a very disorderly manner, and stolen the property of missionaries.

A report has reached here to the effect that a Chinese mob has destroyed a Christian hospital at Fushan, Kwanchow, Kwangtung Province.

Nagasaki, August 8.

The *Matsushima Kan* left here to-day for an unknown destination.

The Russian ship *Rasboynik* has left for Hongkong.

Nagoya, August 8.

Tatsuta-mura in Kaisai District is still flooded and the rice is rotting in the fields. Over one hundred farmers forced their way to the *Kencho* yesterday.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club is closed for the season: and re-opens on Thursday, 3rd October.

The Tokyo Chess Club is now closed for the holiday season and will re-open on Friday, 4th October, 1895.

SOLUTION OF PROBLEM No. 188.

WHITE.

BLACK.

1-B to Q B 4

1-Anything

2-Mates accordingly.

"A good clean problem with no duals."

Correct answers from W. D. Cox, E.D., W. Barrie, W.H.S., Digamma, J.D., Shogi, and E. J. King.

PROBLEM No. 190.

By CHAS. A. GILBERG.

BLACK.

WHITE.

White to play and mate in two moves.

AUSTRALIAN CHESS.

The last mail gives us news of the progress of a match for the Championship of the Southern continent. Mr. Esling has challenged the present Champion, Mr. Wallace, and the match was in progress when the mail left. Mr. Wallace made the running at first till the score stood: Wallace 3, Esling 0, Draws 2; but after that he was troubled with insomnia and Mr. Esling won the sixth game. The seventh game was adjourned in the middle (with a position in favour of Mr. Esling) on account of Mr. Wallace's health. We reprint from the *Australasian* some of the better games already played and hope to hear that the match is concluded at an early date.

GAME No. 313.

SECOND GAME—QUEEN'S GAMBIT DECLINED.

WHITE.

BLACK.

Mr. Wallace.

Mr. Esling.

1-P to Q 4 (a)

1-P to Q 4

2-P to Q B 4

2-P to K 3

3-Q Kt to B 3

3-K Kt to B 3

4-Kt to B 3

4-P to Q Kt 3 (b)

5-P to K 3

5-B to Kt 2

6-P to Q R 3 (c)

6-B to K 2

8-B to Kt 5 ch. (d)

8-P to B 3 (e)

9-B to Q 3

9-Q to B 2 (f)

10-Kt takes Kt

10-K P takes Kt

11-Castles

11-Castles

12-P to K 4 (g)

12-P to Q B 4 (h)

13-Q to B 2

13-P to B 5 (i)

14-P takes P

14-B takes P

15-B takes P ch.

15-K to R sq.

9 minutes.

27 minutes.

16-B to K 4

16-B takes B

17-Q takes B

17-Kt to B 3 (j)

18-B to B 4

18-Q to Q 2 (k)

19-P to Q 5!

19-Kt to R 4

20-B to R 5!

20-Q R to B sq.

21-Q R to Q sq.

21-K to Kt sq.

22-K R to K sq.

22-K R to K sq.

63 minutes.

65 minutes.

23-Q to K B 4

23-R to B 4

24-B takes P (l)

24-R takes P (m)

At this stage the players adjourned for refreshments. On the resumption of play Mr. Wallace's sealed move was found to be Q to R 6.

25-Q to R 6

25-P to B 3

26-R takes R

26-Q takes R

27-B takes P (n)

27-Q takes R

96 minutes.

100 minutes.

And Mr. Esling resigns.

(a) The close game requires great attention to detail and right judgment in position.
(b) King's side castling should precede the Fianchetto business.
(c) Lost time in this situation, P to Q R 3 is good enough to stop Kt to Q Kt 5, or to secure the Queen's side, P majority, when Black has played P to Q B 4.
(d) Correctly played, compelling Black to block his Q B.

(e) This shows the weakness of his 4th move. If now 8-Kt to B 3, 9-Kt to K 5 evidently wins a piece.

(f) A bad spot at present for her Majesty, 9-Kt to Q 5 was much better.

(g) A bold and successful move, but played a little too soon; 12-Q to B 2 weakens the Black King's side.

(h) White's K B is obviously a very dangerous piece. Why not now compel the exchange of the weaker for the stronger by playing 12-B to R 3?

(i) So glaring an error is unusual in Mr. Esling's chess. We suggest 13-P takes K P; 14-B takes P, B takes B; 15-Q takes B, Kt to Q 2; 15-B to B 4, B to Q 3, &c.

(j) His game is gone, but there was no reason for the sudden collapse. 17-Kt to Q 2 would have kept his position together for some time.

(k) If Black play 18-B to Q 3, 19-Kt to Kt 5 wins at once for White.

(l) White's play could not be improved. This forcible stroke shatters Black's defence.

(m) If 23-K takes P, 24-Kt to K 5 wins the Q or mates.

(n) A potent and elegant conclusion.

GAME No. 314.

THE THIRD GAME—THE FRENCH DEFENCE.

WHITE.

BLACK.

Mr. Esling.

Mr. Wallace.

66-K to Q B 8

67-R to Q R sq. (ch.)

67-K to Kt 7

195 minutes.

197 minutes.

And Mr. Esling resigns. (m)

(a) No improvement on 7. B to K 5 in the first game, but the natural 7. Kt to B 3 is superior to either.

(b) In our notes to game No. 2 we recommended the text move in preference to 7. B takes P.

(c) Very weak; forcing tactics in an undeveloped position nearly always recoil.

(d) 12. R to Kt sq. seems better, as it prevents Kt to B 4.

(e) Here we think Black could afford to lose a move by Q to R 5 ch. and Q home. White's K side is then broken, and castling dangerous.

- 6—P takes P
7—B to Kt 5
8—Kt to K 5
9—B to Q B 6
10—Kt takes Kt
11—B takes P
12—Kt takes Kt (b)

24—R takes P
25—Q takes R (ch.)
26—Q to K B 7
27—Q takes R P
28—Q to K 2 (i)
29—Q to K 5
30—Q takes Q
85 minutes.

And Mr. Wallace resigned.

NOTES.

- (a) Providing for the escape of the threatened Queen.
(b) White has played to win a Pawn, and he has won it at the cost of backward development. The position is in favour of the second player.
(c) Initiating a strong attack. 13—B takes P would not have been good.
(d) At this stage it was no easy matter to find a satisfactory move for White.
(e) Very much stronger than the specious 15—B to Q Kt 5.
(f) The right move.
(g) Preventing the threatened... R takes P.
(h) Well-timed. Black now realises a portion of his advantage.
(i) Posting the Queen on the proper square.

Said Mr. Blackburne to an interviewer, with whom he had a chat the other day:—"Compare one of Paul Morphy's games with a German game. In the one you have genius, magnificent combination, brilliancy, and what I can only call inspiration. In the other you have the apotheosis of laborious dullness."

"Chess," says Mr. Blackburne, "is growing in popularity to a marvellous degree. Where 30 years ago there was only one chess club there are now 26. The game has 'caught on' with the spread of education; and, nowadays, there are very few decent-sized hamlets, to say nothing of towns, without their chess clubs." In England, continues the champion, chess goes, at present, upon "the German lines. The German player is a careful, cautious man, who rarely, if ever, delivers a brilliant attack; and who depends rather upon capturing a Piece or a Pawn, and so obtaining an advantage, than upon a brilliant *tour de force*. An Englishman at the chess board ought to be like an Englishman elsewhere—"adventurous, plucky, resourceful, not without confidence in himself. But the younger school of English players are all for the tedious German game."

Mr. Blackburne knows many people who believe that the study of chess is an excellent method of training the mind in logic, in shrewd calculation, and in prevision and caution. But for his part he has not found these qualities reflected in the lives of chess players. Chess players "are just as fallible and as foolish as other folk who do not know a Rook from a Pawn." Nor does Mr. Blackburne believe that, in schools and colleges, chess would be found useful as a substitute, say, for Euclid. Moreover, even if chess were a form of mental discipline, he would object to it because of its fatal fascination. It "is a kind of mental alcohol. It inebriates the man who plays it constantly. He lives in a chess atmosphere; and his dreams are of gambits and of end games." Many an able man of Mr. Blackburne's acquaintance has been ruined by chess. "The game has charmed him; and, as a consequence, he has given up everything to the charmer. If a man has not supreme self-control, it is better that he should not learn to play chess."

No. 168, Bombay	—

METALS.

Dull and lifeless. This is not the season for an active trade, and dealers expect lower prices ere long, for they assert that several importers are loaded up with stock.

	PER PICUL.
Flat Bars, 4 inch	\$3.25 to 3.30
Flat Bars, 4 inch	3.30 to 3.35
Round and square up to 4 inch	3.22 to 3.30
Iron Plates, assorted	3.40 to 3.50
Sheet Iron	4.30 to 4.55
Galvanized Iron sheets	8.50 to 8.75
Wire Nails, assorted	5.60 to 6.00
Tin Plates, per box	5.20 to 5.40
Pig Iron, No. 3	1.65 to 1.70

KEROSENE.

Quiet and inanimate. Holders will reduce no further, as they believe that buyers must shortly enter the market. Dealers will not operate, believing that fresh supplies will yet weaken holders. The German ship *Carl* arrived yesterday with a full cargo American Oil from New York.

American	\$2.20 to 2.25
Russian	2.10 to 2.15
Langkat	1.90 to 2.00

SUGAR.

Brown—A fairly current trade in China and Manila sorts without change in quotation. Formosa sorts which later came into good request, and prices are hardening for these classes. White—A fair demand, without any rush or change in prices.

	PER PICUL.
Brown Takao	\$3.65 to 3.70
Brown Manila	4.30 to 4.50
Brown Daitong (New)	3.10 to 3.20
Brown Canton	3.10 to 3.60
White Java and Penang	6.10 to 6.20
White Refined	6.00 to 9.25

EXPORTS.
RAW SILK.

A good business all round at last prices.

Supplies are plentiful and holders are very wisely current.

QUOTATIONS.—(NEW SILK.)

Filatures—Extra 9/11, 10/12 deniers	\$870 to 880
Filatures—Extra 13/15, 14/16 deniers	860 to 870
Filatures—No. 1, 10/13 deniers	850 to 860
Filatures—No. 1, 13/15, 14/16 den.	830 to 840
Filatures—No. 1, 10/14 deniers	820 to 830

Kakedas—Extra	790 to 800
Kakedas—No. 1	770 to 780
Kakedas—No. 1	750 to 760
Kakedas—No. 2	720 to 730

WASTE SILK.

No change to report. Holders firm for their stock of Old Waste, which buyers do not want. New fibre comes forward very slowly, and until it is more plentiful no business of any consequence will be done.

TEA.

A fair amount of business at hardening rates. Choice leaf is now very scarce, and the principal business has been in grades ranging from Common to Good Medium. Settlements and export to date maintain their respective positions as compared with last year.

	PER PICUL.
Choicest	\$30 to \$32
Choice	27 to 28
Finest	25 to 26
Fine	23 to 24
Good Medium	21 to 22
Medium	16 to 20
Good Common	17 to 18
Common	12 to 16

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health
for all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribu-
aries in Abyssinia," says—"I ordered the dragoman Mahomet
to inform the Fakir that I was a Doctor, and I had the best
medicines at the service of the sick, with advice gratis. In a
short time I had many applicants, to whom I served out a
quantity of Holloway's Pills. These are most useful to an ex-
plorer, as, possessing unmistakable purgative properties, they
create an undeniable effect upon the patient, which satisfies
them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations
of all kinds. It acts miraculously in healing ulcerations, curing
skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels
in China, published in 1871, says—"I had with me a quantity of
Holloway's Ointment. I gave some to the people, and nothing
could exceed their gratitude; and, in consequence, milk, fowls
butter, and horse feed poured in upon us, until at last a tea-
spoonful of Ointment was worth a fowl and any quantity of peas,
and the demand became so great that I was obliged to lock up
the small remaining "stock."

Sold by all Chemists and Medicine Vendors the throughout
World. May 1st, 1890.

"MONEY,"

A JOURNAL OF BUSINESS AND FINANCE.

PUBLISHED EVERY WEDNESDAY AND SATURDAY.

Annual Subscription, post free, 25s., in the United
Kingdom. Ditto, 29s., to any part of the World.

Offices—Bishopsgate House, London, E.C.

"PAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, AUG. 17TH, 1895.

BIRTHS.

At 29, Bluff, on the 15th August, the wife of F. G. WOODRUFF of a Daughter.

At 120, Bluff, on the 11th inst., the wife of J. D. HUTCHISON of a son.

DEATH.

At No. 70, Bluff, on the 14th inst., after a lingering illness, HARRIET, the beloved wife of J. H. BROOKE, in her 66th year, deeply regretted.

SUMMARY OF NEWS.

LIEUTENANT GUNJI leaves for Chishima at the end of this month.

THE Gillig Cup, for yachts of 26-rating, has been won by the *Daimyo*.

THE death is announced of Baron Kitaoji, which took place on the 11th inst.

THREE camels captured at Haicheng were brought to Tokyo on the 10th inst.

THE damage caused by the July storms in Shiga Prefecture is placed at yen 5,000,000.

MR. EJIKI IKUSABURŌ has lately discovered a process of distilling a natural oil from cater-

pillars, after the silk had been taken from the cocoons. The oil is transparent and free from offensive smell.

DYSENTERY is again very prevalent in the southern provinces. Great heat is being experienced in Kiushu.

THE CROWN PRINCE has been indisposed of late, but the fever was yielding to treatment at the close of the week.

It is stated that Count Miura leaves Japan on the 25th inst. to relieve Count Inouye as Minister to Korea.

PROJECTS for electric railways are springing up everywhere, and especially in Yokohama, Tokyo, Kyoto, and Osaka.

THE steamer *Catterthun* has been wrecked on Seal Rock one day out from Sydney, with a loss of over sixty lives.

MARQUESSES ITO and Yamagata have accepted the promotion and decorations recently conferred on them by the Emperor.

A CRICKET MATCH was played on Saturday between the Y.C. & A. C. and the Willard Opera Company, resulting in a draw.

CAPTAIN KAMIMURA, late Commander of the *Yamato Kan*, has been appointed Director of the Torpedo School at Yokohama.

DETAILS of the Kucheng massacre show that the unfortunate missionaries were surprised while asleep. The attack was entirely unprovoked.

CHOLERA has been on the increase in Yokohama this week. The Italian cruiser *Umbria* reported three fresh cases and was sent to the Quarantine station.

THE war medals to be given to officers and men of the Army and Navy, interpreters, and others employed in the war will exceed 200,000, in number.

PROFESSOR BURTON has given it as his opinion that the drainage works at Osaka will prove of great benefit to the city, if the construction be properly superintended.

THE death occurred on Wednesday evening of Mrs. J. H. Brooke, one of the oldest residents in Yokohama. The funeral on Friday morning was very largely attended.

THE Willard Opera Company drew much better houses at the Public Hall towards the close of the week, when "Boccaccio," and "The Mascotte" were presented.

TO-DAY being the first anniversary of the death of H.I.H. Prince Mitsunomiya Teruhito, religious services will be performed in the Palace and at the Imperial sepulchre.

ACCORDING to investigation made by the authorities, four persons in Formosa have a fortune of yen 40,000,000 to yen 10,000,000, and seventeen persons possess over yen 1,000,000.

It is stated that the Japanese Government has arranged to receive in London the first instalment of the war indemnity to be paid by the Chinese Government in November next.

A VERDICT of temporary insanity was returned by the Coroner's jury who inquired into the circumstances attending the death of Mr. B. E. Brackenbury of the Hongkong and Shanghai Bank.

SEVEN workmen were buried beneath a large landslide, which took place at Kamakuchi-mura, Inaba Province, on the 4th instant. Six men were recovered very badly wounded, and one is still missing.

THE committee of the Yokohama Soldiers' Relief Society and Mr. Sato, Mayor of Yoko-

hama, proceeded to Yokosuka to inspect the *Chinyen*, *Takachiho*, *Yamato*, *Kongo*, and *Amagi*, on the 11th inst., and made presents to the crews of these vessels.

DURING the five days ending the 9th inst., the *Chen-yuen*, now in dock at Yokosuka, was visited by 167,891 persons, of whom 21,111 came on the 5th, 30,105 on the 7th, 58,093 on the 8th, and 17,891 on the 9th. It is estimated that yen 170,972.59 have been paid for fares by train, steamer, and boat by the visitors.

REUTER telegraphs:—The British Parliament assembled on August 12th. Mr. Gully has been reelected Speaker. The Queen's Speech was to be delivered on the 15th. The massacre at Kucheng has aroused the deepest horror and anger throughout England. An interview has taken place between Prince Hohenlohe, the German Chancellor, and Count Kalnoky, the Austrian Minister for Foreign Affairs, at which the foreign situation, notably as regards Bulgaria, was discussed. H.I.H. the German Emperor has arrived at Cowes. It is understood that the reasons for the delay in the departure of the *Shahzada* are political. Four British ironclads are to leave Gibraltar to-morrow under sealed orders. It is believed that their destination is Morocco. Prince Ferdinand is still absent from Bulgaria, where the situation is grave and complex, owing to the overthrow of the hopes of a reconciliation with Russia under the present régime. M. Matakief, a friend of the late M. Stambuloff, has been fatally wounded by assassins. Dr. Bickersteth, Bishop of Exeter, in a pastoral, enjoins a thanksgiving for the defeat of the party which was menacing the Church. Messrs. Bingen Brothers, Bankers at Genoa, have failed, their liabilities being ten million lire (£400,000).

THE outlook for the Import trade has improved, and though the actual business put through has not been great, enquiries are good, and the tone of the market is encouraging. There have been some movements in Yarns and Grey Cloth, and in Fancy Cottons business has been done in Turkey Reds, Velvets, and Cotton Italians. The Woollen trade is not brisk, but there have been fair sales in several lines. There are immense stocks in the Metal market, but it is stated that these are "contracts." The principal articles in request are Pig Iron and Nails, Bars and Plates being weak, while other descriptions are not much enquired for. Quotations for Kerosene have declined, and still buyers hold off, but they must shortly be forced into the market for the reasons that there are now no stocks in their hands to go on with and holders say that they will not recede a fraction farther in prices. There is now a large stock of all brands—very little below ten million gallons. A fair amount of business is doing in Sugar—China and Manila sorts, Formosa kinds being somewhat neglected. Moderate sales of White at late rates. In the principal Export a large daily business has been done, and the eagerness of buyers to operate has been the cause of a rise in values. Settlements are in excess of those at same date last year, and though arrivals come in freely the brisk trade has kept down the stock. In Waste little has been done, holders apparently keeping back the new fibre in order to get rid of the old, which is still an incubus on this market and is likely to remain. In the Tea trade buying is brisk, and holders have been enabled to put up prices a dollar all round. The stock is small, and the leaf in request is mostly Good Common to Fine. Settlements to date now total 6,000 piculs more than those of last year. Exchange has been fairly steady, and rates close much about the same as this time last week.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The declining by the Premier of the honours conferred upon him by the Emperor has been the principal topic of discussion during the week. The facts having been reproduced in these columns from time to time, it is not necessary to go over them again. As already stated, the Premier has had to yield to the Imperial will and accept the Grand Order of Merit and a Marquisate. The matter is thus ended so far as the honours are concerned, and it now remains to be seen in what way the political trouble, which had its origin in this affair, is to be settled. We hope it will not lead to any far-reaching changes in the *personnel* of the Ministry. As to the Opposition parties, a project is again on foot for amalgamating them under one banner. All such attempts in the past have split upon the rock of personal jealousy, and particularly on account of the intense dislike of the Progressionists by the rest of the Opposition politicians. The Progressionists are regarded, justly or unjustly, to be more crafty than honest, and they are objects of more or less suspicion even by those who do not hesitate to co-operate with them for certain political purposes. The habit of close association may have removed to a certain extent this widespread prejudice against the Progressionists, but the very caution with which they are now conducting the scheme for bringing all the sections of the Opposition under one standard, seems to suggest the consciousness of their own unpopularity. We are strongly disposed to think that the project of amalgamation will again end in failure.

The pacification and development of Formosa has attracted considerable attention. As to the subjugation of the insurgents, the work, if prosecuted vigorously and on a large scale, will involve the loss of considerable men and money, and consequently there may be a tendency in certain quarters to be in no hurry about the matter. But too much time has already been wasted, and prompt measures should now be taken to suppress the insurgents speedily and completely. Such is the substance of the writings of a certain section of the press. There seems to be no need for apprehension on this subject, for the Government has already taken steps for the prosecution of the work in a vigorous manner.

Writing on this Formosa business, the *Fiji Shimpō* lays great stress upon the necessity for dealing uncompromisingly with the insurgents so that the island may be cleared once for all of undesirable characters. As a matter of course those who have taken up arms against their rulers should meet with the punishment which they deserve, and our contemporary also recommends that even those who, though they have not resorted to open violence, have proved themselves in an unmistakable manner inimical to the Japanese, should be deported. There are, says the *Fiji*, two ways in which a conquered territory may be governed; the one, as pursued by England in the case of India, is to suffer the aboriginal population to retain, not only their lands, but their customs and manners, and the other, as followed by the Anglo-Saxon settlers of the United States, to dispossess the aborigines and entirely change the aspect of the country. The latter policy is recommended by our contemporary in the case of Formosa. The rapid increase of population in this country makes it a matter of urgent necessity to provide an outlet for the surplus, and the acquisition of Formosa has been in this respect a godsend which Japan should make use of to the utmost possible extent. The possession of Formosa, as well as the barbarous conduct of its inhabitants, urges the great metropolitan journal to recommend the adoption of the harsh line of action indicated above. Our contemporary remarks that it is aware that a certain paper in this Settlement has accused the Japanese army in Formosa of inhuman atrocities. The writings of such a journal, says the *Fiji*, can not be considered seriously, for they are too distinctly stamped with

the marks of malice and prejudice to do any serious injury. So, without paying any regard to what the unprincipled detractors of the country may choose to say, the Government is strongly urged to take rigorous measures against the insurgents and the disaffected inhabitants of the newly acquired territory.

The *Hochi Shimbun* has an interesting historical article on Formosa. Those daring Japanese adventurers who in the 16th and 17th centuries were a constant terror on the Chinese coast did not fail to leave their footprints on the island of Formosa. The port of Kelung derives its name from a leader of these marauders, Minamoto-no-Mototaka. Mototaka, it should be noticed, is Kelung according to Chinese pronunciation. The island itself was called Takasago-jima by Japanese of those days. As the first step, our contemporary recommends that it should be called by the name of Takasago, so that, instead of being an outlying dependency, it shall be in name as well as substance an integral part of the Japanese Empire.

The discussion of the Oriental question is still continued by the vernacular press. The *Kokkai* considers the attitude of the Opposition on this subject, and strongly criticises the irresponsible manner in which the politicians of the Extreme sections approach this question. They raise a great noise in attacking the Government in connection with the Liaotung Peninsula and Korea, but they do not point out in what manner these problems ought to have been solved. Neither do they show any inclination to assume the practical control of these affairs by displacing those in office.

Writing under the heading "Balance of Power," the *Choya Shimbun* reviews the situation in the East. As a prelude, our contemporary has much to say on the state of affairs in Europe, but this part of its article may be dismissed, for besides containing some chronological errors, its remarks upon European politics are dull and uninteresting. Suffice it, then, to quote the concluding paragraph, which runs in the following strain:—"Japan is the strongest Power in the East, and the balance of power in these quarters is in her keeping. Japan's adhesion to the Franco-Russian alliance would make that combination arbiter of the situation. Japan and Germany combined would be sufficient to keep down the Franco-Russian combination, and a similar result would follow by the union of Japan and England. But the strongest and most irresistible combination would be the co-operation of the three Powers, Japan, England, and Germany. Under the circumstances, Japan's adhesion is important to any combination aiming at ascendancy in the East. The peace of the East is thus seen to be in the hands of Japan."

The *Kokumin Shimbun*, in a very instructive article, discusses the importance of perfect concert between the military and diplomatic arrangements of a country. On the one hand, our contemporary recommends military men to pay proper attention to the diplomatic side of the questions they may be called upon to solve, and on the other, it advises diplomats to shape their course of action in concert with the military powers of the country. Shortly, our contemporary seems to think that, while military men have too high an opinion of the country's fighting capacity, the statesmen charged with the conduct of affairs are prone to underrate it.

On the question of the development of the Military and Naval resources of the country, the vernacular press is agreed upon all essential points. Even the bitterest enemy of the Government is ready to approve measures for a vast increase in the fighting strength of the country. The only journal that has thus far differed from its contemporaries on this subject is the *Nippon*. Our contemporary insinuates that the present cry for the increase of the Army and the Navy is exaggerated and sentimental. The Liaotung ques-

tion has doubtless acted as a great stimulus to this cry, but the *Nippon* fails to understand the reason why that affair should make any change in the situation desirable. The necessity for increasing the Army and the Navy has long been recognised, and the Government had doubtless adopted a definite plan before the outbreak of the recent war. It will be sufficient if that plan be steadily carried out. But according to our contemporary's information, the Cabinet proposes to increase the Military and Naval Expenditure to 45,000,000 *yen* per annum, exclusive of all extraordinary outlays on account of the building of war-vessels, the construction of forts, and so forth. The *Nippon* seems to regard such an increase as out of proportion to the present resources of the country. Our contemporary, however, studiously avoids committing itself to any definite statement on the subject. It also makes satirical allusions to the honours recently bestowed upon the principal civil and military dignitaries, quoting the memorial of Omura Masujiro, a great general of the war of the Restoration, who recommended the appropriation for military purposes of the money set apart for the reward of the officers and men. If, says our contemporary, those in high places mean to subject the people to heavy taxation, it would become them to set an example of disinterested patriotism by following the course suggested by Omura. In short, the *Nippon* thinks that the scheme now attributed to the Ministry is on too gigantic a scale. It says that there is no necessity for such big measures. But the nation, if we can judge from the tone of the press in general, seems to differ from our contemporary.

MARQUIS ITO.

The *Nichi Nichi Shimbun* announces that the Premier has withdrawn his objection to be made the recipient of the recently conferred honours. When he was visited by Count Kuroda at Tonosawa on the evening of the 10th instant, our contemporary states that the Premier, who had been indisposed for some time, felt ill and feverish. But in spite of his indisposition, he had a long talk with the President of the Privy Council, who, besides delivering the Emperor's message pressing the acceptance of the honours, offered him advice as a colleague and a friend. The Premier so far consented as to come back to the capital and explain his motives personally to the Emperor. Arriving in Tokyo on the 13th, he sought an audience with His Majesty on the following afternoon. The audience lasted two hours, during which time the Premier explained in full the motives that led him to decline the honours. But His Majesty refused to attach any importance to his representations, and told him that there was nothing improper in his accepting the honours in question, for they were well deserved by reason of his services to the State in connection with the recent war and other important affairs. It would have been an act of disloyalty after this to still persist in refusal, so the Premier had no choice but to accept the situation.

Amongst recent grants of the S.P.C.K., we notice that on the application of the Rev. A. F. King and the Rev. H. J. Foss, Bibles and Prayer-books, to the value of £2 10s., for Mission work in the Bonin Islands, and on the applications of Archdeacon Perham, Tracts, to the value of £4 for a Mission which is to be preached in Singapore in October, have been made.

The facts about the "subscription" for the Cromwell statue may be of interest. The first offer reached Mr. Herbert Gladstone in the House of Commons on the night when the vote was discussed. This came from three members—Mr. Everett, Mr. W. Johnston, and Mr. Coddington, who offered to guarantee any sum up to £2,000. By the next morning's post Mr. Gladstone received a cheque for the whole amount (£3,000) from a donor who remains anonymous. The next day the *Chronicle* announced that the whole amount had been subscribed "in response to its appeal"—an appeal not published till some hours after the money had been despatched to Mr. Gladstone. A clear case of telepathy. Mr. Stead and Julia should inquire into it.

EDITORIAL NOTES.

THE CHINESE PRISONERS.

ON the 10th instant the Chinese prisoners, numbering 179 rank and file and 3 officers, hitherto confined in the Hongwan Temple at Asakusa, Tokyo, were marched to Shimbashi Station, under escort of 20 gendarmes and 30 policemen. Thence they proceeded to Yokohama, and embarked in the *Toyohashi Maru* on their return to China. The steamer has to call at several places to take up other batches of prisoners, the aggregate number to be carried by her being about 1,064. The Tokyo prisoners do not appear to have been at all pleased at the idea of returning to China. The life of ease that they have been enjoying in this country will be exchanged for one of hardship when they get home, and they are further by no means reassured as to the reception likely to be extended to them by their own authorities. Their sense of the pleasures of prison life was accentuated by a feast given to them one day before their departure, and by a present of a new suit of clothing and a new pair of boots. If it should ever be their lot to fight again against Japan, they are not unlikely to become prisoners once more at the earliest opportunity.

LIEUT. O'BRIEN.

It will be remembered that the San Francisco journal by which a garbled and greatly misleading extract from Lieut. O'Brien's letter with regard to the Port Affair was given, attributed his recall to the fact that he had become a *persona non grata* in Japan, owing to his strictures on the conduct of the Japanese troops at Port Arthur. Considering that Lieut. O'Brien's written evidence on this subject tended greatly to exonerate the Japanese, and was so interpreted by the United States Minister in his covering despatch, it is easy to see how completely false was the statement made by the San Francisco journal. In connection with this we may quote the following from an interview with Mr. Foster, which appears in the *New York Herald*:—

First-Lieutenant Michael J. O'Brien, Fifth Infantry, who was sent out during the war between China and Japan as special military attaché to the United States Legation in Japan, to observe the military operations of the war, has been ordered by cable to return home at once. I am able to state authoritatively that the order for Lieutenant O'Brien's return was not brought about by any complaint on the part of the Japanese government. On the contrary, he has been very greatly liked by the Japanese officials with whom he has come in contact during his stay in the Orient.

Lieutenant O'Brien was first ordered to return soon after the close of active military operations between the Japanese and the Chinese, but subsequently he was directed to remain in Japan for a time and secure official reports of the operations of the Japanese and Chinese armies before returning to the United States. The immediate cause of the cable orders which have been sent to him to return at once was a letter received by State Department from Minister Dun, in which the Minister is understood to have suggested his recall.

We may add that the reason of Lieut. O'Brien's recall was entirely unconnected with Port Arthur, or any other phase of his military duties.

THE UNIVERSITY OF CHICAGO.

THE summer convocation of this great institution of learning was held during the afternoon of July 1st. The convocation address was delivered by Rabbi Emil G. Hirsch, Ph. D., on the subject, "The American University." A large number of certificates, diplomas, scholarships, and fellowships were awarded. The report of President Harper included interesting facts and figures, some of which are here given: The entire income for the past year was \$520,000. The income for the ensuing year has been estimated at \$603,000 and the disbursements at \$582,000. Nine additions have been made to the faculty, which now numbers 157. The number of students is increasing; during the past year there have been 1,587, of whom 534 were in the graduate schools, 281 in the divinity schools, and 772 in the colleges. These are certainly encouraging figures; and,

when we put alongside of them the fact that the University of Michigan sent out nearly 700 graduates from all departments at the recent commencement, it becomes evident that the educational influence of Western institutions is on the increase. The closing exercise of the convocation was the ceremony of laying the cornerstone of Haskell Hall, donated as an Oriental Museum. On one side of the main entrance of the building is the inscription in Greek: "He was the true light that cometh into the world and enlighteneth every man." There are other inscriptions: (in Latin) "Light from the East;" and (in Hebrew) "The entrance of Thy word giveth light." The dedicatory address was fittingly given by Rev. John Henry Barrows, D.D., of Chicago. In the evening of the same day came the annual meeting of the Associated Alumni, an organization including the graduates of both the old and the new institutions. From the programme of toasts the following items are of special interest out here: "The Orient," Rev. John Henry Barrows, D.D.; "The Investigator," Edmund Buckley, Ph. D. (formerly of the Doshisha, Kyoto); "The Old [Theological] Seminary," by Rev. R. L. Halsey (Baptist Missionary), of Chofu, Japan.

CRICKET IN ENGLAND.

FROM telegrams appearing in the *Asian*, we gather that at Lord's on July 6th, the Light Blues defeated the Oxonians by 134 runs. The scores were:—Cambridge University, 244 and 288; Oxford University, 202 and 196. The feature of the match was a magnificent innings for the losers by Mr. W. K. Foster, who made 121. At Lord's, on July 10th, the Players defeated the Gentlemen by 32 runs. The scores were:—Players, 231 and 263; Gentlemen, 266; and 253. For the amateurs, Dr. W. G. Grace contributed a magnificent innings of 118. The return match at Kennington Oval between the Gentlemen and Players, on July 13th, resulted in a draw. The following were the scores:—Gentlemen, first innings, 320; second innings 225. Players, 292 and 225 for five wickets down. At Lord's on July 13th the great inter-school match was drawn. Eton scored 260 and 283 and Harrow 326 and 75 for no wicket. In the Harrow first innings J. H. Stogdon scored 124.

THE LATE TYPHOON AND ITS EFFECTS.

THE *Nagasaki Express* says that the whole bottom of the *Helene Rickmers*, from about 36 feet from either end, is one mass of corrugations, and it speaks wonders for the makers of her plates that these latter stood what they doubtless have. On her port side, that which was on the landward side when she grounded, the steel plates are dinged in to a distance of some 12 inches in many places, and generally resemble a corrugated iron roof. On the starboard side, things are not quite so bad, although they are bad enough there, some of the plates having been forced in about eight inches out of their general level. Rivets have been wrenched out in all directions, and it speaks volumes for her builders, on the Clyde, that she did not go to pieces altogether. Amidships, right under her engines, her keel has a space in it like a bow, about 15 feet in length and, at greatest height, about 6 inches above the level of the bow or stern. The fact of her having two skins was undoubtedly what saved her from total destruction.

MR. IRWIN ON HAWAII.

WE take the following from correspondence appearing in the *New York Herald* under date of June 7th:—

A San Francisco newspaper having recently printed a despatch from Washington exposing an alleged scheme on the part of Japan to absorb the Hawaiian Islands, spoke to Minister Irwin about it. Mr. Irwin is a native of the United States, and he has had much to do with establishing the republic in Hawaii. He has represented the Dole Government very ably here and has been instrumental in sending many Japanese labourers to Hawaii.

"This style of talk is pure nonsense," said Minister Irwin. "Some sincere friends of the Hawaiian Government talk in this way in order

to hurry action in the United States, and many insincere people indulge in it. Japan truly has no designs upon Hawaii. If she ever had she would have shown her hand when President Cleveland proposed to restore the Queen. She had two men-of-war at Honolulu at the time, and her action could have been made decisive. There are 25,000 Japanese coolies in Hawaii now. The question of suffrage there was settled when the constitution was adopted. Anybody may become a citizen and voter by becoming naturalized and renouncing his allegiance to his native country. The Japanese who are in Hawaii are contract labourers. They intend to return to Japan when their terms of service expire.

"As soon as Formosa is opened up the Japanese will cease going to Hawaii. Formosa will be the great field for Japanese labour, for there the coolies can secure permanent homes and be all the while under their own flag. The Japanese do not care to alienate themselves. Formosa will be developed as a great sugar producing island. Japan will do the refining, and this sugar will compete with the Hawaiian product in the United States. As to Japan having designs upon Hawaii it is absolutely unfounded, as I know."

Although Minister Irwin is an ardent supporter of the existing republic he believes in the ultimate annexation of the Hawaiian group to the United States. He regards that as the ultimate destiny of the islands, and he believes that Cuba should belong to the United States as well.

DR. ELDRIDGE ON SANITATION IN JAPAN.

DR. ELDRIDGE, interviewed by Colonel Cockrill on the subject of Cholera in Japan, said:—

Up to June 14, there have been 1,382 cases in Japan itself representing, probably, the invasion of at least a hundred different localities, and yet, with the exception of certain of the military ports at which the imported cases were first received, and where it has been most successfully handled and restricted, the disease has, in every instance, been stamped out with the occurrence of the first half dozen cases. Considering that thousands of troops and coolies are now returning to their homes, that the land quarantine of cholera is, for many reasons, most difficult, and that it is generally ineffective, and that infection of the most malignant type may be carried by one suffering from what is apparently a slight indisposition, the work accomplished this year by the Japanese in controlling and limiting the spread of cholera is not only marvellous, but, I think, unprecedented. So far as I know, there is no record of such successful sanitation in any other country. The nearest approximation to it is in the work of the English sanitary authorities, in 1892; but in this case the points of outbreak were very few, and the machinery for control, though no more perfect, theoretically, than that of the Japanese, has been the growth of a century, and has the advantage of an almost unlimited supply of thoroughly educated and experienced men as its instruments.

Remember that, until within a few years, the introduction of even a single case of cholera practically ensured a widespread epidemic, that the sanitary system of Japan dates from 1877 only, and that its officers have had to be educated and trained *ab initio*; that, as a matter of fact, the government has had, so far, during the present emergency, no advice or assistance whatever from foreign experts, and the success of the Japanese in this great battle against disease and death can be appreciated at its true value.

Whether, with the setting in of the hot weather, and the even wider distribution of the disease by the still returning members of the expeditionary forces, the present superb results can be continued, remains to be seen; but whether complete control of the pestilence be, or be not, within the power of the authorities, the management of the situation up to date is an achievement unparalleled in the history of sanitation.

THIRTY KNOTS AN HOUR.

It is reported that Messrs. Yarrow & Co., of Poplar, having declined the order placed with them by the Admiralty to build two of the 20 torpedo-boat destroyers which are to be added to the strength of the British Navy, Messrs. Thornycroft and Co., of Chiswick, and Messrs. Laird & Co., of Birkenhead, have each received orders for four of the vessels, and that Messrs. J. and G. Thomson, of Clydebank, will receive a similar order. The vessels are all to be built of nickel steel, to be fitted with water-tube boilers, and during a three hours' continuous full-power trial a mean speed of 30 knots is to be obtained, with a consumption of 20 tons of coal.

THE STANDARD LIFE INSURANCE COMPANY.

THE Standard Life Insurance Company, of which Messrs. Fraser, Farley, are the local agents, have just circulated their annual report for 1895.

From it we gather that the total funds have increased considerably during the year, and the rate of interest earned by them has been maintained, being at the average rate of £4, 2s. 3d. per cent. over the whole amount. The Board regret to state that they are losing at this time the services of Mr. N. B. Gunn, the very efficient Secretary of the Company at the Head Office, who has received the appointment of Manager to the Scottish Amicable Life Assurance Society. Mr. Gunn's post has been filled up by the appointment of Mr. George Oliver, from the Company's London West End Office, and previously Secretary to the Company in Bombay. The Company's revenue for the year ending 15th November, 1894, amounted to £1,055,991. Its funds now amount to £8,000,000 sterling.

KOBE INTERNATIONAL HOSPITAL.

THE Kobe International Hospital has just held a general meeting of subscribers at which the following were elected to serve as the Committee for the ensuing year:—Rev. S. Swann, Messrs. R. von Krencki, Enslie, Harper, and Gill. The report says:—For the year ended June 30th, 1894, the number of patients admitted was 55 as follows:—British 18, American 9, German 8, French 6, Chinese 5, Swedish 3, Japanese 3, Norwegian 1, Austrian 1, Brazilian 1. During the year ending 30th June, 1895, the numbers were considerably larger, viz., 77, the largest number in fact for some years past. The nationalities represented were—British 35, American 14, Norwegian 7, French 4, Dutch 3, Swedish 2, Russian 2, Chinese 2, Japanese 1, Chilean 1, and Portuguese 1. Sixty-five were discharged cured, 6 were relieved, and 6 died, while 8 remained in the hospital.

LANGUAGE STUDY IN JAPAN.

"JAPAN," says *Languages*, "promises well in the way of linguistic attainments. In the higher schools, and particularly in commercial schools, the study of English is now on the same footing as Japanese itself; that is to say, it is compulsory. It is interesting to note the place occupied by other European languages in Japanese education. The Tokyo High School of Commerce may be taken as a fairly representative institution for this purpose. Out of about a hundred pupils at present studying various foreign languages, twenty-five have French, twenty-four Chinese, twenty-three Spanish, eight German, and seven Russian. Strangely enough, there is not a single pupil now studying Italian, although not long ago both that language and German were much in favour. At present, moreover, there is an Italian professor, who was brought specially from Italy, attached to the teaching staff. Spanish appears to be the tongue that has gained most of the ground recently lost by German and Italian."

A BETTO KILLED BY A HORSE.

ON Friday morning a number of people witnessed in Kobe the almost instantaneous death of a *betto* in the employ of Mr. W. Down. It appears that the man was riding on the horse when, on reaching the incline at the back of the San-nomiya Station, the animal was startled by the whistle of an engine and galloped down the hill, kicking and plunging. Eventually the man was thrown off, but he still retained his hold on the bridle, and after being dragged along for some distance attempted to regain control of the horse. The animal then appears to have reared up and brought its two fore-legs down on the *betto*, who fell and was again kicked by the horse, the unfortunate man dying almost immediately.—*Chronicle*.

THE "EQUITABLE."

MR. J. T. HAMILTON, the agent for the East of the "Equitable," has just returned to Yokohama, after a tour round the world. Mr. Hamilton has interviewed the heads of nearly all the principal life insurance concerns in Europe and America, mainly with the object of enquiring into the working of the different systems and schemes under which life insurance policies are issued and the benefits accruing to the assured. The result has been that the "tontine" system

has been found to have been largely introduced—though often under another appellation—and is rapidly increasing in popularity as its advantages become apparent. Of this system there is no question that the "Equitable" is the head and chief.

DEATH OF MRS. J. H. BROOKE.

THE community will learn with sincere regret of the death of Mrs. J. H. Brooke, the sad event occurring at her residence on the Bluff on Wednesday evening. The deceased lady has long been suffering from valvular disease of the heart, and her ailment gradually gained ground. On Wednesday her condition grew steadily worse, and eventually she sank. Great sympathy is extended towards the bereaved husband and family, nearly all the members of which were round their mother's bed at the hour of her death. Mrs. Brooke, who was one of the oldest residents in Japan, was a native of Boston, Lincolnshire. Her loss will be greatly felt by a very large circle of attached friends.

THE "STURGEON'S" TRIAL.

H.M. TORPEDO-BOAT destroyer *Sturgeon*, built and engined by the Naval Armaments Company, Barrow-in-Furness, proceeded to the measured mile at Skelmorlie for the purpose of undergoing her official three hours' speed trials. These proved most satisfactory. The average of six runs on the mile was 27.6 knots, and the mean speed attained on the three hours' steaming 27½ knots per hour. The *Sturgeon* is 196 ft. long by 19 ft. 6 in. beam, and 250 tons displacement. Her engines are of the usual triple-expansion type, and she is fitted with Mr. Blechynden's patent boilers, which are compact, and arranged so that all tubes can be easily renewed.

THE FLOODS.

A CORRESPONDENT writes:—"I have just been through the flooded districts near Tsuruga. The devastation, especially along the coast, is greater than anything that I could have supposed rain capable of accomplishing. At places the whole sides of mountains have slipped into the sea, carrying houses and even villages with them. The debris has, in more than one case, been thrust by momentum right into the sea, and has formed a new island. A full mile of the Tsuruga Railway has been so completely swept away that no trace of it remains. Repairs, or rather reconstruction, will take many months.

MARQUIS ITO.

THE *Chuo Shimbun* states that Marquis Ito, the Premier, has sent in his resignation, owing to his promotion in rank, the Premier having strongly wished to decline the decoration and promotion. The Marquis has been staying at the villa of Mr. Hara Zenzaburo at Yokohama since the 8th inst. Viscount Hijikata, Minister of the Imperial Household, and Mr. Yoshikawa, Minister of Justice, came down to this port yesterday, and called on the Premier.

THE CROWN PRINCE.

H.I.H. the Crown Prince, who has been indisposed for some time, is at present receiving medical treatment at the Takanawa Palace. Drs. Ikeda, Hashimoto, and Baelz are in attendance upon the Prince. His Highness's condition improved somewhat yesterday, and the fever was much lower when Surgeon Ishiguro examined him and took the Prince's temperature.

LIEUT.-GENERAL MIURA.

THE *Asahi Shimbun* is responsible for the statement that Lieut.-General Viscount Miura, a Japanese Minister (unattached), will be appointed to Korea in two or three days, and as he is requested by Count Inouye to leave for Korea as soon as possible, he will set out on the 25th instant.

CHOLERA ON THE "UMBRIA."

THE Italian cruiser *Umbria* is very unfortunate in regard to cholera. In Kobe some of her seamen died of the complaint, and yesterday two cases of the disease were reported on board.

The men were taken to the Infections Diseases Hospital, and the *Umbria* has gone to the Nagahama Quarantine station. The *Boyeki Shimbun* states that another case of cholera was reported on board the Italian man-of-war *Umbria* on the 14th inst.

FRENCH REPULSE.

A COLUMN of 1,200 men, half European and half Annamite tirailleurs, under the command of Colonel Chaumont was recently sent out to extirpate the pirates in Moncay district, and in the course of their march attacked a position in the Panhay range. The position was strongly held, and the French were obliged to retire with the loss of about a hundred killed and missing, among whom was one officer.

IMPERIAL AUDIENCE.

H.E. the new British Minister proceeded to the Palace yesterday to present his credentials to H.I.M. the Emperor. The son of the Russian Minister, who lately arrived from home, paid his respects to His Majesty the same day. The Commander-in-Chief of the Russian Asiatic Squadron and a few other officers were also received by the Emperor.

THE MASSACRE AT KULIEN.

THE *Kobe Herald* is in receipt of information that the victims of the terrible outrage at Kulien, near Foochow, are: Miss E. Goldie, Miss Newcombe, Misses Saunders (2), Rev. and Mrs. R. W. Stewart and child, Mrs. Stewart's foreign Governess, Miss Stewart, and one other. Several others were wounded.

THE RUSSO-JAPANESE TREATY.

WE read in the *Nichi Nichi Shimbun* that the Revised Treaty between Japan and Russia, concluded some time ago in St. Petersburg, passed the Japanese Privy Council on the 9th instant, and will probably be ratified by the Emperor very shortly.

EXCHANGE OF PRISONERS.

In a former issue we stated that the exchange of prisoners would take place at Taku on the 20th instant, but we now find that our information has not been quite exact. The Chinese prisoners, numbering over a thousand, are to be returned by Japan at Taku on the date mentioned, but the Japanese prisoners are to be handed over to the garrison in the Liaotung peninsula. As to the number of Japanese prisoners, it has hitherto been put at about fifty, though upon what basis this calculation is made has never been pointed out. In compliance with the demand of the Japanese Minister, the Pekin Government instructed the Generals in Manchuria to forward reports in respect to the Japanese prisoners in their charge. According to an official telegram from Mr. Hayashi, dated Pekin 11th instant, it is stated that the Tsung-li Yamên had replied to the effect that there were two Japanese captives who had been severely wounded somewhere in the neighbourhood of Liao-tung, and that they should be handed over to the Japanese troops as soon as the Chinese prisoners shall have been restored; that Generals Sung and Wei had reported that they hold no Japanese prisoners; and that Generals Yun-lo, Chang Shun, and Iko Tang-a had not yet sent in reports. The reports of the three last-named Generals may alter the complexion of affairs, but it is not thought to be likely that they have any large number of Japanese in their charge. At all events, the prisoners to be received by Japan will fall far short of the number expected, and suspicions are naturally entertained here as to the treatment that has been accorded by the Chinese Generals to the captured Japanese. It is inconceivable that the number of Japanese soldiers unfortunate enough to fall into Chinese hands should have been so small. It is stated by the Japanese military authorities that about sixty privates have been missed during the war whose whereabouts have never been discovered. It is this circumstance that has led the authorities to expect that the Japanese prisoners in China would number about fifty.

THE PREMIER.

The Premier has declined both the decoration and the higher rank of nobility that His Majesty was pleased to confer upon him on the 5th instant. The incident has given rise to various rumours. In some quarters it appears to be regarded in the light of a Ministerial crisis, that is to say, a serious rupture between the Choshu and Sa'shu statesmen. Those taking this view of the matter evidently believe that the bestowal of signal marks of Imperial favour was planned by certain intriguers of the Satsuma clique, who thereby hoped to make Count Ito an object of popular envy and abuse. Whatever credence this rumour may deserve, there is certainly danger of the incident's being utilized by crafty strategists as a means of fomenting misunderstandings between the different sections of the elder statesmen. Hopes are still entertained, however, that some happy solution of the dilemma may be effected without disturbance of the political equipoise.

The facts relating to this curious incident, as recounted by the *Nichi Nichi Shimbun*, are these:—On the 4th instant, the Premier received a note from the Household Department intimating that His Excellency's attendance in full dress was required at Court at 10.30 a.m. the following day. Construing this as an intimation that some mark of honour was to be conferred on him, and being somewhat indisposed, the Premier wrote asking to be excused, and adding that he did not consider himself entitled to any honours. Early on the morning of the 5th instant, he received a visit from Viscount Hijikata, Minister of the Household, who represented the grave inconvenience that would be entailed by his absence from Court on that day, and told him that under any circumstances his attendance was necessary. Thus pressed, the Premier consented to accompany the Viscount to Court where the Emperor conferred on him the Grand Order of Merit and a Marquisate. To complete the ceremony on such occasions, the Court regulations require that the recipient of the Imperial favour shall withdraw to an adjoining chamber, where, in the case of an order of nobility, he has to sign a paper gratefully signifying the acceptance of the honour, and in the case of a decoration, he puts it on and then again appears before the Sovereign to express his thanks for the favour bestowed on him. Count Ito—for it is proper to call him so until he accepts the new title—repaired to the ante-room, but instead of writing his acceptance or putting on the decoration, he sought an interview with the Minister of the Household, and requested him to represent to His Majesty that, grateful as he was for the extraordinary honours just conferred upon him, he could not accept them, inasmuch as he had done nothing deserving such marks of Imperial recognition. Then returning to his official residence, he drew up a memorial and sent it to the Household Department for presentation to the Throne. The document is said to have been couched in the following terms:—

May it please Your Imperial Majesty:

In my humble opinion, the great work of the Restoration was accomplished by my great predecessors now deceased, in pursuance of the profoundly sagacious policy determined by Your Majesty. Treading in their footsteps, it has ever been my humble ambition by fidelity, industry, and perseverance, to contribute my share, however trifling, to the great work. But being little gifted with intelligence or energy, I have been unable to render any service to the country, and consequently the signal and increasing favours that Your Majesty has already graciously condescended to shower upon me are so entirely out of proportion to my worth, that, whenever I think of them, my heart is filled with mingled sentiments of gratitude and awe. When the war was ended and peace restored, I made bold to implore Your Majesty to release me from office at the proper time. But now, instead of receiving Your Majesty's gracious sanction to my humble prayer, I have been surprised by being decorated with the Grand Order of Merit and raised to a Marquisate. Deeply touched as I am by Your Majesty's great favour to me, and sincerely desirous as I am of employing my humble capacities in Your Majesty's service, my peace of

mind cannot but be disturbed by the thought that I have not the smallest title to such excessive marks of Imperial favour and honour. I therefore humbly and respectfully pray to be allowed to decline these honours. Would that Your Majesty may so far condescend as to have pity on me and grant my earnest prayer, so that, freed from the reproach of basking in undeserved honours, I may be enabled to continue in my present office, and to endeavour, in however insignificant a degree, to deserve the marks of Imperial favour already bestowed upon me.

Count Ito then left the capital for Yokohama, and stayed a few days at Mr. Hara's villa, where he was visited by Viscount Hijikata on the 9th instant. The Minister of the Household was the bearer of an Imperial message pressing the acceptance of the honours upon the Premier. The latter, however, is understood to have positively declared his inability to withdraw his declination. On the same day, he went to Odawara, and staying there for that night, proceeded on the next day to Tonosawa, where he is now staying. Such in brief is the substance of the account published in the *Nichi Nichi*. Our contemporary adds that, so far as it has been able to gather, Count Ito has not the slightest intention of resigning his post of Minister President of State.

How this incident will end is a most perplexing question. From all that we have thus far been able to learn, it appears that Count Ito was not directly consulted about the honours that were about to be conferred upon him. Suspecting, however, that steps were being taken for the bestowal of some marks of distinction upon himself, he seems to have taken the precaution of making known his sentiments on the matter. Of course he could not directly appeal to the Throne, as he had not received any official notice of what was pending. Under the circumstances, there was nothing improper in his resignation of the honours. But it is an acknowledged custom in this country that honours openly conferred by the Sovereign may not be refused by a subject. Ten years ago, Count Itagaki made strenuous efforts to refuse promotion to the peerage, but he had to yield at last. Count Ito's case, it is true, presents some exceptional features, but still it is not very likely that His Majesty will easily agree to the Count's refusal. On the other hand, unless these honours are revoked, there seems to be little likelihood of the Count's resuming the duties of his office. Here is, then, the dilemma. Either the Court must yield or the Count must go out of office. There is no reason to suppose for a moment that any friction exists between His Majesty and his favourite Minister. So far as that is concerned, the affair is simply a matter of form. But, regrettable as such a result would be, the Cabinet may be wrecked on this little rock of conventionality.

It should be stated here that Count Yamagata, too, has declined the recently conferred Marquisate, though he gratefully accepted the Order of the Golden Kite.

Viscount Hijikata's recent mission having failed in its object, there was a meeting of the Ministers of State at the residence of Count Kuroda, President of the Privy Council, at Mita, on the morning of the 10th instant. On the evening of the following day, Count Kuroda went to Tonosawa, where he had a long and earnest conference with the Premier at the Fukuzumi Hotel. The President of the Privy Council stopped there for that night, and returned to the capital the following day. On Monday at 11 a.m., he repaired to the Palace and had an audience with the Emperor. The Premier was also expected to return to Tokyo on Tuesday evening, and it is believed that he has consented to accept the honours recently conferred upon him. How this will affect the possibility of his remaining in office, is more than we can tell at present. At all events, it must not be supposed that the crisis has ended.

The selection of Mr. Goschen for appointment as First Lord of the Admiralty under the new Government has caused much satisfaction in naval circles. It is nearly twenty years since the hon. gentlemen was at the Admiralty.

CURRENT TOPICS.

The *Doshikai* held a conference on Monday at the Atagokan, Shiba, Tokyo, and decided to issue a manifesto, the compilation of which was entrusted to Messrs. Suyehiro Shigeyasu, Inukai Ki, and Shiga Shigetaka. The object of the members of this association is to enrol in their list of membership all politicians of the Opposition. A circular will be addressed to the different parties, the *Kaishin-to*, the *Ote Club*, the *Kakushin-to*, the *Chugoku Shimpoto*, and so forth, inviting their members to join the association in question. It is stated that from twenty to thirty of the members of these parties have already expressed their willingness to join. These politicians will not sever their connection with their respective parties, but will most probably continue to belong to the two bodies at the same time. In this way they propose to evade that provision of the Law of Political Associations. Doubtless the ultimate object aimed at by the originators of this scheme is to effect an amalgamation of the different sections of the Opposition—an experiment which has more than once before been tried, but without success, and there is no indication that it will be attended with a better result on the present occasion.

A similar experiment is being made on a smaller scale in the Prefecture of Tochigi. The principal members of the different political parties in the locality met at Utsunomiya on the 10th and 11th instant. There were present Messrs. Arai, M.P., Yokowo, President of the Local Assembly, and several other influential individuals belonging to the prefecture. Recognizing the impossibility of effacing party distinctions all at once, they resolved that a certain number of the representatives of each party should assemble and organize a new party. In other words, they propose following exactly the same course pursued by their leaders in the capital.

We have heard nothing for some time now about an extraordinary session of the Diet. People are, however, again talking about it, and it is suggested that as the Imperial Proclamation for such a session has not yet been issued, it is likely that the Cabinet has decided against such a course. The delay in the issue of the Proclamation has hitherto been ascribed to the uncertainty of the date upon which the Military and Naval measures will have been completed. So far as the military measures are concerned, it is reported that the drafts have been finished and are now undergoing final revision at the General Staff Office. It cannot be long now before the measures are perfected, and the Naval Bills may be expected to be ready about the same time. It is probable, therefore, that things will be ready for the calling together of the Diet during the month of September.

The Progressionists held a meeting on the 13th instant, when, among other things, they decided to send out nine parties of lecturers to different places in the country. They can not be idle while their opponents, the Radicals, are stumping the country.

The *Kokkai* states, on the authority of one who has just arrived in the capital from Kyushu, that the people in that island are opposed to the policy of attacking the Cabinet on the question of the Liaotung Peninsula. Of all the localities, Kyushu has been most directly influenced by the war, and its inhabitants are stated to be so keenly alive to the paramount importance of the increase of the Army and Navy and the development of industry and trade, that they deprecate anything that might tend to injure the harmony at present existing between the Government and the people. The Radical party has never been strong in Kyushu, but it is a significant commentary on the tendency of public opinion that even in Kyushu that party's programme finds general sympathy.

The experiment of effecting local combinations of the different sections of the Opposition, recently inaugurated in the Prefecture of Tochigi, is being tried in some other places. The latest news from Okayama states the *Chugoku*
